Then one of his disciples, Judas Iscariot, he that was about to betray him, said: 'Why was not this ointment sold for three hundred pence, and given to the poor?' Now he said this, not because he cared for the poor; but because he was a thief, and having the purse, carried the things that were put therein ([John 12:4-6](#)).

This fact that Judas carried the purse is again referred to by the same Evangelist in his account of the Last Supper (13:29), The Synoptic Gospels do not notice this office of Judas, nor do they say that it was he who protested at the alleged waste of the ointment. But it is significant that both in Matthew and Mark the account of the anointing is closely followed by the story of the betrayal: "Then went one of the twelve, who was called Judas Iscariot, to the chief priests, and said to them: What will you give me, and I will deliver him unto you?" (Matt., xxvi, 14-5); "And Judas Iscariot, one of the twelve, went to the chief priests, to betray him to them. Who hearing it were glad; and they promised him they would give him money" (Mark, xiv, 10-1). In both these accounts it will be noticed that Judas takes the initiative: he is not tempted and seduced by the priests, but approaches them on his own accord. St. Luke tells the same tale, but adds another touch by ascribing the deed to the instigation of Satan: "And Satan entered into Judas, who was surnamed Iscariot, one of the twelve. And he went, and discoursed with the chief priests and the magistrates, how he might betray him to them. And they were glad, and convenanted to give him money. And he promised. And he sought opportunity to betray him in the absence of the multitude" (Luke, xxii, 3-6).

St. John likewise lays stress on the instigation of the evil spirit: "the devil having now put into the heart of Judas Iscariot, the son of Simon, to betray him" (xiii, 2). The same Evangelist, as we have seen, tells of an earlier intimation of Christ's foreknowledge of the betrayal (John, vi, 71-2), and in the same chapter says expressly: "For Jesus knew from the beginning, who they were that did not believe, and who he was, that would betray him" (vi, 65). But he agrees with the Synoptics in recording a more explicit prediction of the treachery at the Last Supper: "When Jesus had said these things, he was troubled in spirit; and he testified, and said: Amen, amen I say to you, one of you shall betray me" (John, xii, 21). And when St. John himself, at Peter's request, asked who this was, "Jesus answered: He it is to whom I shall reach bread dipped. And when he had dipped the bread, he gave it to Judas Iscariot, the son of Simon. And after the morsel, Satan entered into him. And Jesus said to him: That which thou dost, do quickly. Now no man at the table knew to what purpose he said this unto him. For some thought, because Judas had the purse, that Jesus said to him: Buy those things which we have need of for the festival day: or that he should give something to the poor" (xii, 26-9). These last details about the words of Jesus, and the natural surmise of the disciples, are given only by St. John. But the prediction and the questioning of

the disciples are recorded by all the Synoptics (Matt., xxvi; Mark, xiv; Luke, xxii). St. Matthew adds that Judas himself asked, "Is it I, Rabbi?" and was answered: "Thou hast said it" (xxvi, 25). All four Evangelists agree in regard to the main facts of the actual betrayal which followed so closely on this prediction, and tell how the traitor came with a multitude or a band of soldiers from the chief priests, and brought them to the place where, as he knew, Jesus would be found with His faithful disciples (Matt., xxvi, 47; Mark, xiv, 43; Luke, xxii, 47; John, xviii, 3). But some have details not found in the other narratives. That the traitor gave a kiss as a sign is mentioned by all the Synoptics, but not by St. John, who in his turn is alone in telling us that those who came to take Jesus fell backward to the ground as He answered "I am he." Again, St. Mark tells that Judas said "Hail, Rabbi" before kissing his Master, but does not give any reply. St. Matthew, after recording these words and the traitor's kiss, adds: "And Jesus said to him: Friend, whereto art thou come?" (xxvi, 50). St. Luke (xxii, 48) gives the words: "Judas, dost thou betray the Son of man with a kiss?"

St. Matthew is the only Evangelist to mention the sum paid by the chief priests as the price of the betrayal, and in accordance with his custom he notices that an Old Testament prophecy has been fulfilled therein (Matt., xxvi, 15; xxvii, 5-10). In this last passage he tells of the repentance and suicide of the traitor, on which the other Gospels are silent, though we have another account of these events in the speech of St. Peter: "Men, brethren, the scripture must needs be fulfilled, which the Holy Ghost spoke before by the mouth of David concerning Judas, who was the leader of them that apprehended Jesus: who was numbered with us, and had obtained part of this ministry. And he indeed hath possessed a field of the reward of iniquity, and being hanged, burst asunder in the midst: and all his bowels gushed out. And it became known to all the inhabitants of Jerusalem: so that the same field was called in their tongue, Haceldama, that is to say, the field of blood. For it is written in the book of Psalms: Let their habitation become desolate, and let there be none to dwell therein. And his bishopric let another take" (Acts, I, 16-20). Cf. Ps., lxxviii, 26; cviii, 8). Some modern critics lay great stress on the apparent discrepancies between this passage in the Acts and the account given by St. Matthew. For St. Peter's words taken by themselves seem to imply that Judas himself bought the field with the price of his iniquity, and that it was called "field of blood" because of his death. But St. Matthew, on the other hand, says: "Then Judas, who betrayed him, seeing that he was condemned, repenting himself, brought back the thirty pieces of silver to the chief priests and ancients, saying: I have sinned in betraying innocent blood. But they said: What is that to us? Look thou to it. And casting down the pieces of silver in the temple, he departed: and went and hanged himself with an halter." After this the Evangelist goes on to tell how the priests, who scrupled to put the money in the corbona because it was the price of blood, spent it in buying

the potter's field for the burial of strangers, which for this cause was called the field of blood. And in this St. Matthew sees the fulfillment of the prophecy ascribed to Jeremias (but found in Zach., xi, 12): "And they took the thirty pieces of silver, the price of him that was prized, whom they prized of the children of Israel. And they gave them unto the potter's field, as the Lord appointed to me" (Matt., xxvii, 9, 10).

But there does not seem to be any great difficulty in reconciling the two accounts. For the field, bought with the rejected price of his treachery, might well be described as indirectly bought or possessed by Judas, albeit he did not buy it himself. And St. Peter's words about the name Haceldama might be referred to the "reward of iniquity" as well as the violent death of the traitor. Similar difficulties are raised as to the discrepancies in detail discovered in the various accounts of the betrayal itself. But it will be found that, without doing violence to the text, the narratives of the four Evangelists can be brought into harmony, though in any case there will remain some obscure or doubtful points. It is disputed, for instance, whether Judas was present at the institution of the Holy Eucharist and communicated with the other Apostles. But the balance of authority is in favour of the affirmative. There has also been some difference of opinion as to the time of the treachery. Some consider that it was suddenly determined on by Judas after the anointing at Bethania, while others suppose a longer negotiation with the chief priests.

But these textual difficulties and questions of detail fade into insignificance beside the great moral problem presented by the fall and treachery of Judas. In a very true sense, all sin is a mystery. And the difficulty is greater with the greatness of the guilt, with the smallness of the motive for doing wrong, and with the measure of the knowledge and graces vouchsafed to the offender. In every way the treachery of Judas would seem to be the most mysterious and unintelligible of sins. For how could one chosen as a disciple, and enjoying the grace of the Apostolate and the privilege of intimate friendship with the Divine Master, be tempted to such gross ingratitude for such a paltry price? And the difficulty is greater when it is remembered that the Master thus basely betrayed was not hard and stern, but a Lord of loving kindness and compassion. Looked at in any light the crime is so incredible, both in itself and in all its circumstances, that it is no wonder that many attempts have been made to give some more intelligible explanation of its origin and motives, and, from the wild dreams of ancient heretics to the bold speculations of modern critics, the problem presented by Judas and his treachery has been the subject of strange and startling theories. As a traitor naturally excites a peculiarly violent hatred, especially among those devoted to the cause or person betrayed, it was only natural that Christians should regard Judas with loathing, and, if it were possible, paint him blacker than he was by allowing him no good qualities at all. This would be an extreme view which, in some respects, lessens

the difficulty. For if it be supposed that he never really believed, if he was a false disciple from the first, or, as the Apocryphal Arabic Gospel of the Infancy has it, was possessed by Satan even in his childhood, he would not have felt the holy influence of Christ or enjoyed the light and spiritual gifts of the Apostolate.

At the opposite extreme is the strange view held by the early Gnostic sect known as the Cainites described by St. Irenaeus (*Adv. Haer.*, I, c. ult.), and more fully by Tertullian (*Praesc. Haeretic.*, xlvii), and St. Epiphanius (*Haeres.*, xxxviii). Certain of these heretics, whose opinion has been revived by some modern writers in a more plausible form, maintained that Judas was really enlightened, and acted as he did in order that mankind might be redeemed by the death of Christ. For this reason they regarded him as worthy of gratitude and veneration. In the modern version of this theory it is suggested that Judas, who in common with the other disciples looked for a temporal kingdom of the Messias, did not anticipate the death of Christ, but wished to precipitate a crisis and hasten the hour of triumph, thinking that the arrest would provoke a rising of the people who would set Him free and place Him on the throne. In support of this they point to the fact that, when he found that Christ was condemned and given up to the Romans, he immediately repented of what he had done. But, as Strauss remarks, this repentance does not prove that the result had not been foreseen. For murderers, who have killed their victims with deliberate design, are often moved to remorse when the deed is actually done. A Catholic, in any case, cannot view these theories with favour since they are plainly repugnant to the text of Scripture and the interpretation of tradition. However difficult it may be to understand, we cannot question the guilt of Judas. On the other hand we cannot take the opposite view of those who would deny that he was once a real disciple. For, in the first place, this view seems hard to reconcile with the fact that he was chosen by Christ to be one of the Twelve. This choice, it may be safely said, implies some good qualities and the gift of no mean graces.

But, apart from this consideration, it may be urged that in exaggerating the original malice of Judas, or denying that there was even any good in him, we minimize or miss the lesson of this fall. The examples of the saints are lost on us if we think of them as being of another order without our human weaknesses. And in the same way it is a grave mistake to think of Judas as a demon without any elements of goodness and grace. In his fall is left a warning that even the great grace of the Apostolate and the familiar friendship of Jesus may be of no avail to one who is unfaithful. And, though nothing should be allowed to palliate the guilt of the great betrayal, it may become more intelligible if we think of it as the outcome of gradual failing in lesser things. So again the repentance may be taken to imply that the traitor deceived himself by a false hope that after all Christ might pass through the midst of His enemies as He had done

before at the brow of the mountain. And though the circumstances of the death of the traitor give too much reason to fear the worst, the Sacred Text does not distinctly reject the possibility of real repentance. And Origen strangely supposed that Judas hanged himself in order to seek Christ in the other world and ask His pardon (In Matt., tract. xxxv).

W.H. KENT

Judas Machabeus

Judas Machabeus

Third son of the priest Mathathias who with his family was the centre and soul of the patriotic and religious revolt of the Jews against the King of Syria (I Mach., ii, 4). Various conjectures have been put forth as to the origin of his surname. The name appears to be derived from the Syriac word *maqqa* (a hammer or mallet) and it was bestowed with reference to the crushing prowess displayed by Judas against the enemies of the nation, being equivalent to the name *Martel* given to Charles Martel. Judas was designated by his dying father as the new leader of the band of guerrilla warriors in year 167 B.C., and he remained in command until the year 161. He was animated with a great confidence in the help of the Lord in the good cause. He began his military operations by surprising and burning down many towns which had held out for the enemies of Israel, and when regular armed forces were sent to put a stop to his ravages, he did not refuse to meet them in the field (II Mach., viii, 1-7). He proved himself to be an excellent tactician as well as an intrepid warrior. Among his military exploits are mentioned the defeat and slaying of Apollonius the recent plunderer of Jerusalem, and the utter rout of the Syrian forces led by the deputy governor Seron in an encounter at Bethoron (I Mach., iii, 10-24). Other Syrian leaders were also vanquished by Judas, viz., Gorgias and Nicanor, Timotheus, Bachides, and Lysias (I Mach., iii, 10-iv, 35).

These victories afforded a respite during which Judas turned his attention to the condition of the ruined city of Jerusalem and that of the Temple which had been ignominiously profaned. Having appointed a body of armed men to hold in check the Syrian garrison still occupying the citadel, the Jewish leader set about renovating and purifying the sanctuary, being aided in the work by the priests. When the renovation was completed the new Temple service was inaugurated by a feast of re-dedication which lasted eight days, and it was decreed that henceforth in memory of this event an annual feast also of eight days should be celebrated (I Mach., iv, 36-59; II Mach., x,

1-8; John, x, 22). Some of the neighbouring tribes, alarmed at the progress of the Jews, took up arms against them, but they were easily vanquished by Judas, who then bent all his energies to bring a successful issue the war of independence against Syria. For three years he pursued this arduous task with relentless energy and patience and with varying success. In the meantime he sent messengers to Rome in order to secure the protection of the Government against the oppression of the Syrians. The mission was diplomatically successful, but before the negotiations had time to become known in the East, Judas had been defeated and slain on the battlefield at Laisa (161 B.C.) (I Mach., iv, 60-ix, 18; II Mach., x-xv).

BEURLIER in VIGOUROUX, *Dict de la Bible*, s.v. Judas Machabée; GIGOT, *Outlines of Jewish History*, xxviii, § 2, 1.

JAMES F. DRISCOLL

Claude Judde

Claude Judde

French preacher and spiritual father; born at Rouen, about 20 December, 1661; died at Paris, 11 March, 1735.

He entered the Society of Jesus on 18 September, 1677, and was admitted to his final vows on 2 Feb., 1695. He was first employed to preach, and did so successfully both in the provinces and in the capital. It soon became evident that he possessed oratorical gifts equal to Bourdaloue's, who indeed wished him to become his successor and spoke of bequeathing him his papers. Judde's superiors, however, asked him to sacrifice his pulpit success for the more humble but very important duty of training his brethren in religious virtues. The orator accepted this inconspicuous office, and from 1704 to 1721 he was instructor of the third probation at Rouen and rector of the Paris novitiate. The hearers of his retreats and exhortations were charmed with his solid and convincing eloquence, at once vigorous and pathetic, and sought to keep the memory of it in writing. Hence the great number of copies which were preserved by Jesuits or made for the use of other religious communities, and of which many are still found in public and private libraries. Father Judde did not publish any of his works, but after his death, thanks to the transcripts already mentioned, several collections appeared successively. Father Lallemand, S.J., had printed the "*Retraite spirituelle pour les personnes religieuses*" (Paris, 1746), which was early translated into Latin by Father J. B. Cachet, S.J. (Augsburg and Freiburg im Br., 1752). Abbé Lemascrier edited the "*Réflexions chrétiennes sur les grandes vérités de la foi et sur les principaux mystères de la Passion de Notre Seigneur*" (Paris, 1748). These meditations, especially suitable for Holy Week, were later translated into Spanish by Father de Isla, S.J. (Madrid, 1785).

Father Chéron, a Theatine, gave to the public the "Exhortations sur les principaux devoirs de l'état religieux" (Paris, 1772). Finally, Abbe Lenoir-Duparc, a former Jesuit and novice under Father Judde, undertook from copies revised by the author a complete collection of "OEuvres spirituelles" (Paris and Lyons, 1781-2). At the beginning of these seven volumes, later reduced to five and often re-edited, there is, under the title of "Retraite spirituelle de trente jours", an excellent development of the Exercises of St. Ignatius, especially the parts known as the First and the Third Weeks. The treatises in catechetical form on confession, prayer, and the Mass, and the very instructive "Exhortations" are also worthy of note. Several parts of this collection been, up to date, published separately and also translated into German.

PAUL DEBUCHY

Epistle of Saint Jude

Epistle of St. Jude

The present subject will be treated under the following heads:

I. The Author and the Authenticity of the Epistle:

(1) Jude in the Books of the New Testament; (2) Tradition as to the Genuineness and the Canonicity of the Epistle; (3) Difficulties Arising from the Text; (4) The Relation of Jude to the Second Epistle of St. Peter; (5) Vocabulary and Style;

II. Analysis of the Epistle;

III. Occasion and Object; IV. To Whom Addressed; V. Date and Place of Composition.

I. THE AUTHOR AND THE AUTHENTICITY OF THE EPISTLE

(1) Jude in the Books of the New Testament

In the address of the Epistle the author styles himself "Jude, the servant of Jesus Christ and brother of James". "Servant of Jesus Christ" means "apostolic minister or labourer". "Brother of James" denotes him as the brother of James *kat exochen* who was well-known to the Hebrew Christians to whom the Epistle of St. Jude was written. This James is to be identified with the Bishop of the Church of Jerusalem (Acts, xv, 13; xxi, 18), spoken of by St. Paul as "the brother of the Lord" (Gal. i, 19), who was the author of the Catholic Epistle of St. James. and is regarded amongst Catholic interpreters as the Apostle James the son of Alpheus (St. James the Less). This last identification, however, is not evident, nor, from a critical point of view, does it seem beyond all doubt. Most Catholic commentators identify Jude with the "Judas Jacobi" ("Jude, the brother of James" in the D.V.) of Luke, vi, 16, and Acts, i, 13 -- also called Thaddeus (Matt. x, 3; Mark, iii, 18) -- referring the expression to the fact that his brother James was better known than himself in the primitive Church. This view is strongly confirmed

by the title "the brother of James", by which Jude designates himself in the address of his Epistle. If this identification is proved, it is clear that Jude, the author of the Epistle, was reckoned among the Twelve Apostles. This opinion is most highly probable. Beyond this we find no further information concerning Jude in the New Testament, except that the "brethren of the Lord", among whom Jude was included, were known to the Galatians and the Corinthians; also that several of them were married, and that they did not fully believe in Christ till after the Resurrection (I Cor., ix, 5; Gal., i, 10; John, vii, 3-5; Acts, i, 14). From a fact of Hegesippus told by Eusebius (Hist. eccl., III, xix, xx, xxii) we learn that Jude was "said to have been the brother of the Lord according to the flesh", and that two of his grandsons lived till the reign of Trajan (see, however, Brethren of the Lord).

(2) Tradition as to the Genuineness and the Canonicity of the Epistle

The Epistle of Jude is one of the so-called *antilegomena*; but, although its canonicity has been questioned in several Churches, its genuineness has never been denied. The brevity of the Epistle, the coincidences between it and II Peter, and the supposed quotation from apocryphal books, created a prejudice against it which was gradually overcome. The history of its acceptance by the Church is briefly as follows:

Some coincidences or analogies exist between Jude and the writings of the Apostolic Fathers -- between Barnabas, ii, 10, and Jude, 3, 4; Clemens Romanus, Ep. xx, 12; lxxv, 2, and Jude, 25; Ep. ad Polyc., iii 2; iv, 2, and Jude, 3. 20, Mart. Polyc., xx, and Jude, 24 sq. It is possible, though not certain, that the passages here noted were suggested by the text of Jude. The similarity between "Didache" ii, 7 and Jude, 22 sq., does not seem to be accidental, whilst in Athenagoras (about A.D., 177), "Leg.", xxiv, and in Theophilus of Antioch (d. about 183), "Ad Autol." II, xv, there is a clear reference to Jude, 6 and 13 respectively.

The earliest positive reference to the Epistle occurs in the Muratorian Fragment, "Epistola sane Judæ et superscriptæ Joannis duæ in catholica [scil. Ecclesia] habentur." The Epistle was thus recognized as canonical and Apostolic (for it is Jude the Apostle who is here meant) in the Roman Church about 170. At the end of the second century it was also accepted as canonical and Apostolic by the Church of Alexandria (Clement of Alexandria, "Pæd.", III, viii, followed by Origen), and by the African Church of Carthage (Tertullian). At the beginning of the third century the Epistle was universally accepted except in the primitive East Syrian Church, where none of the Catholic Epistles were recognized, nor the Apocalypse.

This remarkably wide acceptance, representing as it does the voice of ancient tradition, testifies to the canonicity and the genuineness of Jude. During the third and fourth centuries doubt and suspicion, based on internal evidence (especially on the supposed quotation from the Book of Enoch and the "Assumption of Moses"), arose

in several Churches. However the prejudice created against the deuterocanonical Jude was soon overcome, so that the Epistle was universally accepted in the Western Church at the very beginning of the fifth century (see Canon of the New Testament).

In the Eastern Church Eusebius of Cæsarea (260-340) placed Jude among the *antilegomena* or the "disputed books, which are nevertheless known and accepted by the greater number" (Hist. Eccl., II xxiii; III, xxv); he incorporated all the Catholic Epistles in the fifty copies of the Bible which at the command of Constantine, he wrote for the Church of Constantinople. St. Athanasius (d. 387) and St. Epiphanius (d. 403) placed Jude among the canonical and Apostolic writings. Junilius and Paul of Nisibis in Constantinople (513) held it as *mediæ auctoritatis*. However, in the sixth century the Greek Church everywhere considered Jude as canonical.

The recognition of Jude in the Syriac Church is not clear. In Western Syria we find no trace of Jude in the fifth century. In Eastern Syria the Epistle is wanting in the oldest Syriac version, the Peshito, but it is accepted in the Philoxenian (508) and Heraclion (616) versions. Except among the Syriac Nestorians, there is no trace of any ecclesiastical contradiction from the beginning of the sixth century till the Council of Trent, which defined the canonicity of both the proto- and deuterocanonical books of the New Testament.

(3) Difficulties Arising from the Text

The wording of verse 17 -- which some critics have taken as an evidence that the Epistle was written in the second century -- does not imply that the recipients of the Epistle had, in a period that was past, received oral instructions from *all* the Apostles, nor does it imply that Jude himself was not an Apostle. The text *ton apostolon* implies only that several of the Apostles had predicted to the readers that such "mockers" as are described by the writer would assail the Faith; it is not separation in time, but distance of place, that leads Jude to refer to the scattered Apostles as a body. Nor does he exclude himself from this body, he only declares that he was not one of those prophesying Apostles. The author of II Peter, who often ranks himself among the Apostles, uses a similar expression *ton apostolon humon* (3:2), and certainly does not mean to imply that he himself was not an Apostle.

Many Protestant scholars have maintained that the false teachers denounced in Jude are Gnostics of the second century. But, as Bigg rightly says: "It is not really a tenable view" (op. cit. infra). St. Jude does not give any details about the errors denounced in this short letter any more than does St. Peter, and there is no ground for identifying the false teachers with any of the Gnostic sects known to us. There is nothing in the references made to false doctrines that obliges us to look beyond the Apostolic times.

The use made of apocryphal writings, even if proved, is not an argument against the Apostolicity of the Epistle; at most it could only invalidate its canonicity and inspiration. Verse 9, which contains the reference concerning the body of Moses, was supposed by Didymus ("Enarr. in Epist. Judæ" in P. G., XXXIX, 1811 sqq.), Clement of Alexandria (Adumbr. in Ep. Judæ), and Origen (De Princ., III, ii, 1), to have been taken from the "Assumption of Moses", which is unquestionably anterior to the Epistle of Jude. Jude may possibly have learned the story of the contest from Jewish tradition. But, at any rate, it is evident that Jude does not quote the "Assumption" as a written authority, and still less as a canonical book.

As regards the prophecy of vv. 14 sq., many Catholic scholars admit it to be a loose and abbreviated citation from the apocryphal Book of Henoch, i, 1, 9, which existed a century before St. Jude wrote. But here again St. Jude does not quote Henoch as a canonical book. There is nothing strange, as Plumptre remarks (op. cit. infra, 88), in Jude making use of books not included in the Hebrew Canon of the Old Testament, "as furnishing illustrations that gave point and force to his counsels. The false teachers, against whom he wrote, were characterized largely by their fondness for Jewish fables, and the allusive references to books with which they were familiar, were therefore of the nature of an *argumentum ad hominem*. He fought them, as it were, with their own weapons." He merely intends to remind his readers of what they know. He does not affirm or teach the literary origin of the apocryphal book, such is not his intention. He simply makes use of the general knowledge it conveys, just as the mention of the dispute between Michael and the Devil is but an allusion to what is assumed as being known to the readers. By no means, therefore, does either of the passages offer any difficulty against the canonicity of the Epistle, or against the Catholic doctrine of inspiration.

(4) The Relation of Jude to the Second Epistle of St. Peter

The resemblance as to thought and language between Jude and II Peter, ii, is quite sufficient to make it certain that one of the two writers borrowed from the other: the hypothesis that both writers borrowed from a common document must be put aside, as having no support whatsoever. The question remains: Which of the two Epistles was the earlier? The priority of II Peter, as well as the priority of Jude, has found strong advocates, and much has been written about this intricate question. The following arguments, however, lead to the conclusion that the Epistle of Jude was the earlier of the two:

- It is not uncommon for St. Peter to throw a light on the more obscure passages of the Epistle of Jude, or to interpret the more difficult passages. At one time he puts them in a shorter form or uses more general terms; at another, while adducing in general the same arguments, he adds a new one or omits one or another used in

Jude. This shows that St. Peter had probably read the Epistle of St. Jude. Compare especially II Peter, ii, 12, with Jude, 10.

- This may also be confirmed not only by II Peter, i, 17, compared with Jude, 13 -- where St. Peter doubles Jude's comparison and puts more strength into it, whilst Jude has more similitudes -- but also by comparing the style of both, for, whereas the style of Jude is always the same, that of St. Peter differs somewhat from his usual way of writing, and the reasons for this change seem to be the matter he writes about and the influence of the Epistle of St. Jude.
- Finally, is more probable that St. Peter has embodied in his work the text of Jude's Epistle than that Jude should have included in his writing only a part of St. Peter's Epistle. If Jude wrote later than Peter and found the same state of things, why did he omit the remaining questions, e.g. the doubts about the *parousiæ*? Or why should he, in order to combat the same heretics, give only a summary of St. Peter's Epistle, omitting entirely the strongest arguments?

(5) Vocabulary and Style

The vocabulary of Jude proves that the author was a Jew, saturated with the Old Testament, using Hebraisms, yet acquainted with the *koine dialektos* -- the "common dialect". Thirteen words found in Jude do not occur elsewhere in the New Testament. Some words of the new Christian dialect appear in Jude as well as in the Pauline Epistles, but literary affinity or direct quotation cannot be proved. The style, although sometimes poetical, always evinces the severe and authoritative tone of a man of Apostolic rank, held in high honour.

II. ANALYSIS OF THE EPISTLE

(a) **Exordium.** Address and good wishes (vv. 1-2), occasion and purpose of the Epistle (3-4).

(b) **First Part.** He inveighs against the pseudo-teachers; describes their life and errors (5-16). They will be severely punished, as is evident from the severe punishment of the unbelieving Israelites in the desert (5), of the wicked angels (6), and of the inhabitants of Sodom (7). He mentions their wicked teaching and life (8), and opposes the modesty of Michael the Archangel (9) to their pride (10). He foretells for the heretics the punishment of Cain, Balaam, and the sons of Core, for they have imitated their errors (11-3). Enoch has already prophesied the judgment of God upon them (14-6).

(c) **Second Part.** He exhorts the faithful (17-23). They must remember the teaching of the Apostles, by whom they had been warned of the coming of such heretics (17-19). They must maintain the Faith, keep themselves in the love of God, and wait for

life everlasting (20-21). What their behaviour should be towards Christians that have in any way fallen away (22-23)

(d) **Epilogue.** A most beautiful doxology (24-25).

III. OCCASION AND OBJECT

Occasion. The Epistle was occasioned by the spread of the dogmatico-moral errors amongst the Hebrew Christians; pseudo-doctors "are secretly entered in", who abuse Christian liberty to give themselves over to intemperance; moreover "denying the only sovereign Ruler, and our Lord Jesus Christ" (4).

Object. Jude's intention was to caution his readers, the Hebrew Christians, against such depraved teaching, and to exhort them to keep faithfully the teaching of the Apostles.

IV. TO WHOM ADDRESSED

The dedicatory address runs as follows: *tois en Theo patri hegapemenois kai Iesou Christo teteremenois kletois* (to them that are beloved in God the Father, and preserved in Jesus Christ, and called). Which are the *kletoi*, or "called", becomes manifest from the context. They are not all the Christians of the whole Christian world, but those of a particular Church (vv. 3, 4, 17, 22). Several commentators think that St. Jude's Epistle was addressed to the same churches of Asia Minor to which St. Peter's Epistle was written. This opinion, according to these commentators, is to be held because in both Epistles the same errors are condemned, and also because Jude (v. 17) appears to have known II Peter, and shows that the prophecy of the Prince of the Apostles has been verified. But we have already proved that the second argument is of no value (see above I, 4); as for the first, there are two objections:

- the errors condemned in the Epistle of St. Jude and in II Peter may have spread in countries outside Asia Minor;
- we find in Jude several reasons for believing that the Epistle was addressed, not to the Gentile Christians of Asia Minor, but to the Hebrew Christians of Palestine or of a neighbouring country.

V. DATE AND PLACE OF COMPOSITION

Date. It is difficult to state the exact time at which St. Jude wrote his Epistle. But the doctrines against which he inveighs, and the looseness of morals or the so-called *antinomismus*, seem to indicate the end of the Apostolic age. Jude seems on the other hand to have written before A.D. 70; otherwise in vv. 5-7 he would have spoken of the destruction of Jerusalem. In those verses St. Jude mentions the different punishments of prevaricators, and therefore in this exhortation to Hebrew Christians he could not

have passed over in silence so dire a calamity. Moreover we have shown that the Epistle of St. Jude was written before II Peter, which latter was probably written A.D. 64 (65). Therefore St. Jude must have written shortly before 64 (65).

Place of Composition. Here we can only guess, but we prefer the opinion that the Epistle was written in Palestine, and probably in Jerusalem.

A. CAMERLYNCK

Judea

Judea

Like the adjective *Ioudaios*, the noun *Ioudaia* comes from the Aramæan *Iehûdai* (I Esd., iv, 12). It designates the part of Palestine adjacent to Jerusalem and inhabited by the Jewish community after their return from captivity. Its original limits may be assigned as follows: Bethsûr, on the south; Bethoron, on the north; Emaüs, on the west; the Jordan on the east. The Jews scattered in other parts of the country did not inhabit Judea properly so called. When, in 160 b.c., the Syrian general Bacchides wished to keep Judea in his possession, he built forts at Jericho, Bethoron, Bethel, Tibneh, and Tephon (not Bêt-Nettif), and fortified Bethsûr and Gézer (I Mach., ix, 50-52). Then, between Nehemias (cf. II Esd., iii) and the Hasmoneans, the boundaries of the Jewish country underwent few modifications. But the Machabees, through their conquests, pushed the frontiers back; Apherema (Taybeh?), Lydda, Ramathem, (Rentis) (I Mach., xi, 34), Jaffa (I Mach., xii, 33), Mâdabâ, Samaria, Scythopolis (Josephus, "Antiq. Jud.", XIII, ix, 1; x, 2) were in succession annexed to the Jewish territory. The Machabean kingdom is sometimes called Judea by Josephus (Antiq. Jud., XIII, xi, 3). Elsewhere, however, the same historian restricts Judea proper to more correct limits. To the north it extended only as far as Anuath-Borkeos ('Ainah-Bergît), less than two miles north of Lubbân; to the south as far as Iardas, on the confines of Arabia, thus taking in what was called Idumea at the time of the Syrian domination. The Jordan was its boundary on the east, the Mediterranean on the west (Bell. Jud., III, iii, 5). The history of this Judea is often confounded with that of Jerusalem. At first a province (*medînah*) of the Persian Empire, it was administered by a governor who resided at Jerusalem and was assisted by a council of elders. In 332 b.c., Alexander annexed it to the empire which he was then building. His successors long disputed over it. In 320 it was Egyptian; in 198 it was Syrian. The Jewish rising under the Machabees, which began in 167, issued in the independence of Judea, which lasted from 130 to 63 b.c. At the latter date, Pompey made it tributary to the Romans. Under Herod, who became its king in 37 b.c., the Saviour was born at Bethlehem. Archelaus, the son and successor of Herod, having been deposed in the year 6 of our era, the government of Judea was confided

to Roman procurators, one of whom, Pontius Pilate, condemned Christ to the cross, and two others, Felix and Porcius Festus, are involved in the history of St. Paul. Administered from a.d. 41 to 44 by Agrippa I, it returned to the procurators until a.d. 66; and in a.d. 70 Judea disappeared as an individual district.

The evangelization of Judea began during the earthly life of Christ, Who journeyed through the land more than once and had friends there. It was one of the first provinces to benefit by the preaching of the Apostles. Judeans had heard the discourse of St. Peter, when he went forth from the upper chamber, and "there came together to Jerusalem a multitude out of the neighbouring cities, bringing sick persons, and such as were troubled with unclean spirits; who were all healed" (Acts, v, 16). Philip, one of the most zealous of the first seven deacons, baptizes the eunuch of Ethiopia on the road from Jerusalem to Gaza, in the spring which rises at the foot of Bethsûr. Thence this preacher betakes himself to Azotus (Esdoud), and from Azotus he goes up to Cæsarea, preaching the Gospel in the towns through which he passes. Lydda and Joppa, where St. Peter was soon to find disciples, lay along St. Philip's itinerary (Acts, viii, 26 sqq.). The Talmud is perhaps furnishing information on the preaching of the Gospel in Judea when it speaks of James of Kafar Sâmâ, who healed the sick in the name of Jesus. Kafar Sâmâ was probably in the neighbourhood of Hebron (perhaps Semouah). St. Paul again and again speaks of the Churches of Judea as being sorely tried by poverty, dissension, and persecution — Churches to which he was at first unknown, but which afterwards listened to his voice (I Thess., ii, 14; Gal., i, 22; Acts, xi, 29). Christianity was planted in Judea so early that at the Council of Nicæa (325) we meet with bishops of Cæsarea, Ascalon, Nicopolis, Jamnia, Eleutheropolis, Maximianopolis (Hebron?), Jericho Lydda, Azotus, Gaza (Gelzer, "Patrum Nicenorum nomina", Leipzig, 1898). In later lists of bishops we find names to add to these: Joppa, Anthedon, Diocletianopolis, Raphia, etc. (Hierocles, "Synecdemus", Berlin, 1866). From the fourth century to the Arab invasion the monastic life rose to a great height; it is enough to mention the foundations of St. Euthymius, St. Theodosius, and St. Sabas (cf. Génier, "Vie de s. Euthyme le Grand", Paris, 1909).

Considered in the extension given to it by Josephus — i. e. as a great square of territory lying between Aqrabeh, Deir Ballût, and the Nahr el Audjeh, on the north; the Mediterranean, on the west; Bersabee and Tell 'Arad, on the south; the Dead Sea and the Jordan, on the east — Judea presents a sufficiently varied physiognomy. On the west the ancient Philistia, the plains of Shephelah, of the Darôm, and of Saron produce sesame, wheat, and sorghum in abundance, while the orange, citron, palm, and vine grow there freely. In this level region are several important places: Jaffa (23,000 inhabitants), Gaza (16,000 inhabitants), Lydda, and Ramleh. Between the plain and the main group of mountains there is a stretch of well-cultivated hilly country without

any important towns. The mountain region of Judea rises to a height of 3280 feet, and is not very fertile, except near the springs. The summits are quite bare; where any earth is to be found on the rocks the fig, the olive, the vine, and barley grow. Of this region the chief centres are Jerusalem (80,000 to 100,000 inhabitants), Bethlehem (7000 inhabitants), Hebron (9000 inhabitants). The eastern part of Judea, abutting on the Dead Sea and the Jordan, is dotted with little hills, and peopled by nomadic tribes. The south, where Negeb offers a light soil, is not unsuited for cultivation. Water is scarce in Judea. In the mountains the rainfall is collected in cisterns; in the plains deep wells have been dug. There are a few springs, but their output is not very considerable; the principal ones are those of 'Arroub, Umm ed Daraj (Jerusalem), Liftah, Aïn Karim, Kolonieh, Abu Ghôsh, Bireh, and a whole group in the vicinity of Hebron. In the *wâdys* of the Jordan basin there is water throughout the year, which is not the case with those on the Mediterranean slope. The *wâdys* Farah, Kelt, Audjeh, Fusail, Far'â, not to mention the important springs of Eliseus, Doûk, Nuwaïmeh, Feshkha, and Engaddi, contribute their waters to the Ghôr and the Dead Sea throughout the entire year.

The Roman roads with which Judea was formerly scored are now impracticable. The only roads fit for wheeled vehicles are those from Jerusalem to Jericho, to Hebron by way of Bethlehem, to St. John in Montana, to Nablus, to Jaffa, and to the Mount of Olives — all of recent construction. There is also a narrow-gauge railroad from Jerusalem to Jaffa, the latter being the chief port of Judea, Gaza being the second.

Judea is above all an agricultural country. There are, however, a few special industries: at Jerusalem, carving in olive wood; at Bethlehem, carving in mother-of-pearl; at Gaza, goat's hair tissue, slippers, and soap; at Hebron, leather and water-bottles, jars and glass trinkets. The Mutessarifik of Jerusalem, which nearly corresponds to the ancient Judea, has an area of 8484 square miles, and comprises 328 cities, towns, villages, and hamlets, with an aggregate population of 350,000, of whom 100,000 are non-Mussulman. There are 27,000 Catholics, having for their parishes Jerusalem, Bethlehem, Bêt-Sahur, Bêt-Djâlah, Ramallah, Taybeh, Bir-Zeit, Ramleh, Jaffa and Gaza. Although not a vilayet, this province is directly dependent on the minister of the interior at Constantinople. It has five sub-prefectures: Jaffa, Gaza, Hebron, Bersabee, and (since 1906) Nazareth, which last is geographically within the vilayet of Beirut.

Paläst. Vereins* (1907), p. 53.

F.M. ABEL
Ecclesiastical Judge

Ecclesiastical Judge

(Judex Ecclesiasticus)

An ecclesiastical person who possesses ecclesiastical jurisdiction either in general or in the strict sense (see Jurisdiction) The official body appointed by the qualified ecclesiastical authority for the administration of justice is called a court (*judicium ecclesiasticum, tribunal, auditorium*) Every such court consists at the least of two sworn officials, the judge who gives the decision, and the clerk of the court (*scriba, secretarius, scriniarius, notarius, cancellarius*), whose duty is to keep a record of the proceedings and the decision (c. xi, X, De probat., II, xix). As a rule, however, an ecclesiastical court forms a collegiate tribunal, the members of which either join with the presiding officer in giving the decision as judges (*judices*) or merely advise with him as councillors (*auditores, assessores, consultores, consilarii*) (cc. xvi, xxi, xxii, xxiii, X, De off. et pot. jud. deleg., I, xxix) Connected with the courts are advocates, procurators, syndics, defenders, promoters, conservators, apparitors, messengers, etc The procurators and advocates conduct the case as the representatives or defenders of the parties to the suit (X, De postul., I, xxxvii; X, De procurat., I, xxxviii) The syndic is the counsel of a juridical person, a collegiate body or a chapter (X, De syndic., I, xxxix) The chief duty of the conservators is to represent the rights of the *personae miserabiles*, i.e. members of orders, the poor, widows, orphans (c. xv, in VIto, De off. et pot. jud. deleg., I, xiv) The fiscal promoter (*promotor fiscalis*) is appointed by the ecclesiastical authorities to watch over ecclesiastical discipline (Instructio Congr. Ep. et Reg., 11 June, 1880, art. xiii), consequently in penal cases he appears as public prosecutor A *defensor matrimonii*, or defender of the matrimonial tie, assists in suits concerning the invalidity of a marriage (Benedict XIV, "Dei miseratione", 3 November, 1741).

In addition to his jurisdiction, which can be ordinary, quasi-ordinary, or delegated, the judge must also have certain physical and moral qualities First, he must be an ecclesiastic (c. ii, X, De jud., II, i) Consequently women and laymen are excluded from the office of ecclesiastical judge. Yet the pope could confer the office upon a layman (Gloss to "Praesumant", c. ii, X, De jud., II, i) It is further necessary to have full use of his senses and understanding, and suitable legal knowledge; the person appointed must also be twenty years old; but eighteen years will suffice for a judge appointed by the pope or if the parties agree to it (c. xli, X, De off. jud. deleg., I, xxix) The judge must also have a good reputation, must not be excommunicated, suspended from office, or under an interdict (c. xxiv, X, De sent. et re jud., II, xxvii) Above all he must be impartial

A suspicion of partiality attaches to the judge who is personally interested in a case (c. xxxvi, X, De appellat., II, xxviii), or is related by blood within the fourth degree to one of the parties, or connected with one by marriage (c. xxxvi, cit.), or who lives in the same house, or dines at a common table, or is otherwise friendly, or on the other hand inimical, towards one of the parties (c. xxv, X, De off. jud. deleg., I, xxix), and he may be rejected (*recusari, exceptio judicis suspecti*) by the accused or by both parties as prejudiced (*suspectus*) If objection be raised against a judge on the ground of prejudice, which must be done in writing and if possible before the beginning of the action (c. xx, X, De sent. et re jud., II, xxvii), arbitrators are to pass on the objection (c. xxxix, X, De off. jud. deleg., I, xxix); if, however, objection be raised against the delegate of the bishop, the decision rests with the bishop (c. iv, X, De foro compet., II, ii) If the objection be declared well-founded, the judge transfers the case, with the concurrence of the party who brought the accusation, to another or to a higher judge (c. lxi, X, De appell., II, xxviii) If the judge lack the necessary qualifications, and this be known to the parties in the suit, the decision is invalid If, however, his unfitness be unknown to the parties, and he follow statute law, the Church supplements the deficiency, even if the judge have acted in bad faith.

Ecclesiastical jurisdiction is exercised over all baptized persons In order, however, that an ecclesiastical judge may be permitted to exercise *de facto* his judicial power he must also be competent, i.e. must be authorized to pass judgment on a given person in a given case Proceedings held before a judge without competence are null and void Those subject to the jurisdiction of a certain judge are said to be within the competence (*competentia*) of his court, or have their forum in him. The forum is either the free, voluntary choice of the parties (*forum prorogatum*), or it is defined by law (*forum legale*) But in criminal and matrimonial cases there is no *forum prorogatum* (c. ix, X, De in integr. restit., I, xli). Ecclesiastics can choose another judge only with the permission of the bishop, and in this case he must be an ecclesiastic (c. xii, xviii, X, De foro compet., II, ii) The legal forum (*forum legale*) is either ordinary, if the proper course of the regular courts is followed, or extraordinary, if, for legal reasons, a regular court is passed over Moreover, the *forum legale* is either general (*commune*), corresponding to the universally valid law, or special or privileged (*speciale sive privilegiatum*), resting on privilege, as in the case of ecclesiastics on account of the *privilegium fori* which they cannot renounce As the jurisdiction of a judge is generally limited to a defined locality, the *forum commune* is fixed by the domicile or quasi-domicile of the accused The axiom holds: *Actor sequitur forum rei*, the plaintiff goes to the court of the accused (c. v, viii, X, De foro compet., II, ii). Domicile (q.v.) is that place where one actually resides with the intention of always remaining there Quasi-domicile is determined by actual residence at the place and the intention to remain there at least the greater part of the year

There is also a domicile by operation of law, legal or fictitious domicile (*domicilium legale sive fictitium*) Thus a wife is subject to the jurisdiction of the domicile of the husband, children to that of the parents, religious to that of the place where the monastery is situated, persons having no fixed abode to that of the present place of residence A process can be instituted at Rome against an ecclesiastic who is only accidentally there (c. xx, X, De foro compet., II, ii) Besides the *forum domicilii*, the usual one, there is also that of the object (*forum rei sitae*, where the thing is situated), i.e. complaint can be brought before the judge in whose district the controverted object is (c. iii, X, De foro compet., II, ii); the forum where the contract is made (*forum contractus*), i.e. the parties can bring action before the judge in whose district the disputed contract has been made (c. xcii, X, De foro compet., II, ii); that of the offence (*forum delicti*), within the jurisdiction where the offence was committed (c. xiv, X, De foro compet., II, ii). There is also a forum arising from the connection of matters (*forum connexitatis sive continentiae causarum*), if the matters in dispute are so interrelated that one cannot be decided without the other (c. i, X, De causa possess., II, xii); also the forum of a counterplea (*forum reconventionis sive reaccusationis*), i.e. in a criminal suit the defendant can, on his side, accuse the plaintiff in the court of the judge before whom he himself is to be tried (c. ii, X, De mut. petit., II, iv) If the judge himself wishes to bring an accusation the superior appoints the judge who is to hear it (c. i, c. xvi, Q. vi) The decision of an incompetent judge is valid if by common error (*error communis*) he is held to be competent In civil disputes the parties can entrust the decision to any desired arbiter (X, De transact., I, xxxvi; X, De arbitr., I, xliii).

If the judge render a defective decision appeal can be taken to the next higher judge This relation of the courts to one another and the successive course of appeals (*gradus*) is called succession of instances, and follows the order of superiority From the beginning the bishop, or his representative, the archdeacon, or the "official" (*officialis*), or the vicar-general, was the judge in first instance for all suits, contentious or criminal, which arose in the diocese or in the corresponding administrative district, so far as such suits were not withdrawn from his jurisdiction by the common law. The court of second instance was originally the provincial synod, later the metropolitan [c. iii (Syn. of Nicaea, an. 325, c. v), iv (Syn. of Antioch, an. 341, c. xx), D. XVIII]. The court of the third instance was that of the pope. The court of the first instance for bishops was the provincial synod, the metropolitan, the exarch, or the patriarch; the court of second instance was that of the pope [c. xxxvi (Syn. of Sardica, an. 343, c. vii), c. II, Q. vi] Only the pope could be the judge of first instance for exarchs and patriarchs Since the Middle Ages the pope is the judge of first instance in all more important episcopal causes (*causae maiores, graviores, difficiliore, arduae*), the number and extent of which are in no way exactly definable, but to which above all belong the *causae*

criminales graviore contra episcopos---more serious criminal charges against bishops (c. i, X, De transl. episc., I, vii) Conformably to this the diocesan bishop or his representative (the vicar-general, or *officialis*, or some other diocesan authority) is now the judge of the court of first instance, so far as canon law has not withdrawn from him this jurisdiction (Council of Trent, Sess. XXIV, De ref., c. xx). If the see is vacant the vicar-capitular is judge of the court of first instance The judge of the second instance is the metropolitan (c. lxvi, X, De appell., II, xxviii) For archdioceses, as a rule, the judge of second instance is a neighbouring archbishop or bishop appointed by the Holy See (Concil. plenar. Baltimor., III, an. 1884, n. 316; Leo XIII, "Trans Oceanum", 18 April, 1897, n. 14) The same ordinance also applies to exempt bishoprics (Sac. Congr. pro negot. eccles. extraord., 11 September, 1906) The court of the third instance is the Apostolic See, but in the *causae maiores* it is the court of first instance As, however, the pope is the *judex ordinarius omnium*, the ordinary ecclesiastical judge of all, ecclesiastical suits without exception can be brought or summoned before the papal forum as the court of first instance (Council of Trent, Sess. XXIV, De ref., c. xx; Vatic., Sess. III, De eccl., c. iii).

In the Middle Ages the lower courts were often evaded, or the popes summoned the suits at one before their forum (c. lci, X, De appell., II, xxviii) This custom had some advantages on account of the better legal education and greater impartiality of the members of the papal court On the other hand the administration of justice was delayed, and, above all, made more costly by the rule enforced in the papal courts that the parties must appear in person. What made the matter still worse was that such summonses to Rome, as to the court of first instance, diminish unduly the authority of the lower courts To put an end, therefore, to constant complaint on this point the Decretals (q. v.) ordained that in future, before the rendering of the sentence, no one could appeal to a higher court without giving a sufficient reason to the judge *a quo* (from whom the appeal was made), and that the appeal could not be accepted by the judge *ad quem* (to whom appeal lies) until after he had satisfied himself of the validity of the appeal (c. lvi, X, De appell., II, xxviii) Lawsuits, therefore, pending before the Apostolic See were to be tried by a judge, belonging to the place whence the appeal came, and especially appointed by the pope (c. xxviii, X, De rescript., I, iii; c. xi, in VIto, De rescript., I, iii) In the late Middle Ages rulers of countries were frequently granted for their domains the papal *privilegia de non evocando* (exemption from summons); in some cases, also, they forbade the appeal to a foreign court.

Following the precedents of the Synods of Constance (Martini V Pap. et Germ. nat. concordata, c. iv, in Hardouin, "Acta. Conc.", VIII, 891) and of Basle (Sess. XXXI, c. i, in Hardouin, "Acta. Conc.", VIII, 1425), the Council of Trent (Sess. XXIV, De ref., c. xx, and Sess. XXV, De ref., c. x) decreed: The court of the bishop is the court of first

instance Each suit must be brought to a close within at least two years. During this period no appeal is permitted, neither can the higher judge summon the case before his forum An appeal before the lapse of two years is permissible only if a final sentence has been pronounced In case of appeal to the Apostolic See, or in case the latter, for good reasons, summons a suit from the beginning before its forum, the suit is to be decided either at Rome or by delegated judges on the spot (*judices in partibus*). As, however, on account of the remoteness of the place where the dispute arose and the consequent lack of knowledge of local persons, unsuitable judges have been at times appointed at the place where the dispute arose, the bishops are each to select, on occasion of the provincial or diocesan synod, at least four men (*judices synodales*) having the qualities designated by Boniface VIII (c. xi, in VIto, De rescript., I, iii), and must be present their names to the Apostolic See, which in its selection of judges is to be so limited to the persons thus named that the delegation of any other person is invalid As provincial and diocesan synods are no longer regularly held, bishops are permitted to make this selection with the advice of the chapter (Benedict XIV, "Quamvis paternae", 26 August, 1741) Consequently, judges so appointed are called *judices prosynodales* At present, however, this also is no longer customary On the contrary, the Apostolic See appoints its representatives *in partibus* entirely independently, but it is so arranged that the delegation is bestowed on neighbor bishops and archbishops for a definite term of years Such delegation is all the more necessary in case a State does not permit ecclesiastical suits to be tried outside of its boundaries, or will only permit the judgment of such a court to be executed within its territories by the secular power.

Johannes Baptist Sagmuller

Judges

Judges

The seventh book of the Old Testament, second of the Early Prophets of the Hebrew canon.

I. TITLE

The Hebrew name of the book was transliterated by Origen *Safateím*, and by St. Jerome *Sophtim*; it was translated by Melito and Origen *Kritaí*, by the Septuagint *ì tôn kritôn bíblos* or *tôn kritôn*, so, too, by the Greek Fathers; the Latins translated *liber Judicum* or *Judicum*.

The Hebrew verb meant originally "to act as a Divine judge", and was applied to God (Gen., xviii, 25), and to Moses acting as the specially inspired lawgiver and judge of Israel (Ex., xviii, 13, 16). In time the elders of the people became the "judges" (v. 25, 26). In this book the term *judges* (*shôphatím*) is applied to the leaders of Israel, and would seem to indicate that their right was Divine (Judges, x, 2, 3). The office of judge differed from that of king only in the absence of hereditary succession (xii, 7-15). It is worth noting that the Phoenicians, according to Livy, called their chief magistrate *suffetes* (XXVIII, xxxvii), and gave to the *suffetes* of Carthage a power analogous to that of the Roman consul (XXX, vii; XXXIV, lxi).

II. CONTENTS

(1) Introduction (i-xx, 5). A summary of the conquest of Chanaan (i, 1-36). The angel of Jahweh reproves the tribes that made league with the stranger (ii, 1-5). (2) The history of Israel under the judges (ii, 6-xvi), introduced by a summary of its contents -- Israel's forsaking of Jahweh, turning to Baal and Astaroth, defeat by her enemies, and deliverance by Jahweh (ii, 6-iii, 6). Then follow the wonderful deeds of the judges, of whom Gedeon and Samson are the chief heroes; to them are devoted seven chapters. (3) Two more stories of the times of the judges -- the migration of Dan and their idolatrous worship of the idol of Michas (xvii-xviii), the crime of the Benjamites and their punishment by Israel (xix-xxi). For fuller analysis see Cornely, "Introd. Spec. in Hist. V. T. Lib.", I, Paris, 1887, 109-14.

III. CANONICITY

The Book of Judges is admitted by all to belong to the canons of the Jews of Palestine, the Jews of the Dispersion (the Alexandrian canon), and the Christians. Only the authority of the infallible Church can determine the canon of Sacred Scripture, and define the inspired meaning of the Books. Hence Catholics may not go the way of Rationalists and of Protestants in the matter of the so-called late and manifold redaction of Judges.

IV. AUTHENTICITY

The chief arguments for the authenticity of Judges are given below under *Historicity* and *Sources*. We now appeal to:

- The canonizing of the book by Jews and Christians as an authentic narrative of part of Israel's history;
- the life-like style of the work;
- the minute and accurate details of the narrative;
- the evident purpose of the narrator to give a history of the things whereof he knows.

V. PURPOSE

Although the purpose of the narrator is evidently to give a history of the events that took place in Israel between the days of Josue and of Samuel, yet that purpose is rather epic and didactic than historical in the modern sense of the word.

(1) The narrator does not purpose history in the modern sense; he does not narrate in historical order all the important events of the period. This fact is clear from the appendixes (xvii-xxi), which give very important events outside their proper historical order.

(2) The historian of Judges has an epic purpose, as early historians (e.g. Herodotus) often had. The epos, or theme, of the historian of Judges is evolved in the summary (ii, 6-iii, 6), wherewith he introduces the history proper; he has it ever in mind to unfold why Jahweh allowed the foe to abide so long in the promised land, and even to defeat the chosen people, and why He raised up the judges. The idolatry of Israel is the reason.

(3) The didactic purpose of the book is to teach Israel that the commandments of Jahweh should be obeyed (iii, 4). When Israel leaves Jahweh, Jahweh leaves Israel, at least for the while; the foes of Israel triumph (cf. Aug., "De Civ. Dei", xvi, 43).

VI. SOURCES

The problem is complicated. Most contradictory theories have been proposed. According to Moore (see "Internat. Crit. Comm." on "Judges", also art. in "Encycl. Bibl."), the body of the book (ii, 6-xvi, 33) is Deuteronomistic; the general setting of the stories and the purpose of that setting show characteristics of the seventh and sixth centuries, the influence of Deuteronomy and of the great Prophets Jeremias and Ezechiel. The stories of the book, out of their setting and apart from their set purpose in the Book of Judges, are pre-Deuteronomic; they show no Deuteronomic traces except in the introductions and the links that chain the various stories together. Indeed, Moore would have it that this redaction and unification of the sources was the work of a pre-

Deuteronomic editor; this editor is not admitted by Kittel. To sum up, then, the opinion of Moore, one of the most eminent Protestant students of Judges, the book itself (i.e. ii, 6-xvi, 31) is made up of two strands (J and E), united not later than 621 b.c. by a preDeuteronomic redactor (R^{JE}), and reedited shortly thereafter, during the Deuteronomic reform of Josias and the influence of Jeremias, by the Deuteronomic editor of the Hexateuch (D). Many critics refuse to assign any strata of Judges to the Hexateuchal fictions -- J, E, JH, P or R, and D, even though they postulate many and late sources for the book in its present state. Among Catholic scholars a few, who wrote before the Biblical Commission issued its decrees about the Pentateuch, have accepted the late redaction. Most Catholic scholars, however, are unanimous against these few who have left the traditional positions of Catholic Bible-study. In the matter of historical criticism of Judges, as of the Pentateuch, Catholic scholars do not deny the use of various sources by the inspired writer, but postulate that these documents shall have been written and put together very much earlier than the Rationalists wish. There is no proof whatsoever of the late and manifold redactions of these documents in our present book. Cornely (loc. cit., 214-22) and Hummelauer (In Lib. Jud. et Ruth, 27) both consider that the writer of Judges was probably Samuel; and both admit that the work shows signs of the use of pre-existing documents. Such is the opinion also of Kaulen ("Einleitung in die heilige Schrift", 3rd ed., Freiburg, 1890, 181).

(1) Judges, in its present state, cannot have been written before Israel had a king. Only in the time of a king could the writer have said: "In those days there was no king in Israel, but every one did that which seemed right to himself" (xvii, 6; cf. xviii, 1; xxi, 24). These words appear only in the appendix (xvii-xxi), which we admit to be later than some of the sources used by the sacred writer; this appendix is generally admitted to be part of the work done by the last editor of Judges. This editor, then, wrote while Israel had a king.

(2) The book was not written after Solomon had done evil. The writer deems the lack of a king to be the explanation of the idolatry of the Danites and the misdeeds of the tribe of Benjamin. Such an explanation would have been out of the question had the writer known either of the idolatry brought in by Jeroboam and encouraged by Solomon or of the separation of Juda from Israel.

(3) This last editor must have written before David had reigned seven years. For Jerusalem was still called *Jebus* and was occupied by the Jebusites (xix, 11); whereas, in the seventh year of his reign, David took the citadel of Sion, called it the city of David, and destroyed the Jebusites (II Kings, v).

(4) Finally, it is likely that Judges antedates even the first seven years of David's reign and the last years of Saul's. The book purposes to keep the children of Israel from idolatry and from the Divine punishments thereof. In the beginning of David's and

the end of Saul's reign there was no need of such purpose: Saul had "rooted out the magicians and soothsayers from the land" (I Kings, xxviii, 9). Moreover, in that period the writer would have seen that even a "king in Israel" did not prevent the tribal and internal dissensions of the days of the judges.

(5) Since, then, Judges was most likely written in the first years of Saul's reign, there is no more probable writer thereof than Samuel. He had yielded to Israel's clamours, and set up Saul as king. A new war was impending. There was none in Israel more likely to make the people ready for that war by driving home to them the thesis of Judges -- that fidelity to Jahweh meant success against the foe of Israel.

(6) The use of previous documents by Samuel sufficiently explains the varied literary style on account of which the Rationalists frame their various hypotheses. The song of Debbora (v) is archaic by contrast with the language of its setting. The story of Gedeon is originally from a different hand than that of the first writer of Samson's history.

Catholic commentators of old assigned the Book of Judges to many hands. So Maldonatus (Comm. in Matt., ii, 23), Pineda (In Job, præf., iii), Clair (p. 10), and many others. Hummebauer (In Jud., 27) argues that the longer narratives -- those of Aod (iii, 15-30), Barac (iv and v), Gedeon (avi-viii), Abimelech (ix), Jephthe (xi, 1-xii, 7), and Samson (xiii-xvi) -- are distinct accounts, written by separate authors, who were contemporary or almost contemporary with the events they narrated. These varied narratives Samuel incorporated much as he found them; he drew from tradition for the minor details which he gives about the lesser judges. While setting these stories together, Samuel was inspired in regard to the complete thoughts he culled from others, as well as the introductions, links, and remarks he superadded.

VII. HISTORICITY

(1) Internal Evidence

The writer of Judges was contemporary with some of the events which he narrated; used documents written by those who were contemporary, or all but contemporary, with the deeds they told; and shows every sign of sincerity, care, and truth. The very concern of the writer to give the truth explains the manifold literary style of the book. He has preserved to us unchanged the style of the song of Debbora and that of the fable of Joatham. He has transmitted sayings peculiar to place and to person (ii, 5; iv, 5; vi, 24, 32; xv, 19; xviii, 12, 29). The nationalistic objections to the miraculous in the stories of Gedeon and Samson are generally accepted by Protestant writers, who look upon these portions of Judges as legendary; to Catholics these are as historical as any other portion of the work. The enemies to the historicity of the book in vain insist that these stories are set down as legends to please the Israelites. The writer of Judges so

berates the Israelites for idolatry and inter-tribal dissension that it is unscientific to accuse him of truckling to their pride in their heroes.

(2) External Evidence

(a) Catholic tradition is clear. The Fathers look upon the narrative of Judges as fact-narrative; their unanimity is admitted by all who deem that unanimity worth consideration.

(b) O.-T. testimony is manifold. The opening summary (i, 1-ii, 5) gives details the historical value of which is attested by Josue: Juda's siege of Dabir (i, 10-15; Jos., xv, 14-19), the Jebusites in Jerusalem (i, 21; Jos., xv, 63), the Chanaanite in Gazer along with Ephraim (i, 29; Jos., xvi, 10), the Chanaanite dwelling with Manasses (i, 27; Jos., xvii, 11). Like details are the death of Josue (ii, 6-9; Jos., xxiv, 28-31), the capture of Lesem by Dan (xvii, xviii; Jos., xix, 47). The Books of Kings tell us as facts much that we read in Judges. Israel's forgetfulness of Jahweh, her defeat by the foe and salvation by the judges (I Kings, xii, 9-11); the death of Abimelech, son of Gedeon (ix, 53; II Kings, xi, 21). The Psalms dwell proudly on the deeds of the judges: the fate of Sisara, Jabin, Oreb, Zeb, Zebee, and Salmana (vii, 22, 25; iv, 15; viii, 21; Ps. lxxxii, 10-12); the entire history of Judges in outline (Ps. cv, 34-46). The Prophets refer to real facts given in Judges: the defeat of Madian by Gedeon (Is., ix, 4; x, 26); the crime at Gabaa (Osee, ix, 9; x, 9).

(c) In the N. T., St. Paul mentions the judges in their proper place between Josue and Samuel (Acts, xiii, 20); praises some of the judges along with certain kings (Heb., xi, 32).

VIII. TEXT

(1) *Hebrew*. Kittel's edition shows that the Masoretic text is in very good condition. "It is better preserved than any other of the historical books" (Moore, "Judges", 43). The only serious difficulties are in the song of Debbora.

(2) *Greek*. We have two distinct Septuagint forms (cf. Lagarde, "Septuaginta-Studien", 1892, 1-72): one is seen in the Alexandrinus (A), Coislinianus (P), Basiliano-Vaticanus (V), and many cursives; the other version is represented by the Vatican (B), and a considerable number of cursives.

(3) *Latin*. St. Jerome's version is one of his most careful efforts at translation of the Masorah, and is of the greatest exegetical importance.

Fathers: Theodoret, *Quæstiones in Librum Judicorum* in P.G., LXXX, 485; Procopius of Gaza, *Comm. in Judices* in P.G., LXXXVII, 1041; St. Augustine, *Quæstiones in Heptateuchium* in P.L., XXXIV, 701. Modern commentators mentioned in the body of the article. See also Bonfrère, *Comm. in Jos., Jud., et Ruth* (Paris, 1631); Serarius, *Jud. et Ruth explanati* (Mainz, 1609); Clair, *Les Juges et Ruth* (Paris, 1878). Protestant commentators of worth are Moore, Keil, Budde, Bertheau.

WALTER DRUM

Divine Judgment

Divine Judgment

This subject will be treated under two heads:

- I. Divine Judgment Subjectively and Objectively Considered;
- II. Pre-Christian Beliefs Concerning Judgment after Death.

Particular Judgment and General Judgment will be treated in separate articles.

I. DIVINE JUDGMENT SUBJECTIVELY AND OBJECTIVELY CONSIDERED

Divine judgment (*judicium divinum*), as an immanent act of God, denotes the action of God's retributive justice by which the destiny of rational creatures is decided according to their merits and demerits. This includes:

- God's knowledge of the moral worth of the acts of free creatures (*scientia approbationis et reprobationis*), and His decree determining the just consequences of such acts;
- the Divine verdict upon a creature amenable to the moral law, and the execution of this sentence by way of reward and punishment.

It is clear, of course, that the judgment, as it is in God, cannot be a process of distinct and successive acts; it is a single eternal act identical with the Divine Essence. But the effects of the judgment, since they take place in creatures, follow the sequence of time. The Divine judgment is manifested and fulfilled at the beginning, during the progress, and at the end of time. In the beginning, God pronounced judgment upon the whole race, as a consequence of the fall of its representatives, the first parents (Gen., iii). Death and the infirmities and miseries of this were the consequences of that original sentence. Besides this common judgment there have been special judgments on particular individuals and peoples. Such great catastrophes as the flood (Gen., vi, 5), the destruction of Sodom (Gen., xxviii, 20), the earthquake that swallowed up Core and his followers (Num., xvi, 30), the plagues of Egypt (Ex., vi, 6; xii, 12), and the evil that came upon other oppressors of Israel (Ezech., xxv, 11; xxviii, 22) are represented in the Bible as Divine judgments. The fear of God is such a fundamental idea in the Old Testament that it insists mainly on the punitive aspect of the judgment (cf. Prov., xi, 31; Ezechiel, xiv, 21). An erroneous view of these truths led many of the rabbis to teach

that all the evil which befalls man is a special chastisement from on high, a doctrine which was declared false by Christ.

There is also a judgment of God in the world that is subjective. By his acts man adheres to or deviates from the law of God, and thereby places himself within the sphere of approval or condemnation. In a sense, then, each individual exercises judgment on himself. Hence it is declared that Christ came not to judge but to save (John, iii, 17; viii, 15; xii, 47). The internal judgment proceeds according to a man's attitude: towards Christ (John, iii, 18). Though all the happenings of life cannot be interpreted as the outcome of Divine judgment, whose external manifestation is therefore intermittent, the subjective judgment is coextensive with the life of the individual and of the race. The judgment at the end of time will complement the previous visitations of Divine retribution and will manifest the final result of the daily secret judgment. By its sentence the eternal destiny of creatures will be decided. As there is a twofold end of time, so there is likewise a twofold eternal judgment: the particular judgment, at the hour of death, which is the end of time for the individual, and the general judgment, at the final epoch of the world's existence, which is the end of time for the human race.

II. PRE-CHRISTIAN BELIEFS CONCERNING JUDGMENT AFTER DEATH

The idea of a final readjustment beyond the grave, which would rectify the sharp contrast so often observed between the conduct and the fortune of men, was prevalent among all nations in pre-Christian times. Such was the doctrine of metempsychosis or the transmigration of souls, as a justification of the ways of God to man, prevailing among the Hindus of all classes and sects, the Pythagoreans, the Orphic mystics, and the Druids. The doctrine of a forensic judgment in the unseen world, by which the eternal lot of departed souls is determined, was also widely prevalent in pre-Christian times.

The Egyptian idea of the judgment is set forth with great precision of detail in the "Book of the Dead", a collection of formulae designed to aid the dead in their passage through the underworld (EGYPT). The Babylonians and the Assyrians make no distinction between the good and the bad so far as the future habitation is concerned. In the Gilgames epic the hero is marked as judge of the dead, but whether his rule was the moral value of their actions is not clear. An unerring judgment and compensation in the future life was a cardinal point in the mythologies of the Persians, Greeks, and Romans. But, while these mythological schemes were credited as strict verities by the ignorant body of the people, the learned saw in them only the allegorical presentation of truth. There were always some who denied the doctrine of a future life, and this unbelief went on increasing till, in the last days of the Republic, skepticism regarding immortality prevailed among Greeks and Romans.

With the Jews, the judgment of the living was a far more prominent idea than the judgment of the dead. The Pentateuch contains no express mention of remuneration in the future life, and it was only at a comparatively late period, under the influence of a fuller revelation, that the belief in resurrection and judgment began to play a capital part in the faith of Judaism. The traces of this theological development are plainly visible in the Machabean era. Then arose the two great opposing parties, the Pharisees and the Sadducees, whose divergent interpretations of Scripture led to heated controversies, especially regarding the future life. The Sadducees denied all reward and penalty in the hereafter, while their opponents encumbered the truth with ludicrous details. Thus some of the rabbis asserted that the trumpet which would summon the world to judgment would be one of the horns of the ram which Abraham offered up instead of his son Isaac. Again they said: "When God judges the Israelites, He will stand, and make the judgment brief and mild; when He judges the Gentiles, he will sit and make it long and severe." Apart from such rabbinical fables, the current belief reflected in the writings of the rabbis and the pseudographs at the beginning of the Christian Era was that of a preliminary judgment and of a final judgment to occur at the consummation of the world, the former to be executed against the wicked by the personal prowess of the Messiah and of the saints of Israel, the latter to be pronounced as an eternal sentence by God or the Messiah. The particular judgment of the individual person is lost sight of in the universal judgment by which the Messiah vindicate the wrongs endured by Israel. With Alexandrian Judaism, on the contrary, with that at least of which Philo is the exponent, the dominant idea was that of an immediate retribution after death. The two dissenting sects of Israel, the Essenes and the Samaritans, were in agreement with the majority of Jews as to the existence of a discriminating retribution in the life to come. The Essenes believed in the preexistence of souls, but taught that the after-existence was an unchanging state of bliss or woe according to the deeds done in the body. The eschatological tenets of the Samaritans were at first few and vague. Their doctrine of the resurrection and of the day of vengeance and recompense was a theology patterned after the model of Judaism, and first formulated for the sect by its greatest theologian, Marka (A.D. fourth century)

J.A. MCHUGH

Particular Judgment

Particular Judgment

A. Dogma of Particular Judgment

The Catholic doctrine of the particular judgment is this: that *immediately after death the eternal destiny of each separated soul is decided by the just judgment of God.*

Although there has been no formal definition on this point, the dogma is clearly implied in the Union Decree of Eugene IV (1439), which declares that souls leaving their bodies in a state of grace, but in need of purification are cleansed in Purgatory, whereas souls that are perfectly pure are at once admitted to the beatific vision of the Godhead (*ipsum Deum unum et trinum*) and those who depart in actual mortal sin, or merely with original sin, are at once consigned to eternal punishment, the quality of which corresponds to their sin (*paenis tamen disparibus*). The doctrine is also in the profession of faith of Michael Palaeologus in 1274, in the Bull "Benedictus Deus" of Benedict XII, in 1336, and in the professions of faith of Gregory XIII and Benedict XIV.

B. Existence of Particular Judgment Proved from Scripture

[Ecclesiastes 11:9](#); [12:1 sq.](#); and [Hebrews 9:27](#), are sometimes quoted in proof of the particular judgment, but though these passages speak of a judgment after death, neither the context nor the force of the words proves that the sacred writer had in mind a judgment distinct from that at the end of the world. The Scriptural arguments in defence of the particular judgment must be indirect. There is no text of which we can certainly say that it expressly affirms this dogma but there are several which teach an immediate retribution after death and thereby clearly imply a particular judgment. Christ represents Lazarus and Dives as receiving their respective rewards immediately after death. They have always been regarded as types of the just man and the sinner. To the penitent thief it was promised that his soul instantly on leaving the body would be in the state of the blessed: "This day thou shalt be with me in Paradise" ([Luke 23:43](#)). St. Paul ([II Corinthians 5](#)) longs to be absent from the body that he may be present to the Lord, evidently understanding death to be the entrance into his reward (cf. [Philemon 1:21 sq.](#)). [Ecclesiasticus 11:28-29](#) speaks of a retribution at the hour of death, but it may refer to a temporal punishment, such as sudden death in the midst of prosperity, the evil remembrance that survives the wicked or the misfortunes of their children. However, the other texts that have been quoted are sufficient to establish the strict conformity of the doctrine with Scripture teaching. (Cf. [Acts 1:25](#); [Apocalypse 20:4-6](#), 12-14.)

C. Patristic Testimony Regarding Particular Judgment

St. Augustine witnesses clearly and emphatically to this faith of the early Church. Writing to the presbyter Peter, he criticizes the works of Vincentius Victor on the soul, pointing out that they contain nothing except what is vain or erroneous or mere commonplace, familiar to all Catholics. As an instance of the last, he cites Victor's interpretation of the parable of Lazarus and Dives. He writes:

For with respect to that which he (Victor] most correctly and very soundly holds, namely, that souls are judged when they depart from the body, before they come to that judgment which must be passed on them when reunited to the body and are tormented or glorified in that same flesh which they here inhabited -- was that a matter of which you (Peter) were unaware? Who is so obstinate against the Gospel as not to perceive those things in the parable of that poor man carried after death to Abraham's bosom and of the rich man whose torments are set before us? (De anima et ejus origine, 11, n.8.)

In the sermons of the Fathers occur graphic descriptions of the particular judgment (cf. S. Ephraem, "Sermo de secundo Adventu"; "Sermo in eos qui in Christo obdormiunt").

D. Heresies

Lactantius is one of the few Catholic writers who disputed this doctrine (*Divine Institutes* VII:21). Among heretics the particular judgment was denied by Tatian and Vigilantius. The Hypnopsychites and the Thnetopsychites believed that at death the soul passed away, according to the former into a state of unconsciousness, according to the latter into temporary destruction. They believed that souls would arise at the resurrection of the body for judgment. This theory of "soul slumber" was defended by the Nestorians and Copts, and later by the Anabaptists, Socinians, and Arminians. Calvin (Inst. III, 25) holds that the final destiny is not decided till the last day.

E. Prompt Fulfilment of Sentence

The prompt fulfilment of the sentence is part of the dogma of particular judgment, but until the question was settled by the decision of Benedict XII, in 1332, there was much uncertainty regarding the fate of the departed in the period between death and the general resurrection. There was never any doubt that the penalty of loss (*poena damni*), the temporal or eternal forfeiture of the joys of Heaven, began from the moment of death. Likewise it was admitted from the earliest times that the punishment following death included other sufferings (*poena sensus*) than the penalty of loss (Justin, "Dial.", v). But whether the torment of fire was to be included among these sufferings, or whether it began only after the final judgment, was a question that gave rise to many divergent opinions. It was a common belief among the early Fathers that the devils will not suffer from the flames of hell until the end of the world. Regarding the reprobate souls there was a similar belief. Some of the Fathers contended that these souls do not suffer the torment of fire until reunited with their bodies in the resurrection, while others hesitated (cf. Tert., "De Test. an.", iv). Many, on the contrary, clearly taught that the punishment of hell fire followed speedily upon the particular judgment (Hilary, In Ps. cxxxviii, 22). This is evident from the words of Gregory the Great: "just as hap-

piness rejoices the elect, so it must be believed that from the day of their death fire burns the reprobate" (Dial., IV, 28). Early Christian writers also refer to a purgatorial fire in which souls not perfectly just are purified after death.

Some of the early Fathers, misled by Millenarian errors, believed that the essential beatitude of Heaven is not enjoyed until the end of time. They supposed that during the interval between death and the resurrection the souls of the just dwell happily in a delightful abode, awaiting their final glorification. This was apparently the opinion of Sts. Justin and Irenaeus, Tertullian, St. Clement of Alexandria, and St. Ambrose. According to others, only the martyrs and some other classes of saints are admitted at once to the supreme joys of heaven. It cannot, however, be inferred from these passages that all of the Fathers quoted believed that the vision of God is in most cases delayed till the day of judgment. Many of them in other parts of their works profess the Catholic doctrine either expressly or by implication through the acknowledgment of other dogmas in which it is contained, for instance, in that of the descent of Christ into Limbo, an article of the Creed which loses all significance unless it be admitted that the saints of the Old Testament were thereby liberated from this temporal penalty of loss and admitted to the vision of God. As to the passages which state that the supreme happiness of Heaven is not enjoyed till after the resurrection, they refer in many instances to an increase in the accidental joy of the blessed through the union of the soul with its glorified body, and do not signify that the essential happiness of heaven is not enjoyed till then. Notwithstanding the aberrations of some writers and the hesitation of others, the belief that since the death of Christ souls which are free from sin enter at once into the vision of God was always firmly held by the great body of Christians (cf. St. Cyprian, *De exhort. mart.*). As the earliest Acts of the Martyrs and Liturgies attest, the martyrs were persuaded of the prompt reward of their devotion. This belief is also evidenced by the ancient practice of honouring and invoking the saints, even those who were not martyrs. But the opposite error found adherents from time to time, and in the Middle Ages was warmly defended. The Second Council of Lyons (1274) declared that souls free from sin are at once received into heaven (*mox in caelum recipi*), but did not decide in what their state of beatitude consisted. A number of theologians maintained the opinion that until the resurrection the just do not enjoy the intuitive or facial vision of God, but are under the protection and consolation of the Humanity of Jesus Christ. Pope John XXII (1316-1334) at Avignon, as a private theologian, seems to have supported this view, but that he gave it any official sanction is a fable invented by the Fallibilists. His successor, Benedict XII, ended the controversy by the Bull "Benedictus Deus".

F. Circumstances of Particular Judgment according to Theologians

Theologians suppose that the particular judgment will be instantaneous, that in the moment of death the separated soul is internally illuminated as to its own guilt or innocence and of its own initiation takes its course either to hell, or to purgatory, or to heaven (Summa Theologica Supplement 69:2, 88:2). In confirmation of this opinion the text of St. Paul is cited: "Who shew the work of the law written in their hearts, their conscience bearing witness to them, and their thoughts between themselves accusing, or also defending one another, in the day when God shall judge the secrets of men by Jesus Christ ([Romans 2:15-16](#)). The "Book of Judgment", in which all the deeds of men are written ([Apocalypse 20:12](#)), and the appearance of angels and demons to bear witness before the judgment seat are regarded as allegorical descriptions (St. Aug. "De Civ. Dei", XX, xiv). The common opinion is that the particular judgment will occur at the place of death (Suarez in III, Q, lix. a. 6, disp. 52).

J.A. MCHUGH

General Judgment (Last Judgment)

General Judgment

(Judicium Universale, Last Judgment).

I. EXISTENCE OF THE GENERAL JUDGMENT

1. Few truths are more often or more clearly proclaimed in Scripture than that of the general judgment. To it the prophets of the Old Testament refer when they speak of the "Day of the Lord" ([Joel 2:31](#); [Ezekiel 13:5](#); [Isaiah 2:12](#)), in which the nations will be summoned to judgment. In the New Testament the second Parusia, or coming of Christ as Judge of the world, is an oft-repeated doctrine. The Saviour Himself not only foretells the event but graphically portrays its circumstances ([Matthew 24:27](#) sqq.; [25:31](#) sqq.). The Apostles give a most prominent place to this doctrine in their preaching ([Acts 10:42](#); [17:31](#)) and writings ([Romans 2:5-16](#); [14:10](#); [1 Corinthians 4:5](#); [2 Corinthians 5:10](#); [2 Timothy 4:1](#); [2 Thessalonians 1:5](#); [James 5:7](#)). Besides the name Parusia (*parousia*), or Advent ([1 Corinthians 15:23](#); [2 Thessalonians 2:19](#)), the Second Coming is also called Epiphany, *epiphaneia*, or Appearance ([2 Thessalonians 2:8](#); [1 Timothy 6:14](#); [2 Timothy 4:1](#); [Titus 2:13](#)), and Apocalypse (*apokalypsis*), or Revelation ([2 Thessalonians 2:7](#); [1 Peter 4:13](#)). The time of the Second Coming is spoken of as "that Day" ([2 Timothy 4:8](#)), "the day of the Lord" ([1 Thessalonians 5:2](#)), "the day of Christ" ([Philemon 1:6](#)), "the day of the Son of Man" ([Luke 17:30](#)), "the last day" ([John 6:39-40](#)).

2. The belief in the general judgment has prevailed at all times and in all places within the Church. It is contained as an article of faith in all the ancient creeds: "He

ascended into heaven. From thence He shall come to judge the living and the dead" (Apostles' Creed). He shall come again with glory to judge both the living and the dead" (Nicene Creed). "From thence he shall come to judge the living and the dead, at whose coming all men must rise with their bodies and are to render an account of their deeds" (Athanasian Creed). Relying on the authority of Papias, several Fathers of the first four centuries advanced the theory of a thousand years' terrestrial reign of Christ with the saints to precede the end of the World (*see article on MILLENNIUM*). Though this idea is interwoven with the eschatological teachings of those writers, it in no way detracted from their belief in a universal world-judgment. Patristic testimony to this dogma is clear and unanimous.

3. The Roman Catechism thus explains why, besides the particular judgment of each individual, a general one should also be passed on the assembled world: "The first reason is founded on the circumstances that most augment the rewards or aggravate the punishments of the dead. Those who depart this life sometimes leave behind them children who imitate the conduct of their parents, descendants, followers; and others who adhere to and advocate the example, the language, the conduct of those on whom they depend, and whose example they follow; and as the good or bad influence or example, affecting as it does the conduct of many, is to terminate only with this world; justice demands that, in order to form a proper estimate of the good or bad actions of all, a general judgment should take place. . . . Finally, it was important to prove, that in prosperity and adversity, which are sometimes the promiscuous lot of the good and of the bad, everything is ordered by an all-wise, all-just, and all-ruling Providence: it was therefore necessary not only that rewards and punishments should await us in the next life but that they should be awarded by a public and general judgment."

II. SIGNS THAT ARE TO PRECEDE THE GENERAL JUDGMENT

The Scriptures mention certain events which are to take place before the final judgment. These predictions were not intended to serve as indications of the exact time of the judgment, for that day and hour are known only to the Father, and will come when least expected. They were meant to foreshadow the last judgment and to keep the end of the world present to the minds of Christians, without, however, exciting useless curiosity and vain fears. Theologians usually enumerate the following nine events as signs of the last judgment:

1. General Preaching of the Christian Religion. Concerning this sign the Saviour says: "And this gospel of the kingdom, shall be preached in the whole world, for a testimony to all nations, and then shall the consummation come" ([Matthew 24:14](#)). This sign was understood by Chrysostom and Theophilus as referring to the destruction of Jerusalem, but, according to the majority of interpreters, Christ is here speaking of the end of the world.

2. Conversion of the Jews. According to the interpretation of the Fathers, the conversion of the Jews towards the end of the world is foretold by St. Paul in the Epistle to the Romans (11:25-26): "For I would not have you ignorant, brethren, of this mystery, . . . that blindness in part has happened in Israel, until the fullness of the Gentiles should come in. And so all Israel should be saved as it is written: *There shall come out of Sion, he that shall deliver, and shall turn away ungodliness from Jacob*".

3. Return of Enoch and Elijah. The belief that these two men, who have never tasted death, are reserved for the last times to be precursors of the Second Advent was practically unanimous among the Fathers, which belief they base on several texts of Scripture. (Concerning Elijah see [Malachi 4:5-6](#); [Ecclesiasticus 48:10](#); [Matthew 17:11](#); concerning Enoch see [Ecclesiasticus 44:16](#).)

4. A Great Apostasy. As to this event St. Paul admonishes the Thessalonians ([2 Thessalonians 2:3](#)) that they must not be terrified, as if the day of the Lord were at hand, for there must first come a revolt (*he apostasia*). The Fathers and interpreters understand by this revolt a great reduction in the number of the faithful through the abandonment of the Christian religion by many nations. Some commentators cite as confirmatory of this belief the words of Christ: "But yet the Son of man, when he cometh, shall he find, think you, faith on earth?" ([Luke 18:8](#)).

5. The Reign of Antichrist. In the passage above mentioned ([2 Thessalonians 2:3](#) sqq.) St. Paul indicates as another sign of the day of the Lord, the revelation of the man of sin, the son of perdition. "The man of sin" here described is generally identified with the Antichrist, who, says St. John ([1 John 2:18](#)), is to come in the last days. Although much obscurity and difference of opinion prevails on this subject, it is generally admitted from the foregoing and other texts that before the Second Coming there will arise a powerful adversary of Christ, who will seduce the nations by his wonders, and persecute the Church.

6. Extraordinary Perturbations of Nature. The Scriptures clearly indicate that the judgment will be preceded by unwonted and terrifying disturbances of the physical universe ([Matthew 24:29](#); [Luke 21:25-26](#)). The wars, pestilences, famines, and earthquakes foretold in [Matthew 24:6](#) sq., are also understood by some writers as among the calamities of the last times.

7. The Universal Conflagration. In the Apostolic writings we are told that the end of the world will be brought about through a general conflagration, which, however, will not annihilate the present creation, but will change its form and appearance ([2 Peter 3:10-13](#); cf. [1 Thessalonians 5:2](#); [Apocalypse 3:3](#), and [16:15](#)). Natural science shows the possibility of such a catastrophe being produced in the ordinary course of events, but theologians generally tend to believe that its origin will be entirely miraculous.

8. The Trumpet of Resurrection. Several texts in the New Testament make mention of a voice or trumpet which will awaken the dead to resurrection ([1 Corinthians 15:52](#); [1 Thessalonians 4:15](#); [John 5:28](#)). According to St. Thomas (Supplement 86:2) there is reference in these passages either to the voice or to the apparition of Christ, which will cause the resurrection of the dead.

9. "The Sign of the Son of Man Appearing in the Heavens." In [Matthew 24:30](#), this is indicated as the sign immediately preceding the appearance of Christ to judge the world. By this sign the Fathers of the Church generally understand the appearance in the sky of the Cross on which the Saviour died or else of a wonderful cross of light.

III. CIRCUMSTANCES ACCOMPANYING THE GENERAL JUDGMENT

1. Time. As was stated above, the signs that are to precede the judgment give no accurate indication of the time when it will occur ([Mark 13:32](#)). When the Disciples asked the Saviour: "Lord, wilt thou at this time restore again the kingdom to Israel?" He answered: "It is not for you to know the times or moments, which the Father hath put in his own power" ([Acts 1:6-7](#)). The uncertainty of the day of judgment is continually urged by Christ and the Apostles as an incentive to vigilance. The day of the Lord will come "as a thief" ([Matthew 24:42-43](#)), like lightning suddenly appearing ([Matthew 24:27](#)), like a snare ([Luke 21:34](#)), as the Deluge ([Matthew 24:37](#)).

2. Place of the Judgment. All the texts in which mention is made of the Parusia, or Second Coming, seem to imply clearly enough that the general judgment will take place on the earth. Some commentators infer from [1 Thessalonians 4:16](#), that the judgment will be held in the air, the newly risen being carried into the clouds to meet Christ; according to others the prophecy of Joel (3:1 sq.) places the last judgment in the Valley of Josaphat.

3. The Coming of the Judge. That this judgment is ascribed to Christ, not only as God, but also as Man, is expressly declared in Scripture; for although the power of judging is common to all the Persons of the Trinity, yet it is specially attributed to the Son, because to Him also in a special manner is ascribed wisdom. But that as Man He will judge the world is confirmed by Christ Himself ([John 5:26-27](#)). At the Second Coming Christ will appear in the heavens, seated on a cloud and surrounded by the angelic hosts ([Matthew 16:27](#); [24:30](#); [25:31](#)). The angels will minister to the Judge by bringing all before Him ([Matthew 24:31](#)). The elect will aid Christ in a judicial capacity ([1 Corinthians 6:2](#)). The lives of the just will in themselves be a condemnation of the wicked ([Matthew 21:41](#)), whose punishment they will publicly approve. But the Apostles will be judges of the world in a sense yet more exact, for the promise that they shall sit upon twelve thrones judging the twelve tribes of Israel ([Matthew 19:28](#)) seems to imply a real participation in judicial authority. According to a very probable opinion, this prerogative is extended to all who have faithfully fulfilled the counsels of the Gospel

([Matthew 19:27-28](#)). Nothing certain is known as to the manner in which this delegated authority will be exercised. St. Thomas conjectures that the greater saints will make known the sentence of Christ to others (Supplement 88:2).

4. Those to be Judged. All men, both good and bad, according to the Athanasian Creed, will appear in the judgment to give an account of their deeds. As to children that have personally done neither good nor evil, the baptized must be distinguished from the unbaptized. The former appear in the judgment, not to be judged, but only to hold the glory of Christ (Supplement 80:5), while the latter, ranked with the wicked, although not judged, will be enabled to realize the justice of their eternal loss (Suarez). The angels and the demons will not be judged directly, since their eternal destiny has already been fixed; yet, because they have exercised a certain influence over the fortunes of men, the sentence pronounced on the latter will have a corresponding effect on them also (Supplement 89:8).

5. Object of the Judgment. The judgment will embrace all works, good or bad, forgiven as well as forgiven sins, every idle word ([Matthew 12:36](#)), every secret thought ([1 Corinthians 4:5](#)). With the exception of Peter Lombard, theologians teach that even the secret sins of the just will be made manifest, in order that judgment may be made complete and that the justice and mercy of God may be glorified. This will not pain or embarrass the saints, but add to their glory, just as the repentance of St. Peter and St. Mary Magdalen is to these saints a source of joy and honour.

6. Form of the Judgment. The procedure of the judgment is described in [Matthew 25:31-46](#), and in the [Apocalypse 20:12](#). Commentators see in those passages allegorical descriptions intended to convey in a vivid manner the fact that in the last judgment the conduct and deserts of each individual will be made plain not only to his own conscience but to the knowledge of the assembled world. It is probable that no words will be spoken in the judgment, but that in one instant, through a Divine illumination, each creature will thoroughly understand his own moral condition and that of every fellow creature ([Romans 2:15](#)). Many believe, however, that the words of the sentence: "Come, ye blessed", etc. and "Depart from me", etc. will be really addressed by Christ to the multitude of the saved and the lost.

IV. RESULTS OF THE GENERAL JUDGMENT

With the fulfilment of the sentence pronounced in the last judgment the relations and the dealings of the Creator with the creature find their culmination, are explained and justified. The Divine purpose being accomplished, the human race will, as a consequence, attain its final destiny. The reign of Christ over mankind will be the sequel of the General Judgment.

J.A. MCHUGH

Judica Sunday

Judica Sunday

Name given to the fifth Sunday of Lent, and derived from the first words of the Introit of that day: "Judica me, Deus" -- "Judge me, O God" ([Psalm 42](#)). Passion Sunday is the more common name, and in Germany this day is called "Black Sunday", from the custom of veiling the crosses and statues in the church, which was formerly done at the words in the Gospel "Jesus hid Himself", but is now done on the previous evening. Martène says that in very early times this day was called "Dominica mediana", a title that seems more properly to belong to mid-Lent Sunday. On Judica Sunday several significant changes take place in the Church's Liturgy. The Judica psalm is not again said at the beginning of Mass until Easter Day; the Gloria is omitted, to signify the ignominy of Christ's Passion, when His glory was for the time being laid aside; and the whole spirit of the Office and Mass is one of solemn preparation for the great events of the coming Holy Week. At Rome the station on this day was formerly observed in the Vatican Basilica.

DURAND, *Rationale Divine Officii* (Venice, 1568); MARTÈNE, *De Antiq. Mon. Ritibus* (Lyons, 1690); GUÉRANGER, *L'Année Liturgique*, tr. SHEPHERD (Dublin, 1867); LEROSEY, *Hist. et Symbolisme de la Liturgie* (Paris, 1889).

G. CYPRIAN ALSTON

Book of Judith

Book of Judith

HISTORY

Nabuchodonosor, King of Nineveh, sends his general Holofernes to subdue the Jews. The latter besieges them in Bethulia, a city on the southern verge of the Plain of Esdrelon. Achior, the Ammonite, who speaks in defense of the Jews, is maltreated by him and sent into the besieged city to await his punishment when Holofernes shall have taken it. Famine undermines the courage of the besieged and they contemplate surrender, but Judith, a widow, upbraids them and says that she will deliver the city. She goes into the camp of the Assyrians and captivates Holofernes by her beauty, and finally takes advantage of the general's intoxication to cut off his head. She returns inviolate to the city with his head as a trophy, and a sally on the part of the Jews results in the rout of the Assyrians. The book closes with a hymn to the Almighty by Judith to celebrate her victory.

THE TEXT

The book exists in distinct Greek and Latin versions, of which the former contains at least eighty-four verses more than the later. St. Jerome (Praef. in Lib.) says that he translated it from the Chaldaic in one night, "magis sensum e sensu, quam ex verbo verbum transferens" (aiming at giving sense for sense rather than adhering closely to the wording). He adds that his codices differed much, and that he expresses in Latin only what he could clearly understand of the Chaldaic.

Two Hebrew versions are known at present, a long one practically identical with the Greek text, and a short one which is entirely different; we shall return to the latter when discussing the origin of the book. The Chaldaic, from which St. Jerome made our present Vulgate version, is not recoverable unless it be identified with the longer Hebrew version mentioned above. If this be the case we can gauge the value of St. Jerome's work by comparing the Vulgate with the Greek text. We at once find that St. Jerome did not exaggerate when he said that he made his translation hurriedly. Thus a comparison between vi, 11, and viii, 9 shows us a certain confusion relative to the names of the elders of Bethulia -- a confusion which does not exist in the Septuagint, where also x, 6, should be compared. Again in iv, 5, the high priest is Eliachim, which name is later changed into Joachim (xv, 9) -- an allowable change but somewhat misleading: the Septuagint is consistent in using the form Joachim. Some of the historical statements in the Septuagint directly conflict with those of the Vulgate; for example, the thirteenth year (Vulg.) of Nabuchodonosor becomes the eighteenth in the Septuagint, which also adds a long address of the king to Holofernes. St. Jerome has also frequently condensed the original--always on the supposition that the Septuagint and the longer Hebrew version do really represent the original. To give but one instance:

Septuagint (2:27): "And he came down into the plain of Damascus at the time of the wheat harvest, and burnt up all their fields, their flocks and and their herds he delivered to destruction, their cities he ravaged, and the fruits of their fertile plains he scattered like chaff, and he struck all their young men with the edge of the sword."

Vulgate (2:17): "And after these things he went down into the plains in the days of the harvest, and he set all the corn on fire, and he caused all the trees and vineyards to be cut down."

With regard to the Septuagint version of the Book of Judith it should be noted that it has come down to us in two recensions: Codex B or Vaticanus on the one hand, and Codex Alexandrinus with Codex Sinaiticus on the other.

HISTORICITY

Catholics with very few exceptions accept the book of Judith as a narrative of facts, not as an allegory. Even Jahn considers that the genealogy of Judith is inexplicable on the hypothesis that the story is a mere fiction ("Introductio", Vienna, 1814, p. 461). Why carry out the genealogy of a fictitious person through fifteen generations? The Fathers have ever looked upon the book as historical. St. Jerome, who excluded Judith from the Canon, nonetheless accepted the person of the valiant woman as historical (Ep. lxxv, 1).

Against this traditional view there are, it must be confessed, very serious difficulties, due, as Calmet insists, to the doubtful and disputed condition of the text. The historical and geographical statements in the book, as we now have it, are difficult to understand: thus

- Nabuchodonosor was apparently never King of Nineveh, for he came to the throne in 605, whereas Nineveh was destroyed certainly not later than 606, and after that the Assyrians ceased to exist as a people;
- the allusion in i, 6, to Erioch, King of the Elicians, is suspicious; we are reminded of the Arioch of Gen., xiv, i. The Septuagint makes him King of the Elumaens, presumably the Elamites,
- the character of Nabuchodonosor is hardly that portrayed for us on the monuments: in the India House Inscription, for example, his sentiments are remarkable for the modesty of their tone. On the other hand, we must remember that, as Sayce says, the "Assyrian kings were most brazen-faces liars on their monuments";
- the name Vagao, or the Septuagint Bagoas, for the eunuch of Holofernes is suggestive of the Bagoses, who, according to Josephus (Antiquities, XI, vii, 1), polluted the temple and to whom apparently we have a reference in the recently discovered papyri from Assuan;
- the mixture of Babylonian, Greek, and Persian names in the book should be noted;
- the genealogy of Judith as given in the Vulgate is a medley: that given in the three principal Greek codices is perhaps better but varies in every one. Still it is an historical genealogy, though ill-conserved;
- a geographical puzzle is presented by the Vulgate of ii, 12-16; the Septuagint is much superior, and it should be noted that throughout this version, especially in Codex B, we have the most interesting details furnished us (cf. particularly i, 9; ii, 13, 28-9). The Septuagint also gives us information about Achior which is wanting in the

Vulgate; it is apparently hinted in vi, 2, 5, that he was an Ephraimite and a mercenary hired by Moad;

- Bethulia itself is a mystery: according to the Septuagint it was large, had streets and towers (vii, 22, 32), and withstood a long siege at the hands of a vast army. Its position, too, is stated with minuteness; it stood on the edge of the Plain of Esdrelon and guarded the pass to Jerusalem; yet no trace of the existence of such a place is to be found (unless we accept the theory of Conder, "Handbook", 5th ed., p. 239);
- the names, Judith (Jewess), Achior (brother of light), and Bethulia (?Bethel, i.e. ?Jerusalem, or perhaps from the Hebrew word meaning "virgin" -- in the shorter Hebrew version Judith is called not "the widow" but "the virgin", i.e. Bethulia), sound rather like symbolic names than those of historical places or persons;
- in Judith's speech to Holofernes there is (xi, 12, 15) some apparent confusion between Bethulia and Jerusalem;
- while the events are referred to the time of Nabuchodonosor, and therefore to the close of the Hebrew monarchy, we seem to have in v, 22, and viii, 18-19, an allusion to the time subsequent to the Restoration;
- there is no king in Palestine (iv, 5), but only a high priest, Joachim or Eliachim; and in iv, 8; xi, 14; xv, 8 (Sept.), the Sanhedrin is apparently mentioned;
- the book has a Persian and even a Greek colouring, as is evidenced by the recurrence of such names as Bagoas and Holofernes.

These are serious difficulties, and a Catholic student must be prepared to meet them. There are two ways of doing so.

(a) According to what we may term "conservative" criticism, these apparent difficulties can every one be harmonized with the view that the book is perfectly historical and deals with facts which actually took place. Thus, the geographical errors may be ascribed to the translators of the original text or to copyists living long after the book was composed, and consequently ignorant of the details referred to. Calmet insists that the Biblical Nabuchodonosor is meant, while in Arphaxad he sees Phraortes whose name, as Vigoroux (*Les Livres Saints et La Critique Rationaliste*, iv, 4th ed.) shows, could easily have been thus perverted.

Vigoroux, however, in accordance with recent Assyrian discoveries, identifies Nabuchodonosor with Assur-bani-pal, the contemporary of Phraortes. This enables him to refer the events to the time of the captivity of Manasses under Assur-bani-pal (II Par., xxxiii, 11; cf. Sayce, "Higher Criticism and the Verdict of the Monuments",

4th ed., p. 458). It is further maintained that the campaign conducted by Holofernes is well illustrated in the records of Assur-bani-pal which have come down to us. And these facts will undoubtedly afford an explanation of the apparent allusion to the captivity; it was indeed a Restoration, but that of Manasses, not that under Esdras. The reference, too, to the Sanhedrin is doubtful; the term *gerousia* is used of the "ancients" in Lev., ix, 3, etc. Lastly, Conder's identification of Bethulia with Mithilia (loc. cit. supra) is highly probable. Moreover, the writer who described the strategical position in iv, 1-6, knew the geography of Palestine thoroughly. And we are given details about the death of Judith's husband which (viii, 2-4) can hardly be attributed to art, but are rather indications that Judith represents a really existing heroine. With regard to the state of the text it should be noted that the extraordinary variants presented in the various versions are themselves a proof that the versions were derived from a copy dating from a period long antecedent to the time of its translators (cf. Calmet, "Introd. in Lib. Judith").

(b) Some few Catholic writers are not satisfied with Calmet's solution of the difficulties of the Book of Judith; they deem the errors of translators and of scribes to be no sufficient explanation in this matter. These few Catholics, together with the non-Catholics that do not care to throw the book over entirely into the realm of fiction, assure us that the Book of Judith has a solid historical foundation. Judith is no mythical personage, she and her heroic deed lived in the memory of the people; but the difficulties enumerated above seem to show that the story as we now have it was committed to writing at a period long subsequent to the facts. The history, so it is maintained, is vague; the style of composition, the speeches, etc., remind us of the Books of Machabees. A remarkable knowledge of the Psalter is evinced (cf. vii, 19 and Ps. cv, 6; vii, 21, and Ps. lxxviii, 10, xciii, 2; ix, 6, 9, and Ps. xix, 8; ix, 16, and Ps. cxlvi, 10; xiii, 21, and Ps. cv, 1). Some of these psalms must almost certainly be referred to the period of the Second Temple. Again, the High Priest Joachim must presumably be identified with the father of Eliashib, and must therefore have lived in the time of Artaxerxes the Great (464-424 B.C. Cf. Josephus, "Antiquities", XI, vi-vii). We referred above to a shorter Hebrew version of the book; Dr. Gaster, its discoverer, assigns this manuscript to the tenth or eleventh century A.D. (Proceedings of Soc. of Bibl. Archaeol., XVI, pp. 156 sqq.). It is exceedingly brief, some forty lines, and gives us only the gist of the story. Yet it seems to offer a solution to many of the difficulties suggested above. Thus Holofernes, Bethulia, and Achior, all disappear; there is a very natural explanation of the purification in xii, 7; and, most noticeable of all, the enemy is no longer an Assyrian, but Seleucus, and his attack is on Jerusalem, not on Bethulia.

If it could be maintained that we have in this manuscript the story in its original form, and that our canonical book is an amplification of it, we should then be in a

position to explain the existence of the numerous divergent versions. The mention of Seleucus brings us down to Machabean times, the title of Judith, now no longer the "widow" but the "virgin", may explain the mysterious city; the Machabean colouring of the story becomes intelligible, and the theme is the efficacy of prayer (cf. vi, 14-21; vii, 4; II Mach., xv, 12-16).

CANONICITY

The Book of Judith does not exist in the Hebrew Bible, and is consequently excluded from the Protestant Canon of Holy Scripture. But the Church has always maintained its canonicity.

St. Jerome, while rejecting in theory those books which he did not find in his Hebrew manuscript, yet consented to translate Judith because "the Synod of Nicaea is said to have accounted it as Sacred Scripture" (Praef. in Lib.). It is true that no such declaration is to be found in the Canons of Nicaea, and it is uncertain whether St. Jerome is referring to the use made of the book in the discussions of the council, or whether he was misled by some spurious canons attributed to that council, but it is certain that the Fathers of the earliest times have reckoned Judith among the canonical books; thus St. Paul seems to quote the Greek text of Judith, viii, 14, in I Cor., ii, 10 (cf. also I Cor., x, 10, with Judith, viii, 25). In the early Christian Church we find it quoted as part of Scripture in the writing of St. Clement of Rome (First Epistle to the Corinthians, iv), Clement of Alexandria, Origen, and Tertullian.

Consult the various Biblical dictionaries and introductions; also *Civiltà Cattolica* (1887). The best summary of the various views and arguments on the question is in GIGOT, *Special Introd.*, I; cf. also especially SCHURER, *The Jewish People in the Time of Christ*, div. II, vol. III; VIGOUROUX, *La Bible et les Découvertes Modernes*, IV (5th ed.), 275-305; BRUENGO, *Il Nabucodonosor di Giuditta* (Rome, 1888).

HUGH POPE

St. Juliana

St. Juliana

Suffered martyrdom during the Diocletian persecution. Both the Latin and Greek Churches mention a holy martyr Juliana in their lists of saints. The oldest historical notice of her is found in the "Martryologium Hieronymianum" for 16 February, the place of birth being given as Cumae in Campania (In Campania Cumbas, natale Julianae). It is true that the notice is contained only in the one chief manuscript of the above-named martyrology (the Codex Epternacensis), but that this notice is certainly authentic is clear from a letter of St. Gregory the Great, which testifies to the special

eneration of St. Juliana in the neighbourhood of Naples. A pious matron named Januaria built a church on one of her estates, for the consecration of which she desired relics (*sanctuaria*, that is to say, objects which had been brought into contact with the graves) of Sts. Severinus and Juliana. Gregory wrote to Fortunatus, Bishop of Naples, telling him to accede to the wishes of Januaria ("Gregorii Magni epist.", lib. IX, ep. xxxv, in Migne P.L., LXXXVII, 1015). The Acts of St. Juliana used by Bede in his "Martyrologium" are purely legendary. According to the account given in this legend, St. Juliana lived in Nicomedia and was betrothed to the Senator Eleusius. Her father Africanus was a pagan and hostile to the Christians. In the persecution of Maximianus, Juliana was beheaded after suffering frightful torturers. Soon after a noble lady, named Sefhonia, came through Nicomedia and took the saint's body with her to Italy, and had it buried in Campania. Evidently it was this alleged translation that caused the martyred Juliana, honoured in Nicomedia, to be identified with St. Juliana of Cumae, although they are quite distinct persons. The veneration of St. Juliana of Cumae became very widespread, especially in the Netherlands. At the beginning of the thirteenth century her remains were transferred to Naples. The description of this translation by a contemporary writer is still extant. The feast of the saint is celebrated in the Latin Church on 16 February, in the Greek on 21 December. Her Acts describe the conflicts which she is said to have with the devil; she is represented in pictures with a winged devil whom she leads by a chain.

J.P. KIRSCH

St. Juliana Falconieri

St. Juliana Falconieri

Born in 1270; died 12 June, 1341. Juliana belonged to the noble Florentine family of Falconieri. Her uncle, St. Alexis Falconieri, was one of the seven founders of the Servite Order (q.v.). Through his influence she also consecrated herself from her earliest youth to the religious life and the practices of Christian perfection. After her father's death she received about A.D. 1385 from St. Philip Benitius, then General of the Servites, the habit of the Third Order, of which she became the foundress. Until

her mother's death she remained in her parents' house, where she followed the rule given her by St. Philip Benitius, practicing perfect chastity, strict mortification, severe penance, zealous prayer, and works of Christian charity. After her mother's death she and several companions moved into a house of their own in 1305, which thus became the first convent of the Sisters of the Third Order of Servites, Juliana remaining the superior until the end of her life. Their dress consisted of a black gown, secured by a leathern girdle, and a white veil. As the gown had short sleeves to facilitate work, people called the sisters of the new order "Mantellate". They devoted themselves especially to the care of the sick and other works of mercy, and the superioress, through her heroic deeds of charity, set a noble example to all. For thirty-five years Juliana directed the community of Servite Tertiaries. An extraordinary occurrence, mentioned in the *oratio* of her feast day, took place at her death. Being unable to receive Holy Communion because of constant vomiting, she requested the priest to spread a corporal upon her breast and lay the Host on it. Shortly afterwards the Host disappeared and Juliana expired, and the image of a cross, such as had been on the Host, was found on her breast. Immediately after her death she was honoured as a saint. The Order of Servite Tertiaries was sanctioned by Martin V in 1420. Benedict XIII granted the Servites permission to celebrate the Feast of St. Juliana. Clement XII canonized her in 1737, and extended the celebration of her feast on 19 June to the entire Church. St. Juliana is usually represented in the habit of her order with a Host upon her breast.

Giuliana Falconieri, con note di Agost. Morini (Florence, 1864); BATTINI, Compendio della vita di S. Giuliana Falconieri (Bologna, 1866); SOULIER, Life of St. Juliana Falconieri (London, 1898); LÉPICIER, Ste. Julienne Falconieri fondatrice des Mantelées (Brussels, 1907).

J.P. KIRSCH

Saints Julian and Basilissa

Sts. Julian and Basilissa

Husband and wife; died at Antioch or, more probably, at Antinoe, in the reign of Diocletian, early in the fourth century, on 9 January, according to the Roman Martyrology, or 8 January, according to the Greek Menaea. We have no historically certain data relating to these two holy personages, and more than one this Julian of Antinoe has been confounded with Julian of Cilicia. The confusion is easily explained by the fact that thirty-nine saints of this name are mentioned in the Roman Martyrology, eight of whom are commemorated in the one month of January. But little is known

of this saint, one we put aside the exaggerations of his Acts. Forced by his family to marry, he agreed with his spouse, Basilissa, that they should both preserve their virginity, and further encouraged her to found a convent for women, of which she became the superior. while he himself gathered a large number of monks and undertook their direction. Basilissa died a very holy death, but martyrdom was reserved for Julian. During the persecution of Diocletian he was arrested, tortured, and put to death at Antioch, in Syria, by the order of the governor, Martian, according to the Latins, at Antinoe, in Egypt, according to the Greeks, which seems more probable. Unfortunately, the Acts of this martyr belong to those pious romances so much appreciated in early times, whose authors, unearned only for the edification of their readers, drowned the few known facts in a mass of imaginary details. Like many similar lives of saints, it offers miracles, prodigies, and improbable utterances, that lack the least historical value. In any case these two saints must have enjoyed a great reputation in antiquity, and their veneration was well established before the eighth century. In the "Martyrologium Hieronymianum" they are mentioned under 6 January; Usuard, Ado, Notker, and others place them under the ninth, and Rabanus Maurus under the thirteenth of the same month, while Vandelbert puts them under 13 February, and the Menology of Canisius under 21 June, the day to which the Greek Menaea assign St. Julian of Caesarea. There used to exist at Constantinople a church under the invocation of these saints, the dedication of which is inscribed in the Greek Calendar under 5 July.

Acta SS. Bolland. Jan.. I (1643), 570-75; MARCHINI, I SS. Giuliano e Basilissa sposi, vergini e martiri, protettori dei conjugati (Genoa, 1873); TILLEMONT, Memoires pour servir a l'hist. eccl. V (Paris, 1698), 799 sqq.; SURIUS, Vit. Sanct., I (Venice 1581), 61-62.

LEON CLUGNET

St. Juliana of Liege

St. Juliana of Liège

Nun, b. at Retinnes, near Liège, Belgium, 1193; d. at Fosses, 5 April, 1258. At the age of five she lost her parents and was placed in the convent of Mont-Cornillon, near Liège. She made rapid progress, and read with pleasure the writings of St. Augustine and St. Bernard. She also cultivated an ardent love of the Blessed Virgin, the Sacred Passion, and especially the Blessed Sacrament. In 1206 she received the veil, and devoted herself to the sick in the hospital in charge of the convent. She very early exerted every energy to introduce the feast of Corpus Christi. In 1230 she was chosen superioress by the unanimous vote of the community. But soon God sent heavy trials. Her convent was under the supervision of a general superior, Roger, a man of vicious and scandalous

habits; he secured this position in 1233 by intrigues and bribery. Disliking the virtues and piety of Juliana, and much more her entreaties and reproaches, he incited the populace against her. She fled to the cell of St. Eve of Liège, and then to a house given her by John, a canon of Lausanne. Vindicated in the courts through the influence of Robert de Thorate, Bishop of Liège, she was restored to her position in the community, and Roger was deposed. But in 1247 Roger was again in power, and succeeded once more in driving out the saint. Juliana found refuge at Namur and then at Fosses, where she passed the last years of her life in seclusion. At her own request she was buried at Villiers. After her death a number of miracles occurred at her intercession (*Acta SS.*, April, I, 435 sq.). In 1869 Pius IX ratified her veneration and permitted the office and Mass in her honour. Her feast is on 6 April.

FRANCIS MERSHMAN

Juliana of Norwich

Juliana of Norwich

English mystic of the fourteenth century, author or recipient of the vision contained in the book known as the "Sixteen Revelations of Divine Love". The original form of her name appears to have been Julian. She was probably a Benedictine nun, living as a recluse in an anchorage of which traces still remain in the east part of the churchyard of St. Julian in Norwich, which belonged to Carrow Priory. According to her book, this revelation was "shewed" to her on 8 or 14 May (the readings differ), 1373, when she was thirty years and a half old. This would refer her birth to the end of 1342. Her statement, that "for twenty years after the time of this shewing, save three months, I had teaching inwardly", proves that the book was not written before 1393. An early fifteenth-century manuscript, recently purchased for the British Museum from the Amherst library, states that she "yet is on life, Anno Domini 1413". It is probable that this is the manuscript cited by Francis Blomefield, the eighteenth-century historian of Norfolk, and that a misreading of the date led to the statement that she was still living in 1442. Attempts have been made to identify her with Lady Julian Lampet, the anchoress of Carrow, references concerning legacies to whom occur in documents from 1426 to 1478; but this is manifestly impossible. The newly-discovered manuscript differs considerably from the complete version hitherto known, of which it is a kind of condensation, lacking the beginning and the end. Only three, much later, manuscripts of the fuller text are known to exist. The earliest, in the *Bibliothèque Nationale* at

Paris (from which the book was first edited by Serenus de Cressy in 1670), dates from the sixteenth century; the other two, both in the British Museum and not independent of each other, belong to the seventeenth. The better of the latter is evidently a copy of a much earlier original.

Whatever be their precise date, these "Revelations", or "Shewings", are the most perfect fruit of later medieval mysticism in England. Juliana described herself as a "simple creature unlettered" when she received them; but, in the years that intervened between the vision and the composition of the book, she evidently acquired some knowledge of theological phraseology, and her work appears to show the influence of Walter Hilton, as well as neo-Platonic analogies, the latter probably derived from the anonymous author of the "Divine Cloud of Unknowing". There is one passage, concerning the place in Christ's side for all mankind that shall be saved, which argues an acquaintance with the letters of St. Catherine of Siena. The psychological insight with which she describes her condition, distinguishing the manner of her vision and recognizing when she has to deal with a mere delusion, is worthy of St. Teresa. When seemingly at the point of death, in the bodily sickness for which she had prayed in order to renew her spiritual life, she passes into a trance while contemplating the crucifix, and has the vision of Christ's suffering "in which all the shewings that follow be grounded and joined".

The book is the record of twenty years' meditation upon that one experience; for, "when the shewing, which is given for a time, is passed and hid, then faith keepeth it by grace of the Holy Ghost unto our lives end". More than fifteen years later, she received "in ghostly understanding" the explanation, the key to all religious experience: "What? wouldest thou wit thy Lord's meaning in this thing? Wit it well: Love was His meaning. Who sheweth it thee? Love. Wherefore sheweth He it thee? For love. Hold thee therein, thou shalt wit more in the same. But thou shalt never wit therein other without end." With this illumination, the whole mystery of Redemption and the purpose of human life become clear to her, and even the possibility of sin and the existence of evil does not trouble her, but is made "a bliss by love". This is the great deed, transcending our reason, that the Blessed Trinity shall do at the last day: "Thou shalt see thyself that all manner of thing shall be well." Like St. Catherine, Juliana has little of the dualism of body and soul that is frequent in the mystics. God is in our "sensuality" as well as in our "substance", and the body and the soul render mutual aid: "Either of them take help of other till we be brought up into stature, as kind worketh." Knowledge of God and knowledge of self are inseparable: we may never come to the knowing of one without the knowing of the other. "God is more nearer to us than our own soul", and "in falling and rising we are ever preciously kept in one love." She lays special stress upon the "homeliness" and "courtesy" of God's dealings with us, "for love maketh might

and wisdom full meek to us." With this we must correspond by a happy confidence; "failing of comfort" is the "most mischief" into which the soul can fall. In the Blessed Virgin the Lord would have all mankind see how they are loved. Throughout her revelation Juliana submits herself to the authority of the Church: "I yield me to our mother Holy Church, as a simple child oweth."

EDMUND G. GARDNER

Julian of Eclanum

Julian of Eclanum

Born about 386; died in Sicily, 454; the most learned among the leaders of the Pelagian movement and Bishop of Eclanum near Beneventum. He was the son of Memorius, a bishop in Apulia, and his ecclesiastical career began in his father's church, where he was ordained lector and subsequently deacon. About 417 he was raised to episcopal rank by Innocent I, and placed in charge of a see variously styled *Eclana*, *Eclanum*, *Eculanum*, *Æclanum* or *Æculanum*. There is no means of deciding how Julianus, who enjoyed an enviable reputation for learning, zeal, and sanctity, was led to ally himself with the Pelagian party. When Pope Zosimus issued, in 418, his "Epistola Tractatoria", Julianus was one of the eighteen Italian bishops who refused to subscribe to the condemnation of Pelagius which it contained. In consequence of this refusal he was exiled under the decree of the Emperor Honorius, which pronounced banishment against Pelagius and his sympathizers. Driven from Italy in 421, he commenced an active literary campaign in the interests of the new heresy and by his writings soon won for himself the position of intellectual leader of the heretical party. To him is due the credit of having systematized the teachings of Pelagius and Coelestius. His writings, which were frankly Pelagian, were largely directed against the doctrines which St. Augustine had defended, and for several years after the expulsion of the Pelagians the history of the conflict is merely an account of the controversy between Julian and Augustine. Most of Julian's works are lost, and are known only through the copious quotations found in the works of his great adversary. Principal among them are the letter to Rufus, Bishop of Thessalonica, and the epistle to the Roman clergy, which Augustine, at the request of Pope Boniface, refuted in his work "Against Two Letters of the Pelagians"; the reply to Augustine's work "De Nuptiis et Concupiscentia"; and his answer to Augustine's defense of his own work. Driven from Italy, he found refuge for a time with Theodore of Mopsuestia, who, though sympathetic, subsequently subscribed to his condemnation. At the accession of each pontiff Julian sought to have the Pelagian controversy re-opened, but this merely resulted in further condemnations by Celestine, Sixtus III, and Leo I. For a time he enjoyed the patronage and friendship

of Nestorius, the Patriarch of Constantinople, and the protection of the Emperor Theodosius II. But Marius Mercator, by his "Commonitorium de Coelestio", opened the eyes of the emperor to the true character of Pelagianism. By reason of this Julian was expelled from Constantinople. His subsequent career, with the exception of his attempts to conciliate the popes, is not known. Julian was the most learned among the Pelagians, and, though superior to Pelagius and Coelestius, his system did not differ materially from theirs.

PATRICK J. HEALY

Julian of Speyer

Julian of Speyer

Often called Julianus Teutonicus.

A famous composer, poet, and historian of the thirteenth century, b. at Speyer, d. at Paris about 1250 (not in 1285, as is so often stated). He studied at the celebrated University of Paris, and was the musical director at the royal chapel during the reigns of Philip Augustus (1179-1223) and Louis VIII (1223-6) of France. When he resigned to become a member of the newly founded Order of St. Francis is not known. But it is certain that Julian accompanied Brother Simon Angelicus to his native land when the latter was made Provincial of Germany by the General Chapter of Assisi in 1227. It is probable that he was present at the translation of St. Francis at Assisi in May, 1230. Subsequently he again lived in Paris at the great convent of the Minorites, where he was choir-master as well as *corrector mensae* (in which capacity he superintended the reading in the refectory). He is renowned as a scholar, artist, and a saintly religious. Although, in the Middle Ages, Julian of Speyer was held in high repute as the composer and writer of rhymed offices, he was almost forgotten until the last decade. It is certain that he composed the rhymed Office (technically termed *historia* in the Middle Ages) of St. Francis of Assisi (written between 23 February, 1229, and 4 October 1235), as well as that of St. Anthony of Padua who was canonized on 30 May, 1232 (composed probably shortly after 1241).

Both these musical, as well as poetical, masterpieces are still used by the Minorites. The acme of liturgical narrative poems, these works are equally distinguished for the

harmony, rhythm, and rhyme of the verses, and for their sublime expressiveness as musical compositions. Of their kind they are unequalled. Only a few sentences in the third nocturn (the antiphons) were written by Pope Gregory IX and the cardinals; the remainder is all Julian's composition. Even outside the Franciscan Order the rhythmic structure has been often copied, whole verses being frequently taken (especially from the "Historia rhythmica" of St. Francis), and these plagiarisms set to Julian's melodies without any alteration. It is not known how much of the poetical narrative of St. Dominic (d. 1221), used on his feast by both Franciscans and Dominicans, belongs to Julian of Speyer. Some portions at least of the Mass formula of Sts. Francis and Anthony are undoubtedly the musical and poetical composition of Julian. Only in the last decade was Julian recognized as the author of the "Legenda S. Francisci"—partly published in the "Acta SS.", October, II, 548 sqq., and published in full in "Analecta Bollandiana", XXI (1902), 160-202—and of the "Vita ab auctore anonymo" of St Anthony of Padua, printed in the "Acta SS.", June; II, 705 sqq.

Hist.*, I (Quaracchi, 1908), 45-9.

MICHAEL BIHL

Julian the Apostate

Julian the Apostate

(FLAVIUS CLAUDIUS JULIANUS).

Roman emperor 361-63, b. at Constantinople in 331, d. 26 June, 363, son of Julius Constantius, the half-brother of Constantine the Great. With his stepbrother Gallus, who was some years older, he escaped the massacre of his kinsfolk at Constantinople after the death of Constantine the Great, and was brought up by the eunuch Mardonius and the philosopher Nicocles—the latter secretly a pagan. The suspicious Emperor Constantius sent Julian later to the castle of Macellum in Cappadocia. Julian received a Christian training, but the recollection of the murder of his relatives sowed in him

a bitter resentment against the authors of that massacre, and he extended this hatred to the Christians in general. When Constantius became involved in war in the West with the usurper Magnentius, he named Gallus his colleague, with the title of Caesar. Julian was allowed to study at Constantinople, but his intellectual character aroused attention and caused Constantius to send him in 350 to Nicomedia. Here Julian devoted himself exclusively to neo-Platonic philosophy, mixed with all kinds of magic and mysteries. The neo-Platonist, Maximus of Ephesus, dazzled him by his fantastic teachings and prophesied his destined task, the restoration of paganism. When, at the close of 354, Constantius recalled Gallus Caesar to Italy, and had him beheaded for his manifold cruelties, Julian was taken a state prisoner to Milan, but, gaining the sympathy of the Empress Eusebia, secured permission to visit in 355 the schools of Athens, where Greek philosophy and rhetoric were enjoying their last period of prosperity. Julian now went over completely to the so-called Hellenism, and was initiated into the Eleusinian mysteries.

Julian was presented on 6 November, 355, to the army as Caesar, married the emperor's youngest sister Helena, and then sent to Gaul. Here he at once displayed great ability, both as soldier and administrator. He boldly advanced from his headquarters at Vienne to Reims, and thence made a sally into the territory of the Alamanni on the Upper Rhine, occupying and garrisoning Cologne, which a year before had been taken and sacked by the Franks. The following year, although not supported by the troops of Constantius, he completely routed over 30,000 Alamanni near Strasbourg. He then returned by way of Mainz, Cologne, and Julich to Reims and Lutetia (Paris). In a later expedition he opened the Rhine again for the passage of ships: in 359 he even made his way into the heart of the territory of the Alamanni (the present Wurtemberg). Julian also displayed an unwearied activity in promoting just taxation and administration of the laws. In the meantime war had again broken out with Persia, King Shâpûr demanding the cession of Mesopotamia and Armenia. Long jealous of Julian, the emperor now ordered the latter to send a part of his most experienced German auxiliaries, although these troops had been enlisted for the Gallic war only. Against the advice of Julian the imperial commissioner Decentius in the winter of 360 started with the picked troops by way of Paris and stopped here to rest: a mutiny now broke out, the troops appeared before Julian's residence, and enthusiastically proclaimed him Augustus. To avoid a civil war, Julian sought to come to an agreement with Constantius whom he was ready to acknowledge as supreme emperor. Constantius, however, demanded the unconditional surrender of the title of Caesar and of his position as governor of Gaul. Neither the army nor the people would consent to this, and Julian advanced in the spring to Illyricum, taking possession of the capital, Sirmium. Shapur having disbanded his great Persian army, Constantius now planned to turn

his entire fighting strength against his rebellious cousin Julian. While on the march, however, Constantius died, 3 November, 361.

Julian advanced in triumph to Constantinople. Hitherto outwardly a Christian, he now let himself be portrayed as under the protection of Zeus, who in his opinion possessed with Helios the same undivided creative power. He commanded all towns to reopen the temples for pagan worship, restored animal sacrifices, and assumed the duties of a Pontifex Maximus. The Christians were united in fighting their enemy. Julian issued a decree that all titles to lands, rights and immunities bestowed since the reign of Constantine upon the Galileans, as he contemptuously called the Christians, were abrogated, and that the moneys granted to the Church from the revenues of the State must be repaid. He forbade the appointment of Christians as teachers of rhetoric and grammar. Still, he copied the organization of the Christian Church; he created, for example, a form of hierarchy, the head of which was the imperial Pontifex Maximus, and urged pagans to imitate such Christian virtues as charity and mercy. Yet Julian's changes failed to bring him any appreciable success. His attempt to defy the Gospel and rebuild the temple at Jerusalem was brought to nothing by fire and earthquake.

In May, 362, Julian left Constantinople for Asia and made active preparations at Antioch for a great war with Persia. While at Antioch in the winter of 362-63, he wrote his books against the Christians. In March, 363, he advanced from Antioch into Mesopotamia, successfully crossed the Tigris, and fought a successful battle with the Persians. Burning his supply fleet, he now marched into the interior of Persia, but soon found himself obliged by lack of provisions to begin a retreat, during which he was beset by the Persian cavalry. On 26 June, 363, he was wounded in the side by an arrow in a small cavalry skirmish, and died during the night. Various reports concerning the circumstances of his death have come down to us. Both Christians and pagans believed the rumor that he cried out when dying: *Nenikekas Galilaie* (Thou hast conquered, O Galilean). With Julian the dynasty of Constantine came to an end. He was rather a philosophical *littérateur* of a somewhat visionary character, than a great ruler whose actions were the dictates of strong will and principles. The good beginnings of a just government which he showed in Gaul were not maintained when he was sole ruler. Although his personal life was unostentatious, he was passionate, arbitrary, vain, and prejudiced, blindly submissive to the rhetoricians and magicians. Some of Julian's many controversial writings, orations, and letters have been preserved, showing his discordant, subjective character.

KARL HOEBER

Saint Julie Billiard

St. Julie Billiard

(*Also Julia*). Foundress, and first superior-general of the Congregation of the Sisters of Notre Dame of Namur, born 12 July, 1751, at Cuvilly, a village of Picardy, in the Diocese of Beauvais and the Department of Oise, France; died 8 April, 1816, at the motherhouse of her institute, Namur, Belgium. She was the sixth of seven children of Jean-François Billiard and his wife, Marie-Louise-Antoinette Debraine. The childhood of Julie was remarkable; at the age of seven, she knew the catechism by heart, and used to gather her little companions around her to hear them recite it and to explain it to them. Her education was confined to the rudiments obtained at the village school which was kept by her uncle, Thibault Guilbert. In spiritual things her progress was so rapid that the parish priest, M. Dangicourt, allowed her to make her First Communion and to be confirmed at the age of nine years. At this time she made a vow of chastity. Misfortunes overtook the Billiard family when Julie was sixteen, and she gave herself generously to the aid of her parents, working in the fields with the reapers. She was held in such high esteem for her virtue and piety as to be commonly called, "the saint of Cuvilly". When twenty-two years old, a nervous shock, occasioned by a pistol-shot fired at her father by some unknown enemy, brought on a paralysis of the lower limbs, which in a few years confined her to her bed a helpless cripple, and thus she remained for twenty-two years. During this time, when she received Holy Communion daily, Julie exercised an uncommon gift of prayer, spending four or five hours a day in contemplation. The rest of her time was occupied in making linens and laces for the altar and in catechizing the village children whom she gathered around her bed, giving special attention to those who were preparing for their First Communion.

At Amiens, where Julie Billiard had been compelled to take refuge with Countess Baudoin during the troublesome times of the French Revolution, she met Françoise Blin de Bourdon, Viscountess of Gizaincourt, who was destined to be her co-laborer in the great work as yet unknown to either of them. The Viscountess Blin de Bourdon was thirty-eight years old at the time of her meeting with Julie, and had spent her youth in piety and good works; she had been imprisoned with all of her family during the

Reign of Terror, and had escaped death only by the fall of Robespierre. She was not at first attracted by the almost speechless paralytic, but by degrees grew to love and admire the invalid for her wonderful gifts of soul. A little company of young and high-born ladies, friends of the viscountess, was formed around the couch of "the saint". Julie taught them how to lead the interior life, while they devoted themselves generously to the cause of God and His poor. Though they attempted all the exercises of an active community life, some of the elements of stability must have been wanting, for these first disciples dropped off until none was left but Françoise Blin de Bourdon. She was never to be separated from Julie, and with her in 1803, in obedience to Father Varin, superior of the Fathers of the Faith, and under the auspices of the Bishop of Amiens, the foundation was laid of the Institute of the Sisters of Notre Dame, a society which had for its primary object the salvation of poor children. Several young persons offered themselves to assist the two superiors. The first pupils were eight orphans. On the feast of the Sacred Heart, 1 June, 1804, Mother Julie, after a novena made in obedience to her confessor, was cured of paralysis. The first vows of religion were made on 15 October, 1804 by Julie Billiard, Françoise Blin de Bourdon, Victoire Leleu, and Justine Garson, and their family names were changed to names of saints. They proposed for their lifework the Christian education of girls, and the training of religious teachers who should go wherever their services were asked for. Father Varin gave the community a provisional rule by way of probation, which was so far-sighted that its essentials have never been changed. In view of the extension of the institute, he would have it governed by a superior-general, charged with visiting the houses, nominating the local superiors, corresponding with the members dispersed in the different convents, and assigning the revenues of the society. The characteristic devotions of the Sisters of Notre Dame were established by the foundress from the beginning. She was original in doing away with the time-honored distinction between choir sisters and lay sisters, but this perfect equality of rank did not in any way prevent her from putting each sister to the work for which her capacity and education fitted her. She attached great importance to the formation of the sisters destined for the schools, and in this she was ably assisted by Mother St. Joseph (Françoise Blin de Bourdon), who had herself received an excellent education.

When the congregation of the Sisters of Notre Dame was approved by an imperial decree dated 19 June, 1806, it numbered thirty members, In that and the following years, foundations were made in various towns of France and Belgium, the most important being those at Ghent and Namur, of which the latter house Mother St. Joseph was the first superior. This spread of the institute beyond the Diocese of Amiens cost the foundress the greatest sorrow of her life. In the absence of Father Varin from that city, the confessor of the community, the Abbé de Sambucy de St. Estève, a man of

superior intelligence and attainments but enterprising and injudicious, endeavored to change the rule and fundamental constitutions of the new congregation so as to bring it into harmony with the ancient monastic orders. He so far influenced the bishop, Mgr. Demandolx, that Mother Julie had soon no alternative but to leave the Diocese of Amiens, relying upon the goodwill of Mgr. Pisani de la Gaude, bishop of Namur, who had invited her to make his episcopal city the center of her congregation, should a change become necessary. In leaving Amiens, Mother Julie laid the case before all her subjects and told them they were perfectly free to remain or to follow her. All but two chose to go with her, and thus, in the mid-winter of 1809, the convent of Namur became the motherhouse of the institute and is so still. Mgr. Demandolx, soon undeceived, made all the amends in his power, entreating Mother Julie to return to Amiens and rebuild her institute. She did indeed return, but after a vain struggle to find subjects or revenues, went back to Namur. The seven years of life that remained to her were spent in forming her daughters to solid piety and the interior spirit, of which she was herself the model. Mgr. De Broglie, bishop of Ghent, said of her that she saved more souls by her inner life of union with God than by her outward apostolate. She received special supernatural favors and unlooked-for aid in peril and need. In the space of twelve years (1804 - 1816) Mother Julie founded fifteen convents, made one hundred and twenty journeys, many of them long and toilsome, and carried on a close correspondence with her spiritual daughters. Hundreds of these letters are preserved in the motherhouse. In 1815 Belgium was the battlefield of the Napoleonic wars, and the mother-general suffered great anxiety, as several of her convents were in the path of the armies, but they escaped injury. In January, 1816, she was taken ill, and after three months of pain borne in silence and patience, she died with the Magnificat on her lips. The fame of her sanctity spread abroad and was confirmed by several miracles. The process of her beatification, begun in 1881, was completed in 1906 by the decree of Pope Pius X dated 13 May, declaring her Blessed. [*Note*: She was canonized in 1969 by Pope Paul VI.]

St. Julie's predominating trait in the spiritual order was her ardent charity, springing from a lively faith and manifesting itself in her thirst for suffering and her zeal for souls. Her whole soul was echoed in the simple and naove formula which was continually on her lips and pen: "Oh, qu'il est bon, le bon Dieu" (How good God is). She possessed all the qualities of a perfect superior, and inspired her subjects with filial confidence and tender affection.

SISTER OF NOTRE DAME

Juliopolis

Juliopolis

Titular see in the province of Bithynia Secunda, suffragan of Nicaea. The city was founded under the Emperor Augustus by a robber chieftain named Cleon, who was a native of the region; previously it had been called Gordoucome (Strabo, XII, viii, 9; Pliny, "Hist. Natur.," V, xl, 3). The location of the city is unknown, none of its titulars being known, neither does it figure in any "Notitiae episcopatum," unless it may be considered identical with Gordoserboi, as Le Quien thinks (*Oriens Christ.*, I, 659). This Juliopolis must not be confounded with another town of the same name situated in Galatia Prima, and which under the name of Gordion was formerly the capital of Phrygia. It was there, in the temple of Zeus, that Alexander cut the famous Gordian knot. Under its own name, or that of Basilaion, Juliopolis of Galatia is noticed in all the "Notitiae episcopatum," and Le Quien (*op.cit.*, I, 475-78) gives the names of a number of its bishops. Its ruins are about six miles S.S.E. of Nali-Khan, and about three miles north of the Sangarius, in the plain of Aimanghir and the vilayet of Angora.

S. VAILHÉ

Pope Saint Julius I

Pope St. Julius I

(337-352).

The immediate successor of Pope Silvester, Arcus, ruled the Roman Church for only a very short period — from 18 January to 7 October, 336 — and after his death the papal chair remained vacant for four months. What occasioned this comparatively long vacancy is unknown. On 6 Feb., 337, Julius, son of Rustics and a native of Rome, was elected pope. His pontificate is chiefly celebrated for his judicious and firm intervention in the Arian controversies, about which we have abundant sources of information. After the death of Constantine the Great (22 May, 337), his son Constantine II, Governor of Gaul, permitted the exiled Athanasius to return to his See of Alexandria (see ATHANASIUS). The Arians in Egypt, however, set up a rival bishop in the person of Pistus, and sent an embassy to Julius asking him to admit Pistus into communion

with Rome, and delivering to the pope the decisions of the Council of Tyre (335) to prove that Athanasius had been validly deposed. On his side Athanasius likewise sent envoys to Rome to deliver to Julius a synodal letter of the Egyptian bishops, containing a complete justification of their patriarch. On the arrival of the Athanasian envoys in Rome, Macarius, the head of the Arian representatives, left the city; the two remaining Arian envoys, with the Athanasian deputies, were summoned by Pope Julius. The Arian envoys now begged the pope to assemble a great synod before which both parties should present their case for decision.

Julius convened the synod at Rome, having dispatched two envoys to bear a letter of invitation to the Eastern bishops. Under the leadership of Eusebius, who had been raised from Nicomedia to the See of Constantinople, the Arian bishops had meanwhile held a council at Antioch, and elected George of Cappadocia Bishop of Alexandria in the place of Pistus. George was intruded forcibly into his see, and Athanasius, being again exiled, made his way to Rome. Many other Eastern bishops removed by the Arian party, among them Marcellus of Ancyra, also came to Rome. In a letter couched in haughty terms, however, the Arian bishops of the party of Eusebius refused to attend the synod summoned by Julius. The synod was held in the autumn of 340 or 341, under the presidency of the pope, in the titular church of the presbyter Vitus. After a detailed examination of the documents, Athanasius and Marcellus of Ancyra, who had made a satisfactory profession of faith, were exonerated and re-established in their episcopal rights. Pope Julius communicated this decision in a very notable and able letter to the bishops of the Eusebian party. In this letter he justifies his proceedings in the case, defends in detail his action in reinstating Athanasius, and animadverts strongly on the non-appearance of the Eastern bishops at the council, the convening of which they themselves had suggested. Even if Athanasius and his companions were somewhat to blame, the letter runs, the Alexandrian Church should first have written to the pope. "Can you be ignorant," writes the pope, "that this is the custom, that we should be written to first, so that from here what is just may be defined" (*Julii ep. ad Antiochenos*, c. xxii). After his victory over his brother Constantine II, Emperor Constans was ruler over the greater part of the Empire. He was entirely orthodox in his views, and, at the request of the pope and other Western bishops, interceded with his brother Constantius, Emperor of the East, in favour of the bishops who had been deposed and persecuted by the Arian party. Both rulers agreed that there should be convened a general council of the Western and Eastern bishops at Sardica, the principal city of the Province of Dacia Mediterranea (the modern Sofia). It took place in the autumn of 342 or 343, Julius sending as his representatives the priests Archidamus and Philoxenus and the deacon Leo. Although the Eastern bishops of the Arian party did not join in the council, but held their assembly separate and then departed, the synod nevertheless

accomplished its task. Through the important canons iii, iv, and v (vii in the Latin text) of this council, the procedure against accused bishops was more exactly regulated, and the manner of the papal intervention in the condemnation of bishops was definitely established.

At the close of its transactions the synod communicated its decisions to the pope in a dutiful letter. Notwithstanding the reaffirmation of his innocence by the Synod of Sardica, St. Athanasius was not restored to his see by Emperor Constantius until after the death of George, the rival Bishop of Alexandria, in 346. Pope Julius took this occasion to write a letter, which is still extant, to the priests, deacons, and the faithful of Alexandria, to congratulate them on the return of their great pastor. The two bishops Ursacius of Singidunum and Valens of Mursia, who, on account of their Arianism, had been deposed by the Council of Sardica, now made a formal recantation of their error to Julius, who, having summoned them to an audience and received a signed confession of faith, restored to them their episcopal sees. Concerning the inner life of the Roman Church during the pontificate of Julius we have no exact information; all agree, however, that there was a rapid increase in the number of the faithful in Rome, where Julius had two new basilicas erected: the titular church of Julius (now S. Maria in Trastevere) and the Basilica Julia (now the Church of the Twelve Apostles). Beside these he built three churches over cemeteries outside the walls of Rome: one on the road to Porto, a second on the Via Aurelia, and a third on the Via Flaminia at the tomb of the martyr St. Valentine. The ruins of the last-mentioned have been discovered. The veneration of the faithful for the tombs of the martyrs continued to spread rapidly. Under the pontificate of Julius, if not earlier, catalogues of feast-days of saints came into use — the Roman feast-calendar of Philocalus dates from the year 336.

Through St. Athanasius, who remained in Rome several years subsequent to 339, the Egyptian monastic life became well-known in the capital, and the example of the hermits of the Egyptian deserts found many imitators in the Roman Church. Julius died on 12 April, 352, and was buried in the catacombs of Calepodius on the Aurelian Way, and, very soon after his death, was honoured as a saint. His body was later transported to S. Maria in Trastevere, the church which he had built. His feast is celebrated on 12 April.

J.P. KIRSCH

Pope Julius II

Pope Julius II

(GIULIANO DELLA ROVERE).

Born on 5 December, 1443, at Albissola near Savona; crowned on 28 November, 1503; died at Rome, in the night of 20-21 February, 1513. He was born of a probably noble but impoverished family, his father being Raffaello della Rovere and his mother Theodora Manerola, a lady of Greek extraction. He followed his uncle Francesco della Rovere into the Franciscan Order, and was educated under his tutelage at Perugia. With the elevation of his uncle to the papacy as Sixtus IV on 9 August, 1471, begins the public career of Giuliano. On 15 December, 1471, he was created Cardinal Priest of San Pietro in Vincoli, and thereafter literally overwhelmed with benefices, although during the lifetime of Sixtus IV he never took a prominent part in ecclesiastical diplomacy. He held the episcopal sees of Carpentras (1471-2), Lausanne (1472-6), Catania (1473-4), Coutances (1476-7), Mende (1478-83), Viviers (1477-9), Sabina (1479-83), Bologna (1483-1502), Ostia (1483-1503), Lodève (1488-9), Savona (1499-1502), Vercelli (1502-3), and the Archiepiscopal See of Avignon (1474-1503). In addition he was commendatory Abbot of Nonantola, Grottaferrata, and Gorze, and drew the revenues of various other ecclesiastical benefices. These large incomes, however, he did not spend in vain pomp and dissipation, as was the custom of many ecclesiastics of those times. Giuliano was a patron of the fine arts, and spent most of his superfluous money in the erection of magnificent palaces and fortresses. Still his early private life was far from stainless, as is sufficiently testified by the fact that before he became pope he was the father of three daughters, the best known of whom, Felice, he gave in marriage to Giovanni Giordano Orsini in 1506.

In June, 1474, Giuliano was sent at the head of an army to restore the papal authority in Umbria. He succeeded in reducing Todi and Spoleto, but for the subjugation of Città di Castello he needed the assistance of Duke Federigo of Urbino. In February, 1476, he was sent as legate to France to regulate the affairs of his Archdiocese of Avignon, and probably to oppose the council which Louis XI intended to convene at Lyons. In 1480 he was sent as legate to the Netherlands and France to accomplish three things, viz. to settle the quarrel concerning the Burgundian inheritance between Louis XI and Maximilian of Austria, to obtain the help of France against the Turks, and to effect the liberation of Cardinal Balue whom Louis XI had held in strict custody since 1469 on account of treasonable acts. After successfully completing his mission he returned to Rome in the beginning of 1482, accompanied by the liberated Cardinal Balue.

At that time a war was just breaking out between the pope and Venice on one side and Ferrara on the other. Giuliano made various attempts to restore peace, and was probably instrumental in the dissolution of the Veneto-Papal alliance on 12 December, 1482. He also protected the Colonna family against the cruel persecutions of Cardinal Girolamo Riario in 1484. After the death of Sixtus IV on 12 August, 1484, Giuliano played a disreputable role in the election of Innocent VIII. Seeing that his own chances for the papacy were extremely meagre, he turned all his efforts to securing the election of a pope who was likely to be a puppet in his hands. Such a person he saw in the weak and irresolute Cardinal Cibo, who owed his cardinalate to Giuliano. To effect the election of his candidate he did not scruple to resort to bribery. Cibo ascended the papal throne as Innocent VIII on 29 August, 1484, and was greatly influenced during the eight years of his pontificate by the strong and energetic Giuliano. The war that broke out between the pope and King Ferrante of Naples must be attributed chiefly to Giuliano, and it was also due to him that it did not come to an earlier conclusion.

After the death of Innocent VIII on 25 July, 1492, Giuliano again aspired to the papacy, but his great influence during Innocent's pontificate and his pronounced sympathy for France had made him hateful to the cardinals. He was shrewd enough to understand the situation. He was, however, loath to see the tiara go to Cardinal Rodrigo Borgia, not because the latter was an unworthy candidate, but on account of his personal aversion towards the Borgia. Despite Giuliano's efforts to the contrary, Rodrigo Borgia was the successful candidate, and ascended the papal throne as Alexander VI on 11 August, 1492. Fearing for his safety in Rome, Giuliano withdrew to his strongly fortified castle at Ostia towards the end of 1492. An apparent reconciliation between Alexander VI and Giuliano was effected in July, 1493, but Giuliano did not trust in the sincerity of the pope and fled by way of Genoa to the court of Charles VIII of France, whom he induced to make an expedition into Italy with the purpose of de-throning Alexander VI. Giuliano accompanied the king on his expedition, but by liberal concessions Alexander gained Charles to his side. In the treaty effected between them, it was stipulated that Giuliano should remain in possession of all his dignities and benefices, and should be guaranteed secure and undisturbed residence in Rome. Giuliano, however, still feared the secret machinations of Alexander and returned to France. Another apparent reconciliation took place in June, 1497, when Giuliano assisted the pope in the matrimonial affairs of Cesare Borgia. But Giuliano's distrust of Alexander remained. He evaded Rome, spending most of his time in France and Northern Italy.

After the death of Alexander on 18 August, 1503, he returned to Rome on 3 September to take part in the election of the new pope. He was again a strong candidate for the papacy, but his great ambition was not yet to be realized. The sick and aged

Francesco Piccolomini ascended the papal throne as Pius III, but died on 18 October, 1503, after a reign of only twenty-six days. Giuliano's chance of being elected was now better than at any previous election. To ensure his success he made great promises to the cardinals, and did not hesitate to employ bribery. The conclave began on 31 October, and after a few hours the cardinals united their votes on Giuliano, who as pope took the name of Julius II. It was the shortest conclave in the history of the papacy. In the capitulation preceding the election, the following terms were secured by the cardinals: (1) the continuation of the war against the Turks; (2) the restoration of ecclesiastical discipline and the convocation of a general council for that purpose within two years; (3) that no war was to be undertaken with another nation without the consent of two-thirds of the cardinals, who were to be consulted on all important matters, especially concerning the creation of new members for the Sacred College; (4) that the pope with two-thirds of the cardinals were to determine upon the place of the next general council. Such an unlawful restriction of papal rights no pope could tolerate, much less the impatient, irascible, ambitious, and warlike Julius II, whose fearless and awe-inspiring presence gained for him the epithet of pontefice terribile. The chief task of his pontificate he saw in the firm establishment and the extension of the temporal power. For the accomplishment of this task no pope was ever better suited than Julius, whom nature and circumstances had hewn out for a soldier.

Venice was the first to feel the strong hand of Julius II. Under pretence of humiliating Cesare Borgia, whom Alexander VI had made Duke of the Romagna, the Venetians had reduced various places in the Romagna under their own authority. The Romagna was ecclesiastical territory, and every one of its cities added to the Venetian republic was lost to the papacy. Julius, therefore, ordered Cesare Borgia to surrender the fortified places of the Romagna into his own hands. Cesare Borgia refused and was arrested by the pope's order. Venice, however, stubbornly refused to give back the cities which it had previously taken. A temporary settlement was reached in March, 1505, when Venice restored most of its conquests in the Romagna. Meanwhile trouble was brewing at Perugia and Bologna, two cities that belonged to the Papal States. At Perugia the Baglioni and at Bologna the Bentivogli were acting as independent despots. The warlike Julius II personally directed the campaign against both, setting out at the head of his army on 26 August, 1506. Perugia surrendered without any bloodshed on 13 September, and the pope proceeded towards Bologna. On 7 October he issued a Bull deposing and excommunicating Giovanni Bentivoglio and placing the city under interdict. Bentivoglio fled, and Julius II entered Bologna triumphantly on 10 November. He did not leave the city until 22 February, 1507, arriving again at Rome on 27 March.

The Venetians meanwhile continued to hold Rimini and Faenza, two important places in the Romagna: they moreover encroached upon the papal rights by filling the

vacant episcopal sees in their territory independently of the pope, and they subjected the clergy to the secular tribunal and in many other ways disrespected the ecclesiastical jurisdiction of Julius II. Unable to cope alone with the powerful Republic of Venice, he reluctantly joined the League of Cambrai on 23 March, 1509. This League had been formed by Emperor Maximilian I and Louis XII of France chiefly with the purpose of forcing Venice to restore its recent continental conquests to their original owners. On 27 April, 1509, Julius II placed Venice under interdict and dispatched his troops into the Romagna. Venice was too weak to contend against the combined forces of the League, and suffered a complete defeat at the battle of Agnadello on 14 May, 1509. The Venetians were now ready to enter negotiations with Julius II, who withdrew from the League and freed the Venetians from the ban on 24 February, 1510, after they agreed upon the following terms. (1) to restore the disputed towns in the Romagna; (2) to renounce their claims to fill vacant benefices; (3) to acknowledge the ecclesiastical tribunal for ecclesiastics and exempt them from taxes; (4) to revoke all treaties made with papal cities; (5) to permit papal subjects free navigation on the Adriatic.

Julius II was now again supreme temporal master over the entire Pontifical States, but his national pride extended beyond the Patrimony of St. Peter. His ambition was to free the whole of Italy from its subjection to foreign powers, and especially to deliver it from the galling yoke of France. His efforts to gain the assistance of Emperor Maximilian, Henry VIII of England, and Ferdinand of Spain, proved futile for the moment, but the Swiss and the Venetians were ready to take the field against the French. Julius II inaugurated the hostilities by deposing and excommunicating his vassal, Duke Alfonso of Ferrara, who supported France. Louis XII retaliated by convoking a synod of French bishops at Tours in September, 1510, where it was decreed that the pope had no right to make war upon a foreign prince, and, in case he should undertake such a war, the foreign prince had the right to invade the Ecclesiastical States and to withdraw his subjects from their obedience to the pope. The synod also threatened the pope with a general council. Taking no notice of this synod, Julius again assumed personal command of his army and set out for Northern Italy. At Bologna he fell severely sick, and would probably have been captured by the French had it not been for the timely appearance of the Venetians. He had scarcely recovered, when, braving the inclemency of the weather, he marched against Mirandola which he took on 20 January, 1511. On 23 May, 1511, the French made a descent upon Bologna which Julius II had left nine days previously, drove out the papal troops and reinstated the Bentivogli.

Some of the cardinals were displeased with the pope's anti-French policy, and five of them went so far as to convoke a schismatic council at Pisa on 1 September. They were supported in their schism by the King of France and for some time also by Emperor Maximilian. The pope now looked for aid to Spain, Venice, and England, but

before completing negotiations with these powers he fell dangerously sick. From 25 to 27 August, 1511, his life was despaired of. It was during this sickness of Julius II that Emperor Maximilian conceived the fantastic plan of uniting the tiara with the imperial crown on his own head (see Schulte, "Kaiser Maximilian als Kandidat für den papstlichen Stuhl", Leipzig, 1906; and Naegle, "Hat Kaiser Maximilian I in Jahre 1507 Papst werden wollen" in "Historisches Jahrbuch", XXVIII, Munich, 1907, pp. 44-60, 278-305). But Julius II recovered on 28 August, and on 4 October the so-called Holy League was formed for the purpose of delivering Italy from French rule. In the beginning the League included only the pope, the Venetians, and Spain, but England joined it on 17 November, and was soon followed by the emperor and by Switzerland. Under the leadership of the brilliant Gaston de Foix the French were at first successful, but after his death they had to yield to the superior forces of the League, and, being defeated in the bloody battle of Ravenna on 11 April, 1512, they were driven beyond the Alps. Bologna again submitted to Julius II and the cities of Parma, Reggio, and Piacenza were added to the Ecclesiastical States.

Julius II was chiefly a soldier, and the fame attached to his name is greatly due to his re-establishment of the Pontifical States and the deliverance of Italy from its subjection to France. Still he did not forget his duties as the spiritual head of the Church. He was free from nepotism; heard Mass almost daily and often celebrated it himself; issued a strict Bull against simony at papal elections and another against duels; erected dioceses in the recently discovered American colonies of Haiti (Espanola), San Domingo, and Porto Rico; condemned the heresy of Piero de Lucca concerning the Incarnation on 7 September, 1511; made various ordinances for monastic reforms; instituted the still existing Capella Julia, a school for ecclesiastical chant which was to serve as a feeder for the Capella Palatina; and finally convoked the Fifth Lateran Council to eradicate abuses from the Church and especially from the Roman Curia, and to frustrate the designs of the schismatic cardinals who had convened their unsuccessful council first at Pisa, then at Milan (see LATERAN COUNCILS). Julius II has also gained an enviable reputation as a patron of arts. Bramante, Raphael, and Michelangelo gave to the world some of their greatest masterpieces while in his service. He laid the cornerstone of the gigantic Basilica of St. Peter on 18 April, 1506, and conceived the idea of uniting the Vatican with the Belvedere, engaging Bramante to accomplish the project. The famous frescoes of Michelangelo in the Sistine Chapel and of Raphael in the Stanze, the Court of St. Damasus with its loggias, the Via Giulia and Via della Lungara, the colossal statue of Moses which graces the mausoleum of Julius II in the church of San Pietro in Vincoli, and many other magnificent works in and out of Rome are lasting witnesses of his great love of art.

MICHAEL OTT

Julius III

Pope Julius III

(GIAMMARIA CIOCCHI DEL MONTE).

Born at Rome, 10 September, 1487; died there, 23 March, 1555. He was the son of a famous Roman jurist, studied jurisprudence at Perugia and Siena, and theology under the Dominican, Ambrosius Catharinus. In 1512 he succeeded his uncle Antonio del Monte as Archbishop of Siponto (Manfredonia), and in 1520 as Bishop of Pavia, retaining, however, the administration of Siponto. Later he became vice-legate of Perugia, and under Clement VII was twice appointed prefect of Rome. After the Sack of Rome (1527) he was one of the hostages given by Clement VII to the Imperialists, and would have been killed by the imperial Landsknechte in the Campo di Fiori, had he not been secretly liberated by Cardinal Pompeo Colonna. In 1534 he became legate of Bologna, the Romagna, Parma, and Piacenza. Pope Paul III created him Cardinal-Priest of SS. Vitalis, Gervasius, and Protasius on 22 December, 1536, and raised him to the dignity of cardinal-bishop with the Diocese of Palestrina on 5 October, 1543. As early as 1542 he had been entrusted with work preparatory to the convocation of the Council of Trent, and in a consistory held on 6 February, 1545, he was appointed first president of the council. In this capacity he opened the council at Trent on 13 December with a short oration (cf. Ehses, "*Concilium Tridentinum*", IV, Freiburg im Br., 1904, p. 516). At the council he represented the papal interests against Emperor

Charles V, with whom he came in conflict on various occasions, especially when on 26 March, 1547, he transferred the Council to Bologna.

After the death of Paul III on 10 November, 1549, the forty-eight cardinals present in Rome entered the conclave on 29 November. They were divided into three factions: the Imperials, the French, and the adherents of Farnese. The friends of Farnese united with the Imperial party and proposed Reginald Pole and Juan de Toledo as their candidates. The French party rejected both and, though in the minority, they were strong enough to prevent the election of either candidate. The adherents of Farnese and the French party finally reached a compromise and agreed upon Cardinal del Monte, who was duly elected on 7 February, 1550, after a conclave of ten weeks, although the emperor had expressly excluded him from the list of candidates. The new pope took the name of Julius III. In fulfilment of promises made in the conclave, Julius restored Parma to Ottavio Farnese a few days after his accession. But, when Farnese applied to France for aid against the emperor, Julius allied himself with the emperor, declared Farnese deprived of his fief, and sent troops under the command of his nephew Giambattista del Monte to co-operate with Duke Gonzaga of Milan in the capture of Parma. In a Bull, dated 13 November, 1550, Julius transferred the council from Bologna back to Trent, and ordered that its sessions be resumed on 1 May, 1551, but he was compelled to suspend it again on 15 April, 1552, because the French bishops would take no part in it, and, to escape his enemies, the emperor had to flee from Innsbruck. The success of the French arms in Northern Italy also compelled Julius on 29 April, 1552, to make a truce with France, in which it was stipulated that Farnese was to remain in the peaceful possession of Parma for two years.

Discouraged at his failure as an ally of Charles V, the pope henceforth abstained from interfering in the political affairs of Italy. He withdrew to his luxurious palace, the Villa Giulia, which he had erected at the Porta del Popolo. Here he spent most of his time in ease and comfort, occasionally making a weak effort at reform in the Church by instituting a few committees of cardinals for reformatory purposes. He was a liberal supporter of the rising Jesuit Order, and at the instance of St. Ignatius issued the Bull of foundation for the *Collegium Germanicum* on 31 August, 1552, and granted it an annual subsidy. During his pontificate the Catholic religion was temporarily restored in England by Queen Mary, who succeeded Edward VI on the English throne in 1553. Julius sent Cardinal Reginald Pole as legate to England with extensive faculties to be used at his discretion in the interests of the Catholic restoration. In February, 1555, an embassy was sent by the English Parliament to Julius III to inform him of its unreserved submission to the papal supremacy, but the embassy was still on its journey when the pope died. Shortly before his death Julius III sent Cardinal Morone to represent the Catholic interest at the Religious Peace of Augsburg. At the beginning of

his pontificate Julius III had the earnest desire to bring about a reform in the Church and with this intent he reopened the Council of Trent. That the council was again suspended was due to the force of circumstances. His inactivity during the last three years of his pontificate may have been caused by the frequent and severe attacks of the gout to which he was subject. The great blemish in his pontificate was nepotism. Shortly after his accession he bestowed the purple on his unworthy favourite Innocenzo del Monte, a youth of seventeen whom he had picked up on the streets of Parma some years previously, and who had been adopted by the pope's brother, Balduino. This act gave rise to some very disagreeable rumours concerning the pope's relation to Innocenzo. Julius was also extremely lavish in bestowing ecclesiastical dignities and benefices upon his relatives.

MICHAEL OTT

Julius Africanus

Julius Africanus

(c. 160-c. 240; the full name is Sextus Iulius Africanus, Gk. *Sextos Ioulios Aphrik-anos*).

Julius Africanus is the father of Christian chronography. Little is known of his life and little remains of his works. He is important chiefly because of his influence on Eusebius, on all the later writers of Church history among the Fathers, and on the whole Greek school of chroniclers. His name says that he was an African; Suidas calls him "a Libyan philosopher". Gelzer ("S. Julius Africanus", pp. 4, 5) thinks he was of Roman descent. He knew Greek (in which language he wrote), Latin, and Hebrew. He was at one time a soldier and had been a pagan; he wrote all his works as a Christian. Tillemont deduced that he was a priest from the fact that he addresses the priest Origen (in his letter to him) as "dear brother" ("*Mémoires pour servir à l'histoire ecclésiastique*", III, Paris, 1693, 254). Gelzer (op. cit., 9) points out that a friendly Christian layman

could quite well use such a form. The statement that Julius Africanus was a bishop does not appear till the fourth century. It is probably an error. He went to Alexandria to study, attracted by the fame of its catechetical school, possibly about the year 215 (Eusebius, "H. E.", VI, 31). All the dates of his life are uncertain. One tradition places him under the Emperor Gordianus (238-244; Gelzer, p. 7), another mentions him under Alexander Severus (222-235; id., p. 6). He appears to have known Abgar VIII, the Christian King of Edessa (176-213); in his Chronography he calls him a "holy man" (Gelzer, p. 3). Eusebius, in his chronicle (ad a. Abr., 2239, ed. Schoene, II, Berlin, 1875, 178), says that under Alexander Severus the city of Emmaus in Palestine was restored and called Nikopolis under the direction of "Julius Africanus the writer of the Chronicle". It appears that he lived there for a time (Bardenhewer, "Patrologie", Freiburg, 1894, p. 173). He shows in his Chronicle that he knows the topography of Palestine (Gelzer, p. 10). He seems to have been in Greece; he went to Rome about the year 221 (id., 11). Bardenhewer (op. cit., p. 173) puts his death at about 237. Preuschen (in Harnack, "Gesch. der altchristlichen Litteratur", p. 507) says that he died "after 221" and adds "under Gordianus 238-244?". Harnack ("Realenc. für prot. Theol. u. Kirche", Leipzig, 1901, IX, 627) says, "after 240".

The works of S. Julius Africanus are: (1) The "Chronicle" (Gk. *Chronographiai*) in five books, covering the time from the Creation (B.C. 5499 in his calculation) to the third year of Eliogabalus (A.D. 221). Gelzer thinks he wrote this work between 212 and 221 (op. cit., 12). It is an attempt to combine the account in the Bible and the secular (Roman and Greek) history known to the author, with special regard to chronology. From the third book the order is strictly chronological. Julius uses as sources first the Bible, then Greek, Roman, and Jewish historians, especially Justus of Tiberias, who depends on Josephus. He is also influenced by the "Stromata" of Clement of Alexandria (Gelzer, 19-24). As the first Christian attempt at a universal history, and as the source of all later Christian chronography, this work is of great importance. Eusebius made it the foundation of his chronicle. It is the source of all later Byzantine writing of history, so that for centuries the Christian world accepted the dates and epochs calculated by Julius. Only fragments of this work are now extant.

(2) The "Embroideries" (Gk. *kestoi*; compare the title of Clem. Alex.: *stromata*), also called "Puzzles" (Gk. *paradoxa*), is a kind of encyclopedia of sciences -- mathematics, botany, medicine, etc. -- full of all manner of curious anecdotes and illustrations. It has been thought that the author of this work was a pagan, Sextus Africanus, different from the Christian Julius Africanus. This is directly contradicted by Eusebius in his "Chronicle" (H.E., VI, 31): "Africanus (the author of the 'Chronographia'), writer of the composed Embroideries" (Gk. *ho ton epigegrammenon keston syggrapheus*). Gelzer (2-3) has shown that the author of the *kestoi* was a Christian (he quotes Ps. xxxiii, 9)

and that there is no reason to doubt Eusebius's statement. This work, too, constantly quoted and much esteemed by the Greek Fathers, survives only in a few fragments about agriculture and war (Gelzer, 13-16). It had originally twenty-four books. It is from the *kestoi*, in which the author discourses of magic, divination and medicine, that the opinion arose that he was a physician.

(3) Two letters of Julius are known, one to Origen, in which he disputes the authenticity of the story of Susanna, pointing out that the play upon words in the Greek text (*prinos*, an oak-tree, and *prio*, to saw asunder; *schinos*, a mastic-tree and *schizo*, to cleave: Dan., xiii, 54-55, 58-59) would not exist in Hebrew or Aramaic. From his address in this letter (*Kyrié mou kai huié*) he seems to have been an old man when he wrote it. Origen answered it. Both letters are included in Origen's works (e.g., ed. of De la Rue, I, Paris, 1733, 10). This letter is the only one of Julius's works that is completely extant. His criticism has won for him high respect among modern writers. J. G. Rosenmüller (*Historia Interpretationis*, III, 161) considers that these few lines contain more true exegesis than is to be found in all Origen's works. Gelzer (p. 17) points out that the "Chronography" and especially the *kestoi* show that Julius does not deserve his reputation as a critic. The other letter is addressed to a certain Aristides. In it he proposes what is still the favourite explanation of the two pedigrees of our Lord (Matt., i, 2-19; Luke, iii, 23-38), namely that St. Joseph's two fathers, Jacob (Matt., i, 16) and Heli (Luke, iii, 23), were half-brothers of the same mother, that Heli died without children, and Jacob took his wife to raise up seed to his brother according to the Levitical law (Deut., xxv, 5-6). Of this letter a fragment is preserved by Eusebius (H. E., I, vii), another fragment is contained in an epitome of Eusebius's "Quæstiones de differ. Evang.", published by A. Mai ("Nova Patrum bibliotheca", IV, Rome, 1852). Julius also translated Tertullian's "Apologeticum" into Greek (Harnack in "Texte und Untersuchungen", VIII, 4).

Later Syrian writers mention works that have disappeared. Dionysius Bar-Salibi speaks of a commentary on the Gospels (Assemani, "Bibliotheca Orientalis", II, Rome, 1721, 158), Ebed-Jesu of commentaries on the New Testament (Hebediesu, "Catalogus librorum chaldæorum", Rome, 1633, p. 15). Spurious works are the Acts of St. Symphorosa (Ruinart, "Acta primorum martyrum", Ratisbon, 1859, 70), a Latin version of Abdias's "History of the Apostles" ("Historiæ apostolicæ, auctore Abdia", Cologne, 1576, which asserts throughout, even in the title, that it was translated from the Hebrew by Julius Africanus) and an astonishing semi-pagan "Interpretation of the things that happened in Persia through the Incarnation of our Lord and God and Saviour, Jesus Christ" (ed. by Ignaz von der Hardt in J. C. von Aretin's "Beiträge zur Gesch. u. Litter.", II, Munich, 104, 52-69). St. Jerome in his "de Viris illustribus" (no. 63) includes: "Julius Africanus, of whom five books *de temporibus* [=the Chronography] are extant, accepted

a mission for the restoration of the city of Emmaus, afterwards called Nicopolis, under the Emperor Marcus Aurelius Antoninus, who succeeded Macrinus. There is a letter to Origen about the question of Susanna in which he says that this fable is not in the Hebrew, nor does *apo tou prinou prisai kai apo tou schisou schisai* agree with Hebrew etymology; against whom Origen wrote a learned letter. There exists also another letter of his to Aristides in which he discusses at length the disagreement which seems to be in the genealogy of the Saviour in Matthew and Luke." Except for the wrong date (M. Aurelius) this account, taken from Eusebius, represents very fairly what we know of Africanus.

Fragments of the works in ROUTH, *Reliquiæ sacræ*, II (2nd ed., Oxford, 1846-48), 219-509; P.G., X, 35-108; GELZER, *Sextus Julius Africanus und die Byzantinische Chronographie* (Leipzig, 1898); HARNACK, *Geschichte der alt-christlichen Litteratur bis Eusebius*, I (Leipzig, 1893), 507-513; SPITTA, *Der Brief des Julius Africanus an Aristides* (Halle, 1877).

ADRIAN FORTESCUE

Benedictine Abbey of Jumièges

Benedictine Abbey of Jumièges

Jumièges, situated on the north bank of the Seine, between Duclair and Caudebec, in Normandy (Seine-Inférieure). The abbey was founded in 634 by St. Philibert, who had been the companion of Sts. Ouen and Wandrille at the Merovingian court. Philibert became first abbot but was later on, through the jealousy of certain enemies, obliged to leave Jumièges, and afterwards founded another monastery at Noirmoutier, where he died about 685. Under the second abbot, St. Achard, Jumièges flourished exceedingly and numbered within its walls nearly a thousand monks. Enjoying the patronage of the dukes of Normandy, the abbey became a great centre of religion and learning, its schools producing, amongst many other scholars, the national historian, William of Jumièges. It reached the zenith of its fame about the eleventh century, and was regarded as a model of perfection for all the monasteries of the province. It was renowned especially for its charity to the poor, being popularly called "Jumièges l'Aumônier". In the ninth century it was pillaged and burnt to the ground by the Normans, but was rebuilt on a grander scale by William, Duke of Normandy, surnamed *Longue-Épée*. The church was enlarged in 1256, and again restored in 1573. The abbots of Jumièges took part in all the great affairs of the Church and nation; one of them, Robert, became Archbishop of Canterbury in 1040; many others became bishops in France, and some were also raised to the cardinalial dignity. The fortunes of the abbey suffered somewhat through the English invasion of the fifteenth century, but it recovered and maintained its

prosperity and high position until the whole province was devastated by the Huguenots and the Wars of Religion. In 1649, during the abbacy of Francis III, Jumièges was taken over by the Maurist Congregation, under which rule some of its former grandeur was resuscitated. The French Revolution, however, closed its career as a monastery, and only its majestic ruins now remain to show what it was in the days of its splendour. These comprise the church, with its beautiful twin towers and western façade, and portions of the cloisters and library. The contents of the latter were removed to Rouen when the abbey was suppressed.

Bernard Jungmann

Bernard Jungmann

A dogmatic theologian and ecclesiastical historian, born at Münster in Westphalia, 1 March, 1833; died at Louvain, 12 Jan., 1895. He belonged to an intensely Catholic family of Westphalia; like him, two of his brothers entered the service of the Church, one joining the Society of Jesus and the other becoming a missionary in the United States. After finishing his studies with brilliant success at the public schools of his native town, he entered the German College at Rome through the mediation of the bishop's secretary, afterwards Cardinal Melchers, and made his philosophical and theological studies in the Gregorian College. In 1854 he received the degree of Doctor of Philosophy; he was ordained priest in Rome on 8 June, 1857, and two years later received the degree of Doctor of Theology. He then returned to Germany, and worked for a short time as chaplain in the church of St. Adelgunde at Emmerich. Bishop Malou of Bruges, who chanced to be present in Rome in 1854 when Jungmann made his public defence of the philosophical theses, called him in September, 1861, to the chair of philosophy in the *Petit Séminaire* at Roulers. Four years later (1865) he became professor of theology in the ecclesiastical seminary at Bruges. Even at Roulers, while performing his duties as teacher, he began that literary activity, which was thenceforth ever associated with his professorial duties. His appointment to the chair of ecclesiastical history at Louvain, in succession to Wouters, opened in 1871 a wider field for his

great ability. A keen intellect with powers of clear exposition, joined to the spirited delivery which distinguished his lectures, ensured him great success. He enlarged the field of ecclesiastico-historical studies by delivering special lectures on patrology, and establishing in 1890 a seminary for ecclesiastical history, in which students were to receive a scientific and methodical training in original historical research.

Jungmann remained to the end of his life a professor at Louvain, declining the honour of a call to be professor of dogmatic theology in the newly founded Catholic University at Washington. He was seized with a fit of apoplexy at the burial of a colleague, and died at Louvain in 1895. His activity as a writer was equal to his energy as a lecturer. As professor of philosophy he wrote "Demonstratio christiana. I. Demonstrationis christianæ præambula philosophica" (Roulers, 1864; 2nd ed., 1867). In the domain of theology he wrote his "Institutiones theologiæ dogmaticæ specialis" in five tracts, widely used and much appreciated for their clear style: "De Gratia" (Bruges, 1866; 5th ed., Ratisbon, 1882); "De Deo uno et trino" (Bruges, 1867; 4th ed., Ratisbon, 1882); "De Deo Creatore" (Bruges, 1868; 4th ed., Ratisbon, 1883); "De Verbo incarnato" (Bruges, 1869; 4th ed., Ratisbon, 1884); "De quattuor novissimis" (Ratisbon, 1871; 3rd ed., 1885). He wrote also the "Institutiones theologiæ dogmaticæ generalis" (Bruges, 1871; 4th ed., Ratisbon, 1886). In church history he first re-edited Wouter's "Historiæ ecclesiasticæ compendium" (3 vols., Louvain, 1879), and later published special studies, particularly on theological controversies and on the papacy: "Dissertationes selectæ in historiam ecclesiasticam" (5 vols., Ratisbon, 1880). In patrology he issued Fessler's excellent "Institutiones Patrologiæ" in a new and much enlarged edition (2 vols., Innsbruck, 1890, 1892, 1896). He contributed numerous articles to German and French journals, particularly worthy of mention being: "Die neue französische Fortschrittsphilosophie" in the "Katholik" (Mainz, 1865); "Die hl. Märtyrer von Gorkum", *ibid.* (1867); "Clemens V. und die Aufhebung des Templerordens" in the "Zeitschrift für kath. Theologie" (Innsbruck, 1881); "Le caractère moral de Luther" in "La Controverse" (1883).

Annuaire de l'Université catholique de Louvain (1896), appendixes iii-xx by AB-BELOOS; xxi-xli by DUPONT, *Université catholique de Louvain. Bibliographie 1834-1900* (Louvain, 1900), 63-5.

J. P. KIRSCH.

Josef Jungmann

Josef Jungmann

Born 12 Nov., 1830, at Münster, Westphalia; died at Innsbruck, 25 Nov., 1885. In 1850 he entered the German College at Rome, and was ordained priest in 1855. He

afterwards joined the Society of Jesus and as early as 1858, even before the expiration of his novitiate, was chosen to fill the chair of elocution in the re-established theological faculty at Innsbruck. Besides many articles in periodicals Jungmann published: "Fünf Sätze zur Erklärung und wissenschaftlichen Begründung der Andacht zum hl. Herzen Jesu und zum reinsten Herzen Mariæ" (Innsbruck, 1869); "Eine Litanei zum hl. Herzen Jesu aus der hl. Schrift" (2nd ed., *ibid.*, 1871); "Gefahren belletristischer Lektüre" (*ibid.*, 1872); "Zur Verehrung U. L. Frau" (2nd ed., *ibid.*, 1879); "Das Gemüt und das Gefühlsvermögen der neueren Psychologie" (2nd ed., *ibid.*, 1885); "Die Andacht zum hl. Herzen Jesu und die Bedenken gegen dieselbe" (2nd ed., *ibid.*, 1885); "Theorie der geistlichen Beredskamkeit" (2 vols., 3rd ed., Innsbruck, 1886); "Aesthetik" (2 vols., 3rd ed., 1886). A third edition of his "Beredskamkeit" was published by his colleague, Michael Gatterer, who also edited a fourth and much abbreviated edition. Jungmann had a wonderful influence over his students. Speaking of him, one of them writes: "I do not know what it was that always charmed the other students so much, but, for myself, I felt irresistibly drawn to him on account of his high sentiments and character, founded on deeply rooted principles, influenced by such alone, and therefore immovable. These sentiments distinguished him at every turn — in his studies, in his social intercourse, in his daily avocations, and in his religious exercises."

HOFMANN, *Das Nikolaihaus zu Innsbruck einst und jetzt* (Innsbruck, 1908), 126.

KARL KLAAR.

Ecclesiastical Jurisdiction

Ecclesiastical Jurisdiction

The right to guide and rule the Church of God. The subject is here treated under the following heads:

- I. General Concept and Classification of Jurisdiction;
- II. Development of Jurisdiction in its strict sense;
- III. Present Scope of Jurisdiction in its strict sense.

I. GENERAL CONCEPT AND CLASSIFICATION OF JURISDICTION

The Church founded by Christ for the salvation of men needs, like every society, a regulating power (the authority of the Church). This power Christ has bestowed upon it. Directly before His Ascension He gave to the Apostles collectively the commission, and with it the authority, to proclaim his doctrine to all nations, to baptize them, and to teach them to observe all things that He had commanded (Matt., xxviii, 18 sqq.). It may be noted here that the Decree "Lamentabili sane", of 3 July, 1907, rejects

(n. 52 sqq.) the doctrine that Christ did not desire to found a permanent, unchangeable Church endowed with authority. It is customary to speak of a threefold office of the Church: the office of teaching (prophetic office), the priestly office, and the pastoral office (governing office), also, therefore, of the threefold authority of the Church, that is, the *teaching* authority, *ministerial* authority, and *ruling* authority. Since, however, the teaching of the Church is authoritative, the teaching authority is traditionally included in the ruling authority; regularly, therefore, only the ministerial authority and the ruling authority are distinguished. By ministerial authority, which is conferred by an act of consecration, is meant the inward, and, because of its indelible character, permanent capacity to perform acts by which Divine grace is transmitted. By ruling authority, which is conferred by the Church (*missio canonica*, canonical mission), is understood the authority to guide and rule the Church of God. Jurisdiction, in so far as it covers the relations of man to God, is called *jurisdiction of the internal forum* or jurisdiction of the forum of Heaven (*jurisdictio poli*). (See Ecclesiastical Forum.) This again is either *sacramental* or *penitential*, so far as it is used in the Sacrament of Penance, or extra-sacramental, e.g. in granting dispensations from private vows. Jurisdiction, in so far as it regulates external ecclesiastical relations, is called jurisdiction of the external forum, or briefly *jurisdictio fori*. This jurisdiction, the actual power of ruling is *legislative*, *judicial*, or *coactive*. Jurisdiction can be possessed in varying degrees. It can also be held either for both fora, or for the internal forum only, e.g. by the parish priest. Jurisdiction can be further sub-divided into: *ordinary*, *quasi-ordinary*, and *delegated jurisdiction*. Ordinary jurisdiction is that which is permanently bound, by Divine or human law, with a permanent ecclesiastical office. Its possessor is called an ordinary judge. By Divine law the pope has such ordinary jurisdiction for the entire Church and a bishop for his diocese. By human law this jurisdiction is possessed by the cardinals, officials of the Curia and the congregations of cardinals, the patriarchs, primates, metropolitans, archbishops, the *praelati nullius*, and prelates with quasi-episcopal jurisdiction, the chapters of orders, or, respectively, the heads of orders, cathedral chapters in reference to their own affairs, the archdiaconate in the Middle Ages, and parish priests in the internal forum. If, however, jurisdiction is permanently connected with an office, but the office itself is said to be quasi-ordinary, or *jurisdictio vicaria*. This form of jurisdiction is possessed, for example, by a vicar-general. Temporary exercise of ordinary and quasi-ordinary jurisdiction can be granted, in varying degrees, to another as representative, without conferring on him an office properly so called. In this transient form jurisdiction is called *delegated* or *extraordinary*, and concerning it canon law, following the Roman law, has developed exhaustive provisions. This development began when the popes, especially since Alexander III (1159-81), found themselves obliged, by the enormous mass of legal business which came to them from

all sides as the "*judices ordinarii omnium*" to hand over, with proper instruction, a large number of cases to third parties for decision, especially in matters of contentious jurisdiction.

Delegated jurisdiction rests either on a special authorization of the holders of ordinary jurisdiction (*delegatio ab homine*), or on a general law (*delegatio a lege, a jure, a canone*). Thus, the Council of Trent transferred a number of papal rights to the bishops "tanquam Apostolicae Sedis delegati", i.e. also as delegates of the Apostolic See (Sess. VI, De ref., c. ii, iii, etc.), and "etiam tanquam Apostolicae Sedis delegati", i.e. also as delegates of the Apostolic See (Sess. VI, De ref., c. iv, etc.). In the first class of cases bishops do not possess ordinary jurisdiction. The meaning of the second expression is disputed, but it is generally taken as purely cumulative. If the delegation applies to one or several designated cases only, it is *special* delegation. If, however, it applies to an entire class of subjects, it is then *general* delegation or delegation for the universality of causes. Delegated jurisdiction for the total of a number of matters is known as *delegatio mandata*. Only those can be appointed delegates who are competent to execute the delegation. For an act of consecration the delegate must have himself the necessary sacred orders. For acts of jurisdiction he must be an ecclesiastic, though the pope could also delegate a layman. Papal delegation is usually conferred only on ecclesiastical dignitaries or canons (c. xi, in VI^o, De rescript., I, iii; Council of Trent, Sess. XXV, De ref., c. x). The delegate must be twenty years old, but eighteen years suffices for one appointed by the pope (c. xli, X, De off. jud. deleg., I, xxix). He must also be free from excommunication (c. xxiv, X, De sent. et re jud., II, xxvii). Those placed under the jurisdiction of the delegator must submit to the delegation (c. xxviii, X, De off. jud. deleg., I, xxix). Delegation for one matter can also be conferred upon several. The distinction here to be made is whether they have to act jointly and severally (*collegiatly*), jointly but individually (*solidarily*), or solidarily at least in some given case (c. xvi, xxi, X, De off. jud. deleg., I, xxix; c. viii, in VI^o, h. t. I, xiv). The delegate is to follow exactly his instructions. He is, however, empowered to do all that is necessary to execute them (c. i, c, cii, ciii, xi, xxi, xxvi, xxviii, X, De off. jud. deleg., I, xxix). If he exceed his power, his act is null (c. xxxvii, X, De off. jud. deleg., I, xxix). When necessary the delegate can himself delegate, i.e. subdelegate, a qualified person; he can do this especially if he is a papal delegate (c. iii, xxviii, X, De off. jud. deleg., I, xxix), or if he has received permission, or if he has been delegated for a number of cases (Gloss to "Delegatus", c. lxii, X, De appell., II, xxviii). Since delegation constitutes a new court appeal can be taken from the delegate to the delegator, and in the case of subdelegation to the original delegator (c. xxvii, X, De off. jud. deleg., I, xxix). Delegated jurisdiction expires on the death of the delegate, in case the commission were not issued in view of the permanence of his office, on the loss of office or the death of the delegator, in

case the delegate has not acted (*re adhuc integra*, the matter being still intact), on recall of his authority by the delegator (even *re adhuc nondum integra*, the matter being no longer intact), on expiration of the allotted time, on settlement of the matter, on declaration of the delegate that he has no power (c. xiv, xix, iv, xxxviii, X, De off. jud. deleg., I, xxix).

II. DEVELOPMENT OF JURISDICTION IN ITS STRICT SENSE

The Church has the right, as a perfect and independent society provided with all the means for attaining its end, to decide according to its laws disputes arising concerning its internal affairs, especially as to the ecclesiastical rights of its members, also to carry out its decision, if necessary, by suitable means of compulsion, *contentious* or *civil* jurisdiction. It has, therefore, the right to admonish or warn its members, ecclesiastical or lay, who have not conformed to its laws, and also, if needful to punish them by physical means, that is, *coercive* jurisdiction. The church has, first, the power to judge sin. This it does in the internal forum. But a sin can be at the same time externally a misdemeanour or a crime (*delictum, crimen*), when threatened with external ecclesiastical or civil punishment. The Church also judges ecclesiastical crimes in the external forum by infliction of penalties, except when the wrong doing has remained secret. In this case it contents itself, as a rule, with penance voluntarily assumed. Finally, another distinction is to be drawn between *necessary* jurisdiction and *voluntary* jurisdiction; the latter contemplates voluntary subjection on the part of those who seek in legal matters the co-operation of ecclesiastical agencies, e.g. notarially executed instruments, testaments, etc. The judicial power described above, jurisdiction strictly so called, was given by Christ to His Church, was exercised by the Apostles, and transmitted to their successors (Matt., xviii, 15 sqq.; I Cor., iv, 21; v, 1 sqq.; II Cor., xiii, 10; I Tim., i, 20; v, 19 sq.).

From the beginning of the Christian religion the ecclesiastical judge, i.e. the bishop, decided matters of dispute that were purely religious in character (*causae mere ecclesiasticae*). This jurisdiction of the Church was recognized by the civil (imperial) power when it became Christian. But long before this the early Christians, following the exhortation of Saint Paul (I Cor., vi, 14), were wont to submit to ecclesiastical jurisdiction matters which by their nature belonged to the civil courts. As long as Christianity was not recognized by the State it was left to the conscience of the individual whether he would conform to the decision of the bishop or not. When, however, Christianity had received civil recognition, Constantine the Great raised the former private usage to a public law. According to an imperial constitution of the year 321 the parties in dispute could, by mutual agreement, bring the matter before the bishop even when it was already pending before a civil judge, and the latter was obliged to put into effect the decision of the bishop. A further constitution of 331 provided that in any stage of the

suit any one of the parties could appeal to the bishop even against the will of the others (Hanel, "De constitutionibus, quas F. Sirmondus, Paris, an. 1631 edidit," 1840). But Arcadius, in 398, and Honorius, in 408, limited the judicial competence of the bishop to those cases in which both parties applied to him (lex VII, Cod. Just., De audientia episc., I, iv). This arbitral jurisdiction of the bishop was not recognized in the new Teutonic kingdoms. In the Frankish kingdoms purely ecclesiastical matters of dispute belonged to the jurisdiction of the bishop, but mixed cases, in which civil interests appeared, e.g. marriage questions, law suits concerning Church property, etc., belonged to the civil courts.

In the course of the Middle Ages the Church succeeded in extending its jurisdiction over all matters that offered an ecclesiastical interest (*causae spiritualibus annexae*), all litigation concerning marriages (c. vii, X, Qui filii sint legit., IV, xvii; c. vii, X, De donat., IV, xx); matters concerning burial (X, De sepult., III, xxviii); testaments (X, De testam., III, xxvi); compacts ratified with an oath (c. iii, in VI^o, De foro compet., II, ii); matters pertaining to benefices (c. ii, X, De suppl. neglig. praelat., I, x); questions of patronage (X, De jur. patron., III, xxxviii); litigation concerning church property and tithes (X, De decim., III, xxx). In addition all civil litigation in which the element of sin was in question (*ratio peccati*) could be summoned before an ecclesiastical court (c. xiii, X, De judic., II, i).

Also, the ecclesiastical court had jurisdiction over the affairs of ecclesiastics, monks, and nuns, the poor, widows, and orphans (*personae miserabiles*), also of those persons to whom the civil judge refused legal redress (c. xi, X, De foro compet., II, ii). Owing to the unsatisfactory administration of justice in the medieval world this far-reaching civil jurisdiction of the Church was beneficial. However, it eventually overlapped the natural boundaries of Church and State. The result was that the ecclesiastic became too much involved in secular litigation and grew estranged from his proper calling. For these reasons, but further also for selfish ones, a reaction against this condition of affairs arose in England as early as the twelfth century. The reaction spread to France and Germany and gained in influence and justification the more the administration of justice by the State improved. At the end of the long vicissitudinous struggle the Church lost its jurisdiction in *res spiritualibus annexae*, notwithstanding the claims of the Council of Trent (Sess. XXIII, De ref., c. vi; sess. XXIV, De sacr. matr., can. xii; sess. XXV, De ref., c. xx), also the privilege of the clergy, and finally jurisdiction in matrimonial causes as far as their civil character was concerned.

In regard to ecclesiastical jurisdiction in criminal matters the Church exercised jurisdiction at first only in purely ecclesiastical offences, and inflicted only ecclesiastical punishments, e.g. excommunication, and in the case of clerics deposition. The observance of these penalties had to be left to the conscience of the individual. But

with the formal recognition of the Church by the State and the increase of ecclesiastical penalties proportioned to the increase of ecclesiastical offences, came an appeal from the Church to the secular arm for aid in enforcing the said penalties, which aid was always willingly granted. Some offence, indeed, especially deviations from the Catholic Faith, were by the State made punishable in civil law and secular penalties were attached to them, also to certain disciplinary misdemeanours of ecclesiastics (Cod. Just., lib. I, tit. v, De haeret. et manich.; tit. vii, De Apost.; tit. ix, De jud. et coelic.). Conversely, the Church in the Middle Ages increased its penal jurisdiction in the civil domain by infliction of varied penalties, some of them purely secular in character. Above all, by means of the *privilegium fori* it withdrew the so-called "criminous clerks" from the jurisdiction of the civil courts. Then it obtained for the court held by the bishop during his diocesan visitation (the *send*) not only the punishment of those civil misdemeanours which involved the element of sin and consequently affected both Church and State, but it also punished, and as such, purely civil offences. The penal jurisdiction of the medieval Church included, therefore, first the merely ecclesiastical offences, e.g. heresy, schism, apostasy, etc.; then the merely civil offences; finally the mixed offences, e.g. sins of the flesh, sacrilege, blasphemy, magic, perjury, usury, etc. In punishing offences of a purely ecclesiastical character the Church disposed unreservedly of the aid of the State for the execution of the penalty. When in the aforesaid *send*, or court held by the bishop during his visitation, it inflicted punishment on the civil offences of the laity, the penalty, as a rule, was enforced by the count (*graf*) who accompanied the bishop and represented the civil power. The principle prevailed later that an offence already punished by a secular judge was no longer punishable by the ecclesiastical judge (c. ii, in VI^o, De except., II, xii). When the *send* began to disappear, both ecclesiastical and secular judges were in general held equally competent for mixed offences. Prevention (previous adjudication of the case by one judge or the other) was decisive (c. viii, X, De foro compet., II, ii). If the matter were brought before the ecclesiastical judge he inflicted at the same time the civil penalty, not, however, corporal punishment or death. If the accusation was brought before the secular judge, the civil penalty was inflicted by him and the action of the Church was limited to the imposition of a penance. The Church, however, eventually lost by far the greater part of its criminal jurisdiction for the same reasons which, since the end of the Middle Ages, led to the loss of most of its contentious jurisdiction, and in the same manner. Moreover, from the fifteenth century on, the *recursus ab abusu* which first arose in France (*appel comme d'abus*), that is the appeal from an abuse of power by an ecclesiastical authority, did much to weaken and discredit ecclesiastical jurisdiction.

III. PRESENT SCOPE OF JURISDICTION IN A STRICT SENSE

Today the only objects of contentious ecclesiastical jurisdiction (in which jurisdiction, however, the State often takes part or interferes) are: questions of faith, the administration of the sacraments, particularly the contracting and maintenance of marriage, the holding of church services, the creation and modification of benefices, the appointment to and the vacation of ecclesiastical offices, the rights of beneficed ecclesiastics as such, the ecclesiastical rights and duties of patrons, the ecclesiastical rights and duties of religious, the administration of church property. As to the criminal jurisdiction of the Church it now inflicts on the laity only ecclesiastical penalties, and solely for ecclesiastical offences. If ever civil consequences ensue, only the civil authority can take cognizance of them. As regards ecclesiastics, the power of the Church to punish their disciplinary offences and maladministration of their offices, is everywhere acknowledged by the State. Where Church and State are not separated, the State aids in investigating these offences, as well as in executing the canonically rendered decisions of the Church. As to the civil offences of ecclesiastics, ecclesiastical jurisdiction carries with it no secular consequences, though the Church is free to punish such offences by ecclesiastical penalties. According to the Bull "Apostolicae Sedis moderationi" (12 October, 1869), those persons fall under the excommunication reserved to the pope *speciali modo*, who directly or indirectly hinder the exercise of ecclesiastical jurisdiction in the external forum or in the internal forum, as well as those who appeal from ecclesiastical to civil jurisdiction; finally every legislator or person in authority who directly or indirectly compels a judge to cite ecclesiastical persons before a civil tribunal (I, vi, vii, viii). It may be added that in various concordats with the civil power the Church has more or less abandoned the *privilegium fori* of ecclesiastics: Concordat with Bavaria, 1817, art. XII, lit. c. (concerning civil litigation); with Costa Rica, 1853, art. XIV, XV; with Guatemala, 1853, art. XV, XVI; with Austria, 1855, art. XIII, XIV; with Wurtemberg and Baden, 1857 and 1859, art. V.

KELLNER, Das Buss- und Strafverfahren gegen Kleriker in den sechs ersten christlichen Jahrhunderten (Trier, 1863); BOUIX, Tractatus de judiciis ecclesiasticis (Paris, 1855); HINSCHIUS, Das Kirchenrecht der Katholiken und Protestanten, III-VI (Berlin, 1869-1897), i; MUNCHEN, Das kanonische Gerichtsverfahren und Strafrecht (2nd ed., Cologne, 1874); FOURNIER, Les officialites au moyen-age: Etude sur l'organisation, la competence et la procedure des tribunaux ecclesiastiques ordinaires en France de 1180 a 1328 (Paris, 1880); DROSTE, Kirchliches Disziplinar- und Kriminalverfahren gegen Geistliche (Paderborn, 1882); PIERANTONELLI, Praxis fori ecclesiastici (Rome, 1883); LEGA, Praelectiones de judiciis ecclesiasticis (2nd ed., Rome, 1905); SEBASTIANELLI, De judiciis (Rome, 1906); HERGENROTHER-HOLLWECK, Lehrbuch des katholischen Kirchenrechts (Freiburg im Br., 1905), 51 sqq., 490 sqq.,

536 sqq.; LAURENTIUS, *Institutiones juris ecclesiastici* (2nd ed., Freiburg im Br., 1908), 32 sqq., 267 sqq.; SAGMULLER, *Lehrbuch des katholischen Kirchenrechts* (2nd ed., Freiburg im Br., 1909), 25 sqq., 218 sqq., 248 sqq., 742 sqq.

JOHANNES BAPTIST SÄGMÜLLER

De Jussieu

De Jussieu

Name of five French botanists.

(1) ANTOINE DE JUSSIEU, physician and botanist, b. at Lyons, France, 6 July, 1686; d. at Paris, 22 April, 1758. He studied medicine at Montpellier, but as early as 1708 he was appointed, upon the recommendation of Fagon, to succeed the celebrated Tournefort as professor and demonstrator at the Jardin du Roi. By 1711 he was a member of the Academy of Sciences. After making botanical journeys over a large part of France, he explored in 1716 the flora of the Pyrenean peninsula. In addition to his activity as botanist he had a large medical practice, giving much attention to the poor. From 1718 he also made use in his practice of quassia bark (*Cortex Simarubæ*), the first of which had been sent in 1713 to the Jesuit Father Soleil at Paris from Cayenne. Antoine de Jussieu wrote an account of the bark in the "Mémoires" of the Academy for 1729, and Linnæus named after him the plant *Simaruba Jussiei*. The "Mémoires" of the Academy for 1728, and Linnæus named after him the plant *Simaruba Jussiei*. The "Mémoires" of the academy also contain papers by Jussieu on human anatomy, zoology, palæontology, and mineralogy. Haller ["*Bibliotheca botanica*", II (1772)] enumerates twenty botanical papers, of which the "Descriptio et icon Coffeæ (coffee)" of 1713 has historical value. In 1719 he published a new and revised edition, with an appendix, of Tournefort's "*Institutiones rei herbariæ*". He edited, further, the chief botanical work of the Dominican Jacques Barrelier (1606-73), a large and not unimportant treatise. Barrelier had left numerous drawings of plants and the text for a large work; the text was destroyed in a fire after Barrelier's death, but the drawings were saved. The work edited by de Jussieu contains 334 botanical plates, in folio, with 1392 figures, and is entitled "*Plantæ per Galliam, Hispaniam et aliam observatæ*" (Paris, 1714). He also left a work, "*Traité des vertus des plantes*" (Nancy, 1771).

(2) BERNARD DE JUSSIEU, brother of the above, b. at Lyons, 17 August, 1699; d. at Paris, 6 November, 1777; the date of death is sometimes given as 1776. He was educated at the large Jesuit college at Lyons until he had finished the study of rhetoric. In 1716 he accompanied his brother Antoine on the latter's journies to Spain, and developed into an enthusiastic botanist. He studied medicine at Montpellier, obtaining his degree in 1720, but practised medicine only for a short time. He was called to Paris

by his brother Antoine, at the request of the botanist Vaillant, and after Vaillant's death in 1722 was appointed the latter's successor as professor and assistant demonstrator at the Jardin du Roi. He devoted all his energies to the royal garden, which his brother Antoine left almost entirely to him. He also made botanical excursions in the country surrounding Paris, and was able in 1725 to issue a revised and enlarged edition of Tournefort's work, "Histoire des plantes des environs de Paris"; this publication gained his admission into the Academy of Sciences. Many persons studied botany under his guidance, as the chemist Lavoisier. Owing to de Jussieu's unusual modesty and unselfishness he published very little, notwithstanding the wide range of his learning. He wrote an important paper on zoophytes, sea-organisms whose classification as plants or animals was then a matter of dispute. To study them he went three times to the coast of Normandy, proved in the "Mémoires" of 1742 that they belonged to the animal kingdom (before Peyssonel), and sought to classify them at this early date into genera. He also separated the whale from the fish and placed it among the mammals. The few botanical papers which he published (1739-42) treat of three water-plants.

In 1758 Louis XV made de Jussieu superintendent of the royal garden at Trianon near Paris, in which all plants cultivated in France were to be reared. His greatest achievement is the system according to which he arranged and catalogued the plants in the garden at Trianon; it is called "the older Jussieu natural system of plants of 1759", or the Trianon system. Jussieu himself never published anything about his system, nor did he offer any explanation of his arrangement, or give it a theoretical foundation. The genera are not arranged systematically in groups according to a single characteristic, but after consideration of all the characteristics, which, however, are not regarded as of equal value. De Jussieu proposed three main groups, to which he gave no name; these contained altogether fourteen classes, with sixty-five orders or families. Beginning with the cryptogams, the system proceeds from the monocotyledon to the dicotyledon, and closes with the coniferæ. Before this Linnæus had pointed out that only the natural system should be the aim of botanical classification, and published, outside of his artificial system, fragments of a natural system as early as 1738. Compared to the present development of the natural system, both Linnæus and de Jussieu offer scarcely more than a weak attempt at a natural classification of plants, but their attempt is the first upon which the further development rests.

De Jussieu was a thoughtful observer of nature, who behind things saw the laws and the Mind which gave the laws. Notwithstanding the great range of his knowledge he was exceedingly modest and unselfish. He was always animated by an intense love of truth, and his influence in the Academy and over French scholars was very great. He was besides deeply religious, preserving his religious principles and acting upon them to the end of his life. An old biography says of him: "No one has proved better

than he how religious feeling can be combined with many sciences and true knowledge." He was a member of numerous academies and learned societies, e.g. the academies of Berlin, St. Petersburg, Upsala, London, and Bologna. In 1737 Linnæus named after him the genus *Jussieua*, which belongs to the family of the Onograceæ, and at the present day includes some thirty-six tropical species, chiefly South American.

(3) JOSEPH DE JUSSIEU, explorer and traveller, brother of the two mentioned above, b. at Lyons, 3 September, 1704; d. at Paris, 11 April, 1779. Highly educated in many directions and able to act as physician, botanist, engineer, and mathematician, he became a member of the scientific expedition sent by the Academy to Peru in 1735 to measure an arc of the meridian. After the task of the expedition was completed he remained in South America, supporting himself chiefly by the practice of medicine. His extended and arduous explorations in Peru took place mainly in the years 1747-50. The botanical results of these journeys were large, but the greater part of his manuscripts and collections was lost, and he finally returned to Paris in 1771, broken in health and with a clouded mind. He sent the seed of the *heliotropium peruvianum* to his brother Bernard, so that the introduction of this ornamental plant into Europe is due to him. He also undertook an investigation as to the area over which the cinchona tree flourishes and as to the first use of its bark by the Jesuits in South America.

(4) ANTOINE-LAURENT DE JUSSIEU (botanical abbreviation, *Juss.*), nephew of the above mentioned three brothers, b. at Lyons, 12 April, 1748; d. at Paris, 17 September, 1836. In 1765 he went to his uncle Bernard at Paris, where he first studied medicine. However, after he was appointed in 1770 professor and demonstrator at the Jardin du Roi in place of Lemonnier, he applied himself entirely to botany. In 1804 he was made professor of botany in the medical faculty at Paris, where he lectured until 1826. His memoir on the classification of the family of Ranunculaceæ (1773) led to his election to the Academy of Sciences. He adopted his uncle Bernard's ideas concerning the natural system, expanded them, gave them a theoretical basis, and applied them practically to the different families. All our knowledge concerning the natural system of his uncle we owe to him; consequently it is not possible to make a clear distinction between the work of the two men. As early as 1774, during the lifetime of the uncle, appeared the treatise "Exposition d'un nouvel Ordre des Plantes, adopté dans les démonstrations du Jardin royal", in the "Mém. de l'Acad. des Science" (1774), 175-97. His chief work, the result of many years study on the same subject, was entitled "Genera plantarum secundum ordines naturales disposita, juxta methodum in horto Regio Parisiensi exaratum anno 1774" (Paris, 1789). His work has remained the basis of all advance in the natural system of plant classification. It greatly influenced investigators in France, especially Cuvier and de Candolle. At a later date it also affected the German and English investigators, who had been at first suspicious of it as a product

of the French Revolution (from 1789) and were extreme adherents of the Linnæan system. Even more vigorously than his uncle Bernard he upholds the theory of subordination or unequal value of the characteristics of plants, according to which certain characteristic signs have a more general and comprehensive importance than others. The characteristics are "weighed, not simply mechanically counted" (*pesés et non comptés*). Once ascertained, these essential characteristics are to be used like the chief fossils in geology, in order to assign plants to a definite group. It is true that in the application this principle frequently leads to false results. Antoine-Laurent gave to the three main groups of the original classification of his uncle the names of Acotyledon, Monocotyledon, and Dicotyledon, and divided them into fifteen classes, containing in all one hundred families. A most important fact is that he sought out and clearly defined the characteristics of families, largely indeed in later treatises. In the period, beginning in 1789, of the French Revolution, it may be said in brief that with other scholars he reorganized the Natural History Museum at Paris in 1790, and in 1808 was appointed by Napoleon counsellor of the university. During the years 1789-1802 he published no botanical works. It was not until the "Annales" and "Mémoires" of the Natural History Museum were founded that there began for him a new era of intense activity in investigation. He wrote for these publications, 1802-20, a very large number of memoirs and notes on individual species or genera, and especially monographs on numerous families. He was led largely to these labours by the work "De fructibus et seminibus plantarum" (1788-91) of the German botanist Joseph Gärtner (1732-91). Antoine-Laurent also published "Principes de la methode naturelle des végétaux" (Paris, 1824). He partly prepared a greatly desired second edition of the "Genera plantarum", but the work was never issued. Only what had been left ready for print, an entirely rewritten "Introductio" for the second edition, was published after his death by his son Adrien [An. des Sc. nat. (1837)].

(5) ADRIEN-HENRI DE JUSSIEU (botanical abbreviation, *Adr. Juss.*), son of Antoine-Laurent, b. at Paris, 23 December, 1797, d. there, 29 June, 1853. He received in 1824 the degree of Doctor of Medicine at Paris, presenting a treatise on the plant family Euphorbiaceæ. When his father retired in 1826 he was made professor of agricultural botany at the Jardin des Plantes; in 1845 he was made professor of organography of plants at the university. His textbook, "Cours élémentaire de botanique" (Paris), passed through numerous editions and translations. Besides a "Géographie botanique" (Paris, 1845), he also published monographs on several families of plants, especially the Malpighiaceæ (1843). He was president of the French Academy of Sciences.

JOSEPH ROMPEL

Jus Spolii

Jus Spolii

(RIGHT OF SPOIL; also called JUS EXUVIARUM and RAPITE CAPITE)

Jus Spolii, a claim, exercised in the Middle Ages, of succession to the property of deceased clerics, at least such as they had derived from their ecclesiastical benefices. It was an outcome of ancient canons which forbade clerics to dispose by will of goods accruing from their ecclesiastical office. These canons were gradually relaxed because of the difficulty of distinguishing between ecclesiastical and patrimonial property. Abuses then arose. Churches were despoiled at the death of their incumbents. Bishops and archdeacons seized for the cathedral the spoil of abbeys and other benefices, on the pretence that all other churches were but offshoots of the cathedral. After the fall of the Western Empire any one present at the death of a cleric felt at liberty to carry off whatever property of the deceased, ecclesiastical or otherwise, he could seize (*rapite capite*, seize and take). As the civil power became more conscious of itself it began to restrain this indiscriminate plunder. The sovereign claimed for himself the "Jus Spolii" in the case of deceased bishops, while the smaller feudal lords laid similar claim to the property of all clerics who died in their domains. Councils (Tribur, 895; Trosly, 909; Clermont, 1095; II Lateran, 1139) of the Church legislated against these abuses, finally obtaining a renunciation of this so-called right. In the thirteenth century the Roman Church put forth in a modified way the same claim, and it eventually became a principle of canon law that the goods of beneficed ecclesiastics, dying intestate, belonged of right to the papal treasury. This right however was not allowed in France, Germany, Belgium, or Portugal. In the Kingdom of Naples a compromise was made at the close of the sixteenth century, whereby the right was renounced for an annual payment to the papal treasury.

ANDREW B. MEEHAN.

Juste

Juste

The name conventionally applied to a family of Italian sculptors, whose real name was Betti, originally from San Martino a Mensola, near Florence. Giusto, whose name

was afterwards given to the whole family, and Andrea are the first two known to us. Neither seems to have gone out of Italy. But Andrea had three sons — Anthony (1479-1519), Andrew (born about 1483), and John, the most illustrious of the house (1485-1549) — all of whom early emigrated to France and figured prominently during the Renaissance. With Francesco Laurana they stand as the most brilliant representatives and the most active emissaries of Italian art beyond the Alps.

As early as 1504 the three brothers were in Brittany, at Dol, executing the monument of Bishop Thomas James. Later, they separated. Anthony worked for the Cardinal d'Amboise in the famous castle of Gaillon; while John, attracted to Tours, spent a few years in the atelier of Michel Colombe, famous as the sculptor of the "Entombment" in the Abbey of Solesmes. Colombe was the last representative of the Dijon School, founded by Claus Sluter under the first dukes of Burgundy. At his school John Juste became imbued with the realism of Flanders, slightly softened and tempered with French delicacy. Through this combination of qualities, he created for himself a style whose charm consisted in its flexibility and complexity. At the death of Michel Colombe (1512) the Justes worked again in concert and inherited his fame. Francis I commissioned them to execute the famous mausoleum of Louis XII at St-Denis, and this occupied almost fifteen years (1516-31). But Anthony's share in this work was slight, as he died in 1519. The honour of this magnificent masterpiece belongs entirely to his brother John.

The original conception seems to have been Perréal's, and yet it was not wholly his. The iconography of tombs was extremely rich in France in the fifteenth century. Its main theme consists of a *gisant* or recumbent effigy of the deceased, laid upon a funeral couch surmounting the sarcophagus, upon the sides of which a procession of mourners is represented. The most celebrated example of this style is the monument of Philip the Bold by Claus Sluter, at Dijon (1405), of which there have been several variants, down to the monument of Philippe Pot (1480) in the Louvre. The tomb of Louis XII inaugurated a new tradition, or rather a colossal development of the subject. The hero is represented kneeling on a catafalque beneath which the *gisant* appears as a naked, emaciated corpse, "such as death has made it for us". This striking contrast is in itself a most eloquent funeral oration. The monument is an incomparable masterpiece; it has served as the type of many others, and would, alone, be sufficient to bring glory to an artist; but it is not the only work we have of John Juste. He also executed the tombs of Philippe de Montmorency and of Artus Gouffier in the church of Oiron (Deux-Sèvres), that of Jean Rieux, at Ancenis, of Thomas Bohier, at St-Saturnin, Tours, and of the Abbé Louis de Crévent at the Trinité, Vendôme. He had one son, John the second, the last sculptor of the family, who died in 1577, and of whom some works are to be seen in the churches of Oiron and Champeaux.

LOUIS GILLET.

Justice

Justice

Justice is here taken in its ordinary and proper sense to signify the most important of the cardinal virtues. It is a moral quality or habit which perfects the will and inclines it to render to each and to all what belongs to them. Of the other cardinal virtues, prudence perfects the intellect and inclines the prudent man to act in all things according to right reason. Fortitude controls the irascible passions; and temperance moderates the appetites according as reason dictates. While fortitude and temperance are self-regarding virtues, justice has reference to others. Together with charity it regulates man's intercourse with his fellow men. But charity leads us to help our neighbour in his need out of our own stores, while justice teaches us to give to another what belongs to him.

Because man is a person, a free and intelligent being, created in the image of God, he has a dignity and a worth vastly superior to the material and animal world by which he is surrounded. Man can know, love, and worship his Creator; he was made for that end, which he can only attain perfectly in the future, immortal, and never-ending life to which he is destined. God gave him his faculties and his liberty in order that he might freely work for the accomplishment of his destiny. He is in duty bound to strive to fulfil the designs of his Creator, he must exercise his faculties and conduct his life according to the intentions of his Lord and Master. Because he is under these obligations he is consequently invested with rights, God-given and primordial, antecedent to the State and independent of it. Such are man's natural rights, granted to him by nature herself, sacred, as is their origin, and inviolable. Beside these he may have other rights given him by Church or State, or acquired by his own industry and exertion. All these rights, whatever be their source, are the object of the virtue of justice. Justice requires that all persons should be left in the free enjoyment of all their rights.

A right in the strict sense in which the term is used in this connection is not a mere vague and indefinite claim against others, which others are bound to respect, on any grounds whatever. We sometimes say that the unemployed have a right to work, that

the needy have a right to assistance, and it may be conceded that those phrases are quite correct, provided that such a right is understood as a claim in charity not as a claim in justice. For, at least if we confine our attention to natural law and ordinary circumstances, the assistance to which a man in need has a claim does not belong to him in justice before it is handed over to him, when it becomes his. His claim to it rests on the fact that he is a brother in distress, and his brotherhood constitutes his title to our pity, sympathy, and help. It may, of course, happen that positive law does something more than this for the poor and needy; it may be that the law of the land has given a legal right to the unemployed to have employment provided for them, or to the poor a legal right to relief; then, of course, the claim will be one of justice.

A claim in justice, or a right in the strict sense, is a moral and lawful faculty of doing, possessing, or exacting something. If it be a moral and lawful faculty of doing something for the benefit of others, it belongs to the class of rights of jurisdiction. Thus a father has the natural right to bring up and educate his son, not for his own, but for the son's benefit. A lawful sovereign has the right to rule his subjects for the common good. The largest class of rights which justice requires that we should render to others are rights of ownership. Ownership is the moral faculty of using something subordinate to us for our own advantage. The owner of a house may dispose of it as he will. He may live in it, or let it, or leave it unoccupied, or pull it down, or sell it; he may make changes in it, and in general he may deal with it as he likes, because it is his. Because it is his, he has a right to all the uses and advantages which it possesses. It is his property, and as such its whole being should subserve his need and convenience. Because it belongs to him he must be preferred to all others as to the enjoyment of the uses to which it can be put. He has the right to exclude others from the enjoyment of its uses, it belongs with all the advantages which it can confer to him alone. Were anyone else to make use of the house against the reasonable wish of the owner, he would offend against justice, he would not be rendering to the owner what belongs to him.

The right of ownership may be absolute or qualified. Absolute ownership extends to the substance of the property and to all its uses. Qualified ownership may, in the language of divines, be direct or indirect. The former is ownership of the substance of a thing without its uses, such as the landlord has over a house which he has let. Indirect ownership is the faculty of using, but not of disposing of, a thing. When anything definite and determinate is owned by anyone so that he can say--"This is my property"--he is said by divines to have a right *in re*. On the other hand if the thing has not yet come into existence though it will come, or it is not separate and determinate, so that he cannot say that it is actually his, but he nevertheless has a strict claim in justice that it should become his, he is said to have a right *ad rem*. Thus a farmer has a right *ad*

rem to the harvest of the coming year from his land; when he has harvested his crop he will have a right *in re*.

Ownership in the sense explained is the principal object of the virtue of justice as it regulates the relations of man with man. It sharply distinguishes justice from charity, gratitude, patriotism, and other virtues whose object is a claim against others indeed, but a claim of a less strict and more indefinite character. Justice between man and man is called individual, particular, or commutative justice, because it is chiefly concerned with contracts and exchange. Individual justice is distinguished from social, for not only individuals have claims in justice against other individuals but a subject has claims against the society to which he belongs, as society has claims against him. Justice requires that all should have what belongs to them, and so the just man will render to the society, or State, of which he is a member, what is due to it. The justice which prescribes this is called legal justice. On the other hand, the individual subject has claims against the State. It is the function of the State to protect its subjects in their rights and to govern the whole body for the common good. Authority for this purpose is given to the State by nature and by God, the Author of man's social nature.

The power of the State is limited by the end for which it was instituted, and it has no authority to violate the natural rights of its subjects. If it does this it commits injustice as individuals would do if they acted in like manner. It may indeed levy taxes, and impose other burdens on its subjects, as far as is required by the common necessity and advantage, but no further. For the common good it has authority to compel individual citizens to risk life for the defence of their country when it is in peril, and to part with a portion of their property when this is required for a public road, but as far as possible it must make suitable compensation. When it imposes taxes, military service, or other burdens; when it distributes rewards, offices, and honours; when it metes out condign punishment for offenses, it is bound to do so according to the various merits and resources of the persons concerned; otherwise the State will sin against that special kind of justice which is called distributive.

There is a controversy among authorities as to whether commutative, legal, and distributive justice are so many species of one common genus, or whether commutative justice is in reality the only species of justice in the strict sense. There is much to be said for the latter view. For justice is something which is due to another; it consists, as Aristotle said, in a certain equality by which the just and definite claim of another, neither more nor less, is satisfied. If I have borrowed a horse and cart from my neighbours, justice requires that I should return that particular horse and cart. The debt in its precise amount must be paid. Consequently, justice in the full and proper sense of the term requires a perfect distinction between debtor and creditor. No one can be bound in justice towards himself; justice essentially regards others. However, between

the State and the individuals who compose it there is not this perfect distinction, and so there is something wanting to the proper and complete notion of the virtue in both legal and distributive justice.

The rights which belong to every human being inasmuch as he is a person are absolute and inalienable. The right to life and limb, the essential freedom which is necessary that a man may attain the end for which he is destined by God, the right to marry or remain single, such rights as these may not be infringed by any human authority whatever. A man himself even has no right to dispose of his own life and limbs; God alone is the Lord of life and death. But a man has the duty and the right to use and develop his faculties of soul and body, and if he chooses he may dispose of his right to use these faculties and whatever advantage they can procure him in favour of another. No person then can become the property of another human being, slavery in that sense is repugnant to the dignity of human nature. But a man may by various titles have the right to the labour of another.

All things inferior to man were created for his use and benefit; they fulfil the end of their being by ministering to his wants and necessities. Whatever, therefore, pertains to the animal, vegetable, or inorganic world may be brought under the ownership and made the property of man. The right thus to acquire property which is useful and necessary for an orderly human life, is one of man's natural rights, and it can not be taken away by the State. The State may indeed make reasonable laws regulating and defining the property rights of its subjects for the common good, but it cannot abrogate them altogether. Such rights are antecedent to the State, and in their substance independent of it; the State was instituted to protect and defend them, not to take them away.

Rights are the appanage of intelligent beings as such, beings who can reflect on themselves, know their own wants, and who can will to supply them by permanently appropriating to themselves objects which are subordinate and which will satisfy those wants. Every human being, therefore, is the subject of rights, even before he has been brought into the world. The unborn child has a right to its life; it may even have property rights as well. Justice then is violated if such rights are interfered with unwarrantably. Minors and married women have their rights like others, but positive law frequently modifies their property rights for the common good. In past ages the property rights of women especially were largely modified by positive law on their being married, the husband acquiring more or less extensive rights over the property of his wife. In modern times, and especially in English-speaking countries, the tendency has been to do away with such positive enactments, and to restore to married women all the property rights which unmarried women possess.

Not only individuals, but societies of men as such are the subjects of rights. For men cannot singly and by their own unaided exertions do everything that is necessary

for the security and dignity of human existence. For this end man needs the co-operation of his fellows. He has then a natural right to associate himself with others for the attainment of some lawful end, and when such societies have been formed, they are moral persons which have their rights similar to those of natural persons. Such societies then may own property, and although the State may make laws which modify those rights for the common good, it is beyond its power altogether to abrogate them. Men have this power to form themselves into societies especially for the purpose of offering to God the public and social worship which is due to Him. The Catholic Church, founded by God Himself, is a perfect society and independent of the State. She has her rights, God-given, and necessary for the attainment of her end, and justice is violated if these are unwarrantably interfered with.

As we have seen, human nature, its wants and aims, are the source of the fundamental and natural rights of man. By his industry man may occupy and annex to his person material things which are of use to him and which belong to nobody else. He thus acquires property by the title of occupation. Property once acquired remains in the possession of its owner; all that it is or is capable of is ordained to his use and benefit. If it increases by natural growth or by giving birth to offspring, the increase belongs to the original owner. By the same law of accession increase in value, even unearned increment as it is called, belongs to the owner of that which thus increases--"Res fructificat domino". Positive law may, as we have seen, modify property rights for the common good. It may also further determine those that are indeterminate by the law of nature; it may even create rights which would not exist without it. Thus a father may by law acquire certain rights over the property of his children, and a husband may in the same way have certain rights over the property of his wife. When such rights exist it is, of course, a matter of justice to respect them. Finally, rights may be transferred from one to another or modified by a great variety of contracts, which are treated of under a special heading. See CONTRACT.

The foregoing is in very brief outline the doctrine on justice which has been gradually elaborated by Catholic philosophers and divines. The foundations of the doctrine are found in Aristotle, but the noble, beautiful, and altogether rational edifice has been raised by the labours of such men as Aquinas, Molina, Lessius, Lugo, and a host of others. The doctrine as it appears at large in their stately folios is one of the chief and most important results of Catholic thought. It fully accounts for the peremptory, sacred, and absolutely binding character with which justice is invested in the minds of men. It was never of greater importance than it is nowadays to insist on these characteristics of justice. They disappear almost if not altogether in the modern theories of the virtue. Most of these theories derive rights and justice from positive law, and when socialists and anarchists threaten to abrogate those laws and make new ones

which will regulate men's rights more equitably, no rational defense of the old order is possible. It becomes a mere question of might and brute force. Even if some with Herbert Spencer endeavour to find a deeper foundation for justice in the conditions of human existence, it is easy to answer that their interpretation of those conditions is essentially individualist and selfish, and that human existence thus conditioned is not worth having; that the new social order peremptorily demands their abolition. The Catholic doctrine of justice will be found one of the main safeguards of order, peace, and progress. With even balance it equally favours all and presses unduly on none. It gives the State ample authority for the attainment of its legitimate end, while it effectually bars the road to tyranny and violence.

T. SLATER

Justification

Justification

(Latin *justificatio*; Greek *dikaiosis*.)

A biblio-ecclesiastical term; which denotes the transforming of the sinner from the state of unrighteousness to the state of holiness and sonship of God. Considered as an act (*actus justificationis*), justification is the work of God alone, presupposing, however, on the part of the adult the process of justification and the cooperation of his free will with God's preventing and helping grace (*gratia praeveniens et cooperans*). Considered as a state or habit (*habitus justificationis*), it denotes the continued possession of a quality inherent in the soul, which theologians aptly term sanctifying grace. Since the sixteenth century great differences have existed between Protestants and Catholics regarding the true nature of justification. As the dogmatic side of the controversy has been fully explained in the article on GRACE, we shall here consider it more from an historical point of view.

I. THE PROTESTANT DOCTRINE ON JUSTIFICATION

The ideas on which the Reformers built their system of justification, except perhaps fiduciary faith, were by no means really original. They had been conceived long before either by heretics of the earlier centuries or by isolated Catholic theologians and had been quietly scattered as the seed of future heresies. It was especially the representatives of Antinomianism during the Apostolic times who welcomed the idea that faith alone suffices for justification, and that consequently the observance of the moral law is not necessary either as a prerequisite for obtaining justification or as a means for preserving it. For this reason St. Augustine (*De fide et operibus*, xiv) was of the opinion that the Apostles James, Peter, John, and Jude had directed their Epistles against the Antino-

mians of that time, who claimed to have taken their doctrines -- so dangerous to morality -- from the writings of St. Paul. Until quite recently, it was almost universally accepted that the epistle of St. James was written against the unwarranted conclusions drawn from the writings of St. Paul. Of late, however, Catholic exegetes have become more and more convinced that the Epistle in question, so remarkable for its insisting on the necessity of good works, neither aimed at correcting the false interpretations of St. Paul's doctrine, nor had any relation to the teaching of the Apostle of the Gentiles. On the contrary, they believe that St. James had no other object than to emphasize the fact -- already emphasized by St. Paul -- that only such faith as is active in charity and good works (*fides formata*) possesses any power to justify man (cf. Gal., v,6; I Cor., xiii,2), whilst faith devoid of charity and good works (*fides informis*) is a dead faith and in the eyes of God insufficient for justification (cf. James, ii, 17 sqq.). According to this apparently correct opinion, the Epistles of both Apostles treat of different subjects, neither with direct relation to the other. For St. James insists on the necessity of works of Christian charity, while St. Paul intends to show that neither the observance of the Jewish Law nor the merely natural good works of the pagans are of any value for obtaining the grace of justification (cf. Bartmann, "St. Paulus u. St. Jacobus und die Rechtfertigung", Freiburg, 1897).

Whether Victorinus, a neo-Platonist, already defended the doctrine of justification by faith alone, is immaterial to our discussion. On the other hand, it cannot be denied that in the Middle Ages there were a few Catholic theologians among the Nominalists (Occam, Durandus, Gabriel Biel), who went so far in exaggerating the value of good works in the matter of justification that the efficiency and dignity of Divine grace was unduly relegated to the background. Of late, Fathers Denifle and Weiss have shown that Martin Luther was acquainted almost exclusively with the theology of these Nominalists, which he naturally and justly found repugnant, and that the "Summa" of St. Thomas and the works of other great theologians were practically unknown to him. Even Ritschl ("Christliche Lehre von der Rechtfertigung und Versöhnung", I, 3rd ed., Bonn, 1889, pp. 105, 117) admits that neither the Church in her official teaching nor the majority of her theologians ever sanctioned, much less adopted, the extreme views of the Nominalists. Nevertheless it was not a healthy reaction against Nominalism, but Luther's own state of conscience that caused his change of views. Frightened, tormented, worn out by constant reflexions on his own sinfulness, he had finally found, even before 1517, relief and consolation only in the thought that man cannot overcome concupiscence, and that sin itself is a necessity. This thought naturally led him to a consideration of the fall of man and its consequences. Original sin has so completely destroyed our likeness to God and our moral faculties in the natural order, that our will has lost its freedom regarding works morally good or bad, and we are consequently

condemned to commit sin in every action. Even what we consider good works are nothing but sin. Since, according to Luther, concupiscence, of which death alone shall free us, constitutes the essence of original sin, all our actions are corrupted by it. Concupiscence as an intrinsically evil disposition, has instilled its deadly poison into the soul, its faculties, and its action (cf. Mohler, "Symbolik", sec. 6). But here we are forced to ask: If all our moral actions be the outcome of an internal necessity and constraint, how can Luther still speak of sin in the true meaning of the word? Does not original sin become identical with the "Evil Substance" of the Manichaeans, as later on Luther's follower, Flacius Illyricus, quite logically admitted?

Against this dark and desolate background there stands out the more clearly the mercy of God, who for the sake of the Redeemer's merits lovingly offers to despairing man a righteousness (*justitia*) already complete in itself, namely the exterior righteousness of God or of Christ. With the "arm of faith" the sinner eagerly reaches out for this righteousness and puts it on as a cloak of grace, covering and concealing therewith his misery and his sins. Thus on the part of God, justification is, as the Formulary of Concord (1577) avows, a mere external pronouncement of justification, a forensic absolution from sin and its eternal punishments. This absolution is based on Christ's holiness which God imputes to man's faith. Cf. Solid. Declar. III de fide justif., sec. xi: "The term justification in this instance means the declaring just, the freeing from sin and the eternal punishment of sin in consideration of the justice of Christ imputed to faith by God."

What then is the part assigned to faith in justification? According to Luther (and Calvin also), the faith that justifies is not, as the Catholic Church teaches, a firm belief in God's revealed truths and promises (*fides theoretica, dogmatica*), but is the infallible conviction (*fides fiducialis, fiducia*) that God for the sake of Christ will no longer impute to us our sins, but will consider and treat us, as if we were really just and holy, although in our inner selves we remain the same sinners as before. Cf. Solid. Declar. III, sec. 15: "Through the obedience of Christ by faith the just are so declared and reputed, although by reason of their corrupt nature they still are and remain, sinners as long as they bear this mortal body." This so-called "fiduciary faith" is not a religious-moral preparation of the soul for sanctifying grace, nor a free act of cooperation on the part of the sinner; it is merely a means or spiritual instrument (*instrumentum, organon leptikon*) granted by God to assist the sinner in laying hold of the righteousness of God, thereby to cover his sins in a purely external manner as with a mantle. For this reason the Lutheran formularies of belief lay great stress on the doctrine that our entire righteousness does not intrinsically belong to us, but is something altogether exterior. Cf. Solid. Declar., sec. 48: "It is settled beyond question that our justice is to be sought wholly outside of ourselves and that it consists entirely in our Lord Jesus Christ." The contrast between

Protestant and Catholic doctrine here becomes very striking. For according to the teaching of the Catholic Church the righteousness and sanctity which justification confers, although given to us by God as efficient cause (*causa efficiens*) and merited by Christ as meritorious cause (*causa meritoria*), become an interior sanctifying quality or formal cause (*causa formalis*) in the soul itself, which it makes truly just and holy in the sight of God. In the Protestant system, however, remission of sin is no real forgiveness, no blotting out of guilt. Sin is merely cloaked and concealed by the imputed merits of Christ; God no longer imputes it, whilst in reality it continues under cover its miserable existence till the hour of death. Thus there exist in man side by side two hostile brothers as it were -- the one just and the other unjust; the one a saint, the other a sinner; the one a child of God, the other a slave of Satan -- and this without any prospect of a conciliation between the two. For, God by His merely judicial absolution from sin does not take away sin itself, but spreads over it as an outward mantle His own righteousness. The Lutheran (and Calvinistic) doctrine on justification reaches its climax in the assertion that "fiduciary faith", as described above, is the only requisite for justification (*sola fides justificat*). As long as the sinner with the "arm of faith" firmly clings to Christ, he is and will ever remain regenerated, pleasing to God, the child of God and heir to heaven. Faith, which alone can justify, is also the only requisite and means of obtaining salvation. Neither repentance nor penance, neither love of God nor good works, nor any other virtue is required, though in the just they may either attend or follow as a result of justification. (Cf. Solid. Declar, sec. 23: "Indeed, neither contrition nor love nor any other virtue, but faith alone is the means by which we can reach forth and obtain the grace of God, the merit of Christ and the remission of sin.") It is well known that Luther in his German translation of the Bible falsified Rom. iii, 28, by interpolating the word "alone" (by faith *alone*), and to his critics gave the famous answer: "Dr. Martin Luther wants it that way, and says, 'Papist and ass are the same thing: sic volo, sic jubeo, sit pro ratione voluntas'."

Since neither charity nor good works contribute anything towards justification - - inasmuch as faith alone justifies -- their absence subsequently cannot deprive the just man of anything whatever. There is only one thing that might possibly divest him of justification, namely, the loss of fiduciary faith or of faith in general. From this point of view we get a psychological explanation of numerous objectionable passages in Luther's writings, against which even Protestant with deep moral sense, such as Hugo Grotius and George Bull, earnestly protested. Thus we find in one of Luther's letters, written to Melancthon in 1521, the following sentence: "Be a sinner and sin boldly, but believe and rejoice in Christ more strongly, who triumphed over sin, death, and the world; as long as we live here, we must sin." Could anyone do more to degrade St. Paul's concept of justification than Luther did in the following blasphemy: "If adultery

could be committed in faith, it would not be a sin"? (Cf. Möhler, "Symbolik", sec. 16). The doctrine of justification by faith alone was considered by Luther and his followers as an incontrovertible dogma, as the foundation rock of the Reformation, as an "article by which the Church must stand or fall" (*articulus stantis et cadentis ecclesia*), and which of itself would have been a sufficient cause for beginning the Reformation, as the Smalkaldic Articles emphatically declare. Thus we need not wonder when later on we see Lutheran theologians declaring that the *Sola-Fides* doctrine, as the *principium materiale* of Protestantism, deserves to be placed side by side with the doctrine of *Sola-Scriptura* ("Bible alone", with the exclusion of Tradition) as its *principium formale* -- two maxims in which the contrast between Protestant and Catholic teaching reaches its highest point. Since, however, neither maxim can be found in the Bible, every Catholic is forced to conclude that Protestantism from its very beginning and foundation is based on self-deception. We assert this of Protestantism in general; for the doctrine of justification as defended by the reformed Churches differs only in non-essentials from Lutheranism. The most important of these differences is to be found in Calvin's system, which taught that only such as are predestined infallibly to eternal salvation obtain justification, whilst in those not predestined God produces a mere appearance of faith and righteousness, and this in order to punish them the more severely in hell (Cf. Mohler, "Symbolik", sec.12).

From what has been said it is obvious that justification as understood by Protestants, presents the following qualities: its absolute certainty (*certitudo*), its equality in all (*aequalitas*), and finally the impossibility of ever losing it (*inamissibilitas*). For if it be essential to fiduciary faith that it infallibly assures the sinner of his own justification, it cannot mean anything but a firm conviction of the actual possession of grace. If, moreover, the sinner be justified, not by an interior righteousness capable of increase or decrease, but through God's sanctity eternally the same, it is evident that all the just from the common mortal to the Apostles and the Blessed Virgin Mary possess one and the same degree of righteousness and sanctity. Finally if, as Luther maintains, only the loss of faith (according to Calvin, not even that) can deprive us of justification, it follows that justification once obtained can never be lost.

Incidentally, we may here call attention to another significant fact, namely that it was Luther who laid the foundation for the separation of religion and morality. For, by stating that fiduciary faith alone suffices for obtaining both justification and eternal happiness, he minimized our moral faculties to such an extent that charity and good works no longer affect our relations with God. By this doctrine Luther opened a fundamental breach between religion and morality, between faith and law, and assigned to each its own distinct sphere of action in which each can attain its end independent of the other. Prof. Paulsen of Berlin was therefore justified in eulogizing Kant, who

followed Luther in this matter, as the Philosopher of Protestantism". (Cf. Mohler, "Symbolik", sec. 25.)

The harshness, want of harmony, intrinsic improbability, and contradiction of Holy Writ contained in the system soon brought about a reaction in the very midst of Protestantism. Osiander (d. 1552), at once an enthusiastic admirer of Luther and an independent thinker, emphatically stated (in opposition to Luther and Calvin) that the justifying power of faith consists in a real, intrinsic union of Christ with the soul, an opinion for which, as *being Catholic*, he was censured freely. Butzer (d. 1551) likewise admits, in addition to an "imputed exterior righteousness", the idea of an "inherent righteousness" as a partial factor in justification, thus meeting Catholicism half way. Luther's most dangerous adversary, however, was his friend Melancthon, who, in his praiseworthy endeavour to smooth over by conciliatory modifications the interior difficulties of this discordant system, laid the foundation for the famous *Synergisten-Streit* (Synergist Dispute), which was so soon to become embittered. In general it was precisely the denial of man's free will in the moral order, and of the impossibility of his full cooperation with Divine grace that repelled so many followers of Luther. No sooner had Pfeffinger in his book, "De libero arbitrio" (Leipzig, 1555) taken up defence of man's free will than many theologians of Jena (e.g. Strigel) boldly attacked the Lutheran *Klotz-Stock-und-Steintheorie* (log-stick-and-stone theory), and tried to force from their adversaries the concession that man can cooperate with God's grace. The theological quarrel soon proved very annoying to both parties and the desire for peace became universal. "The Half-Melancthonians" had succeeded in smuggling Synergism into the "Book of Torgau" (1576); but before the "Formulary of Concord" was printed in the monastery of Bergen (near Magdeburg, 1557), the article in question was eliminated as heterodox and the harsh doctrine of Luther substituted in the symbols of the Lutheran Church. The new breach in the system by the *Synergisten-Streit* was enlarged by a counter movement that originated among the Pietists and Methodists, who were willing to admit the fallible assurance of salvation -- given by fiduciary faith -- only in case that that assurance was confirmed by internal experience. But what probably contributed most of all to the crumbling of the system was the rapid growth of Socinianism and Rationalism which during the seventeenth and eighteenth centuries gained so many adherents among the Lutherans. Fiduciary faith was no longer considered a spiritual means to assist man in reaching out for the righteousness of God, but was identified with a disposition which is upright and pleasing to God. Latterly, A. Ritschl defined justification as the change in the consciousness of our relation to God and amplified this idea by the statement that the certainty of our salvation is further determined by the consciousness of our union with the Christian community. Schleiermacher and Hengstenberg deviated still farther from the old doctrine. For they declared

contrition and penance as also necessary for justification, thus "coming dangerously near the Catholic system", as Derner expresses it ("Geschichte der protest. Theologie", Munich, 1867, p.583). Finally the Lutheran Church of Scandinavia has in the course of time experienced a "quiet reformation", inasmuch as it now, without being fully conscious of the fact, defends the Catholic doctrine on justification (cf. Krogh-Tonning, "Die Gnadenlehre und die stille Reformation", Christiania, 1894). The strict orthodoxy of the Old Lutherans, e.g. in the Kingdom of Saxony and the State of Missouri, alone continues to cling tenaciously to a system, which otherwise would have slowly fallen into oblivion.

I. THE CATHOLIC DOCTRINE ON JUSTIFICATION

We have an authentic explanation of the Catholic doctrine in the famous "Decretum de justificatione" of the Sixth Session (13 Jan., 1547) of the Council of Trent, which in sixteen chapters (cf. Denzinger-Bannwart, "Enchir.", nn.793-810) and thirty-three canons (l.c., 811-43) gives in the clearest manner all necessary information about the process, causes, effects, and qualities of justification.

(1) The Process of Justification (Processus justificationis)

Since justification as an application of the Redemption to the individual presupposes the fall of the entire human race, the Council of Trent quite logically begins with the fundamental statement that original sin has weakened and deflected, but not entirely destroyed or extinguished the freedom of the human will (Trent, sess. VI, cap. i: "Liberum arbitrium minime extinctum, viribus licet attenuatum et inclinatum"). Nevertheless, as the children of Adam were really corrupted by original sin, they could not of themselves arise from their fall nor shake off the bonds of sin, death, and Satan. Neither the natural faculties left in man, nor the observance of the Jewish Law could achieve this. Since God alone was able to free us from this great misery, He sent in His infinite love His only begotten Son Jesus Christ, Who by His bitter passion and death on the cross redeemed fallen man and thus became the Mediator between God and man. But if the grace of Redemption merited by Christ is to be appropriated by the individual, he must be "regenerated by God", that is he must be justified. What then is meant by justification? Justification denotes that change or transformation in the soul by which man is transferred from the state of original sin, in which as a child of Adam he was born, to that of grace and Divine sonship through Jesus Christ, the second Adam, our Redeemer (l.c., cap.iv: "Justificatio impii. . . translatio ab eo statu, in quo homo nascitur filius primi Aadae, in statum gratiae et adoptionis filiorum Dei per secundum Adam, Jesum Christum, Salvatorem nostrum"). In the New Law this justification cannot, according to Christ's precept, be effected except at the fountain of regeneration, that is, by the baptism of water. While in Baptism infants are forthwith cleansed of the stain of original sin without any preparation on their part, the adult

must pass through a moral preparation, which consists essentially in turning from sin and towards God. This entire process receives its first impulse from the supernatural grace of vocation (absolutely independent of man's merits), and requires an intrinsic union of the Divine and human action, of grace and moral freedom of election, in such a manner, however, that the will can resist, and with full liberty reject the influence of grace (Trent, l.c., can.iv: "If any one should say that free will, moved and set in action by God, cannot cooperate by assenting to God's call, nor dissent if it wish. . . let him be anathema"). By this decree the Council not only condemned the Protestant view that the will in the reception of grace remains merely passive, but also forestalled the Jansenistic heresy regarding the impossibility of resisting actual grace. With what little right heretics in defence of their doctrine appeal to St. Augustine, may be seen from the following brief extract from his writings: "He who made you without your doing does not without your action justify you. Without your knowing He made you, with your willing He justifies you, but it is He who justifies, that the justice be not your own" (Serm. clxix, c. xi, n.13). Regarding St. Augustine's doctrine cf. J. Jausbach, "Die Ethik des hl. Augustinus", II, Freiburg, 1909, pp. 208-58.

We now come to the different states in the process of justification. The Council of Trent assigns the first and most important place to faith, which is styled "the beginning, foundation and root of all justification" (Trent, l.c., cap.viii). Cardinal Pallavicini (Hist. Conc. Trid., VIII, iv, 18) tells us that all the bishops present at the council fully realized how important it was to explain St. Paul's saying that man is justified through faith. Comparing Bible and Tradition they could not experience any serious difficulty in showing that fiduciary faith was an absolutely new invention and that the faith of justification was identical with a firm belief in the truths and promises of Divine revelation (l. c.: "illumque [Deum] tanquam omnis justitiae fontem diligere incipiunt"). The next step is a genuine sorrow for all sin with the resolution to begin a new life by receiving holy baptism and by observing the commandments of God. The process of justification is then brought to a close by the baptism of water, inasmuch as by the grace of this sacrament the catechumen is freed from sin (original and personal) and its punishments, and is made a child of God. The same process of justification is repeated in those who by mortal sin have lost their baptismal innocence; with this modification, however, that the Sacrament of Penance replaces baptism. Considering merely the psychological analysis of the conversion of sinners, as given by the council, it is at once evident that faith alone, whether fiduciary or dogmatic, cannot justify man (Trent, l. c., can. xii: "Si quis dixerit, fidem justificantem nihil aliud esse quam fiduciam divinae misericordiae, peccata remittentis propter Christum, vel eam fiduciam solam esse, qua justificamur, a.s."). Since our Divine adoption and friendship with God is based on perfect love of God or charity (cf. Gal., v, 6; I Cor., xiii; James, ii, 17 sqq.),

dead faith devoid of charity (*fides informis*) cannot possess any justifying power. Only such faith as is active in charity and good works (*fides caritate formata*) can justify man, and this even before the actual reception of baptism or penance, although not without a desire of the sacrament (cf. Trent, Sess. VI, cap. iv, xiv). But, not to close the gates of heaven against pagans and those non-Catholics, who without their fault do not know or do not recognize the Sacraments of Baptism and Penance, Catholic theologians unanimously hold that the desire to receive these sacraments is implicitly contained in the serious resolve to do all that God has commanded, even if His holy will should not become known in every detail.

(2) The Formal Cause of Justification

The Council of Trent decreed that the essence of active justification comprises not only forgiveness of sin, but also "sanctification and renovation of the interior man by means of the voluntary acceptance of sanctifying grace and other supernatural gifts" (Trent, l. c., cap. vii: "Non est sola peccatorum remissio, sed et sanctificatio et renovatio interioris hominis per voluntariam susceptionem gratiae et donorum"). In order to exclude the Protestant idea of a merely forensic absolution and exterior declaration of righteousness, special stress is laid on the fact that we are justified by God's justice, not that whereby He himself is just but that whereby He makes us just, in so far as He bestows on us the gift of His grace which renovates the soul interiorly and adheres to it as the soul's own holiness (Trent, l. c., cap. vii: "Unica formalis causa [justificationis] est justitia Dei, non qua ipse justus est, sed qua nos justos facit, qua videlicet ab eo donati, renovamur spiritu mentis nostrae: et non modo reputamur, sed vere justus nominamur et sumus, justitiam in nobis recipientes unusquisque suam"). This inner quality of righteousness and sanctity is universally termed "sanctifying (or habitual) grace", and stands in marked contrast to an exterior, imputed sanctity, as well as to the idea of merely covering and concealing sin. By this, however, we do not assert that the "justitia Dei extra nos" is of no importance in the process of justification. For, even if it is not the formal cause of justification (*causa formalis*), it is nevertheless its true exemplar (*causa exemplaris*), inasmuch as the soul receives a sanctity in imitation of God's own holiness. The Council of Trent (l. c. cap. vii), moreover, did not neglect to enumerate in detail the other causes of justification: the glory of God and of Christ as the final cause (*causa finalis*), the mercy of God as the efficient cause (*causa efficiens*), the Passion of Christ as the meritorious cause (*causa meritoria*), the reception of the Sacraments as the instrumental cause (*causa instrumentalis*). Thus each and every factor receives its full share and is assigned its proper place. Hence the Catholic doctrine on justification, in welcome contrast to the Protestant teaching, stands out as a reasonable, consistent, harmonious system. For further explanation of the nature of sanctifying grace, see SUPERNATURAL GRACE. Regarding the false doctrine of

the Catholic theologian Hermes, cf. Kleutgen, "Theologie der Vorzeit", II (2nd ed., Munster, 1872), 254-343.

According to the Council of Trent sanctifying grace is not merely *a* formal cause, but "the only formal cause" (*unica causa formalis*) of our justification. By this important decision the Council excluded the error of Butzer and some Catholic theologians (Gropper, Scripando, and Albert Pighius) who maintained that an additional "external favour of God" (*favor Dei externus*) belonged to the essence of justification. The same decree also effectually set aside the opinion of Peter Lombard, that the formal cause of justification (i.e. sanctifying grace) is nothing less than the *Person* of the Holy Ghost, Who is the hypostatic holiness and charity, or the uncreated grace (*gratia increata*). Since justification consists in an interior sanctity and renovation of spirit, its formal cause evidently must be a created grace (*gratia creata*), a permanent quality, a supernatural modification or accident (*accidens*) of the soul. Quite distinct from this is the question whether the personal indwelling of the Holy Ghost, although not required for justification (inasmuch as sanctifying grace alone suffices), be necessary as a prerequisite for Divine adoption. Several great theologians have answered in the affirmative, as for instance Lessius ("De summo bono", II, i; "De perfect. moribusque divin.", XII, ii); Petavius ("De Trinit.", viii, 4 sqq.); Thomassin ("De Trinit.", viii, 9 sqq.), and Hurter ("Compend. theol. dogmat.", III, 6th ed., pp. 162 sqq.). The solution of the lively controversy on this point between Fr. Granderaath ("Zeitschrift fur katholische Theologie", 1881, pp. 283 sqq.; 1883, 491 sqq., 593 sqq.; 1884, 545 sqq.) and Professor Scheeben ("Dogmatik", II, sec. 169; "Katholik", 1883, I, 142 sqq.; II, 561 sqq.; 1884, I, 18 sqq.; II, 465 sqq., 610 sqq.) seems to lie in the following distinction: the Divine adoption, inseparably connected with sanctifying grace, is not constituted by the personal indwelling of the Holy Ghost, but receives therefrom its full development and perfection.

(3) The Effects of Justification

The two elements of active justification, forgiveness of sin and sanctification, furnish at the same time the elements of habitual justification, freedom from sin and holiness. According to the Catholic doctrine, however, this freedom from sin and this sanctity are effected, not by two distinct and successive Divine acts, but by a single act of God. For, just as light dispels darkness, so the infusion of sanctifying grace *eo ipso* dispels from the soul original and mortal sin. (Cf. Trent, sess. VI, can. xi: "Si quis dixerit, homines justificari vel sola imputatione justitiae Christi, vel sola peccatorum remissione, exclusa gratia et caritate, quae in cordibus eorum per Spiritum Sanctum diffundatur atque illis inhaereat. . ., a.s.") In considering the effects of justification it will be useful to compare the Catholic doctrine of real forgiveness of sin with the Protestant theory that sin is merely "covered" and not imputed. By declaring the grace

of justification, or sanctifying grace, to be the only formal cause of justification, the Council of Trent intended to emphasize the fact that in possessing sanctifying grace we possess the whole essence of the state of justification with all its formal effects; that is, we possess freedom from sin and sanctity, and indeed freedom from sin *by means* of sanctity. Such a remission of sin could not consist in a mere covering or non-imputation of sins, which continue their existence out of view; it must necessarily consist in the real obliteration and annihilation of the guilt. This genuinely Biblical concept of justification forms such an essential element of Catholicism, that even Antonio Rosmini's theory, standing half way between Protestantism and Catholicism, is quite irreconcilable with it. According to Rosmini, there are two categories of sin:

- such as God merely covers and does not impute (cf. Ps., xxxi, 1);
- such as God really forgives and blots out.

By the latter Rosmini understood deliberate sins of commission (*culpae actuales et liberae*), by the former indeliberate sins (*peccata non libera*), which "do no harm to those who are of the people of God". This opinion was censured by the Holy Office (14 Dec., 1887), not only because without any reason it defended a twofold remission of sin, but also because it stamped indeliberate acts as sins (cf. Denzinger-Bannwart, "Enchir.", n.1925).

Although it is a Catholic dogma that sanctifying grace and sin (original and mortal) do never exist simultaneously in the soul, there may be, nevertheless a diversity of opinion regarding the extent of this incompatibility, according as it is considered as either moral, physical, or metaphysical in character. According to the now universally rejected opinion of the Nominalists (Occam, Gabriel Biel) and the Scotists (Mastrius, Henno) the contrast between grace and sin is based on a free decree and acceptance of God, or in other words, the contrast is merely moral. This would logically imply in contradiction to the "unica causa formalis" of the Council of Trent, a twofold formal cause of justification (cf. Pohle, "Dogmatik", II, 4th ed., Paderborn, 1909, p.512). Suarez (De gratia, VII, 20) and some of his followers in defending a physical contrast come nearer the truth. In their explanation grace and sin exclude each other with the same necessity as do fire and water, although in both cases God, by a miracle of his omnipotence, could suspend the general law and force the two hostile elements to exist peacefully side by side. This opinion might be safely accepted were sanctifying grace only a physical ornament of the soul. But since in reality it is an ethical form of sanctification by which even an infant in receiving baptism is necessarily made just and pleasing to God, there must be between the concepts of grace and of sin a metaphysical and absolute contradiction, which not even Divine omnipotence can alter and destroy.

For this last opinion, defended by the Thomists and the majority of theologians, there is also a solid foundation in Holy Writ. For the contrast between grace and sin is as great as between light and darkness (II Cor., vi, 14; Eph., v, 8), between life and death (Rom., v, 21; Col., ii, 13; I John, iii, 14), between God and idols, Christ and Belial (II Cor., vi, 15 sqq.), etc. Thus it follows from Holy Writ that by the infusion of sanctifying grace sin is destroyed and blotted out of absolute necessity, and that the Protestant theory of "covering and not imputing sin" is both a philosophical and a theological impossibility. Besides the principal effect of justification, i.e. real obliteration of sin by means of sanctification, there is a whole series of other effects: beauty of the soul, friendship with God, and Divine adoption. In the article on GRACE these are described as formal effects of sanctifying grace. In the same article is given an explanation of the supernatural accompaniments -- the three theological virtues, the moral virtues, the seven gifts, and the personal indwelling of the Holy Ghost. These, as freely bestowed gifts of God, cannot be regarded as formal effects of justification.

(4) The Qualities of Justification

We have seen that Protestants claim the following three qualities for justification: certainty, equality, the impossibility of ever losing it. Diametrically opposed to these qualities are those defended by the Council of Trent (sess. VI, cap. 9-11): uncertainty (*incertitudo*), inequality (*inaequalitas*), amissibility (*ammissibilitas*). Since these qualities of justification are also qualities of sanctifying grace, see GRACE.

JOSEPH POHLE

Blessed Justin de Jacobis

Blessed Justin de Jacobis

Vicar Apostolic of Abyssinia and titular Bishop of Nilopolis, h. at San Fele, Province of Potenza, Italy, 9 October, 1800 d. 31 July, 1860, in the plain of Eydele between the mountains Chedene and Hamamo in Abyssinia, while on his way to Halay where he hoped to regain his health. On 17 October, 1818, he entered the Congregation of the Lazarists at Naples, took vows there on 18 October, 1820, and was ordained priest at Brindisi, 12 June, 1824. After spending some time in the care of souls at Oria and Monopoli, he became superior, first at Lecce, then at Naples. In 1839 he was appointed first Prefect Apostolic of Abyssinia and entrusted with the foundation of Catholic missions in that country. After laboring with great success in Abyssinia for eight years, he was made titular Bishop of Nilopolis in 1847, and shortly afterwards Vicar Apostolic of Abyssinia, but he refused the episcopal dignity until it was finally forced upon him in 1849. Despite imprisonment, exile, and every other kind of persecution from heathens and heretics, he founded numerous Catholic missions, built various schools for the training of a native clergy, and in many other ways labored for the conversion of Abyssinia. The process of his beatification was introduced on 13 July, 1904.

DEMIMUID, Vie du Venerable Justin de Jacobis (Paris, 1905); Acta Sanctae Sedis (ROME, 1904), XXXVII, 185-189.

MICHAEL OTT

Justinian I

Justinian I

Roman Emperor (527-65)

Flavius Anicius Julianus Justinianus was born about 483 at Tauresium (Taor) in Illyricum (near Uskup); d. 565. The theory that he was a Slav by race is now abandoned (Krumbacher, "Byz. Litt.", 237). He was the nephew of Justin I (518-27), being the son

of Justin's sister Vigilantia and a certain Sabatius. Already during his uncle's reign he became the chief power in the state. Justin was an old man, weak in body and mind; he gradually handed over all power to his nephew. In 521 Justinian was proclaimed consul, then general-in-chief, and in April, 527, Augustus; in August of the same year Justin died, and Justinian was left sole ruler.

The thirty-eight years of Justinian's reign are the most brilliant period of the later empire. Full of enthusiasm for the memories of Rome, he set himself, and achieved, the task of reviving their glory. The many-sided activity of this wonderful man may be summed up under the headings: military triumphs, legal work, ecclesiastical polity, and architectural activity. Dominating all is the policy of restoring the empire, great, powerful, and united. Of these many features of his reign -- each of them epoch-making -- it is impossible to give more than the merest outline here.

I. MILITARY TRIUMPHS

Justinian carried on the unending war against the Persians with mixed success. His general Belisarius lost a battle at first in 528, then completely routed the Persians at Daras, near Nisibis (June, 530); but on 19 April, 531, the Romans were defeated near Callinicum on the Euphrates; in September a peace was arranged on fairly equal terms. The emperor then conceived the plan of reconquering Africa and Italy, lost to the empire by the Vandal and Gothic invasions. In 533 a fleet of five hundred ships set sail for Africa under Belisarius. In two battles the Romans annihilated the Vandal kingdom, took the king, Gelimer, prisoner to Constantinople, and re-established the authority of Caesar in Africa. In 535 Belisarius sailed for Sicily. The island was conquered at once. After a reverse in Dalmatia that province was also subdued. Belisarius in 536 took Rhegium and Naples, entered Rome in triumph, seized Ravenna, sustained a siege in Rome till 538, when the Goths retired. A second general, Narses, then arrived with reinforcements from Constantinople; Milan and all Liguria were taken in 539, and in 540 all Italy up to the frontier of the Frankish Kingdom was reunited to the empire. In 542 the Goths revolted under their king, Totila; by 553 they were again crushed. Narses became the first Exarch of Italy. Verona and Brixia (Brescia), the last Gothic strongholds, fell in 562. The Roman armies then marched on Spain and conquered its south-eastern provinces (lost again in 623, after Justinian's death.) Meanwhile the Crimean Goths and all the Bosphorus, even the Southern Arabs, were forced to acknowledge the rule of Rome. A second war against the Persians (540-45) pushed the Roman frontier beyond Edessa. From 549 to 556 a long in Armenia and Colchis (the Lazic War) again established the empire without a rival on the shores of the Black Sea. So Justinian ruled once more over a colossal world empire, whose extent rivaled that of the great days before Diocletian. Meanwhile the emperor was no less successful at home. In 532 a very dangerous revolt (the Nika revolution), that arose

from the factions of the Circus (the Blues and Greens), was put down severely. Bury says that the result of the suppression was "an imperial victory which established the form of absolutism by which Byzantine history is generally characterized". (Later Roman Empire, I, 345).

II. LEGAL WORK

The most enduring work of Justinian was his codification of the laws. This, too, was an important part of his general scheme. The great empire he was reconquering must have the strength of organized unity. He says in the edict of promulgation of his laws that a state rests on arms and law ("De Justin. Cod. Confirmando", printed in front of the codex). The scattered decrees of his predecessors must then be collected in a well-ordered and complete codex, logically arranged, so that every Roman citizen could learn at once the law of the empire on any subject. This codification was Justinian's great work. He made many new laws himself, but his enduring merit is rather the classification of scattered older laws. The legislation that the world owes to Justinian is in outline this:

- First, a commission of ten lawyers (including the famous Tribonianus and Theophilus) reduced the bulky and rambling Theodosian Code (published in 438) to an orderly compendium, inserting into it the laws made since it was written. So the "Codex" was produced in 529.
- Second, a mass of answers given by authorities (the *responsa prudentum* that formed acknowledged precedents) were arranged (omitting all superfluities) in fifty books, whereby a law library of a hundred and six volumes was reduced to about one-fifth. This is the "Digest", or "Pandects", published in 530.
- Third, a manual of law for students was compiled from the commentaries of Gaius (second century). This, the "Institutes", was published in the same year, 530.
- In 534, finally, the whole work was revised, and a fourth part, the "Authentic", or "Novels", was added, containing later decisions made by Justinian's own courts.

So the immortal "Corpus Juris Civilis" was produced, consisting of four parts: (a) *Digestae seu Pandecta*, (b) *Institutiones*, (c) *Codex*, (d) *Authenticum seu Novellae* (an excellent account of its composition is found in Bury's Gibbon, ed. Cit., IV 461-510). It would be difficult to exaggerate the importance of this "Corpus". It is the basis of all canon law (*ecclesia vivit lege romana*), and the basis of civil law in every civilized country.

III. ECCLESIASTICAL POLITY

The Catholic cannot applaud the great emperor's ecclesiastical polity, though in this, too, we recognize the statesman's effort to promote peace and union within the empire. It was a matter of course that this union was to be that of the "most holy Catholic and Apostolic Church of God" (5 c., *De s. tr.*, I, 1). The *Corpus Juris* is full of laws against paganism (apostasy was punished by death, 10 c., "*De pag.*", I, 11), Jews, Samaritans (who began a dangerous revolt in 529), Manichaeans, and other heretics. The decrees of the four general councils were incorporated in the civil law. There was no toleration of dissent. True to the ideal of Constantinople, the emperor conceived himself as "priest and king", supreme head on earth in matters ecclesiastical as well as in the State. He filled his codex with canon law and assumed the most outspoken Erastianism as the law of the empire. And all through his reign he fell foul of the authority of the Church by his attempts to conciliate the Monophysites. Ever since Chalcedon (451) these heretics filled Syria and Egypt, and were a constant source of disunion and trouble to the empire. Justinian was one of the many emperors who tried to reconcile them by concessions. His wife Theodora was a secret Monophysite; influenced by her, the emperor, while maintaining Chalcedon, tried to satisfy the heretics by various compromises. First came the Theopaschite question. Peter Fullo of Antioch had introduced into the Trisagion the clause: "Who didst suffer for us". Pope Hormisdas (514-23) refused to admit it, as savoring of Monophysitism. But Justinian approved it and promoted a Monophysite, Anthimus I (536), to the See of Constantinople. Then followed the great quarrel of the Three Chapters, the lamentable attitude of Pope Vigilius (540-55), and the Second Council of Constantinople (553). In all this story Justinian appears as a persecutor of the Church, and takes his place, unhappily, among the semi-Monophysite tyrants who caused the long series of quarrels and schisms that were the after-effect of Monophysitism. His ecclesiastical tyranny is the one regrettable side of the character of so great a man.

IV. ARCHITECTURAL ACTIVITY

Justinian also acquired immortal fame by the impetus he gave to the arts. If any style can ever be ascribed to one man, what we call Byzantine architecture, at least in its perfect form, owes its origin to Justinian and the architects he employed. His activity in building was prodigious. He covered his empire from Ravenna to Damascus with superb monuments. All later building in East and West was derived from his models; two most famous schools, our medieval (Gothic) and the Moslem styles, are the lineal descendants of Justinian's architecture. Of his many buildings may be mentioned the two most famous, the church of Our Lady (now the El-Aqsa mosque) at Jerusalem and, by far the most splendid of all, the great church of the Holy Wisdom (Hagia Sophia) at Constantinople. This church especially, built by Anthemius of Tralles

and Isidore of Miletus, and consecrated on 27 December, 537, remains always one of the chief monuments of architecture in the world.

Naturally these great enterprises demanded great expense. Justinian's subjects frequently complained of the heavy taxes; many people in the lands he conquered back thought that the glory of being once more Roman citizens was bought too dearly when they realized how much they had to pay to the Roman exchequer. On the other hand, Justinian spent magnificently. In times of calamity, earthquake and famine, the imperial purse was opened to the sufferers with unlimited generosity.

The emperor's private life is somewhat clouded by the scandals told of his wife, Theodora. She had been a dancing-girl; there is no doubt that she had led an immoral life before her marriage in 523. She was also a Monophysite. But most scholars now reject the scandalous account of her married life given by Procopius in his "Secret History". And in January, 532, at the time of the Circus revolution that nearly wrecked the state, it was Theodora's courage and presence of mind that saved the situation. For the rest she had a hand in all her husband's policy; administration, diplomacy, church affairs, etc., felt her influence for twenty-one years. If she did not dishonor Justinian by infidelity she certainly led him into semi-Monophysitism (see Diehl, *Theodora, imperatrice de Byzance*, Paris, 1904).

Justinian died in November, 565 (succeeded by his nephew, Justin II, 565-78). He was undoubtedly the greatest emperor after Constantine, perhaps the greatest of all the long line of Roman Caesars. Indeed one may question whether any state can show in its history so magnificent a ruler. His glorious memory lasted through all the ages after him (see Dante, "Paradiso", vi,) and his portrait gleams still from the mosaic in S. Vitale at Ravenna, where he stands in his toga and diadem, surrounded by his court, with a bishop at his side the very type of the majesty of Christian Rome on the Bosphorus.

The literature on the various sides of Justinian's activity is naturally enormous. His reign is equally important to the historian of the empire, the lawyer, theologian, and archaeologist. These are a few of the most serviceable modern works only: GIBBON (ed. BURY), *The Decline and Fall of the Roman Empire*, IV (London, 1898), xl-xliv (an excellent general account, with copious bibliography in Bury's appendix); BURY, *A History of the Later Roman Empire*, I (London, 1889), bk. IV 333-482 (supplements Gibbon); DIEHL, *Justinien et la civilisation byzantine au Vle siecle* (Paris, 1901); SCHULZE, *Gesch. des Untergangs des griech.-romischen Heidentums*, I (Jena, 1887), 434-59; HUTTON, *The Church of the Sixth Century* (London, 1897); JOERS, *Die Reichspolitik Kaiser Justinians* (Giessen, 1893); KNECHT, *Die Religionspolitik Kaiser Justinians I.* (Wurzburg, 1896); DIEKAMP, *Die origenistischen Streitigkeiten* (Munster,

1899); Further bibliography is given in DIEHL, *Etudes byzantines* (Paris, 1905), i and ii.

ADRIAN FORTESCUE

Benedetto Justiniani

Benedetto Justiniani

(GIUSTINIANI).

Theological and Biblical writer, born at Genoa, about the year 1550; died at Rome, 19 December, 1622. He entered the novitiate of the Society of Jesus, at Rome, in 1579. For a while he taught rhetoric in the Roman College, and next theology at Toulouse, Messina, and Rome. For upwards of twenty years he was the head of the Roman College and *regens* of the Sacred Poenitentiaria. He filled also the office of chief preacher to the pope. Clement VIII appointed him as theologian to the celebrated Cardinal Cajetan, during the latter's legation in Poland. He is the author of two valuable Scriptural works: "In omnes B. Pauli Epistolas explanationes" (2 vols., Lyons, 1612 and 1613); and "In omnes Catholicas Epistolas explanationes" (Lyons, 1621). In these writings he first gives a paraphrase of the text, and then explains it by means of a commentary. Of his other published works, the "Apologia pro libertate ecclesiastica ad Gallo-Francos" is the best-known. His folio treatise "De Gratia" was not printed, on account of the pope's general order at the time prohibiting the publication of writings on that difficult topic. Among his manuscript opuscles may be mentioned the works: "De Natura brevis disputatio"; "De Sacramentis"; "De Poenitentia"; "De Confessario". His canonical work entitled "De legitima Romani Pontificis electione libri sex" exists only in manuscript. This is also the case with his "Epistola ad Franciscum Brandinum super aliquibus propositionibus philosophicis", and with various volumes of his sermons.

FRANCIS E. GIGOT

Justinianopolis

Justinianopolis

A titular see of Armenia Prima, suffragan of Sebaste. This see is better known in history under the names of Acilizene and Keltzene. Acilizene is a province situated

between the Euphrates and Antitaurus, where Mithridates, pursued by Pompey sought refuge. Strabo (XI, iv, 8 XI, xii, 3, V, xi, 6), Procopius (*Bellum Pers.*, I, 17), and Ptolemy (V, xii, 6) also mention it. The ancient name of Justinianopolis seems to have been Eliza, capital of Acilizene frequently mentioned by the Byzantine historians, and today known as Erzindjan. At first suffragan of Sebaste, later of Camachos, Keltzene was already archiepiscopal see in 980, and had as many as twenty one suffragans. Subsequently, until the fourteenth century, it became again a simple metropolitan, without any suffragans. Lequien (*Oriens Christianus*, I, 435) mentions six bishops of this town, between the fifth and the eleventh century. An earthquake destroyed Erzindjan in 1784; it has since been rebuilt on a more regular plan, and is today a sanjak the Turkish province of Erzeroum, and serves as headquarters for the staff of the fourth and principal corps of the Turkish army. The town counts 30,000 inhabitants, nearly 10,000 of whom are Armenians, and a few hundred are schismatical Greeks.

CUINET, *La Turquie d'Asie*, I (Paris, 1892), 210-216.

S. VAILHÉ

St. Justin Martyr

St. Justin Martyr

Christian apologist, born at Flavia Neapolis, about A.D. 100, converted to Christianity about A.D. 130, taught and defended the Christian religion in Asia Minor and at Rome, where he suffered martyrdom about the year 165. Two "Apologies" bearing his name and his "Dialogue with the Jew Tryphon" have come down to us. Leo XIII had a Mass and an Office composed in his honour and set his feast for 14 April.

LIFE

Among the Fathers of the second century his life is the best known, and from the most authentic documents. In both "Apologies" and in his "Dialogue" he gives many personal details, e.g. about his studies in philosophy and his conversion; they are not, however, an autobiography, but are partly idealized, and it is necessary to distinguish in them between poetry and truth; they furnish us however with several precious and reliable clues. For his martyrdom we have documents of undisputed authority. In the first line of his "Apology" he calls himself "Justin, the son of Priscos, son of Baccheios, of Flavia Neapolis, in Palestinian Syria". Flavia Neapolis, his native town, founded by Vespasian (A.D. 72), was built on the site of a place called Mabortha, or Mamortha, quite near Sichem (Guérin, "Samarie", I, Paris, 1874, 390-423; Schürer, "History of the Jewish People", tr., I, Edinburgh, 1885). Its inhabitants were all, or for the most part, pagans. The names of the father and grandfather of Justin suggest a pagan origin, and

he speaks of himself as uncircumcised (Dialogue, xxviii). The date of his birth is uncertain, but would seem to fall in the first years of the second century. He received a good education in philosophy, an account of which he gives us at the beginning of his "Dialogue with the Jew Tryphon"; he placed himself first under a Stoic, but after some time found that he had learned nothing about God and that in fact his master had nothing to teach him on the subject. A Peripatetic whom he then found welcomed him at first but afterwards demanded a fee from him; this proved that he was not a philosopher. A Pythagorean refused to teach him anything until he should have learned music, astronomy, and geometry. Finally a Platonist arrived on the scene and for some time delighted Justin. This account cannot be taken too literally; the facts seem to be arranged with a view to showing the weakness of the pagan philosophies and of contrasting them with the teachings of the Prophets and of Christ. The main facts, however, may be accepted; the works of Justin seem to show just such a philosophic development as is here described, Eclectic, but owing much to Stoicism and more to Platonism. He was still under the charm of the Platonistic philosophy when, as he walked one day along the seashore, he met a mysterious old man; the conclusion of their long discussion was that he soul could not arrive through human knowledge at the idea of God, but that it needed to be instructed by the Prophets who, inspired by the Holy Ghost, had known God and could make Him known ("Dialogue", iii, vii; cf. Zahm, "Dichtung and Wahrheit in Justins Dialog mit dem Juden Trypho" in "Zeitschr. für Kirchengesch.", VIII, 1885-1886, 37-66).

The "Apologies" throw light on another phase of the conversion of Justin: "When I was a disciple of Plato", he writes, "hearing the accusations made against the Christians and seeing them intrepid in the face of death and of all that men fear, I said to myself that it was impossible that they should be living in evil and in the love of pleasure" (II Apol., xviii, 1). Both accounts exhibit the two aspects of Christianity that most strongly influenced St. Justin; in the "Apologies" he is moved by its moral beauty (I Apol., xiv), in the "Dialogue" by its truth. His conversion must have taken place at the latest towards A.D. 130, since St. Justin places during the war of Bar-Cocheba (132-135) the interview with the Jew Tryphon, related in his "Dialogue". This interview is evidently not described exactly as it took place, and yet the account cannot be wholly fictitious. Tryphon, according to Eusebius (Hist. eccl., IV, xviii, 6), was "the best known Jew of that time", which description the historian may have borrowed from the introduction to the "Dialogue", now lost. It is possible to identify in a general way this Tryphon with the Rabbi Tarphon often mentioned in the Talmud (Schürer, "Gesch. d. Jud. Volkes", 3rd ed., II, 377 seq., 555 seq., cf., however, Herford, "Christianity in Talmud and Midrash", London, 1903, 156). The place of the interview is not definitely told, but Ephesus is clearly enough indicated; the literary setting lacks neither probability nor life, the

chance meetings under the porticoes, the groups of curious onlookers who stop a while and then disperse during the interviews, offer a vivid picture of such extemporary conferences. St. Justin lived certainly some time at Ephesus; the Acts of his martyrdom tell us that he went to Rome twice and lived "near the baths of Timothy with a man named Martin". He taught school there, and in the aforesaid Acts of his martyrdom we read of several of his disciples who were condemned with him.

In his second "Apology" (iii) Justin says: "I, too, expect to be persecuted and to be crucified by some of those whom I have named, or by Crescens, that friend of noise and of ostentation." Indeed Tatian relates (Discourse, xix) that the Cynic philosopher Crescens did pursue him and Justin; he does not tell us the result and, moreover, it is not certain that the "Discourse" of Tatian was written after the death of Justin. Eusebius (Hist. eccl., IV, xvi, 7, 8) says that it was the intrigues of Crescens which brought about the death of Justin; this is credible, but not certain; Eusebius has apparently no other reason for affirming it than the two passages cited above from Justin and Tatian. St. Justin was condemned to death by the prefect, Rusticus, towards A.D. 165, with six companions, Chariton, Charito, Evelpostos, Pæon, Hierax, and Liberianos. We still have the authentic account of their martyrdom ("Acta SS.", April, II, 104-19; Otto, "Corpus Apologetarum", III, Jena, 1879, 266-78; P. G., VI, 1565-72). The examination ends as follows:

"The Prefect Rusticus says: Approach and sacrifice, all of you, to the gods. Justin says: No one in his right mind gives up piety for impiety. The Prefect Rusticus says: If you do not obey, you will be tortured without mercy. Justin replies: That is our desire, to be tortured for Our Lord, Jesus Christ, and so to be saved, for that will give us salvation and firm confidence at the more terrible universal tribunal of Our Lord and Saviour. And all the martyrs said: Do as you wish; for we are Christians, and we do not sacrifice to idols. The Prefect Rusticus read the sentence: Those who do not wish to sacrifice to the gods and to obey the emperor will be scourged and beheaded according to the laws. The holy martyrs glorifying God betook themselves to the customary place, where they were beheaded and consummated their martyrdom confessing their Saviour."

WORKS

Justin was a voluminous and important writer. He himself mentions a "Treatise against Heresy" (I Apology, xxvi, 8); St. Irenæus (Adv. Hær., IV, vi, 2) quotes a "Treatise against Marcion" which may have been only a part of the preceding work. Eusebius mentions both (Hist. eccl., IV, xi, 8-10), but does not seem to have read them

himself; a little further on (IV, xviii) he gives the following list of Justin's works: "Discourse in favour of our Faith to Antoninus Pius, to his sons, and to the Roman Senate"; an "Apology" addressed to Marcus Aurelius; "Discourse to the Greeks"; another discourse called "A Refutation"; "Treatise on the Divine Monarchy"; a book called "The Psalmist"; "Treatise on the soul"; "Dialogue against the Jews", which he had in the city of Ephesus with Tryphon, the most celebrated Israelite of that time. Eusebius adds that many more of his books are to be found in the hands of the brethren. Later writers add nothing certain to this list, itself possibly not altogether reliable. There are extant but three works of Justin, of which the authenticity is assured: the two "Apologies" and the "Dialogue". They are to be found in two manuscripts: Paris gr. 450, finished on 11 September, 1364; and Claromont. 82, written in 1571, actually at Cheltenham, in the possession of M.T.F. Fenwick. The second is only a copy of the first, which is therefore our sole authority; unfortunately this manuscript is very imperfect (Harnack, "Die Ueberlieferung der griech. Apologeten" in "Texte und Untersuchungen", I, Leipzig, 1883, i, 73-89; Archambault, "Justin, Dialogue a vec Tryphon", Paris, 1909, p. xii-xxxviii). There are many large gaps in this manuscript, thus II Apol., ii, is almost entirely wanting, but it has been found possible to restore the manuscript text from a quotation of Eusebius (Hist. eccl., IV, xvii). The "Dialogue" was dedicated to a certain Marcus Pompeius (exli, viii); it must therefore have been preceded by a dedicatory epistle and probably by an introduction or preface; both are lacking. In the seventy-fourth chapter a large part must also be missing, comprising the end of the first book and the beginning of the second (Zahn, "Zeitschr. f. Kirchengesch.", VIII, 1885, 37 sq., Bardenhewer, "Gesch. der altkirchl. Litter.", I, Freiburg im Br., 1902, 210). There are other less important gaps and many faulty transcriptions. There being no other manuscript, the correction of this one is very difficult; conjectures have been often quite unhappy, and Krüger, the latest editor of the "Apology", has scarcely done more than return to the text of the manuscript.

In the manuscript the three works are found in the following order: second "Apology", first "Apology", the "Dialogue". Dom Maran (Paris, 1742) re-established the original order, and all other editors have followed him. There could not be as a matter of fact any doubt as to the proper order of the "Apologies", the first is quoted in the second (iv, 2; vi, 5; viii, 1). The form of these references shows that Justin is referring, not to a different work, but to that which he was then writing (II Apol., ix, 1, cf. vii, 7; I Apol., lxiii, 16, cf. xxxii, 14; lxiii, 4, cf. xxi, 1; lxi, 6, cf. lxiv, 2). Moreover, the second "Apology" is evidently not a complete work independent of the first, but rather an appendix, owing to a new fact that came to the writer's knowledge, and which he wished to utilize without recasting both works. It has been remarked that Eusebius often alludes to the second "Apology" as the first (Hist. eccl., IV, viii, 5; IV, xvii, 1), but

the quotations from Justin by Eusebius are too inexact for us to attach much value to this fact (cf. *Hist. eccl.*, IV, xi, 8; Bardenhewer, *op. cit.*, 201). Probably Eusebius also erred in making Justin write one apology under Antoninus (161) and another under Marcus Aurelius. The second "Apology", known to no other author, doubtless never existed (Bardenhewer, *loc. cit.*; Harnack, "Chronologie der christl. Litter.", I, Leipzig, 1897, 275). The date of the "Apology" cannot be determined by its dedication, which is not certain, but can be established with the aid of the following facts: it is 150 years since the birth of Christ (I, xlvi, 1); Marcion has already spread abroad his error (I, xxvi, 5); now, according to Epiphanius (*Hæres.*, xlii, 1), he did not begin to teach until after the death of Hyginus (A.D. 140). The Prefect of Egypt, Felix (I, xxix, 2), occupied this charge in September, 151, probably from 150 to about 154 (Grenfell-Hunt, "Oxyrhynchus Papyri", II, London, 1899, 163, 175; cf. Harnack, "Theol. Literaturzeitung", XXII, 1897, 77). From all of this we may conclude that the "Apology" was written somewhere between 153 and 155. The second "Apology", as already said, is an appendix to the first and must have been written shortly afterwards. The Prefect Urbinus mentioned in it was in charge from 144 to 160. The "Dialogue" is certainly later than the "Apology" to which it refers ("Dial.", cxx, cf. "I Apol.", xxvi); it seems, moreover, from this same reference that the emperors to whom the "Apology" was addressed were still living when the "Dialogue" was written. This places it somewhere before A.D. 161, the date of the death of Antoninus.

The "Apology" and the "Dialogue" are difficult to analyse, for Justin's method of composition is free and capricious, and defies our habitual rules of logic. The content of the first "Apology" (Viel, "Justinus des Phil. Rechtfertigung", Strasburg, 1894, 58 seq.) is somewhat as follows:

- i-iii: exordium to the emperors: Justin is about to enlighten them and free himself of responsibility, which will now be wholly theirs.
- iv-xii: first part or introduction:
 - ☒ the anti-Christian procedure is iniquitous: they persecute in the Christians a name only (iv, v);
 - ☒ Christians are neither Atheists nor criminals (vi, vii);
 - ☒ they allow themselves to be killed rather than deny their God (viii);
 - ☒ they refuse to adore idols (ix, xii);
 - ☒ conclusion (xii).
- xiii-lxvii: Second part (exposition and demonstration of Christianity):

- ☒ Christians adore the crucified Christ, as well as God (xiii);
 - ☒ Christ is their Master; moral precepts (xiv-xvii);
 - ☒ the future life, judgement, etc. (xviii-xx).
 - ☒ Christ is the Incarnate Word (xxi-lx);
 - ☒ comparison with pagan heroes, Hermes, Æsculapius, etc. (xxi-xxii);
 - ☒ superiority of Christ and of Christianity before Christ (xlvi).
 - ☒ The similarities that we find in the pagan worship and philosophy come from the devils (liv-lx).
 - ☒ Description of Christian worship: baptism (lxi);
 - ☒ the Eucharist (lxv-lxvi);
 - ☒ Sunday-observance (lxvii).

Second "Apology":

- Recent injustice of the Prefect Urbinus towards the Christians (i-iii).
- Why it is that God permits these evils: Providence, human liberty, last judgement (iv-xii).

The "Dialogue" is much longer than the two apologies taken together ("Apol." I and II in P.G., VI, 328-469; "Dial.", *ibid.*, 472-800), the abundance of exegetical discussions makes any analysis particularly difficult. The following points are noteworthy:

- i-ix. Introduction: Justin gives the story of his philosophic education and of this conversion. One may know God only through the Holy Ghost; the soul is not immortal by its nature; to know truth it is necessary to study the Prophets.
- x-xxx: On the law. Tryphon reproaches the Christians for not observing the law. Justin replies that according to the Prophets themselves the law should be abrogated, it had only been given to the Jews on account of their hardness. Superiority of the Christian circumcision, necessary even for the Jews. The eternal law laid down by Christ.
- xxxi-cviii: On Christ: His two comings (xxxi sq.); the law a figure of Christ (xl-xlv); the Divinity and the pre-existence of Christ proved above all by the Old Testament

apparitions (theophanies) (lvi-lxii); incarnation and virginal conception (lxv sqq.); the death of Christ foretold (lxxxvi sqq.); His resurrection (cvi sqq.).

- cviii to the end: On the Christians. The conversion of the nations foretold by the Prophets (cix sqq.); Christians are a holier people than the Jews (cxix sqq.); the promises were made to them (cxxi); they were prefigured in the Old Testament (cxxxiv sqq.). The "Dialogue" concludes with wishes for the conversion of the Jews.

Besides these authentic works we possess others under Justin's name that are doubtful or apocryphal.

- "On the Resurrection" (for its numerous fragments see Otto, "Corpus Apolog.", 2nd ed., III, 210-48 and the "Sacra Parallela", Holl, "Fragmente vornicänischer Kirchenväter aus den Sacra Parallela" in "Texte und Untersuchungen", new series, V, 2, Leipzig, 1899, 36-49). The treatise from which these fragments are taken was attributed to St. Justin by St. Methodius (early fourth century) and was quoted by St. Irenæus and Tertullian, who do not, however, name the author. The attribution of the fragments to Justin is therefore probable (Harnack, "Chronologie", 508; Bousset, "Die Evangeliencitaten Justins", Göttingen, 1891, 123sq.; archambault, "Le témoignage de l'ancienne littérature Chrétienne sur l'authenticité d'un traité sur la resurrection attribué à Justin l'Apologiste" in "Revue de Philologie", XXIX, 1905, 73-93). The chief interest of these fragments consists in the introduction, where is explained with much force the transcendent nature of faith and the proper nature of its motives.
- "A Discourse to the Greeks" (Otto, op. cit., III, 1, 2, 18), an apocryphal tract, dated by Harnack (Sitzungsberichte der k. preuss. Akad. d. Wiss. zu Berlin, 1896, 627-46), about A.D. 180-240. Later it was altered and enlarged in Syriac: text and English translation by Cureton, "Spicileg. Syr.", London, 1855, 38-42, 61-69.
- "Exhortation to the Greeks" (Otto, op. cit., 18-126). The authenticity of this has been defended without success by Widman ("Die Echtheit der Mahnrede Justins an die Heiden", Mainz, 1902); Puech, "Sur le *logos parainetikos* attribué à Justin" in "Mélanges Weil", Paris, 1898, 395-406, dates it about 260-300, but most critics say, with more probability, A.D. 180-240 (Gaul, "Die Abfassungsverhältnisse der pseudojustinischen Cohortatio ad Græcos", Potsdam, 1902).
- "On Monarchy" (Otto, op. cit., 126-158), tract of uncertain date, in which are freely quoted Greek poets altered by some Jew.
- "Exposition of the Faith" (Otto, op. cit., IV, 2-66), a dogmatic treatise on the Trinity and the Incarnation preserved in two copies the longer of which seems the more

ancient. It is quoted for the first time by Leontius of Byzantium (d. 543) and refers to the Christological discussions of the fifth century; it seems, therefore, to date from the second half of that century.

- "Letter to Zenas and Serenus" (Otto, op. cit., 66-98), attributed by Batiffol in "Revue Biblique", VI, 1896, 114-22, to Sisinnios, the Novatian Bishop of Constantinople about A.D. 400.
- "Answers to the Orthodox."
- "The Christian's Questions to the Greeks."
- "The Greek's Questions to the Christians."
- "Refutation of certain Aristotelean theses" (Otto, op. cit., IV, 100-222; V, 4-366).

The "Answers to the Orthodox" was re-edited in a different and more primitive form by Papadopoulos-Kerameus (St. Petersburg, 1895), from a Constantinople manuscript which ascribed the work to Theodoret. Though this ascription was adopted by the editor, it has not been generally accepted. Harnack has studied profoundly these four books and maintains, not without probability, that they are the work of Diodorus of Tarsus (Harnack, "Diodor von Tarsus., vier pseudojustinische Schriften als Eigentum Diodors nachgewiesen" in "Texte und Untersuch.", XII, 4, Leipzig, 1901).

DOCTRINE

Justin and Philosophy

The only pagan quotations to be found in Justin's works are from Homer, Euripides, Xenophon, Menander, and especially Plato (Otto, II, 593 sq.). His philosophic development has been well estimated by Purves ("The Testimony of Justin Martyr to early Christianity", London, 1882, 132): "He appears to have been a man of moderate culture. He was certainly not a genius nor an original thinker." A true eclectic, he draws inspiration from different systems, especially from Stoicism and Platonism. Weizsäcker (Jahrbücher f. Protest. Theol., XII, 1867, 75) thought he recognized a Peripatetic idea, or inspiration, in his conception of God as immovable above the heavens (Dial., cxxvii); it is much more likely an idea borrowed from Alexandrian Judaism, and one which furnished a very efficacious argument to Justin in his anti-Jewish polemic. In the Stoics Justin admires especially their ethics (II Apol., viii, 1); he willingly adopts their theory of a universal conflagration (*ekpyrosis*). In I Apol., xx, lx; II, vii, he adopts, but at the same time transforms, their concept of the seminal Word (*logos spermatikos*). However, he condemns their Fatalism (II Apol., vii) and their Atheism (Dial., ii). His sympathies are above all with Platonism. He likes to compare it with Christianity; apropos of the

last judgment, he remarks, however (I Apol., viii, 4), that according to Plato the punishment will last a thousand years, whereas according to the Christians it will be eternal; speaking of creation (I Apol., xx, 4; lix), he says that Plato borrowed from Moses his theory of formless matter; similarly he compares Plato and Christianity apropos of human responsibility (I Apol., xlv, 8) and the Word and the Spirit (I Apol., lx). However, his acquaintance with Plato was superficial; like his contemporaries (Philo, Plutarch, St. Hippolytus), he found his chief inspiration in the *Timæus*. Some historians have pretended that pagan philosophy entirely dominated Justin's Christianity (Aubé, "S. Justin", Paris, 1861), or at least weakened it (Engelhardt, "Das Christentum Justins des Märtyrers", Erlangen, 1878). To appreciate fairly this influence it is necessary to remember that in his "Apology" Justin is seeking above all the points of contact between Hellenism and Christianity. It would certainly be wrong to conclude from the first "Apology" (xxii) that Justin actually likens Christ to the pagan heroes of semi-heroes, Hermes, Perseus, or Æsculapius; neither can we conclude from his first "Apology" (iv, 8 or vii, 3, 4) that philosophy played among the Greeks the same role that Christianity did among the barbarians, but only that their position and their reputation were analogous.

In many passages, however, Justin tries to trace a real bond between philosophy and Christianity: according to him both the one and the other have a part in the *Logos*, partially disseminated among men and wholly manifest in Jesus Christ (I, v, 4; I, xlvi; II, viii; II, xiii, 5, 6). The idea developed in all these passages is given in the Stoic form, but this gives to its expression a greater worth. For the Stoics the seminal Word (*logos spermatikos*) is the form of every being; here it is the reason inasmuch as it partakes of God. This theory of the full participation in the Divine Word (*Logos*) by the sage has its full value only in Stoicism (see LOGOS). In Justin thought and expression are antithetic, and this lends a certain incoherence to the theory; the relation established between the integral Word, i.e. Jesus Christ, and the partial Word disseminated in the world, is more specious than profound. Side by side with this theory, and quite different in its origin and scope, we find in Justin, as in most of his contemporaries, the conviction that Greek philosophy borrowed from the Bible: it was by stealing from Moses and the Prophets that Plato and the other philosophers developed their doctrines (I, xlv, lix, ls). Despite the obscurities and incoherences of this thought, he affirms clearly and positively the transcendent character of Christianity: "Our doctrine surpasses all human doctrine because the real Word became Christ who manifested himself for us, body, word and soul." (II, Apol., x, 1.) This Divine origin assures Christianity an absolute truth (II, xiii, 2) and gives to the Christians complete confidence; they die for Christ's doctrine; no one died for that of Socrates (II, x, 8). The first chapters of the

"Dialogue" complete and correct these ideas. In them the rather complaisant syncretism of the "Apology" disappears, and the Christian thought is stronger.

Justin's chief reproach to the philosophers is their mutual divisions; he attributes this to the pride of the heads of sects and the servile acquiescence of their adherents; he also says a little later on (vi): "I care neither for Plato nor for Pythagoras." From it all he concludes that for the pagans philosophy is not a serious or profound thing; life does not depend on it, nor action: "Thou art a friend of discourse", says the old man to him before his conversion, "but not of action nor of truth" (iv). For Platonism he retained a kindly feeling as for a study dear in childhood or in youth. Yet he attacks it on two essential points: the relation between God and man, and the nature of the soul (Dial., iii, vi). Nevertheless he still seems influenced by it in his conception of the Divine transcendency and the interpretation that he gives to the aforesaid theophanies.

Justin and Christian Revelation

That which Justin despairs of attaining through philosophy he is now sure of possessing through Jewish and Christian revelation. He admits that the soul can naturally comprehend that God is, just as it understands that virtue is beautiful (Dial., iv) but he denies that the soul without the assistance of the Holy Ghost can see God or contemplate Him directly through ecstasy, as the Platonic philosophers contended. And yet this knowledge of God is necessary for us: "We cannot know God as we know music, arithmetic or astronomy" (iii); it is necessary for us to know God not with an abstract knowledge but as we know any person with whom we have relations. The problem which it seems impossible to solve is settled by revelation; God has spoken directly to the Prophets, who in their turn have made Him known to us (viii). It is the first time in Christian theology that we find so concise an explanation of the difference which separates Christian revelation from human speculation. It does away with the confusion that might arise from the theory, taken from the "Apology", of the partial *Logos* and the *Logos* absolute or entire.

The Bible of Justin

A. The Old Testament

For Philo the Bible is very particularly the Pentateuch (Ryle, "Philo and Holy Scripture", XVII, London, 1895, 1-282). In keeping with the difference of his purpose, Justin has other preferences. He quotes the Pentateuch often and liberally, especially Genesis, Exodus, and Deuteronomy; but he quotes still more frequently and at greater length the Psalms and the Books of Prophecy -- above all, Isaias. The Books of Wisdom are seldom quoted, the historical books still less. The books that we never find in his works are Judges, Esdras (except one passage which is attributed to him by mistake-Dial., lxxii), Tobias, Judith, Ester, Canticles, Wisdom, Ecclesiasticus, Abdias, Nahum, Habacuc, Sophonias, Aggeus. It has been noticed, too (St. John Thackeray in "Journ.

of Theol. Study", IV, 1903, 265, n.3), that he never cites the last chapters of Jeremiah (apropos of the first "Apology", xlvi, Otto is wrong in his reference to Jer., 1, 3). Of these omissions the most noteworthy is that of Wisdom, precisely on account of the similarity of ideas. It is to be noted, moreover, that this book, surely used in the New Testament, cited by St. Clement of Rome (xxvii,5) and later by St. Irenæus (Eusebius, Hist. eccl., V, xxvi), is never met with in the works of the apologists (the reference of Otto to Tatian, vii, is inexact). On the other hand one finds in Justin some apocryphal texts: pseudo-Esdras (Dial., lxxii), pseudo-Jeremias (ibid.), Ps. xevi (xcv), 10 (Dial., lxxii; I Apol., xli); sometimes also errors in ascribing quotations: Zacharias for Malachias (Dial., xlix), Osee for Zacharias for Malachias (Dial., xiv). For the Biblical text of Justin, see Swete, "Introduction to the Old Testament in Greek", Cambridge, 1902, 417-24.

B. The New Testament

The testimony of Justin is here of still greater importance, especially for the Gospels, and has been more often discussed. The historical side of the question is given by W. Bousset, "Die Evangeliencitaten Justins" (Göttingen, 1891), 1-12, and since then, by Baldus, "Das Verhältniss Justins der Märt. zu unseren synopt. Evangelien" (Münster, 1895); Lippelt, "Quæ fuerint Justini mart. *apomnemoneumata* quaque ratione cum forma Evangeliorum syro-latina cohæserint" (Halle, 1901). The books quoted by Justin are called by him "Memoirs of the Apostles". This term, otherwise very rare, appears in Justin quite probably as an analogy with the "Memorabilia" of Xenophon (quoted in "II Apol.", xi, 3) and from a desire to accommodate his language to the habits of mind of his readers. At any rate it seems that henceforth the word "gospels" was in current usage; it is in Justin that we find it for the first time used in the plural, "the Apostles in their memoirs that are called gospels" (I Apol., lxvi, 3). These memoirs have authority, not only because they relate the words of Our Lord (as Bossuet contends, *op. cit.*, 16 seq.), but because, even in their narrative parts, they are considered as Scripture (Dial., xlix, citing Matt., xvii, 13). This opinion of Justin is upheld, moreover, by the Church who, in her public service reads the memoirs of the Apostles as well as the writings of the prophets (I Apol., lxvii, 3). These memoirs were composed by the Apostles and by those who followed them (Dial., ciii); he refers in all probability to the four Evangelists, i.e. to two Apostles and two disciples of Christ (Stanton, "New Testament Canon" in Hastings, "Dictionary of the Bible", III, 535). The authors, however, are not named: once (Dial., ciii) he mentions the "memoirs of Peter", but the text is very obscure and uncertain (Bousset, *op. cit.*, 18).

All facts of the life of Christ that Justin takes from these memoirs are found indeed in our Gospels (Baldus, *op. cit.*, 13 sqq.); he adds to them a few other and less important facts (I Apol., xxxii; xxxv; Dial., xxxv, xlvi, li, lxxviii), but he does not assert that he

found them in the memoirs. It is quite probable that Justin used a concordance, or harmony, in which were united the three synoptic Gospels (Lippelt, op. cit., 14, 94) and it seems that the text of this concordance resembled in more than one point the so-called Western text of the Gospels (cf. *ibid.*, 97). Justin's dependence on St. John is indisputably established by the facts which he takes from Him (I Apol., lxi, 4, 5; Dial., lxix, lxxxviii), still more by the very striking similarity in vocabulary and doctrine. It is certain, however, that Justin does not use the fourth Gospel as abundantly as he does the others (Purves, op. cit., 233); this may be owing to the aforesaid concordance, or harmony, of the synoptic Gospels. He seems to use the apocryphal Gospel of Peter (I Apol., xxxv, 6; cf. Dial., ciii; *Revue Biblique*, III, 1894, 531 sqq.; Harnack, "Bruchstücke des Evang. des Petrus", Leipzig, 1893, 37). His dependence on the Protevangelium of James (Dial., lxxviii) doubtful.

Apologetical method

Justin's attitude towards philosophy, described above, reveals at once the tendency of his polemics; he never exhibits the indignation of a Tatian or even of a Tertullian. To the hideous calumnies spread abroad against the Christians he sometimes answers, as do the other apologists, by taking the offensive and attacking pagan morality (I Apol., xxvii; II, xii, 4, 5), but he dislikes to insist on these calumnies: the interlocutor in the "Dialogue" (ix) he is careful to ignore those who would trouble him with their loud laughter. He has not the eloquence of Tertullian, and can obtain a hearing only in a small circle of men capable of understanding reason and of being moved by an idea. His chief argument, and one calculated to convert this hearers as it had converted him (II Apol., xii), is the great new fact of Christian morality. He speaks of men and women who have no fear of death (I Apol., ii, xi, xlv; II, ii; Dial., xxx), who prefer truth to life (I Apol., ii; II, iv) and are yet ready to await the time allotted by God (II, iv1); he makes known their devotion to their children (I, xxvii), their charity even towards their enemies, and their desire to save them (I Apol., lvii; Dial., cxxxiii), their patience and their prayers in persecution (Dial., xviii), their love of mankind (Dial., xciii, cx). When he contrasts the life that they led in paganism with their Christian life (I Apol., xiv), he expresses the same feeling of deliverance and exaltation as did St. Paul (I Cor., vi, II). He is careful, moreover, to emphasize, especially from the Sermon on the Mount, the moral teaching of Christ so as to show in it the real source of these new virtues (I Apol., xv-xviii). Throughout his exposé of the new religion it is Christian chastity and the courage of the martyrs that he most insists upon.

The rational evidences of Christianity Justin finds especially in the prophecies; he gives to this argument more than a third of his "Apology" (xxx-liii) and almost the entire "Dialogue". When he is disputing with the pagans he is satisfied with drawing attention to the fact that the books of the Prophets were long anterior to Christ, guar-

anted as to their authenticity by the Jews themselves, and says that they contain prophecies concerning the life of Christ and the spread of the Church that can only be explained by a Divine revelation (I Apol., xxxi). In the "Dialogue", arguing with Jews, he can assume this revelation which they also recognize, and he can invoke the Scriptures as sacred oracles. These evidences of the prophecies are for him absolutely certain. "Listen to the texts which I am about to cite; it is not necessary for me to comment upon them, but only for you to hear them" (Dial., liii; cf. I Apol., xxx, liii). Nevertheless he recognizes that Christ alone could have given the explanation of them (I Apol., xxxii; Dial., lxxvi; cv); to understand them the men and women of his time must have the interior dispositions that make the true Christian (Dial., cxii), i.e., Divine grace is necessary (Dial., vii, lviii, xcii, cxix). He also appeals to miracles (Dial., vii; xxxv; lxix; cf. II Apol., vi), but with less insistence than to the prophecies.

THEOLOGY

God. Justin's teaching concerning God has been very diversely interpreted, some seeing in it nothing but a philosophic speculation (Engelhardt, 127 sq., 237 sqq.), others a truly Christian faith (Flemming, "Zur Beurteilung des Christentums Justins des Märtyrers", Leipzig, 1893, 70 sqq.; Stählin, "Justin der Märtyrer und sein neuester Beurtheiler", 34 sqq., Purves, op. cit., 142 sqq.). In reality it is possible to find in it these two tendencies: on one side the influence of philosophy betrays itself in his concept of the Divine transcendency, thus God is immovable (I Apol., ix; x, 1; lxiii, 1; etc.); He is above the heaven, can neither be seen nor enclosed within space (Dial., lvi, lx, cxxvii); He is called Father, in a philosophic and Platonistic sense, inasmuch as He is the Creator of the world (I Apol., xlv, 1; lxi, 3; lxv, 3; II Apol., vi, 1, etc.). On the other hand we see the God of the Bible in his all-powerful (Dial., lxxxiv; I Apol., xix, 6), and merciful God (Dial., lxxxiv; I Apol., xix, 6), and merciful God (Dial., cviii, lv, etc.); if He ordained the Sabbath it was not that He had need of the homage of the Jews, but that He desired to attach them to Himself (Dial., xxii); through His mercy He preserved among them a seed of salvation (lv); through His Divine Providence He has rendered the nations worthy of their inheritance (cxviiicxxx); He delays the end of the world on account of the Christians (xxxix; I Apol., xxviii, xlv). And the great duty of man is to love Him (Dial., xciii).

The Logos

The Word is numerically distinct from the Father (Dial., cxxviii, cxxix; cf. lvi, lxii). He was born of the very substance of the Father, not that this substance was divided, but He proceeds from it as one fire does from another at which it is lit (cxxviii, lxi); this form of production (procession) is compared also with that of human speech (lxi). The Word (*Logos*) is therefore the Son: much more, He alone may properly be called Son (II Apol., vi, 3); He is the *monogenes*, the *unigenitus* (Dial., cv). Elsewhere, however,

Justin, like St. Paul, calls Him the eldest Son, *prototokos* (I Apol., xxxiii; xlvi; lxiii; Dial., lxxxiv, lxxxv, cxxv). The Word is God (I Apol., lxiii; Dial., xxxiv, xxxvi, xxxvii, lvi, lxiii, lxxvi, lxxxvi, lxxxvii, cxiii, cxv, cxxv, cxxvi, cxviii). His Divinity, however, seems subordinate, as does the worship which is rendered to Him (I Apol., vi; cf. lxi, 13; Teder, "Justins des Märtyrers Lehre von Jesus Christus", Freiburg im Br., 1906, 103-19). The Father engendered Him by a free and voluntary act (Dial., lxi, c, cxxvii, cxxviii; cf. Teder, op. cit., 104), at the beginning of all His works (Dial., lxi, lxii, II Apol., vi, 3); in this last text certain authors thought they distinguished in the Word two states of being, one intimate, the other outspoken, but this distinction, though found in some other apologists, is in Justin very doubtful. Through the Word God has made everything (II Apol., vi; Dial., cxiv). The Word is diffused through all humanity (I Apol., vi; II, viii; xiii); it was He who appeared to the patriarchs (I Apol., lxii; lxiii; Dial., lvi, lix, lx etc.). Two influences are plainly discernible in the aforesaid body of doctrine. It is, of course, to Christian revelation that Justin owes his concept of the distinct personality of the Word, His Divinity and Incarnation; but philosophic speculation is responsible for his unfortunate concepts of the temporal and voluntary generation of the Word, and for the subordinationism of Justin's theology. It must be recognized, moreover, that the latter ideas stand out more boldly in the "Apology" than in the "Dialogue."

The Holy Ghost occupies the third place in the Trinity (I Apol., vi). He inspired the prophets (I Apol., vi; xxxi; Dial., vii). He gave seven gifts to Christ and descended upon Him (Dial., lxxxvii, lxxxviii). For the real distinction between the Son and the Spirit see Teder, op. cit., 119-23. Justin insists constantly on the virgin birth (I Apol., xxii; xxxiii; Dial., xliii, lxxvi, lxxxiv, etc.) and the reality of the flesh of Christ (Dial., xlvi, xcvi, ciii; cf. II Apol., x, 1). He states that among the Christians there are some who do not admit the Divinity of Christ but they are a minority; he differs from them because of the authority of the Prophets (Dial., xlvi); the entire dialogue, moreover, is devoted to proving this thesis. Christ is the Master whose doctrine enlightens us (I Apol., xiii, 3; xxiii, 2; xxxii, 2; II, viii, 5; xiii, 2; Dial., viii, lxxvii, lxxxiii, c, cxiii), also the Redeemer whose blood saves us (I Apol., lxiii, 10, 16; Dial., xiii, xl, xli, xcvi, cvi; cf. Rivière, "Hist. du dogme de la rédemption", Paris, 1905, 115, and tr., London, 1908). The rest of Justin's theology is less personal, therefore less interesting. As to the Eucharist, the baptismal Mass and the Sunday Mass are described in the first "Apology" (lxv-lxvii), with a richness of detail unique for that age. Justin here explains the dogma of the Real Presence with a wonderful clearness (lxvi, 2): "In the same way that through the power of the Word of God Jesus Christ our Saviour took flesh and blood for our salvation, so the nourishment consecrated by the prayer formed of the words of Christ . . . is the flesh and blood of this incarnate Jesus." The "Dialogue" (cxvii; cf. xli) completes this doctrine by the idea of a Eucharistic sacrifice as a memorial of the Passion.

The role of St. Justin may be summed up in one word: it is that of a witness. We behold in him one of the highest and purest pagan souls of his time in contact with Christianity, compelled to accept its irrefragable truth, its pure moral teaching, and to admire its superhuman constancy. He is also a witness of the second-century Church which he describes for us in its faith, its life, its worship, at a time when Christianity yet lacked the firm organization that it was soon to develop (see ST. IRENÆUS), but the larger outlines of whose constitution and doctrine are already luminously drawn by Justin. Finally, Justin was a witness for Christ unto death.

JULES LEBRETON

St. Justus

St. Justus

Fourth Archbishop of Canterbury; died 627 (?). For the particulars of his life we are almost entirely dependent on Venerable Bede's "Historia Ecclesiastica", the additions of medieval writers, such as William of Malmesbury or Elmham, possessing no authority. Justus was one of the second band of missionaries sent by St. Gregory the Great, the company which arrived in 601 to reinforce St. Augustine and which conveyed the relics, books, sacred vessels, and other gifts sent by the pope. It is not certain whether he was a secular priest or a monk. St. Bede is silent on the point and only later monastic writers from Canterbury claim him as one of their own order. In 604 he was consecrated by St. Augustine as first Bishop of Rochester, on which occasion King Ethelbert bestowed on the new see, by charter, a territory called Priestfield and other lands. Other charters in which his name occurs are of dubious authenticity. After the death of Au-

gustine, Justus joined with the new Archbishop, St. Laurence, and with Mellitus of London in addressing letters to the recalcitrant British bishops, but without effect. During the heathen reaction which followed the death of Ethelbert, Justus was expelled from his see and took refuge in Gaul for a year, after which he was recalled by Eadbald who had been converted by St. Laurence. On the death of St. Mellitus (24 April, 624) who had succeeded St. Laurence as archbishop, St. Justus was elected to the vacant primacy. The letter which Pope Boniface addressed to him when sending him the pallium is preserved by Venerable Bede (H. F., II, 8). He was already an old man, and little is recorded of his pontificate except that he consecrated Romanus as Bishop of Rochester and St. Paulinus as Bishop for the North. His anniversary was kept at Canterbury on 10 November, but there is uncertainty as to the year of his death, though 627, the commonly received date, would appear to be correct, especially as it fits in with the period of three years usually assigned by the chroniclers to his archiepiscopate. He was buried with his predecessors at St. Augustine's Abbey, Canterbury, and is commemorated in the English supplement to the Missal and Breviary on 10 November.

EDWIN BURTON

Juvenicus

C. Vettius Aquilinus Juvenicus

Christian Latin poet of the fourth century. Of his life we know only what St. Jerome tells us (*De viris*, lxxxiv; cf. *Chron.*, *ad an.* 2345; *Epist.* lxx, 5; *In Matt.*, I, ii, 11). He was a Spaniard of very good birth, became a priest, and wrote in the time of Constantine. From one passage in his work (II, 806, sq.) and from St. Jerome's Chronicle it must be inferred that he wrote about the year 330. His poem, in dactylic hexameters, is entitled "Evangeliorum libri" (The Gospels). It is a history of Christ according to the Gospels, particularly that of St. Matthew. He goes to the other Evangelists for what he does not find in St. Matthew -- as the story of the Infancy, which he takes from St. Luke. He follows his model very closely, "almost literally", as St. Jerome says. The whole problem for him is to render the Gospel text into easy language conformable to the tradition of the Latin poets, and borrowed especially from Virgil. His task is of no higher order than might be accomplished by a proficient schoolboy; it permits of little originality beyond that exhibited in new words composed, or derived, according to

familiar types (*auricolor, flammium, flammicomans, sinuamen*), elegant synonyms to express the Christian realities (*tonans* for "God", *genitor* for the Father, *spiramen* for the Holy Ghost, *uersutia* for the Devil), or, lastly, archaic expressions. There is no colour, no movement. The language is correct, the verses well constructed. A few obscurities of prosody betray the period in which the work was written. The whole effect is carefully wrought out.

In the prologue Juvenecus announces that he wishes to meet the lying tales of the pagan poets, Homer and Virgil, with the glories of the true Faith. He hopes that his poem will survive the destruction of the world by fire, and will deliver him, the poet, from hell. He invokes the Holy Spirit as the pagans invoked the Muses or Apollo. The work is divided into four books, which make arbitrary divisions of the life of Christ. The number four seems to be symbolical, corresponding to the number of the Evangelists. Other traces of symbolism have been found in Juvenecus, the most notable being the significance attached to the gifts of the Magi -- the incense offered to the God, the gold to the King, the myrrh to the Man. This interpretation, of which he, certainly, was not the inventor, was to have the greatest success, as we know. Lastly, eight preliminary verses, Juvenecus's authorship of which is disputed, characterize the Evangelists and assign emblems to them; but they assign the eagle to St. Mark and the lion to St. John. The Bible text which Juvenecus paraphrased was of course an ancient one. He appears, too, to have had recourse at times to the Greek text. The source of his poetical phraseology and his technic is, first, Virgil, then Lucretius, Propertius, Horace, Ovid, Silius, and Statius. The cold correctness of the work recommended it to the taste of the Middle Ages, when it was frequently quoted, imitated, and copied.

St. Jerome tells us that Juvenecus composed another, shorter, Christian poem on "the order of the mysteries" (*Sacramentorum ordinem*). This work is lost. Modern writers have incorrectly attributed to him the "Heptateuchus", a work of Cyprian of Gaul, and the "De Laudibus Domini", a work of Juvenecus's time, but to be credited to some pupil of the rhetoricians of Augustodunum (Autun). The two best editions of Juvenecus are those of Marold (Leipzig, 1886) in the "Bibliotheca Teubneriana", and of Hümer (Vienna, 1891) in the "Corpus script. ecclesiast. latinorum".

PAUL LEJAY

Juvenile Courts

Tribunals for the trial of children charged with crimes or offences. The maximum age is usually fixed at seventeen years, below which age these courts are generally given exclusive jurisdiction where the crimes are not capital. In some cities, power is also conferred upon these courts to commit to institutions, or other custodial care, juvenile dependents and children found to be in unfit homes. Notably in Washington and Denver, jurisdiction is added to try adults charged with contributing in any way to the delinquency or wrongdoing of a child, and husbands or fathers who fail to support or who desert their wives and children in destitute or necessitous circumstances. Sometimes, as at Washington, laws regulating child labour are enforced through these courts.

By the common law, a child under the age of seven years was conclusively presumed to be incapable of committing a crime. Between seven and fourteen years of age, criminal intent, without which there can be no crime, must be shown by the prosecution. Malice would supply age, was the maxim. At fourteen, the age of puberty, when the child had all the powers it would ever possess, the law cast upon it full responsibility for its criminal acts. It was sentenced, upon conviction, to the jail or the penitentiary, where enforced association with adult criminals brought about most deplorable results. Society has been slow to awaken to the mistake, nay more, the criminal folly, of this policy, and now, under the operation of juvenile-court laws, all this is being changed. The juvenile court means more than a new forum. It means a new method in dealing with children who commit offences. It is the manifestation of a new and more rational spirit on the part of the State towards children who violate its public law. The State by its punishment of the adult for crime committed, endeavours, on the one hand, to reform the criminal and, on the other, to deter by the severity of its punishment others from transgressing the law. Now it is recognized that the character of children is yet unformed, that, instead of reformation, they stand in need of formation of good habits and character, and so the aim of the juvenile court becomes correction rather than punishment.

In some States, the juvenile-court movement has commenced by holding the trial of children a separate session of the ordinary criminal court of first instance. In other States, juvenile courts are established, but judges of other tribunals act successively, in turn, as judges of the juvenile court. Elsewhere, as in Colorado, Maryland, Indiana, and the District of Columbia, there are judges appointed as judges of the juvenile court only, and this is claimed to be the best method by those who have given the movement close study. The judge of the juvenile court soon becomes a specialist in his work, but

the demands of the important problem of the child, which is his, require in himself the combined qualities of the jurist, the teacher, the sociologist, and the philanthropist. The juvenile courts of the United States may be grouped under two classes: juvenile courts where the procedure is according to that of the English Court of Chancery, and juvenile courts where the procedure approximates that of the ordinary criminal court. The Juvenile Court of Chicago is presided over by one of the judges of the Circuit Court. The proceedings conform as nearly as may be to the practice in Chancery. The pleadings used are simply a petition and an answer, and the process used is a summons. Such proceedings by the State of Illinois, in dealing with the child who has broken one of its laws, consists of a declaration that the child needs the parental care of the State, which has always been exercised over dependents through the medium of the Court of Chancery, and that it thus requires the parental care of the State, which is *parens patrie*, by reason of the failure of the father and mother, first as they are, in the order both of nature and of time, to fulfil their obligations towards this child. Accordingly the State does not brand the child as a criminal, but deals with him as a delinquent child requiring the parental correction of the State, not its punishment. Chicago had the earliest juvenile court, and this is the furthest advance in the movement. In fact, it smacks strongly of paternalism on the part of the State; but we should remember that it is paternalism exercised where it is sadly lacking. Practically, the power is invoked not to interfere with the normal family, but to succour the poor little waifs of fortune out of unfit homes, starved and weather-beaten, the companions, oftentimes, of thieves and worse.

To the other class belongs the Juvenile Court of New York City, presided over in rotation by the judges of the court of Special Sessions, which is a criminal court for the trial of misdemeanours without a jury. But even here the court has power and authority to extend relief to children who have unfit homes or are otherwise abused by their parents---under our system of jurisprudence, an incident of chancery jurisdiction. New York City is the principal gateway of our country, and the problems of this court are made heavy by the presence in its jurisdiction of many who are strangers both to our language and our customs, and by the acute conditions accompanying an enormous population in which are the extremes of wealth and want. The juvenile court at Washington has a criminal procedure. This court was created by the Act of Congress of 19 March, 1906, and is given original and exclusive jurisdiction of all crimes and offences of persons under seventeen years of age, not capital or otherwise infamous and not punishable by imprisonment in the penitentiary. The court is also given jurisdiction over those adults responsible for the delinquency of any child, and over parents or guardians who fail or refuse to provide food, clothing, or shelter for their children, the criminal court of the district having concurrent powers in the latter class of cases.

Nor can a dependent child be admitted to any institution supported wholly or in part out of public funds, until the fact of dependence is first ascertained and proved in the juvenile court. In this court are tried all cases arising under the child labour law. Provision is made by the Act for a jury and for appeals in matters of law to the court of appeals of the District of Columbia. The juvenile court is empowered to defer sentence, at its discretion, in the case of any juvenile offender under seventeen years of age, and to place such child on probation, during which it shall be under the jurisdiction of the court.

The probation officers are generally employed by the court to make a preliminary investigation before the child is arraigned. This investigation usually results in helpful data about the parentage and antecedents of the child, its habits and its environment. It is comparatively easy to affix a statutory punishment in the case of the adult found guilty of crime. It is a far more difficult matter to correct a wayward child; so that the previous history of the child is most helpful to the judge. Then, too, the services of the physician are often brought into requisition, to cure some physical ill, such as adenoidal growths, which may in a measure account for the delinquency of the child. In both classes of juvenile courts---those whose procedure is after the manner of chancery or equity courts, and those whose procedure is more like that of the ordinary criminal courts---the treatment of the child and the attitude of the judge towards the child are the same. In the treatment, the underlying purpose is the saving of the child, not its punishment, nor even its restraint. And the personality of the judge is an element of vast importance in any juvenile court. "I have always felt and endeavoured to act in each case", said Judge Tuthill, of Chicago, "as I would were it my own son who was before me in my library at home charged with misconduct". The Supreme Court of Utah, in the case of *Mill v. Brown*, 88 Pacific Reporter, page 609 (1907) said: "To administer juvenile laws in accordance with their true spirit and intent requires a man of broad mind, of almost infinite patience, and one who is the possessor of great faith in humanity and thoroughly imbued with that spirit. The judge of any court, and especially a judge of a juvenile court, should be willing at all times, not only to respect, but to maintain and preserve, the legal and natural rights of men and children alike."

The juvenile court must not commit to the jail or the workhouse or the penitentiary the children who must be confined. It may send them to so-called reform schools, institutions that sprang into existence some seventy-five years ago, or to some other place provided for their kindly but custodial care. In the case of *Mill v. Brown*, supra, we read: "Before the State can be substituted to the right of the parent, it must affirmatively be made to appear that the parent has forfeited his natural and legal right to the custody and control of the child by reason of his failure, inability, neglect, or incompetency to discharge the duty and thus to enjoy the right. Unless, therefore, both

the delinquency of the child and the incompetency, for any reason, of the parent concur, and are so found, the court exceeds its power when committing a child to any of the institutions contemplated by the act." Instead of so committing the child, the court may either impose a fine or, what is done in a large percentage of the cases, place the child upon probation. Probation is a new system of custodial care that is rapidly growing in favour as the best method to handle or discipline, not only children who violate the law, but adults as well. Probation means that, with confidence in the promises of the offender to offend no more, the court suspends sentence and enlarges him under the care of the probation officers attached to the court, with a view to releasing him in the future, when his conduct and progress justifies it, from the jurisdiction of the court. The management of penal institutions release prisoners from time to time in a similar manner, but in such cases the release is more accurately and more properly termed *parole*. The nomenclature employed in the method is, however, far from settled.

On probation, the child remains in its home, in its natural environment, where the expenses, too, of its nurture and education should properly be borne. This has resulted in a substantial saving, even from a pecuniary point of view, to the communities where it has been tried, often amounting to as much as sixty thousand dollars per annum, it is estimated, in cities of two hundred and fifty thousand inhabitants. It has been demonstrated that "it is wiser and less expensive to save children than to punish criminals." To do this, probation imposes certain positive duties upon both probation officer and judge, especially where the function of the judge is confined to the juvenile court. In such a case the best results are obtained when the judge becomes in practice his own chief probation officer, carefully supervising the system himself. The judge and the probation officers must labour to develop good character in the child. The aim of probation is character-building. Hereby is brought about the saving of the child, the "citizen of tomorrow", to himself and to his country. Probation is of such importance that it has been termed the keystone of the juvenile court system. By the patient, painstaking efforts of the probation officers, much ignorance is dispelled, and all the helpful agencies in a community are drawn upon to serve the legitimate needs of the child, mentally, morally, and physically. An account of the juvenile court would be incomplete without at least a passing reference to Judge Ben B. Lindsey, of Denver, Colorado, who, through his numerous magazine articles and public addresses throughout the United States upon the juvenile court, is so intimately associated with the institution in the public mind. His excellent services to the children of Denver, his many speeches, addresses, and published articles, have been potent in the speedy spread of the movement for juvenile courts.

As above mentioned, to Chicago belongs the honour of having established the first juvenile court, on 1 July, 1899. The pressing need was generally felt, the country was ripe for the movement, and there quickly followed the inauguration of juvenile courts in Denver, Indianapolis, New York, Philadelphia, Washington, until some thirty cities have them, and almost all cities are considering their adoption. This American movement has appealed to Europe, where it has been adopted in Germany, France, Belgium, Sweden, Hungary, Italy, and England. Canada and Australia now have juvenile courts, also South Africa and India. The English law follows closely the legislation to protect child life that has been enacted throughout the United States. By it, safeguards are thrown around the religious belief of the child, by having the court select, if possible, a person of the same religious persuasion or some person who will give an undertaking that the child or young person shall be brought up in accordance with its own religious persuasion. This act is to be cited as the Children's Act, 1908. It is technically 8 Edward VII, Chapter 67, and is popularly known as "The Children's Charter". Thus it is recognized as entering into the fabric of the British Constitution. By it *child* is defined to mean a person under the age of fourteen years, while the expression *young person* means one between fourteen and sixteen years of age. With the necessary modifications, the act is applied to Scotland and to Ireland. When the court is satisfied of the guilt of the child, it may, in its discretion, deal with the case by dismissing the charge; by placing the offender under the care of a probation officer; by committing the offender to the care of a relative or of some institution; by ordering the offender to be whipped; by ordering the offender to pay a fine, damages, and costs; by ordering the parent or guardian of the offender to make payment of a fine, damages, or costs; and, where the offender is over fourteen years of age, by sending him to prison.

Thus has grown and spread the most remarkable development in jurisprudence of the past decade, a development that is carried on the wings of mercy, kindness, and love, in whose scales of justice are balanced the inexperience of the child and its environment with the responsibility of the parent and the adult, now, for the first time, recognized and enforced by the law of the land. The juvenile court has its origin in the needs of the time. These needs are largely the result of the industrial revolution consequent upon the use of steam and the establishment of the factory system. The old order is changed. Practically, there are no industries in the home. The congregation of workers in factories has promoted the growth of communities and cities. The trend is from the country, with its peace and simple life, to the cities, with their turmoil and dissipations. The conditions in the cities growing out of congestion of population, the use as habitations of flats and tenement houses, have all weakened family life and forced the nervous and mental development of the children into precocity. There is some truth in the saying that there are no children nowadays, and this is a prolific

source of the need for juvenile courts. But, as demanded by conditions, the work of these courts is remedial rather than vindictive and punitory. They aim to conserve child-life. All this is in harmony with the spirit of the Catholic Church, whose Divine Founder said: "Suffer little children to come unto me, and forbid them not." In the spirit of the Master, she early set her face against the exposure and destruction of infants under paganism. Creches and infant asylums have in all Christian ages been offered as an alternative to child- murder. Devoted sisterhoods and brotherhoods have always maintained orphan asylums, refuges, and hospitals for the protection, safeguarding and training of the orphaned, abandoned and abused little brothers of Christ. The spirit that created the juvenile court is closely akin to the spirit of the Catholic Church, which, in its canonical punishments, has never been moved by a vindictive spirit. Recognizing in the meanest and the weakest, a soul purchased by the Blood of Christ, her sanctions are chiefly correctional and medicinal. This is also the motive of the juvenile court, the essence of which is correction, conservation, remedy; not retaliation or vindictive punishment.

Since 1900 numerous articles upon juvenile courts and probation have appeared in periodicals published in the United States and abroad. In the same period, in the published Yearly Proceedings of the National Conference of Charities and Correction, appear addresses upon the subject of Judge Ben B. Lindsey, of Denver; Judge Julian W. Mack, of Chicago; Judge George W. Stubbs, of Indianapolis; Professor Charles R. Henderson, of Chicago; the present writer, and others. See MACK in the Reports of the American Bar Association for 1909; BARROWS, Children's Courts in the United States (reports prepared for the International Prison Commission) (Washington, 1904); LINDSEY, The Problem of the Children and How the State of Colorado Cares for Them (1904); FOLKS, The Care of Destitute, Neglected, and Dependent Children (New York, 1902); Les Tribunaux Speciaux pour Enfants (Paris, 1906); Children's Act (London, 1908); Proceedings of the 75th Anniversary of the Society of St. Vincent de Paul (New York, 1909); HURLEY, Origins of the Illinois Juvenile Court Law (3rd ed., Chicago, 1907).

WILLIAM H. DE LACY

Kabbala

Kabbala

The term is now used as a technical name for the system of esoteric theosophy which for many generations played an important part, chiefly among the Jews, after the beginning of the tenth century of our era. It primarily signifies reception, and, secondarily, a doctrine received by oral tradition. Its application has greatly varied in the course of time, and it is only since the eleventh or twelfth century that the term *Kabbala* has become the exclusive appellation for the system of Jewish religious philosophy which claims to have been uninterruptedly transmitted by the mouths of the patriarchs, prophets, elders, etc., ever since the creation of the first man.

The two works which the advocates of this system treat as the authoritative exposition of its doctrines are the *Book of Creation* and the *Zohar*.

THE BOOK OF CREATION

The *Book of Creation* is a short treatise consisting of six chapters subdivided into thirty-three very brief sections. It is written in Mishnic Hebrew, and is made up of oracular sentences. It professes to be a monologue of the patriarch Abraham, who enumerates the thirty-two ways of wisdom by which God produced the universe, and who shows, by the analogy which is assumed to exist between the visible things and the letters which are the signs of thought, the manner in which all has emanated from God and is inferior to Him.

THE ZOHAR

The *Zohar*, or second expository work of the Kabbala, has justly been called the "Bible" of the Kabbalists. It is written in Aramaic, and its main portion is the form of a commentary on the Pentateuch according to the latter's division into fifty-two weekly lessons. Its title *Zohar* (light, splendour) is derived from the words of [Genesis 1:3](#) ("Let there be light") with the exposition of which it begins. It is a compilatory work, wherein several fragments of ancient treatises can still be noticed. The following is a brief account of the chief contents -- doctrinal, hermeneutical, and theurgical -- of the *Zohar*.

Doctrinal content of the Zohar

The First World

Considered in Himself, the Supreme Being is the *En-Soph* (Endless, Infinite) and, in a certain sense, the *En* (Non-existent) since existence is in human conception a limitation which as such should not be predicted of Him. We can conceive and speak

of God only in so far as He manifests and, as it were, actualizes Himself in or through the *Sephiroth*.

- His first manifestation was by way of concentration in a point called the first Sephira -- "the Crown", as it is called -- which is hardly distinguishable from the *En-Soph* from Whom it emanates, and which is expressed in the Bible by the *Ehieyeh* (I am). From the first Sephira proceeded a masculine or active potency called wisdom, represented in the Bible by *Yah*, and an opposite, i.e. a feminine or passive potency, called intelligence, and represented by *Yahweh*. These two opposite potencies are coupled together by the "Crown", and thus yields the first trinity of the *Sephiroth*.
- From the junction of the foregoing opposite tendencies emanated the masculine potency called love, the the fourth Sephira, represented by the Biblical *El*, and the feminine one justice, the fifth Sephira, represented by the Divine name *Elohah*. From them again emanated the uniting potency, beauty, the sixth Sephira, represented in the Bible by *Elohim*. And thus is constituted the second trinity of the *Sephiroth*.
- In its turn, beauty beamed forth the seventh Sephira, the masculine potency, firmness, corresponding to *Yahweh Sabaoth*, and this again produced the feminine potency splendour, represented by *Elohe Sabaoth*. From splendour emanated the ninth Sephira, foundation, which answers the Divine name *El-Hai* and closes the third trinity of the *Sephiroth*.
- Lastly, splendour sends forth kingdom, the tenth Sephira, which encircles all the others and is represented by *Adonai*.

These ten *Sephiroth* are emanations from the *En-Soph*, forming among themselves and with Him a strict unity, in the same way as the rays which proceed from the light are simply manifestations of one and the same light. They are infinite and perfect when the *En-Soph* imparts His fullness to them, and finite and imperfect when that fullness is withdrawn from them (Ginsburg). In their totality, they represent and are called the archetypal man, without whom the production of permanent worlds was impossible. In fact, they constitute the first world, or world of emanations, which is perfect and immutable because of its direct procession from the Deity.

The Second, Third and Fourth Worlds

Emanating immediately from this first world is the world of creation, the ten *Sephiroth* of which are of a more limited potency, and the substances of which are of the purest nature. From the world of creation proceeds the world of formation, with its less refined ten *Sephiroth*, although its substances are still without matter. Finally,

from this third world proceeds the world of action or of matter, the ten Sephiroth of which are made of the grosser elements of the other works.

The Angels

Of these worlds, the second, that of creation, is inhabited by the angel *Metatron*, who governs the visible world, and is the captain of the hosts of good angels who in ten ranks people the third world, that of formation. The demons or bad angels inhabit the fourth world, that of action, the lowest regions of which constitute the seven infernal halls wherein the demons torture the poor mortals whom they betrayed into sin in this life. The prince of the demons is *Samael* (the "angel of poison or of death"); he has a wife called the Harlot; but both are treated as one person, and are called "the Beast".

Man

Man was directly created not by En-Soph, but by the Sephiroth, and is the counterpart of the archetypal man. His body is merely a garment of his soul. Like God, he has a unity and a trinity, the latter being made up of the spirit representing the intellectual world, the soul representing the sensuous world, and the life representing the material world. Souls are pre-existent destined to dwell in human bodies, and subjected to transmigration till at last they return to God.

Destiny of the World

The world also including *Samael* himself, will return ultimately--viz. at the advent of the Messiah born at the end of days--to the bosom of the Infinite Source. Then Hell shall disappear and endless bliss begin.

Hermeneutical content of the Zohar

All these esoteric doctrines of the Kabbala are supposed to be contained in the Hebrew Scriptures, in which, however they can be perceived only by those initiated into certain hermeneutical methods. The following are the three principal methods of discovering the heavenly mysteries hidden under the letters and words of the Sacred Text:

- The *Temurah* (change) by means of which each letter of the Hebrew alphabet is interchanged with another, according to some definite process, as when *Aleph*, the first letter, becomes *Lamed* by interchange with the twelfth, the second, *Beth*, becomes, *Mem*, the thirteenth, etc.; or as, when the last letter takes place of the first, the last but one takes the place of the second, etc.;
- the Gematria (Gr. *gemetria*), which consists in the use of the numerical values of the letters of a word for purposes comparison with other words, which give the same or similar combinations of numbers: thus in [Genesis 49:10](#), "Shiloh come" is equivalent to 358, which is also the numerical value of *Mashiah*, whence it is inferred that *Shiloh* is identical with *Messias*;

- the *Notarikon* (Lat. *notarius*), or process of reconstructing a word by using the initials of many, or a sentence by using all the letters of a single word as so many initials of other words; for instance, the word *Agla* is formed from the initials of the Hebrew sentence: "Thou (art) (a) Mighty (God) forever."

Theurgical content of the Zohar

The theurgical, or last chief element of the *Zohar*, needs no long description here. It forms part of what has been called the "practical" Kabbala, and supplies formulas by means of which the adept can enter into direct communication with invisible powers and thereby exercise authority over demons, nature, diseases, etc. To a large extent it is the natural outcome of the extraordinary hidden meaning ascribed by the Kabbala to the words of the Sacred Text, and in particular to the Divine names.

CONCLUSION

Of course, the *Book of Creation* does not go back to Abraham, as has been claimed by many Kabbalists. Its ascription by others to Rabbi Akiba (d. A.D. 120) is also a matter of controversy. With regard to the *Zohar*, its compilation is justly referred to a Spanish Jew, Moses of Leon (d. 1305), while some of its elements seem to be of a much greater antiquity. Several of its doctrines recall to mind those of Pythagoras, Plato, Aristotle, the neo-Platonists of Alexandria, the Oriental or Egyptian Pantheists, and the Gnostics of the earliest Christian ages. Its speculations concerning God's nature and relation to the universe differ materially from the teachings of Revelation.

Finally, it has decidedly no right to be considered as an excellent means to induce the Jews to receive Christianity, although this has been maintained by such Christian scholars as R. Lully, Pico della Mirandola, Reuchlin, Knorr von Rosenroth, etc., and although such prominent Jewish Kabbalists as Riccio, Conrad, Otto, Rittangel, Jacob Franck, etc., have embraced the Christian Faith, and proclaimed in their works the great affinity of some doctrines of the Kabbala with those of Christianity.

FRANCIS E. GIGOT

Kafiristan and Kashmir

Prefecture Apostolic of Kafiristan and Kashmir

Created (1887) by Leo XIII in the extreme North of India. As regards India proper, the district was, prior to 1887, part of the Capuchin Diocese of Lahore. In that year it was confided to the Fathers of the English Foreign Missions (Mill Hill). The Prefecture includes some of the most important British military stations of Northern India, Peshawur at the mouth of the Khyber Pass, Nowshera and Rawalpindi, the latter place

being the army headquarters of lieutenant-general commanding the Northern Army in India. Rawalpindi is also the residence of the Prefect Apostolic, the Very Rev. Dominic Wagner, nominated 13 March, 1900. He was born in 1863 in Friesland and ordained in Salford Cathedral by Cardinal Vaughan in February, 1889. He was educated at the Jesuit College of Culemburg in Holland and at St. Joseph's Foreign Missionary College, Mill Hill, London. In the prefecture there are two important convents: the first is at Murree in the charge of the nuns of Congregation of Jesus and Mary. This institution comprises a boarding school for young ladies, a military orphanage, and a day school for outsiders. The other convent is situated at Rawalpindi, and is in charge of the Presentation nuns. They have recently received a number of new postulants from Ireland and hope to found a convent in Kashmir. They will also help Doctor Elizabeth Bielby, who under the guidance of the prefect Apostolic, is about to open (1909) a Catholic hospital for the native women and children of Northern India. At Baramulla, in Kashmir, Father Simon, assisted by a staff of twelve lay teachers, conducts an important school for native Kashmir boys. The pupils number three hundred. The prefecture comprises about fifteen million inhabitants. Twelve million five hundred thousand of these are Mohammedans, two million are Hindoos, five hundred thousand are Buddhists and about five thousand are Catholics.

J.A. CUNNINGHAM

Kafirs

Kafirs

A term popularly to nearly all the natives of South Africa. It was originally imposed by the Arab traders of the East coast, and means "unbeliever". The natives do not use the word, but distinguish themselves by the names of their many tribes. Even in legal phraseology there is some confusion; but the following is a serviceable list of the native races of South Africa as known to the law; Kafir, Zulu, Basuto, Bechuana, Pondo, Fingo, Griqua, Damara, Koranna, Bushman and Hottentot. The almost universal language of the South African natives is the Bantu, of which the Kafir group has four subdivisions, Xosa, Zulu, Tabele, Mfengu. It is likely that many of the tribes evangelized by the Jesuits and Dominicans from the fifteenth to the eighteenth centuries were ancestors of our Kafirs. When the Catholic missionaries were driven out, the native converts could not stand alone, and relapsed into barbarism, although individuals had risen high in the scale of civilization. The terrible Zulu chief Chaka carried on an aggressive war against the other tribes, at the beginning of the nineteenth century, and over a million are said to have perished. Thence until 1879 came a series of wars between the Kafirs and the British or Dutch. Today there are, south of the Zambesi,

some five million natives, chiefly Kafirs. In Cape Colony, the state which has the largest European population, Europeans are to non-Europeans as 100 to 316. The greatest number of Kafirs occupy the land by tribal or communal tenure, under their own laws and the suzerainty of Great Britain. Some are squatters on private or government lands. There are also mission locations and labour locations. A few have individual titles to land, and some are scattered as servants among the whites. In Cape Colony there are about 5500 registered voters out of a total of about twenty thousand non-European voters. In the other South African states the native voter is a negligible quantity. The importance of missionary work among the Kafirs may be gauged from the following remarkable words of the Native Commission, 1903-5, appointed by all the South African States:

The commission considers . . . that no merely secular system of morality that might be applied would serve to raise the native's ideal of conduct, or to counteract the evil influences that have been alluded to, and is of opinion that hope for the elevation of the native races must depend mainly on their acceptance of Christian faith and morals.

The tribal system is in many ways an impediment to missionary enterprise, but it is a safeguard against political combination. Alcohol is a problem, and abolition is the policy in all native reserves. Polygamy is decreasing slowly but surely. The dangerous Ethiopian movement (the revolt of native Christians from the control of white missionaries) is felt in all Protestant missions, but has had little footing in Catholic stations. The principal Catholic Kafir missions are now in the hands of Trappists, Oblates of Mary Immaculate, and Jesuits. Full statistics are not obtainable. The census of 1904 shows that in Cape Colony Catholics of non-European descent were under 5000. The Trappists have 58 priests, 223 lay brothers, and 328 nuns, working among the natives: 82 schools, and 42 mission stations. About 12,000 Kafirs in South Africa today have been trained in Trappist stations.

SIDNEY R. WELCH

Johann Matthias Kager

Johann Matthias Kager

German historical painter, born at Munich, 1566; died at Augsburg, 1634. He was originally a pupil of Pieter de Witte (Candito), but went to Rome when young, and spent several years there. On his return, he was called to Munich by the Elector Maximilian, who appointed him to be his principal painter, and granted him a considerable allowance. He settled down in Augsburg, and spent the rest of his years in that place, becoming burgomaster. He decorated many of the palaces and churches at Munich, but his finest work, called "The Last Judgment", is in the Senate Hall at Augsburg. A notable picture by him is a representation of "David and Abigail", now at Vienna. He etched several plates from his own design, representing religious subjects (dated 1600, 1601, 1603), and his pictures were also engraved by two members of the Sadeler family, and by Kilian, the plates numbering altogether over seventy. He practised in architecture, and painted a few miniatures, but his chief work was in fresco and in oil.

GEORGE CHARLES WILLIAMSON

Kajetan Georg von Kaiser

Kajetan Georg von Kaiser

Chemist, born at Kelheim on the Danube (Bavaria), 5 January, 1803; died at Munich, 28 August, 1871. He was appointed professor of technology at the University of Munich in 1851, and in 1868 became professor of applied chemistry at the technical high school in the same city. His scientific researches into the chemistry of fermentation are of importance; a saccharometer invented by him in 1842 serves for the determination of the percentages of the contents of wort. In addition to articles in scientific journals, he published the paper *Ueber Bieruntersuchungen und Fehler, welche dabei gemacht werden können* (Munich, 1846). He also brought out the scientific works of his friend, the chemist and mineralogist, Johann Nepomuk von Fuchs (d. 1856), under the title "Gesammelte Schriften des Joh. Nep. von Fuchs" (Munich, 1856), adding an obituary notice of that scientist. Like Fuchs, Kaiser always remained a faithful and steadfast Catholic, even in the period of 1870-1. It is stated of him in an obituary notice that "his Catholic belief was invulnerable spot in his heart, in which he always maintained his own individuality under every trial".

J. ROMPEL

Kaiserchronik

Kaiserchronik

(Der Keiser und der Kunige buoch.)

A German epic poem of the twelfth century. It is at once a kind of "Legend of all the Saints" and a confused but remarkable account of the Roman emperors and also of the German emperors and kings to the crusade of King Conrad III (1147). The language is comparatively good and often quite poetic. The chronicle was written about 1150. Undoubtedly the work of an ecclesiastic of Ratisbon, an earnest partisan of the Guelphs, the chronicle is not improbably to be referred to Konrad der Pfaffe (q. v.), who composed the well-known "Song of Roland" (Rolands-lied). He drew his information from the "Chronicon Wirzeburgense", the Chronicle of Ekkehard (see EKKEHARD IV), and the "Annolied"; it may be that he also drew from some earlier record or rhymed chronicle. Judging from the large number of manuscripts still extant (twelve complete and seventeen partial), it must have been very popular, and it was twice continued in the thirteenth century. The original poem, according to the latest authorities, ended with verse 17283; the first addition, called "Bavarian", comprised 800 verses, while the second, the "Swabian", which brought the poem to the Interregnum (1254-73), consisted of 483 lines. The chronicle was first published in full Massmann (Quedlinburg, 1849-54) in three volumes, under the title: "Die sogenannte Kaiserchronik, Gedicht des 12. Jahrhunderts in 18578 Reimzeilen", with careful researches into manuscripts, investigation of authorship, age, etc. The best edition is that of Schröder: "Die Kaiserchronik eines Regensburger Geistlichen" (Hanover, 1892), in "Mon. Germ. Deutsche Chroniken", I,i; Appendix I is the Bavarian, appendix ii the Swabian continuation.

GREDY, *Ueber die Kaiserchronik ein Gedicht des 12. Jahrhunderts. Mit neuhochdeutschen Uebertragungen und Anmerkungen* (Mainz, 1854); WELZHOFER, *Untersuchungen über die deutsche Kaiserchronik* (Munich, 1874), in *Zeitschrift für deutsches Alterthum*, XIV, XVII, XIX, XXVI, XXXII, XXXIV.

PATRICIUS SCHLAGER

Kaiserwilhelmsland

Prefecture Apostolic of Kaiserwilhelmsland

Comprises the German part of the island of New Guinea, area about 460,000 sq. miles; about 1,000,000 inhabitants. It was only in August, 1896, that the first Catholic missionaries arrived there, three priests and three brothers. On a coast extending about four hundred miles there are now twelve stations established. The small mission steamboat Gabriel is the means of communication along the coast. The Apostolic prefecture was established in 1896 and transferred to the Society of the Divine Word. It had in 1909 twenty-two priests, seventeen lay brothers, and twenty-nine sisters; there are no native priests, the mission being too new. A cathedral is already planned, St. Michael's in Alexishafen. Since the beginning of the mission there have been 1960 baptisms. There are thirteen parochial schools and 600 pupils; priests instruct in religion, while the sisters (Serv Spiritus Sancti) teach reading, writing, arithmetic, singing and geography. A catechism school has just been started. The principal difficulty is the variety of languages; at St. Michael's about 120 pupils speak twenty-five different languages. The common language is German. Some of the adult pupils learn from the brothers useful trades, e. g. carpentering, joinery, smith-work, boat-building, mason-work, and tailoring. Some farms have been started, so that the lower classes of New Guineans may learn to appreciate and love the work. It is hoped that in time, through the practice of useful occupations, the mission will be entirely self-supporting. Each mission is governed by a priest, who is subject to a dean, whose duty it is to see that the rules are observed. Conferences are held every three or four weeks, and in order to promote the spiritual welfare of the community, an eight-day retreat is given yearly.

It was at first proposed to found a leper settlement, but for the present this charitable work has failed, owing to the deep mistrust and superstition of the New Guinean character. Moreover, they have an easier way of disposing of these crippled and afflicted creatures; they simply drive them into the great wilderness. All the natives belong to the Papuan race, but along the coast are found a few of Malay race; the few Malays and Chinese are mostly artisans in various trades. The centre of navigation is Astrolabe Bay Friedrich Wilhelmshafen. The latter station belongs to the New Guinea Company, which has, with few exceptions, the monopoly of all land there. Seven English miles north of it is Alexishafen, superior in every way to Friedrich Wilhelmshafen.

E. LIMBROCK

Kaland Brethren

Kalands Brethren

(Kalandbrüder, Fratres Calendarii.)

The name given to religious and charitable associations of priests and laymen especially numerous in Northern and Central Germany, which held regular meetings for religious edification and instruction, and also to encourage works of charity and prayers for the dead. They were originally an extension of the meetings of the clergy of the separate deaneries usually held on the first day of each month (*Kalendæ*, hence their title *Kaland*). After the thirteenth century these meetings developed in many cases into special, organized societies to which both priests and the laity, men and women, belonged. Special statutes regulated the conduct of the society, its reunions, the duties of the directors in promoting the religious life and Christian discipline, the services to be held, the administration of the general funds, and their application to charitable purposes. A dean was at the head of each association, and a treasurer administered the revenues. The associations were encouraged by the bishops, who assigned them particular churches or at least special altars for Divine Service. The offering of prayers and the Sacrifice of the Mass for deceased members was especially fostered. The oldest known Kaland confraternity is that of Ottberg near H \ddot{o} chster (Westphalia), of whose existence in 1226 we have documentary evidence. The "Calendarii" flourished especially in the fourteenth and fifteenth centuries, but later decayed. A banquet was introduced at the meetings, which subsequently degenerated in many instances into a revel, leading in certain neighbourhoods to abuses. From Germany the Kaland confraternities spread to Denmark, Norway, Hungary, and France. In the sixteenth century the Reformation led to the dissolution of the majority; the rest gradually disappeared, only one being now known to exist, that of M \ddot{u} nster in Westphalia.

J.P. KIRSCH

Jan Stephanus van Kalcker

Jan Stephanus van Kalcker

(GIOVANNI DA CALCAR and JOANNES STEPHANUS CALCARENIS.)

Flemish painter, native of the Duchy of Cleves; b. between 1499 and 1510; d. at Naples, 1546. Vasari refers to this painter several times, mainly with respect to his having been a pupil of Titian, entering his school in 1536, and to his faculty for copying the works of that master with extraordinary accuracy. Kalcker appears to have worked first at Dordrecht, but the greater part of his life was spent at Naples, and there, as Vasari tells us, "the fairest hopes had been conceived respecting his future progress." He was responsible for the eleven large plates of anatomical studies which were engraved for Andrea Vesalio as illustrations for his work on anatomy, and Vasari praises them very highly. Kalcker is also said to have drawn the portraits of the artists in the early edition of Vasari's "Lives". By some writers he has been declared to have been a close imitator of Giorgione; all who write about him unite in stating that his imitations of the works of the great Venetian artists, and also of Raphael, were so extraordinary that they deceived many critics of the day. His pictures are to be seen in Berlin, Paris, Florence, Vienna, and Prague, and his original works are, as a rule, portraits, although at Prague there is a remarkable "Nativity" by him, which was once the property of Rubens.

LOMAZZO, *Trattato dell' Arte della Pittura*, etc. (Milan, 1584); VAN MANDER, *Le Livre des Peintres* (Paris, 1884), ed. HYMANS; VASARI, *Vite de' piu eccellenti pittori* (Florence, 1550); also ed. MILANESI (Florence, 1878-85).

GEORGE CHARLES WILLIAMSON

Valerian Kalinka

Valerian Kalinka

Polish historian, born near Cracow in 1826; died at Jaroslaw in 1886. He fled from Poland in 1846 on account of political entanglements, worked on the "Czas" newspaper in 1848, but finally took refuge in Paris, where his first work was written -- "Galicia und Cracoio", an historical and social picture of the country from 1772 to 1850. He afterwards thought of writing a history of the Polish emigration, but eventually chose

to edit a weekly periodical entitled "Political Polish News", the principal contributors to which were himself and Klaczko. Though forbidden everywhere but in Posen, it existed for four years, and dealt with every aspect of Polish national life. Kalinka's articles show a very practical acquaintance with law, administration, history, and statistics, and had mostly to do with the inner life of Poland. After 1863, when searching for documents for a life of Prince Adam Czartoryski, he stumbled on important papers which he published in two volumes as "The Last Years of Stanislaus Augustus" (1787-95). This work placed him at once in the first rank of Polish writers. Poland had not yet had such an historian, especially in the province of diplomacy and foreign politics. While marking out a new line, it carefully pointed out the errors of the past, and showed how they might have been avoided. Szujski, though unknown to Kalinka, was at the same time working in the same direction. Both were accused of undermining patriotic self-respect, of lowering Poland in foreign eyes, and of destroying veneration for the past. In the preface to this work, Kalinka had already answered these charges. A Pole is not less a Pole when he learns from past errors how to serve his country better. About this time Kalinka entered the novitiate of the Resurrection Fathers in Rome, where, save for a few visits to Galicia, he subsequently resided until in 1877, after a visit to the Catholic missions in Bulgaria, he became chaplain of a convent in Jaroslaw. Here in 1880 appeared the first volume of his "Sejmczteroletni" (The Four Years Diet). Polish literature has no better book, and none whose perusal is more painful. It exhibits all the weaknesses in the leading men of Poland, and all their political blunders. To the many fierce reproaches it called forth Kalinka replied: "History calls first for truth; nor can truth harm patriotism." A grave style, artistic grouping, faithful narrative of facts, profound political insight, and splendid literary talent make this book the greatest historical lesson in the Polish language. The second volume, even surpassing the first, appeared in 1886, and with it came to an end the thirty years labour of Kalinka. He was not only a profound and far-seeing politician and one of Poland's best historians, but also one of her most zealous priests.

S. TARNOWSKI

Kalispel Indians

Kalispel Indians

Popularly known under the French name of Pend d'Oreilles, "ear pendants", an important tribe of Salishan stock originally residing about Pend d'Oreille lake and river, in northern Idaho and northeast Washington, and now gathered chiefly upon Flathead reservation, Montana, and Colville reservation, Washington. They are commonly distinguished as Upper Kalispel, on the lake, and Lower Kalispel, on the river.

They are mentioned under the name of Coospellar by the explorers Lewis and Clark, in 1805, at which time they were in the habit of crossing the mountains annually to hunt buffalo on the Missouri. Somewhat later they became acquainted with the Hudson's Bay traders.

In 1844 the work of Christianization was begun by the Jesuit Father Adrian Hoecken, who, four years after the famous Father de Smet had undertaken to carry the Gospel among the Flathead Indians, established St. Ignatius Mission on the east side of Clark's fork, near the Idaho line in the present Stevens county, Washington. When the Mission of St. Mary, on Bitter Root River, was abandoned in 1850, in consequence of the inroads of the Blackfeet, the St. Ignatius Mission grew in importance. In his official report of the commission to the northwestern tribes in 1853, Governor Isaac Stevens gives an extended account of Saint Ignatius, of which he says: "It would be difficult to find a more beautiful example of successful missionary labours." The mission was discontinued in 1855, but in the meantime other Jesuit missions had sprung up, and not only the Kalispel, but also the kindred Colvilles, Lakes, Okanagan, and Flatheads were completely Christianized. In 1855 the Upper band joined with the Flatheads and part of the Kutenai in a treaty with the government by which they were settled on the Flathead reservation in Montana, where some of the Lower band joined them in 1887. In 1872 a part of the Lower band was gathered upon the Colville reservation in Washington. Still others are scattered in various parts of Washington and Idaho. Lewis and Clark estimated the tribe at 1600 souls in 1805. In 1908 there were officially reported 670 "Pend d Oreilles" (Upper band) and 192 "Kalispel" (Lower band) on the Flathead reservation, Montana, and 98 "Kalispel" on Colville reservation, Washington, making, with a few not accounted for, a total of about 1000 souls.

The mission work on both reservations is still in charge of the Jesuits, and is recognized by all observers as in the highest degree successful as regards religious observance, general morality, and self-supporting industry. The fathers are assisted at the Flathead mission (St. Ignatius) by Sisters of Providence, Ursulines, and Lamennais Brothers, and the Colville mission (St. Francis Regis; Ward P. O.) by Sisters of Charity of Providence. The principal industries now are farming and stock raising, with fishing and the gathering of edible roots. The earlier more primitive habit of life is thus summarized in an official report of 1870 upon the non-treaty tribes of northeastern Washington, now gathered on Colville reservation:

The habits and manner of living of the tribes in this district are nearly similar. They live mostly in lodges and move from place to place where they can most easily procure subsistence. In the spring, after they put in their crops, they go to the Spokane country to dig *couse*, bitter-root and wild onion. The first two they dry in the sun: the wild onion they mix with the black moss and bake under hot stones. About the middle of May they collect at the several *camas* grounds, which root (resembling an onion, is sweet and insipid) they dig and prepare as follows: They make a bed six or eight feet in diameter, of smooth stones, on which they build a fire; when the stones are red hot they remove the fire and cover them with green grass two or three inches deep on which they place the camas six to twelve inches deep, and over which they spread green grass; then cover all with earth about six inches deep, on which they build a fire and keep it up from twenty-four to forty-eight hours, according to the amount in the kiln; after being baked it is taken out and dried in the sun. Being thus prepared it will keep for years, and is both nutritious and palatable. Before baking it is white; after black. There are several camas prairies in this district, but the largest is Kalispel on the Pend d'Oreille river, at which place hundreds of bushels are dug and prepared for winter's use every year. About 1 July the Indians collect from far and near at Kettle Falls, where they catch their annual supply of salmon which they dry in the shade. They also gather and dry service berries and choke cherries, all of which they store for the winter. While at the falls they attend religious services at the mission three times a day. After they harvest their crops they go into the mountains, hunting and trapping, where they remain until a week before Christmas, when they go to the traders and exchange their furs for supplies. After attending to their religious devotions they return to the mountains about the middle of January, where they remain until spring, when they return to put in their crops. (Winans)

JAMES MOONEY

Kalocsa-Bacs

Archdiocese of Kalocsa-Bacs

(Colocensis et Bachiensis.)

This archdiocese embraces within its territories an archdiocese and a diocese founded by St. Stephen of Hungary in 1010. The question of the foundation of, and of the relations between, Kalocsa and Bacs was for a long time uncertain. George Fejér was of opinion that St. Stephen founded Kalocsa and Bacs as independent sees, and that subsequently St. Ladislau raised Bacs to archiepiscopal rank in 1093, and united it with Kalocsa. Stephen Katona, on the other hand, held that the Archbishopric of Bacs was founded by St. Ladislaus in 1093 by division of the Archbishopric of Kalocsa, the two archdioceses being afterwards reunited in 1135. To Julius Vározy we are indebted for the solution of the question: he shows that the Archdiocese of Bacs never existed as an independent see, but that the archbishops of Kalocsa for various reasons changed their residence from time to time to Bacs, so that eventually there arose in this town an independent chapter with its own cathedral, etc. In 1135 the union of Kalocsa and Bacs was canonically confirmed, the chapter at Bacs was raised to archiepiscopal rank, and it was decided that in future the election of an archbishop should rest with the united chapters, but should be held in some third locality. It was also decided that the name of the archdiocese should be Kalocsa-Bacs. Bacs remained the residence of the archbishops, and likewise their burialplace, until 1526, when after the battle of Mohács it fell into the hands of the Turks. When first established the archdiocese was very extensive. It embraced the lands between the Danube and the Theiss from Domsod, which is situated to the south of Vác (Waitzen), southwards as far as Titel, including also within its territories a portion of Sylvania. As early as 1229 it suffered its first diminution of territory, when Sylvania was formed into a separate diocese.

The history of the archdiocese and the archbishops of Kalocsa-Bacs is closely interwoven with that of Hungary. The first archbishop was Astrik, who later appears as Archbishop of Gran. It is not quite clear whether the title of archbishop was personal to Astrik, or was also transmissible to his successors, for, while his immediate successor, George, is spoken of as archbishop, his second successor, Desiderius, is spoken of only as bishop. Then again Desiderius's successor, Fabianus, is called archbishop. The Archbishop of Kalocsa from the beginning was next in rank to the Archbishop of Gran. In 1175, when Gran was vacant, the Archbishop of Kalocsa was chosen to crown Béla III; likewise, in 1204, Archbishop John crowned Ladislaus III. Supported by these two precedents the archbishops of Kalocsa claimed the right to crown the kings of Hungary.

In 1212 the question was so far settled that, in case Gran should be vacant, or its archbishop should decline to act, the right to crown the sovereign belonged to Kalocsa. Archbishop Saul (1192-1202) was held in great esteem by the Holy See, which sought his opinion on many questions. Under Ugrin (1219-41) occurred the foundation of the great hospital in Kalocsa, and the establishment of the Diocese of Syrmia in 1229. In this time also the wars against the Patarenes in Bosnia broke out, and, more especially after the establishment of the See of Syrmia, these wars against the Patarenes and other unbelievers were the chief occupation of the archbishops. Ugrin also took part in the coronation of Andrew II. He fell in the battle of Muhi against the Tatar hordes in 1241. Archbishop Ladislaus (1317-37) was distinguished for great theological learning. Andrew Brenti (1413-31) took an important part in the preparations for the Council of Constance. Stephan Várday (1456-71) was distinguished for his humanistic culture. He had studied at Italian universities, and brought back with him a taste for the splendour of the Renaissance. As chancellor and intimate friend of King Matthias Corvinus, he was one of the most zealous promoters of humanism and the renaissance in Hungary. Thanks to the recommendation of the king, he had the distinction of being the first archbishop of Kalocsa to be named cardinal, but died before receiving the insignia. Peter Váradi (1480-1501) was also one of Matthias's confidants, but for some unknown reason forfeited the royal favour, was imprisoned in 1484, and regained his freedom only after the king's death in 1490. He thenceforth devoted his energies mainly to the re-establishment of ecclesiastical discipline. To this end he held a diocesan synod, instituted canonical visitations of the parishes, turned his attention to the education of the clergy, sent young ecclesiastics to the universities for more extensive study, and founded a library. He also regulated the temporalities of the archdiocese.

Archbishop Paul Tomori (1523-26) led the Hungarian army in the decisive struggle against the Turks, meeting his death in the disastrous battle of Mohács in 1526. The territories of the archdiocese were now overrun by the Turks, who prevented the archbishops from exercising their authority. The Holy See continued to appoint to the archdiocese, but the archbishops possessed only the title without being able to exercise any real jurisdiction. George Draskovich (1572-87) took a conspicuous part in the Council of Trent, and received the cardinal's hat. The population diminished at first under Turkish rule, but as early as 1550 Dalmatian Catholics began to immigrate, and the number of Catholics subsequently increased. To satisfy the religious requirements of the population, the Holy See adopted the expedient of treating the archbishopric as missionary territory, and turned over the care of the faithful to the Franciscans. This condition lasted through the whole period of Turkish domination. Leopold Kolonits (1691-5) was first in a position to enter into personal occupation of the archdiocese, and resume jurisdiction, whereupon the archdiocese ceased to be a missionary

district. Still, for a time it was governed by vicars. Paul Szechenyi (1696-1710), the second of this family to become archbishop of Kalocsa (the first, George Szechenyi, was archbishop from 1668 to 1685), played an important part as mediator between Prince Francis Rakóczy II and the Viennese Court, but his efforts to effect a reconciliation were fruitless. A new archiepiscopal curia at Kalocsa was begun in his time, and also the reconstruction of the parish church, etc. Count George Csaky (1710-32), successor of the last-mentioned, laid the foundation of the new cathedral. His successor, Count Gabriel Patachich, may be looked upon as the second founder of the archdiocese. He removed the archiepiscopal residence permanently to Kalocsa, and concentrated all his efforts on the reorganization of the archdiocese. He built the seminary and restored the cathedral chapter. Among the recent archbishops may be specially mentioned Count Franz Nadasdy, whose short reign (1845-51) was devoted mainly to charitable works, but who also played an important part in the political events of these years; Joseph Kunszt (1852-66), who has perpetuated his name in various religious institutions. Archbishop Lajos Haynald is treated in a separate article. The present archbishop is Julius Városvy. St. Stephen is now the patron saint of the archdiocese, although it was originally under the protection of St. Paul the Apostle, and the metropolitan church is dedicated to the Assumption of the Blessed Virgin.

The archiepiscopal chapter of Kalocsa was founded at the same time as the archdiocese. At first it was richly endowed, but in time became so impoverished that Innocent VI reduced the number of canons from twelve to six, but Gregory XI, in 1376, raised the number to ten, where it remained until the battle of Mohács in 1526. There was another chapter at Bacs, already mentioned, but Turkish rule put an end to both. The chapter at Bacs was never re-established, but that of Kalocsa was revived by Archbishop Count Gabriel Patachich in 1738. Clement XII gave the members the right to wear the *cappa magna*, and the chapter also recovered its right as *locus credibilis*. There were four canons until 1763, when another stall was established, with which, in memory of the archiepiscopal chapter of Bacs, the title of Provost of Bacs was associated. Finally, in 1776, the number of canons was increased to ten, a figure which obtains to the present day. In 1779 Maria Theresa granted to the canons the badge which they still wear. The Archbishopric of Kalocsa-Bacs has to-day as suffragans the bishops of Transylvania, Csanád, Grosswardein (Lat. Rite), and the (titular) See of Knin (Tinin). The archbishopric is divided into three archdeaconries -- the metropolitan and those of Bacs and Theiss -- subdivided into 16 vice-archdeaconries. Besides the 10 regular cathedral canons, the archdiocese contains 8 titular stalls, 9 titular abbacies, and 10 titular provostships. The number of parish churches is 126; of chapels-of-ease, 226; of parish priests, 105; of curates-in-charge, 23. The total number of priests in the archdiocese is 284; of clerics, 46. There are 5 orders in the diocese, 6 monasteries with 143

monks, and 32 convents with 548 nuns. The right to give benefices is still exercised by 27 patrons. The population numbers 940,038, of whom 647,408 are Catholics, 265,842 non-Catholics, 26,379 Jews, while 409 are attached to no denomination.

A. ALDÁSY

Kamerun (Cameroon)

Vicariate Apostolic of Kamerun

(Cameroons; Cameroon.)

Located in German West Africa, between British Nigeria and French Congo, stretching northeast from the coast of the southern shore of Lake Chad. The territory was created a prefecture Apostolic on 22 July, 1890, and given in charge of the Pious Society of Missions (Pallottini). Father Henry Vieter was nominated the first prefect Apostolic. The area is about 191,130 square miles, and the native population (Bantu negroes near the seacoast, Sudan negroes inland) is, according to Streit, about 4,000,000. There are about 1000 whites, mostly Germans. The chief exports are palm kernels and palm oil, rubber, ivory, and cocoa. The climate is hot and moist, and malarial fever abounds, especially in the lowlands. The natives generally are addicted to fetichism, and there are a few Mohamedans. In 1892 the German Government allowed the missionaries to open a preparatory house of studies at Linsburg (Nassau), and later at Ehrenbreitstein and Vallendar (Rhineland). The first missionary station was opened at Marienberg on the river Sanaga, here nearly 4000 feet broad. Other stations were opened (1891) near Falls of the Sanaga, and at Kribi on the Batanga coast. From the beginning the missionaries suffered much from malaria; in 1894, therefore, they opened the station of Engelberg in the Kamerun Mountains, at an altitude of nearly 1400 feet, both as a sanatorium and a missionary centre. In 1898 was opened the station of Duala (22,000), the capital of Kamerun, where, however, Protestant missionaries had preceded the Catholics (there are between seven and eight thousand native Protestants). The mission of St. Peter Claver at Big-Batanga was opened in 1900, and in 1901 that of Yannde, twelve days' walk into the interior. Irasa on the upper Rio del Rey was founded in 1906, and in 1907 the station of Einsiedeln was opened in the Kamerun mountains,

at an altitude of about 2800 feet. Another station is almost ready at Victoria; it bears the name of the Blessed Trinity. Einsiedeln serves as a seminary for schoolmasters; it is hoped also that eventually it may graduate priests for the mission. None, however, will receive Holy orders before the age of thirty.

In September, 1906, the first synod was held at Duala. The prefecture was raised to the rank of a vicariate Apostolic (21 Dec., 1904), and the first prefect Apostolic made first vicar Apostolic; he was consecrated titular Bishop of Parætonium on 22 January, 1905. On the arrival of the missionaries they found 5 Catholics; in the vicariate there are now 18 priests, 21 brothers, and 30 sisters for the education of natives. Since October, 1890, death has claimed twenty-four of the little band of missionaries, and several have been sent home in time to save their health, which could not resist the severe climate. In the same period there have been about 8027 baptisms. There are at present about 3819 catechumens, each of whom has two years of probation. There are in the mission schools about 5675 boys and girls. All these, however, are not in the schools of the missionary station; many of them are taught in the village schools by black schoolmasters, directed and paid by the missionaries. After leaving the schools, many of the boys are taught useful trades by the lay brothers of the missions.

H. VIETER

Diocese of Kandy

Diocese of Kandy

(Kandiensis.)

Formerly part of the Vicariate of Southern Colombo, Ceylon, India, from which it was cut off as a vicariate Apostolic on 16 April, 1883, and erected into a diocese on 1 September, 1886. Its only vicar and first bishop is Dom Clement Pagnani, a Sylvestrine Benedictine, b. at Fabriano, near Ancona, Italy, 24 June, 1834; consecrated 25 December, 1879, at which time he was appointed to the Vicariate of Southern Colombo.

The Vicariate of Southern Colombo had been in the hands of the Sylvestrine Benedictines since 1855, but the needs of the country demanding a greater supply of missionaries than the Sylvestrines could meet, the Vicariate of Kandy was entrusted to them in 1883, and Leo XIII made other arrangements for Colombo. Actually the Diocese of Kandy is suffragan of the Archdiocese of Colombo. It comprises the provinces of Central Ceylon and Uva, where tea and rubber are the main industries. Owing to the hilly nature of the country, the climate of the diocese is more temperate than throughout the rest of the island.

From the palm-groves and sweltering heats of Colombo the railway line threads its way a distance of seventy-five miles through tea-plantations, wild bush, and forest,

across mountain streams and under crags of limestone overhanging in great boulders, with Adam's Peak looming conspicuous in the distance, until at an elevation of 1734 feet above the sea it reaches the town of Kandy (in Cingalee, Maha-unwara the Great City), former capital of the island, now the residence of the British governor-agent. It stands on the shore of an artificial lake in an amphitheatre of beautifully wooded hills. Its population in 1901 was 26,522.

Kandy is first mentioned in the fourteenth century, when the Dalada Milagawa, or Temple of the Tooth, was built to contain that famous relic of Buddha brought to Ceylon for safety about 311. In 1592 the town became the capital of Ceylon, and the king's palace was built about the year 1600. Kandy was the last stronghold of the old dynasty, and kings continued to rule there up to the beginning of the nineteenth century, when the last king, Vikrama Raja Sinha, was taken prisoner by the British (1815) and sent to Vellore. The Temple of the Tooth still remains, and is the scene of annual festivities (Perahara) in honour of this precious relic of the Buddha. The sacred tooth itself, however, was taken by the Portuguese to Goa in 1560, and publicly burned there in presence of the viceroy. The Buddhists claim otherwise, and show in proof of their claim a piece of ivory about two inches long by one inch in diameter, which is said to resemble the tooth of a crocodile rather than of a man. It reposes in the temple on a lotus flower of pure gold under seven concentric bellshaped metal shrines. In the vicinity of Kandy is an immense cemetery where were deposited the bodies of the mighty kings and heroes of Ceylon, and about four miles away are the botanical gardens of Peradenia, covering one hundred and fifty acres with most luxuriant exotic vegetation. Indeed the vegetation all around Kandy is luxuriant, and when the white flower of the cinnamon tree is in blossom the effect is very wonderful. Other trees that furnish the landscape are the ebony, satinwood and halmilla. The woods here also have a curiosity in the nature of a fruit, the caskew, which produces its nut outside of the skin, and from the fruit itself, which is not very palatable, a strong intoxicant is distilled. Serpents are numerous, especially the cobra and the carawilla. Kandy has a municipal council partly elected by the ratepayers and partly by the governor-agent. A figure of extreme interest among the inhabitants for many years now has been Arabi Pasha, the Egyptian patriot, imprisoned or exiled there since the Battle of Tel-el-Kebir in 1882.

Besides being the seat of the diocese and the residence of the governor-agent, Kandy is also the residence of the Apostolic delegate to the East Indies, Monsignor Zaleski, Archbishop of Thebes. The town has a seminary known as the Leonianum for native students of India and Ceylon. It is under the care of the Jesuits and numbers eighty-eight students; the course of studies includes philosophy and theology.

The population of the Diocese of Kandy, which is made up of various races including Cingalese and Tamils, amounts to 809,506, of whom 27,938 are Catholics; 11,871

are Protestants; 403,909 are Buddhists; 321,350 Hindus; 43,867 Mohammedans; and the remainder unaccounted for. The languages spoken include Cingalee, Tamil, and English. The towns that have churches with resident priests, besides the episcopal city, are Ampitiya, Panvile, Matale, Vahacotte, Gampola, Mavalapitiya, Hatton, Dirubula, Nuvara-Eliya, Badulla, and Bandarawella.

Matale, a hundred miles from Ceylon, is the northernmost limit of European civilization. It is a large village and is the centre of a flourishing tea and cocoa plantation; it is famous for its native bazaar, and for a splendid avenue of rain-trees, so called from the circumstance that at night the leaves fold into a kind of sack in which the moisture condenses and at sunrise when the leaves open this is discharged in quite a shower all around. Among the natives many Christians are to be found with Portuguese names, descendants of converts made on the island 400 years ago.

Hatton (414 feet above the sea-level) is a restingplace for tourists or pilgrims on their way up Sumana, or Adam's Peak (7400 feet), where Buddha is said to have left the imprint of his foot. Hatton is also the centre of a great tea-growing district. Nuvara-Eliya (6210 feet above the sea) is famous for its cool climate, and has been chosen as the summer residence of the governor-agent. In the neighbourhood is Pidauru Talagala (8300 feet), the highest peak in Ceylon. Badulla is an attractive old town. Dambulla, near Hatton, is famous for its rock temples and natural caves, to which access is obtained along a steep stairway cut about 500 feet up the face of a rock.

Besides the churches with resident priests, there are fifteen chapels-of-ease and thirty-two stations in the diocese. The mission work is done by three secular priests, one native priest, twenty-one regulars, and twelve catechists. There are in the diocese six elementary schools for boys with 668 pupils; nine for girls with 921 pupils; one college for boys with fifty-five pupils; two girls with 163 pupils. There are, moreover, four orphanages containing 126 children. The girls are looked after by the Sisters of the Good Shepherd of whom there are seventeen, and by native sisters of whom there are ten. The regular clergy consists of twenty-five Sylvestrine Benedictines and eleven Jesuits. By an ordinance of 1906 the bishop is constituted a corporation sole, with power to acquire and hold property, and to sue and be sued in courts of justice in relation thereto. The management of the schools is in the hands of the missionaries, but the Government sends its inspector every year to hold an examination, on the results of which a grant is made for the upkeep of the school. The Church Missionary Society and the Wesleyan Methodist Mission Society are very active in and around Kandy.

J.C. GREY

Kansas

Kansas

PHYSICAL CHARACTERISTICS

Geography

Kansas, one of the United States of America, is the central state of the Union, to which it was admitted 29 January, 1861. It has an area of 82,144 square miles, approximately 400 miles from east to west, and 200 miles from north to south. It is bounded on the north by Nebraska, on the east by Missouri, on the west by Colorado, and on the south by Oklahoma. The Territory of Kansas was organized in 1854 with the following limits: beginning at a point on the western boundary of the State of Missouri, where parallel 37° N. crosses the same; thence west on said parallel to the eastern boundary of New Mexico; thence north of said boundary to 38° N.; thence following said boundary westward to the east boundary of the Territory of Utah on the summit of the Rocky Mountains; thence northward on said summit to 40° N.; thence east on said parallel to the western boundary of the State of Missouri; thence south with the western boundary of said state to the place of beginning. It was, however, provided in the organic Act of the Territory that the United States Government should not be inhibited thereby from dividing the Territory of Kansas or from attaching any portion of said territory to any other territory or state of the United States. The State of Kansas is not as large as the territory organized under the same name; in area it ranks the eleventh among the states in the Union, and it is nearly ten times as large as Massachusetts.

Surface

The general surface of Kansas is undulating. It slopes gently from an average height of about 3650 feet above sea level at its western boundary to 850 at its eastern; the average slope is about seven feet to the mile. There is also an inclination from north to south. The mean elevation of the state is about 2000 feet. As for timber, along the waterways in the eastern part are found black hackberry, locust, cherry, and hickory. Artificial forests are found in almost every county.

The state is drained by the Missouri River that forms the north-eastern boundary, and by the Kansas and Arkansas Rivers and their tributaries - all of which belong to the Mississippi system.

CLIMATE

The climate of Kansas is mild and healthful. In the higher altitudes of western Kansas the air is dry, and wholesome for persons with a tendency to pulmonary diseases. The annual range of temperature is about 120°F. The average temperature of the winter months for twenty years has been 31°F.; of the three summer months 74°F. The mean temperature for the year is thus 53°F. The annual average precipitation, which includes rainfall and the water from melted snow, ranges from fifteen inches in the extreme west to forty-four inches in the extreme south-east. Irrigation is applied in parts of the western countries.

HISTORY

It is supposed by some grave writers that the "Cow Country" through which Cabeza de Vaca passed in 1535 was the country north of the Arkansas River and the Old Santa Fé trail, now a part of Kansas. The Spaniards under Coronado entered the limits of the present State of Kansas in 1541, and traversed it in a north-easterly direction marking the limit of the expedition with a cross. This was on the bank of a great tributary of the Mississippi River. Another large river which was crossed by the Spaniards was named Sts. Peter and Paul; Coronado was accompanied by several friars. Among them was Father Juan de Padilla, who remaining to convert the Indians after the departure of Coronado, was here slain by the aborigines. Father Marquette's map of the Mississippi region in 1673 designates various Indian tribes that dwelt within the borders of Kansas. Thus he is the first to mention the Kansas - the tribe from whom the state derives its name. The French in 1705 ascended the Missouri River as far as the Kansas River. Du Tisnet erected a cross with the arms of the King of France in the country of the Padoucas, on 27 September, 1719. According to Du Pratz, in 1721 a band of Spaniards, having a Dominican for their chaplain, were all, with the exception of the priest, massacred by the Missouris whom they had mistaken for Osages, their allies. This happened probably on the present site of Leavenworth. In 1724 M. De Bourgmont made a journey across the territory of Kansas, but during his absence in the following year the entire garrison he had left at Fort Orleans (in Missouri) was massacred by the Indians. Louisiana, of which Kansas was a part, was subject to France until 3 November, 1762 when it became a Spanish possession; only to be retroceded to France in 1800; it was purchased by the United States 30 April, 1803. Lewis and Clark traversed the region in 1804, 1805, and 1806. In 1806 Zebulon M. Pike explored the south of Kansas; at his instance (29 September, 1806) the United States flag replaced the Spanish flag at the Pawnee Indian village in the present Republic County.

For some years previous to this the Choteau family carried on the fur trade in Kansas. In 1819 and 1820 Long's scientific exploration of the country lying west of the Allegheny and east of the Rocky Mountains between 35° and 42° N., embraced the

state of Kansas. Ft. Leavenworth was established by the Federal government in 1827. Except a few missionaries, Indian traders, hunters, and trappers, there were no whites in Kansas until 1854. In 1844 Captain Fremont explored the valleys of the Kansas and Republican Rivers. In June, 1846, General Kearney set out from Fort Leavenworth for the conquest of New Mexico and California. In 1804 Kansas became a part of the District of Louisiana, for which laws were made by the Governor of Indiana Territory, acting with the judges of that territory. In 1805 Congress changed the District of Louisiana to the Territory of "Louisiana", still embracing Missouri and Kansas. When in 1812 the Territory of Orleans became the Territory of Louisiana, what was hitherto known as the Territory of Louisiana was called Missouri Territory. The 7776 square miles lying south of the Arkansas River and west of longitude 100° W., now within the limits of Kansas, were not a part of the Louisiana Purchase, but were acquired from Mexico. In 1820 Congress passed an Act enabling the people of Missouri Territory to become a state, but prohibiting slavery in all of the Louisiana Purchase north of 36°30'. By the organization of Missouri as a state in 1821, Kansas received an eastern boundary. In 1823 the wagon-trains from Missouri to Santa Fé passing through Kansas opened the commerce of the plains. Besides the Santa Fé trail there was the Oregon trail leading to the valley of the Platte in Nebraska. Property worth millions of dollars was transported by the pack-trains and wagon-trains. An army of men, Americans and Mexicans, were employed as teamsters and packers. In addition to the native Indian tribes, Osages, Pawnees, Kansas, and Pandoucas or Comanches, Indians of eastern states were given reservations in Kansas, designated Indian Territory until 1854 when it was organized as Kansas Territory. Kansas Territory extended westward to the summit of the Rocky Mountains, including a large portion of the present State of Colorado under the name of Arapahoe County. In 1854 the Kansas-Nebraska Act abrogated the Missouri Compromise of 1820, and left the question of slavery to the people of the respective territories when adopting a state constitution. In consequence, the North and South entered into a contest to people the Territory of Kansas. It led to acts of violence and bloodshed between the pro-slavery and anti-slavery parties that resulted in the loss of two hundred human lives and in the destruction of property valued at two millions of dollars. The cities of Leavenworth, Atchison, Topeka, and Lawrence were founded in 1854.

The internecine struggle in Kansas, in which John Brown was a prominent factor, was potent in forcing the great war that followed between the Northern and the Southern States. A census taken in February, 1855, showed a white population of 8601. In 1860, according to the United States census, there were 107,206 inhabitants; the drought in this year was a severe calamity. Kansas was admitted as a free State on 29 January, 1861. The motto of the State seal is *Ad astra per aspera*. In 1861 Topeka was made the permanent capital. The state furnished 20,151 men to the Union army,

though the proper quota would have been but 12,930. Out of her military force, Kansas lost 472 officers and 7345 private soldiers. On 21 August, 1863, the notorious guerilla Quantrell attacked Lawrence at daybreak and within five hours left the city a smouldering ruin, with 143 of its citizens slain, and 43 others wounded. Property worth \$2,000,000 was destroyed. In October, 1864, some 20,000 Kansas men were under arms to oppose Gen. Sterling Price, who with a large force of Confederates threatened the eastern border of the state. He was decisively beaten on Kansas soil in the battle of Mine Creek following the Battle of the Blue and the Battle of Westport, near Kansas City. Kansas troops were mainly engaged in Missouri, Arkansas, and Indian Territory (now Oklahoma), but saw service as far south as Mississippi, Louisiana, and Texas. Charles Robinson and Thomas Carney were the war governors of Kansas.

After the severe trials of the preceding years, Kansas was greatly helped by the Homestead Law of 1862. In 1886 the State Legislature granted 500,000 acres of State lands to four railroad companies. The counties voted bonds in favour of the railroads; and the United State Congress by liberal grants encouraging the building of railroads, as early as 1867, there were 523 miles of railways in the state. These were of material aid in the development of the great natural resources of Kansas. The early settlers in remote places were justly in dread of the Indians who made their last raid in 1878, when 29 white people were killed by the savages. Since then the red men have left no mark on the pages of Kansas history, and their number within the state has been reduced to about 2000. The legislature of 1863 located the Insane Asylum at Osawatomie, accepted the congressional grant of lands for an agricultural college at Manhattan, and provided for the state university at Lawrence and the state normal school at Emporia. In the following year the deaf and dumb asylum, the blind asylum, and the penitentiary were located, and suitable buildings were erected for these institutions. There followed two reformatories for boys, a reformatory for girls, a hospital for epileptics, a school for feeble-minded youth and the Soldiers' Orphans' Home, besides an additional hospital for the insane at Topeka. The state makes liberal appropriations for the maintenance of each of them.

A great number of European immigrants settled, largely in colonies, in the state in the decade following 1870. In 1880 the state constitution was amended by the adoption of the law prohibiting in Kansas the manufacture and sale of intoxicating liquors, except for medical, scientific, and mechanical purposes. According to the official opinion of the attorney-general in 1881, the use of wine for the "sacrament" is not prohibited. Almost every legislature has passed some law in reference to the enforcement of "prohibition" which in the large cities has never been strictly enforced for any length of time. In 1877, the municipal suffrage bill conferred on women in Kansas the right to vote at school, bond, and municipal elections. About 26,000 women voted in

the spring election of 1878. In 1894 the constitutional amendment conferring on women the full exercise of suffrage was defeated by 35,000 votes.

ECONOMICS

Agriculture and Trade

The soil is very productive. It consists in the eastern part of heavy black loam of greatest depth along the streams; and in the western part, of a sandy formation.

Kansas is essentially an agricultural state. Wheat and corn are the most important grain products. In 1908, Kansas raised 150,640,516 bushels of corn, with a value of \$82,642,461; 76,808,902 bushels of wheat, with a value of \$63,855,146. The value of sorghums was \$10,258,998; of tame hay \$9,534,290; oats \$7,118,847; of barley \$1,314,343; Irish potatoes \$4,431,864. The field products from 32,216,702 acres under cultivation had a value of \$189,059,626.28. Alfalfa increases annually in acreage and value of crop. The value of animals slaughtered or sold for slaughter was \$67,705,158. Poultry and eggs sold \$9,306,651. Butter sold \$9,413,317. Milk sold \$1,145,922. Garden and horticultural products marketed \$786,879. The total value of all farm products in 1908 reached the sum of \$277,733,925, without considering the live-stock retained by the farmers and returned by assessors to the value of \$197,510,878. In 1909 the value of farm products and live- stock aggregated \$532,685,245, which was \$57,404,414 in excess of 1908.

Bituminous coal is found in most of the counties of the eastern part of the state. It is mined profitably in Crawford, Cherokee, Leavenworth, and Osage Counties. The value of the annual output exceeds \$5,000,000. Natural gas and petroleum are found in large quantities. The former is piped and used in the principal cities for fuel and lighting purposes. Salt is mined at Hutchinson, Kanopolis, Lyons, Kingman, Anthony, Wellington, and Sterling. The veins are about 1000 feet below the surface and in places are 300 feet thick. The salt area of Kansas is estimated at one million acres. The annual production is about 2,000,000 pounds. The lead and zinc mines are a source of profit and give employment to many in the southeastern part of the state. In the production of these ores Kansas is second only to Missouri. There are quarries of superior limestone, sandstone, and rock gypsum. The limestone, especially in the more central counties, is excellent building material. Cement, lime, clays for brick, tiles, and pottery are among the products that contribute to the industries and wealth of the state. According to the United States census of 1900 the manufactured products of the state attained a value of \$172,129,298. In 1903 the mineral production of the state had a value of \$27,154,007.85; natural gas a value of \$1,115,375.

Kansas City is the seat of the second largest packing industry in the world. Here also is one of the most important live-stock markets. Car-shops, wool- len- and paper-mills, iron foundries, furniture factories, soap factories, printing and publishing estab-

lishments are found in nearly all the centres of population. Even before the first railway was laid in these parts, there was a commercial route extending from the eastern to the western border of Kansas. The Santa Fé trail, the great overland route of the pioneer days, was established in 1824, and extended from Independence, Missouri, to Santa Fé, New Mexico. Kansas has 11,000 miles of railroads connecting all the principal cities with one another and affording excellent shipping facilities. Four of the great transcontinental systems cross the state from east to west. A two-cent fare rate obtains. There are also interurban electric railways. The Board of Railroad Commissioners has supervision over all common carriers.

SOCIOLOGY

Population

The following compilation contains the results of the fifth decennial census taken in 1905. Total population of the 105 counties of the state 1,544,498. Males 802,704; females 741,219; sex not given 1045. Native 1,400,441; foreign 118,378; birth-place not given 26,149. White 1,487,256; coloured 51,073; colour not given, 6518. The number of families was given as 345,065, and the average number of persons in family 4.47. Of the foreign population there were born in Germany 43,124; Sweden, Norway, and Denmark 17,929; Great Britain 16,815; Russia 11,535; Ireland 8958; British-America 7444; Southern Europe including Austria, France, Italy, and Spain about 12,000. There are 532,635 persons of school age; i.e. between the ages of 5 and 20 years. There are 410,289 men 21 years old and over. Engaged in agriculture 251,956; engaged in professional and personal services 115,207; engaged in trade and transportation 66,923; engaged in manufacturing and mechanical industries 54,991; engaged in mining 10,991. There are 120 towns that have over one thousand inhabitants each; 13 of those have over ten thousand people. Atchison has 20,000, Leavenworth 25,000, Wichita 50,000, Kansas City 90,000, Topeka, the capital of the state, has 45,000. In 1909 the aggregate in cities of above 10,000 was 340,370, or 19.9% of the total population.

Education

Parents, guardians or others having control of children between the ages of eight and fourteen years are required by law to send such children to public or private school taught by a competent instructor.

Ample provision is made for graded schools in towns and districts. At the discretion of the county commissioners or on petition of one-third of the electors of a county, a high-school may be established in any county if the majority of the electors of the county favour it. In the high-schools provision is made for three courses of instruction, each requiring three years' study for completion; namely, a general course, a normal course and a collegiate course. Tuition is free to all pupils residing in the county where the high school is located. The state constitution provided for the establishment by

law of a state university for the promotion of literature and the arts and sciences, including a normal and an agricultural department. "All funds arising from the sale or rent of lands granted by the United States to the state for the support of a state university and other grants, donations or bequests either by the state or by individuals, for such purpose, shall remain a perpetual fund to be called the university fund; the interest of which shall be appropriated to the support of the state university." Kansas ranks third, in the United States, in the minimum percentage of illiteracy. Of the 392,009 pupils enrolled in the public schools of the state in 1907-1908, 178,893 were in the rural schools taught by 12,908 teachers. The text-books to be used in the public schools are determined by a text-book commission appointed by the governor. The total cost of these public schools in 1908 was \$7,335,443.

The state educational institutions are the following; University of Kansas at Lawrence, with 2250 students; Kansas State Agricultural College at Manhattan, with 2166 students; State Normal School at Emporia, and the State Manual Training School, at Pittsburg. The Industrial and Educational Institute at Topeka, and the Western University at Quindaro for coloured youth, receive support from state funds. To these should be added the Kansas State School for the Deaf at Olathe, with 250 pupils, and the School for Blind at Kansas City. The Orphans' Home at Atchison, the Girls' Industrial School at Beloit, and the Boys' Industrial School at Topeka are also educational institutes. The following non-Catholic denominational colleges are accredited by the State Board of Education; Baker University, Baldwin; Bethany College, Holton; College of Emporia, Emporia; Cooper College, Sterling; Fairmount College, and Friends' University, Wichita; Kansas City University, Kansas City; Wesleyan, Salina; Ottawa University, Ottawa; South-western College, Winfield; Washburn College, Topeka. These institutions have invested in equipment and endowment about \$3,000,000. They represent faculties of 500 persons, instructing 8000 students at an annual expense of \$300,000. Some denominations beside the Catholics, particularly the Lutherans, have a goodly number of primary schools in the state. In 1908 there were more than 300 private and denominational schools in Kansas. The Board of Control of State Charitable Institutions consists of three electors of the state who are appointed by the governor, and thus become the trustees for the following institutions: Industrial School for Girls; the Kansas School for Feeble-Minded Youth; the Osawatomie State Hospital; the Parsons State Hospital; the Topeka State Hospital; the State Industrial School for Boys; the School for the Blind; the School for the Deaf; the Soldiers' Orphans' Home, and all other state charitable institutions. It is the duty of the board to visit and inspect, without notice, once in every three months, the institutions named. All private institutions of charitable nature receiving state aid are subject to the same visitation by the Board of Control. In 1907 the Legislature made appropriations to seventeen private

hospitals, nine of which are Catholic, and ten private children's institutions, including the Catholic orphanages, though the sums granted were small compared with the benevolent work done by these institutions.

The state penitentiary is governed by a warden and a board of three directors appointed by the governor of the state. Prisoners who have received an indeterminate sentence may be recommended for parole on the expiration of their minimum sentence. Prisoners under twenty-five years of age may be sentenced to the State Reformatory at Hutchinson. The juvenile court has jurisdiction over dependent, neglected, or delinquent children under sixteen years of age. According to the U. S. Census of 1900 all the church property in the state was valued at \$8,000,000. The Methodist Episcopal, Presbyterian, Baptist, Christian (Campbellite), Congregational, and Episcopal are the leading Protestant denominations. The Methodists, Baptists, Presbyterians, and Friends were established among the Indians before the Territory was opened to white settlers in 1854. In 1880, the ten principal Protestant denominations had an aggregate membership of 80,415; there was then about an equal number of Catholics. The latter have in thirty years increased thirty per cent. At Haskell Institute, a Federal school for Indians, Catholic pupils receive religious instructions regularly from the priest. The state prison has a Protestant chaplain, but a priest ministers to the Catholic convicts. At the W. B. Military Home in Leavenworth County and at the Federal and Military prisons at Fort Leavenworth, there are also Catholic chaplains. The sessions of the state Legislature are opened with prayer. Candidates for office are nominated in primary elections. Cities may choose the "Commission" form of government.

LEGISLATION

Concerning Religion

The State Constitution provides among other things as follows; "The right to worship God according to the dictates of conscience shall never be infringed; nor shall any person be compelled to attend or support any form of worship; nor shall any control of or interference with the rights of conscience be permitted, nor any preference given by law to any religious establishment or mode of worship. No religious test or property qualification shall be required for any office of public trust, nor for any vote at any election; nor shall any person be incompetent to testify on account of religious belief . . . No religious sect or sects shall ever control any part of the common school or university funds of the state. . . . All property used exclusively for state, county, municipal, literary, educational, scientific, religious, benevolent and charitable purposes, cemeteries, and personal property to the amount of at least \$200 for each family, shall be exempt from taxation The title to all property of religious corporations shall be vested in trustees, whose election shall be by the members of such corporations." The title to the various Catholic Churches and schools is actually vested in the respective

bishop of the diocese as trustee. "All oaths shall be administered by laying the right hand upon the Holy Bible or by the uplifted right hand. Any person having conscientious scruples against taking an oath, may affirm with like effect."

Concerning Marriage

The marriage contract is to be considered in law as a civil contract, to which the consent of the parties is essential, and the marriage ceremony may be regarded either as a civil ceremony or as a religious sacrament, but the marriage relation shall only be entered into, maintained, or abrogated as provided by law. All marriages between parents and children, including grandparents and grandchildren of any degree, between brothers and sisters of the half as well as the whole blood, and between uncles and nieces, aunts and nephews, and first cousins, are declared to be incestuous and absolutely void. Every judge, justice of the peace, or licensed preacher of the Gospel, may perform the marriage ceremony in this state, when a licence issued by the probate judge of any county in the state has been issued. The consent of parent or guardian is required for a licence when the contracting male is under twenty-one years, and the female under eighteen years of age. Insanity in near kindred is a bar. Property, real and personal, which any woman may own in this state at the time of her marriage, shall remain her sole and separate property notwithstanding her marriage. The district court may grant a divorce for any of the following causes: (1) when either of the parties had a former husband or wife living at the time of the subsequent marriage; (2) abandonment for one year; (3) adultery; (4) impotency; (5) when the wife at the time of the marriage was pregnant by another than her husband; (6) extreme cruelty; (7) fraudulent contract; (8) habitual drunkenness; (9) gross neglect of duty; (10) conviction for felony and imprisonment in the penitentiary therefor subsequent to the marriage. When the parties appear to be in equal wrong, the court may in its discretion refuse to grant a divorce. When a divorce is granted the court shall make provision for guardianship, custody, support and education of the minor children of the marriage. A decree of divorce does not become absolute and take effect until the expiration of six months from the day and date when the judgment was rendered in the cause. The wife may obtain alimony from the husband without a divorce in an action brought for that purpose in a district court for any of the causes for which a divorce may be granted. The latest statistics show 2000 divorces and 17,000 marriages in one year.

Wills

Any person of full age and sound mind and memory having an interest in real or personal property may give and devise the same to any person by last will and testament lawfully executed. Any married person having no children may devise one-half of his or her property to other persons than the husband or wife. Either husband or wife may consent in writing, executed in the presence of two witnesses, that the other may

bequeath more than half of his or her property from the one so consenting. A verbal will, made in the last sickness, is valid in respect to personal estate if reduced to writing and subscribed by two competent witnesses within ten days. The legislature of 1909 authorized the assessment of an inheritance tax on estates over \$1000, which is, however, not to apply to property exempt from taxation under the constitution. In bequests to kindred the tax is graduated.

Sunday Observance

Labour, except the household offices of daily necessity, if performed on Sunday is deemed a misdemeanour, and is punishable by a fine not exceeding twenty-five dollars. Persons observing another day of the week as the Sabbath are, however, exempt from the provisions of this statute. Horse-racing, and the sales of merchandise except medicines and provisions of immediate necessity, are also prohibited on the first day of the week. There is a rigid anti-lottery law, and also a law against the use of cigarettes and one forbidding the sale of tobacco to minors under sixteen years of age. The circulation of obscene literature is a misdemeanour and the publishing or dissemination of scandalous prints is a felony.

Legal Holidays

The following are the legal holidays: Lincoln's Birthday (12 Feb.); Memorial Day (30 May); Labour Day (first Monday of September); Washington's Birthday (22 February); New Year's Day (1 January); Independence Day (4 July); Thanksgiving Day (Thanksgiving Day is fixed annually by the proclamation of the president or governor); the first four of the above, Christmas Day (25 December) and Arbor Day, in April, are not legal holidays except as to negotiable instruments.

Exempt from serving as jurors are all persons holding office under the laws of the United States or of Kansas, attorneys and counsellors-at-law, physicians, ministers of the Gospel, professors and teachers of colleges, schools, and other institutions of learning, ferrymen and all firemen organized according to law; all persons more than sixty years of age. A person belonging to any of these classes is, however, not precluded from serving.

ECCLESIASTICAL HISTORY

As early as 1541, the soil of Kansas was hallowed by the blood of Father Juan de Padilla, who fell a victim to his zeal for the conversion of the Indians. Baptism was administered and marriages were blessed by Father Lacroix, in 1822. The Jesuit Father Van Quickenborne began his missionary journeys to the Indian tribes here in 1827. Rev. Joseph Lutz of St. Louis soon thereafter preached to the Kansas or Kaw Indians. In 1835 missionaries visited the Peorias, Weas, and Pienkishaws, a remnant of the Kaskaskias known as the Miamis. St. Francis Xavier's mission and school were established at Kickapoo above Fort Leavenworth in 1836. English was here taught at least

as early as 1840. Among the Pottawattomies, in 1838, a permanent Jesuit mission was established by Father Christian Hoecker. In 1841, four Religious of the Sacred Heart, including the saintly Mother Duchesne, opened a school for girls in this mission. The Jesuits opened a school for boys the following year. Osage Mission obtained resident missionaries in the Jesuit Fathers Schoenmakers and Bax in 1847. In this year the Pottawattomies began moving to their new reservation on the Kaw immediately west of the present site of Topeka. This later developed into the St. Mary's Jesuit Mission with its famous college. During the ten years prior to 1848, there were 1430 baptisms including 550 adults among the Pottawattomies. There were at this period 330 Catholic families in this tribe. Sixty years later some of their descendants are found in Pottawattomie County, and are good Catholics.

In 1851 the Rt. Rev. J. B. Miege, of the Society of Jesus, a professor of St. Louis University, was consecrated Bishop of Messene and appointed Vicar Apostolic of the Indian Territory east of the Rocky Mountains. He made St. Mary's Mission his residence until August, 1855, when he established himself at Leavenworth, a promising city of the newly organized territory, but where the bishop found but seven Catholic families. At the end of this year in the vast territory under his jurisdiction there were but six churches completed, three being built, eleven stations, and eight priests. The Benedictine Fathers and the Carmelites were invited to Kansas for missionary work. The former in 1859 established a priory which has become an abbey, and laid the foundation for St. Benedict's College at Atchison. Bishop Miege was a man of Apostolic spirit and remarkable discretion. His visitations were made before railroads were built over the prairies and across the plains to points as remote as Denver and Omaha. In 1857, Nebraska Territory was formed into a separate vicariate which came under the jurisdiction of Rt. Rev. James Michael O'Gorman in 1859, leaving only Kansas Territory to Bishop Miege. In 1868 there were in the vicariate twenty-seven priests, of whom thirteen were seculars. There were schools under the conduct of the Religious of the Sacred Heart, of the Sisters of Loreto, of the Sisters of St. Benedict, and of the Sisters of Charity. These last were also in charge of a hospital and orphanage in Leavenworth. In this year on 8 December, Leavenworth Cathedral, a massive brick building of great architectural beauty, was consecrated. Bishop Miege went to Rome for the Vatican Council, and later to South America on a collecting tour. In 1871, the prior of St. Benedict's, Louis Mary Fink, O. S. B., was consecrated Bishop of Eucarpia, to assist Bishop Miege, whom he succeeded on the latter's resignation in 1874, when there were 35,000 Catholics in the state. Bishop Fink remained Vicar Apostolic of Kansas until Leavenworth was made an episcopal see, in 1877, when he became its first bishop with jurisdiction over the State of Kansas.

The Catholic population within a few years increased to 80,000 souls. Churches and schools multiplied under his fostering hand. In 1887 two other dioceses, those of Concordia and Wichita, were carved out of Leavenworth. New boundaries were established by Apostolic letters in 1897. The first Bishop-elect of Wichita, Rt. Rev. James O'Reilly, died before his consecration. The Rt. Rev. John Joseph Hennessy was consecrated Bishop of Wichita, 30 Nov., 1888; his jurisdiction extends over an area of 42,915 square miles, with 765,000 inhabitants, of whom 30,000 are Catholics. Rt. Rev. Richard Scannell, who was transferred to Omaha in 1890, was the first Bishop of Concordia. The second to be preconized was the Rt. Rev. Thadeus Butler, D. D., who died in Rome before his consecration. The present bishop is the Rt. Rev. John Francis Cunningham, who was for many years vicar-general of Leavenworth, and was consecrated bishop 21 September, 1898. Concordia diocese has an area of 26,685 sq. miles, with about one Catholic to every square mile out of a population of 351,000. The Rt. Rev. Louis M. Fink, after a laborious and fruitful episcopacy of thirty-three years, went to his reward 17 March, 1904. His successor as Bishop of Leavenworth, the Rt. Rev. Thos. F. Lillis, was consecrated 27 December, 1904. The Leavenworth diocese has an area of 12,524 square miles, with a Catholic population of 56,000. The three dioceses have 312 priests, including about 100 religious.

Excellent Catholic boarding schools for boys are: St. Mary's College, conducted by the Jesuits, with 400 students; and St. Benedict's, at Atchison, by the Benedictines, with 300 students. There are nine academies, with seven hundred girl pupils, several Catholic high-schools, and ninety parochial schools with 11,000 pupils. There are ten Catholic hospitals, and four orphanages including one for coloured children. A mission for the conversion of the coloured people has existed in Leavenworth for thirty years. The priests of Kansas have been distinguished for their zeal in ministering to their scattered flocks. They invited immigrants to Kansas. The Church has fostered benevolent societies here as elsewhere; the Knight of Columbus have active councils; the Catholic Mutual Benevolent Association has nearly 1200 members. Various nationalities are largely represented in the Catholic societies of the parishes to which they belong. They are mostly of German and Irish extraction, or from South-eastern Europe. The Knights of Father Matthew promote the cause of total abstinence from intoxicating liquors. The State Federation of Catholic Societies represents some five thousand men enlisted in the cause of Christian faith and morality. There is an excellent Catholic paper published with the approbation of the bishops. Parochial schools are found not only in the cities, but in the rural districts, in charge of religious communities of women. Catholics of talent are found among the best professional men. General R. W. Blair who came to Kansas in 1859, for a generation devoted his eminent talents in peace and in war to furthering the best interests of the state. Thomas Ewing, Jr., was chief

justice of the first supreme court of the state from February, 1861, to 28 November, 1862, and was distinguished in the Civil War. He died in New York in 1896.

J.A. SHORTER

Diocese of Kansas City

Diocese of Kansas City

(Kansanopolitana.)

Established 10 September, 1880, to include that part of the State of Missouri, U.S.A., south of the Missouri River, and west of the eastern boundary of the counties of Moniteau, Miller, Camden, Laclede, Wright, Douglass, and Ozark, an area of 23,539 square miles. At the same time, Bishop John Joseph Hogan, of the Diocese of St. Joseph, which comprises that part of the State of Missouri between the Missouri and Chariton Rivers, was transferred to the new see and continued also in charge of the Diocese of St. Joseph as administrator. This arrangement continued until 19 June, 1893, when separate jurisdiction of the Diocese of St. Joseph was established, and the Right Rev. Maurice F. Burke, consecrated Bishop of Cheyenne, in Wyoming, 28 October, 1887, was transferred to the title of St. Joseph. Kansas City is suffragan of St. Louis. When the diocese was established, it had 42 churches, 30 priests, and a Catholic population of 12,000. The first bishop, John J. Hogan, was born at Bruff, County Limerick, Ireland, 10 May, 1829. His early classical studies he pursued in his native land, after which he entered the diocesan seminary at St. Louis, Mo., where he was ordained priest 10 April, 1852. From that date up to his consecration as bishop, 13 September, 1868, he had an active and successful career, building up parishes in a wide and sparsely settled section of north-western Missouri. As soon as he took charge of the Diocese of St. Joseph, his zeal and earnestness gave a new impetus to the affairs of the Church there, and the same was manifest with his advent to Kansas City. The number of priests increased, new churches arose, additional religious communities entered the diocese. In 1896 he asked for a coadjutor, and the Rev. John J. Glennon was consecrated titular Bishop of Pinara, and Coadjutor for Kansas City (29 June, 1896). Bishop Glennon, on 27 April,

1903, was transferred as coadjutor with the right of succession to the See of St. Louis and succeeded to that title 13 October, 1903.

Statistics

Religious Communities in diocese -- Men: Benedictines, Franciscans, Dominicans, Jesuits, Lazarists, Father of the Most Precious Blood, Redemptorists, and Christian Brothers. Women: Sisters of St. Benedict, Sisters of Charity of the Blessed Virgin Mary, Third Order Regular of St. Francis, Third Order of St. Dominic, Sisters of St. Francis, Sisters of the Good Shepherd, Sisters of St. Joseph of Nazareth, Sisters of St. Mary, School Sisters of St. Francis, Sisters of St. Joseph, Sisters of Charity of the Incarnate Word, Little Sisters of the Poor, Sisters of Loretto, Sisters Of Mercy, Sisters of the Most Precious Blood, Sisters of Charity (Emmitsburg), Sisters of Our Lady of Sion, Sisters of the Visitation, Sisters of Mercy, School Sisters of Notre Dame. Priests, 101 (31 religious); churches with resident priests, 74; missions with churches, 14; stations, 18; chapels, 30; 1 seminary with 20 students; academies for girls, 10; parishes and missions with schools, 42; pupils in academies and schools, 5543; 2 orphan asylums with 245 inmates; 1 industrial and reform school with 60 inmates; total children under Catholic care, 5773; 6 hospitals; 1 home for aged poor; 1 foundling asylum. Catholic population, 55,000.

THOMAS F. MEEHAN

Prefecture Apostolic of Southern Kan-Su

Prefecture Apostolic of Southern Kan-Su

Separated from the Northern Kan-su mission in 1905, and committed to the Belgian Congregation of the Immaculate Heart of Mary (Scheutveld, Brussels). It includes the seven southern prefectures of Kan-su: Tsin-chou, Ping-liang-fu, Kung-chang-fu, King-chou, Kiai-chou, King-yang-fu and Kung-yuen-fu. It contains about 8,000,000 inhabitants. The first prefect Apostolic is Reverend Everard Joseph Terlaak, dwelling at Tsin-chou. In 1907 the mission consisted of: 1 prefect Apostolic, 10 missionaries, 3 native priests, 23 churches and chapels, 6 schools with 42 students, 1 college with 5 students, 3 orphan asylums with 35 children, 1031 Catholics. In 1908: 1 prefect Apostolic, 12 missionaries, 3 native priests, and 1106 Catholics.

V.H. MONTANAR

Vicariate Apostolic of Northern Kan-Su

Vicariate Apostolic of Northern

This vicariate includes the territory of Ku-ku-nor, northern part of Tibet, and the five northern prefectures of the Chinese province of Kan-su: Lan-chou-fu, Si-ning-fu, Liang-chou-fu, Kan-chou-fu, and Su-chou. The climate varies according to the locality. In general, it is healthy, temperate, and bright. Kan-su is inhabited by Chinese, Turks from Turkestan, Mongols, Tangouses or Fan-tse. The vicariate contains about eight million inhabitants; among this number there are 2700 Catholics. The vicar Apostolic dwells at Sung-shu-chang-tsz in the prefecture of Liang-chou-fu. The province of Kan-su formed a part of the Vicariate Apostolic of Shen-si from 1844 to 1878, when it was separated, erected into a distinct vicariate Apostolic, and entrusted to the Belgian Congregation of the Immaculate Heart of Mary (Scheutveld, Brussels). In 1886 the northern civil prefecture of Ning-hia was confided to the Vicariate Apostolic of South-Western Mongolia. In 1888 the new Chinese province of Sin-kiang was formed into an independent mission, bearing the name of I-li or Kul-dja. In 1905 the seven southern civil prefectures were separated to form the Prefecture Apostolic of Southern Kan-su. The present vicar Apostolic is Mgr. Ubert Otto. He was consecrated titular Bishop of Assurita 13 Jan. 1891. In 1907 the mission had: 1 bishop, 16 European missionaries, 2 native priests, 24 churches and chapels, 9 schools with 127 students, 1 college with 25 students, 2 orphan asylums with 35 children, and 2498 Catholics. In 1908: 1 bishop, 20 missionaries, 1 native priest, 23 churches and chapels, and 2702 Catholics.

V.H. MONTANAR

Philosophy of Immanuel Kant

Philosophy of Immanuel Kant

Kant's philosophy is generally designated as a system of transcendental criticism tending towards Agnosticism in theology, and favouring the view that Christianity is a non-dogmatic religion.

Immanuel Kant was born at Königsberg in East Prussia, 22 April, 1724; died there, 12 February, 1804. From his sixteenth to his twenty-first year, he studied at the university of his native city, having for his teacher Martin Knutzen, under whom he acquired a knowledge of the philosophy of Wolff and of Newton's physics. After the death of his father in 1746 he spent nine years as tutor in various families. In 1755 he returned

to Königsberg, and there he spent the remainder of his life. From 1755 to 1770 he was *Privatdozent* (unsalaried professor) at the University of Königsberg. In 1770 he was appointed professor of philosophy, a position which he held until 1797.

It is usual to distinguish two periods of Kant's literary activity. The first, the pre-critical period, extends from 1747 to 1781, the date of the epoch-making "Kritik der reinen Vernunft"; the second, the critical period, extends from 1781 to 1794.

THE PRE-CRITICAL PERIOD

Kant's first book, which was published in 1747, was entitled "Gedanken von der wahren Schätzung der lebendigen Kräfte" (Thoughts on the True Estimation of Living Forces). In 1775 he published his doctor's dissertation, "On Fire" (De Igne), and the work "Principiorum Primorum Cognitionis Metaphysicae Nova Dilucidatio" (A New Explanation of the First Principles of Metaphysical Knowledge), by which he qualified for the position of *Privatdozent*. Besides these, in which he expounded and defended the current philosophy of Wolff, he published other treatises in which he applied that philosophy to problems of mathematics and physics. In 1770 appeared the work "De Mundi Sensibilis atque Intelligibilis Formis et Principiis" (On the Forms and Principles of the Sensible and Intelligible World), in which he shows for the first time a tendency to adopt an independent system of philosophy. The years from 1770 to 1780 were spent, as Kant himself tells us, in the preparation of the "Critique of Pure Reason".

THE CRITICAL PERIOD

The first work of Kant in which he appears as an exponent of transcendental criticism is the "Critique of Pure Reason" (Kritik der reinen Vernunft), which appeared in 1781. A second edition was published in 1787. In 1785 appeared the "Foundation for the Metaphysics of Ethics" (Grundlegung zur Metaphysik der Sitten). Then came a succession of critical works, the most important of which are the "Critique of Practical Reason" (Kritik der praktischen Vernunft), the "Critique of Judgment" (Kritik der Urtheilskraft, 1790), and "Religion within the Limits of Mere Reason" (Religion innerhalb der Grenzen der blossen Vernunft, 1793). The best editions of Kant's complete works are Hartenstein's second edition (8 vols., Leipzig, 1867-69), Rosenkranz and Schubert's (12 vols., Leipzig, 1834-42), and the edition which is being published by the Academy of Sciences of Berlin (Kants gesammelte Schriften, herausg. von der königlich preussischen Akademie der Wissenschaften, Berlin, 1902-).

During the period of his academic career, extending from 1747 to 1781, Kant, as has been said, taught the philosophy then prevalent in Germany, which was Wolff's modified form of dogmatic rationalism. That is to say, he made psychological experience to be the basis of all metaphysical truth, rejected skepticism, and judged all knowledge by the test of reason. Towards the end of that period, however, he began to question

the solidity of the psychological basis of metaphysics, and ended by losing all faith in the validity and value of metaphysical reasoning. The apparent contradictions which he found to exist in the physical sciences, and the conclusions which Hume had reached in his analysis of the principle of causation, "awoke Kant from his dogmatic slumber" and brought home to him the necessity of reviewing or criticizing all human experience for the purpose of restoring the physical sciences to a degree of certitude which they rightly claim, and also for the purpose of placing on an unshakable foundation the metaphysical truths which Hume's skeptical phenomenalism had overthrown. The old rational dogmatism had, he now considered, laid too much emphasis on the a priori elements of knowledge; on the other hand, as he now for the first time realized, the empirical philosophy of Hume had gone too far when it reduced all truth to empirical or a posteriori elements. Kant, therefore, proposes to pass all knowledge in review in order to determine how much of it is to be assigned to the a priori, and how much to the a posteriori factors, if we may so designate them, of knowledge. As he himself says, his purpose is to "deduce" the a priori or transcendental, forms of thought. Hence, his philosophy is essentially a "criticism", because it is an examination of knowledge, and "transcendental", because its purpose in examining knowledge is to determine the a priori, or transcendental, forms. Kant himself was wont to say that the business of philosophy is to answer three questions: What can I know? What ought I to do? What may I hope for? He considered, however, that the answer to the second and third depends on the answer to the first; our duty and our destiny can be determined only after a thorough study of human knowledge.

It will be found most convenient to divide the study of Kant's critical philosophy into three portions, corresponding to the doctrines contained in his three "Critiques". We shall, therefore, take up successively (1) the doctrines of the "Critique of Pure Reason"; (2) the doctrines of the "Critique of Practical Reason"; (3) the doctrines of the "Critique of the Faculty of Judgment".

"Critique of Pure Reason"

In accordance with his purpose to examine all knowledge in order to find what is and what is not a priori, or transcendental, that is anterior to experience, or independent of experience, Kant proceeds in the "Critique of Pure Reason" to inquire into the a priori forms of (a) sensation, (b) judgment, and (c) reasoning.

A. Sensation

The first thing that Kant does in his study of knowledge is to distinguish between the material, or content, and the form, of sensation. The material of our sense-knowledge comes from experience. The form, however, is not derived through the senses, but is imposed on the material, or content, by the mind, in order to render the material, or content, universal and necessary. The form is, therefore, a priori; it is independent

of experience. The most important forms of sense-knowledge, the conditions, in fact, of all sensation, are space and time. Not only, then, are space and time mental entities in the sense that they are elaborated by the mind out of the data of experience; they are strictly subjective, purely mental, and have no objective entity, except in so far as they are applied to the external world by the mind.

Because of what is to follow, it is important to ask at this point: Do the a priori forms of sensation, since they admittedly enhance the value of sense-knowledge by rendering it universal and necessary, extend the domain of sense-knowledge, and carry us outside the narrow confines of the material, or data, of the senses? Kant holds that they do not. They affect knowledge, so to speak, qualitatively, not quantitatively. Now, the data of sensation represent only the appearances (*Erscheinungen*) of things; therefore all sensation is confined to a knowledge of appearances. Sense-knowledge cannot penetrate to the noumenon, the reality of the thing (*Ding-an-sich*).

B. Judgment

(b) Taking up now the knowledge which we acquire by means of the understanding (*Verstand*), Kant finds that thought in the strict sense begins with judgment. As in the case of sense-knowledge, he distinguishes here the content and the form. The content of judgment, or in other words, that which the understanding joins together in the act of judgment, can be nothing but the sense-intuitions, which take place, as has been said, by the imposition of the forms of space and time on the data of sensation. Sometimes the sense-intuitions (subject and predicate) are joined together in a manner that evidently implies contingency and particularity. An example would be the judgment, "This table is square." With judgments of this kind the philosopher is not much concerned. He is interested rather in judgments such as "All the sides of a square are equal", in which the relation affirmed to exist between the subject and the predicate is necessary and universal. With regard to these, Kant's first remark is that their necessity and universality must be a priori. That nothing which is universal and necessary can come from experience is axiomatic with him. There must, then, be forms of judgment, as there are forms of sensation, which are imposed by the understanding, which do not come from experience at all, but are a priori. These forms of judgment are the categories. It is hardly necessary to call attention to the contrast between the Kantian categories and the Aristotelean. The difference is fundamental, a difference in nature, purpose, function, and effect. The important point for the student of Kant is to determine the function of the categories. They serve to confer universality and necessity on our judgments. They serve, moreover, to bring diverse sense-intuitions under some degree of unity. But they do not extend our knowledge. For while representations (or intuitions) without the categories would be blind, the categories without representative, or intuitional, content, would be empty. We are still within the narrow

circle of knowledge covered by our sense-experience. Space and time do not widen that circle; neither do the categories. The knowledge, therefore, which we acquire by the understanding is confined to the appearances of things, and does not extend to the noumenal reality, the *Ding-an-Sich*.

It is necessary at this point to explain what Kant means by the "synthetic a priori" judgments. The Aristotelean philosophers distinguished two kinds of judgments, namely, synthetic judgments, which are the result of a "putting-together" (synthesis) of the facts, or data, of experience, and analytic judgments, which are the result of a "taking-apart" (analysis) of the subject and predicate, without immediate reference to experience. Thus, "This table is round" is a synthetic judgment; "All the radii of a circle are equal" is an analytic judgment. Now, according to the Aristoteleans, all synthetic judgments are a posteriori, because they are dependent on experience, and all analytic judgments are a priori, because the bond, or nexus, in them is perceived without appeal to experience. This classification does not satisfy Kant. He contends that analytic judgments of the kind referred to do not advance knowledge at all, since they always "remain within the concepts [subject and predicate] and make no advance beyond the data of the concepts". At the same time he contends that the synthetic judgments of the Aristoteleans have no scientific value, since, coming as they do from experience, they must be contingent and particular. Therefore he proposes to introduce a third class, namely, synthetic a priori judgments, which are synthetic because the content of them is supplied by a synthesis of the facts of experience, and a priori, because the form of universality and necessity is imposed on them by the understanding independently of experience. An example would be, according to Kant, "Every effect must have a cause." Our concepts of "effect" and "cause" are supplied by experience; but the universality and necessity of principle are derived from the a priori endowment of the mind. The Aristoteleans answer, and rightly, that the so-called synthetic a priori judgments are all analytic.

C. Reasoning

In the third place, Kant's "Critique of Pure Reason" is occupied with the reasoning faculty (*Vernunft*). Here "ideas" play a role similar to that played in sensation and judgment by space and time and the categories, respectively. Examining the reasoning faculty, Kant finds that it has three distinct operations, namely, categorical, hypothetical, and disjunctive reasoning. To these, he says, correspond the three "ideas", the idea of the soul as thinking subject (psychological idea), the idea of matter as the totality of phenomena (cosmological idea), and the idea of God as the supreme condition of all reality (theological idea). He first takes up the idea of the soul, and, examining the course of reasoning of the psychologist who teaches the substantiality, immateriality, and immortality of the human soul, he pronounces that line of philosophical thought

to be fallacious, because it starts with the false supposition that we can have an intuitive knowledge of the soul as the substantial subject of conscious states. This, he claims, is an erroneous supposition, for, while we can and do know our conscious states, we cannot know the subject of them. Rational psychology, then, makes a wrong start; its way is full of contradictions; it does not conclusively establish the immortality of the soul. Next, Kant subjects the cosmological idea to a similar analysis. He finds that as soon as we begin to predicate anything concerning the ultimate nature of matter we fall into a whole series of contradictions, which he calls "antinomies". Thus, the propositions, "Matter has a beginning", "The world was created", are apparently no more true than their contradictories, "Matter is eternal", "The world is uncreated." To every thesis regarding the ultimate nature of the material universe an equally plausible antithesis may be opposed. The conclusion is that by pure reason alone we cannot attain a knowledge of the nature of the material universe. Finally, Kant takes up the theological idea, the idea of God, and criticizes the methods and arguments of rational theology. The speculative basis of our belief in the existence of God is unsound he says, because the proofs brought forward to support it are not conclusive. St. Anselm's ontological argument tries to establish an existential proposition without reference to experience; it confounds the order of things with the order of ideas. The cosmological argument carries the principle of causality beyond the world of sense-experience, where alone it is valid. And the physico-theological argument from design, while it may prove the existence of an intelligent designer, cannot establish the existence of a Supreme Being. Kant, of course, does not deny the existence of God, neither does he deny the immortality of the soul or the ultimate reality of matter. His aim is to show that the three ideas, or, in other words, speculative reasoning concerning the soul, the universe, and God, do not add to our knowledge. But, although the ideas do not extend our experience, they regulate it. The best way to think about our conscious states is to represent them as inhering in a substantial subject, about which, however, we can know nothing. The best way to think of the external world is to represent it as a multiplicity of appearances, the ground of which is an unknowable material something; and the best way to organize and systematize all our knowledge of reality is to represent everything as springing from one source, governed by one law, and tending towards one end, the law, the source, and the end being an unknown and (speculatively) unknowable God. It is very easy to see how this negative phase of Kant's philosophy affected the subsequent course of philosophic thought in Europe. The conclusions of the first "Critique" are the premises of contemporary Agnosticism. We can know nothing except the appearances of things; the senses reach only phenomena; judgment does not go any deeper than the senses, so far as the external world is concerned; science and philosophy fail utterly in the effort to reach a knowledge of substance (noumenon),

or essence, and the attempts of metaphysics to teach us what the soul is, what matter is, what God is, have failed and are doomed to inevitable failure. These are the conclusions which Kant reaches in the "Critique of Pure Reason"; they are the assumptions of the Agnostic and of the Neo-Kantian opponent of Scholasticism.

"Critique of Practical Reason"

Kant, it has often been said, tore down in order to build up. What he took away in the first "Critique" he gave back in the second. In the "Critique of Pure Reason" he showed that the truths which have always been considered the most important in the whole range of human knowledge have no foundation in metaphysical, that is, purely speculative, reasoning. In the "Critique of Practical Reasoning" he aims at showing that these truths rest on a solid moral basis, and are thus placed above all speculative contention and the clamour of metaphysical dispute. He has overthrown the imposing edifice which Cartesian dogmatism had built on the foundation "I think"; he now sets about the task of rebuilding the temple of truth on the foundation "I ought." The moral law is supreme. In point of certainty, it is superior to any deliverance of the purely speculative consciousness; I am more certain that "I ought" than I am that "I am glad", "I am cold", etc. In point of insistence, it is superior to any consideration of interest, pleasure or happiness; I can forego what is for my interest, I can set other considerations above pleasure and happiness, but if my conscience tells me that "I ought" to do something, nothing can gainsay the voice of conscience, though, of course, I am free to obey or disobey. This, then, is the one unshakable foundation of all moral, spiritual, and higher intellectual truth. The first peculiarity of the moral law is that it is universal and necessary. When conscience declares that it is wrong to tell a lie, the voice is not merely intended for here and now, not for "just this once", but for all time and for all space; it is valid always and everywhere. This quality of universality and necessity shows at once that the moral law has no foundation in pleasure, happiness, the perfection of self, or a so-called moral sense. It is its own foundation. Its voice reaches conscience immediately, commands unconditionally, and need give no reason for its behests. It is not, so to speak, a constitutional monarch amenable to reason, judgment, or any other faculty. It exacts unconditional, and in a sense unreasoned obedience. Hence the "hollow voice" of the moral law is called by Kant "the categorical imperative". This celebrated phrase means merely that the moral law is a command (imperative), not a form of advice or invitation to act or not to act; and it is an unconditional (categorical) command, not a command in the hypothetical mood, such as "If you wish to be a clergyman you must study theology." One should not, however, overlook the peculiarly empty character of the categorical imperative. Only in its most universal "hollow" utterances does it possess those qualities which render it unique in human experience. But as soon as the contingent data, or contents of a specific moral

precept, are presented to it, it imposes its universality and necessity on them and lifts them to its own level. The contents may have been good, but they could not have been absolutely good; for nothing is absolutely good except good will--the acceptance, that is, of the moral law.

We know the moral law not by inference, but by immediate intuition. This intuition is, as it were, the *primum philosophicum*. It takes the place of Descartes' primary intuition of his own thought. From it all the important truths of philosophy are deduced, the freedom of the will, the immortality of the soul, and the existence of God. The freedom of the will follows from the existence of the moral law, because the fact that "I ought" implies the fact that "I can." I know that I ought to do a certain thing, and from this I infer that I can. In the order of things, of course, freedom precedes obligation. In the order of knowledge, I infer freedom from the fact of obligation. Similarly, the immortality of the soul is implied in the moral law. The moral law demands complete fulfilment of itself in absolute human perfection. But the highest perfection that man can attain in this life is only partial or incomplete perfection, because, so long as the soul is united with the body, there is always in our nature a mixture of the corporeal with the spiritual; the striving towards holiness is accompanied by an inclination towards unholiness, and virtue implies a struggle. There must, therefore, be a life beyond the grave in which this "endless progress", as Kant calls it, will be continued. Finally, the moral law implies the existence of God. And that in two ways. The authoritative "voice" of the law implies a lawgiver. Moreover, the nature of the moral law implies that there be somewhere a good which is not only supreme, but complete, which embodies in its perfect holiness all the conditions which the moral law implies. This supreme good is God.

"Critique of the Faculty of Judgment"

Intermediate between the speculative reason, which is the faculty of knowledge, and practical reason, which is the faculty of voluntary action, is the faculty which Kant calls judgment, and which is the faculty of aesthetic appreciation. As the true is the object of knowledge, and as the good is the object of action, the beautiful and purposive is the object of judgment. By this peculiar use of the word *judgment* Kant places himself at once outside the ranks of the sensists, who refer all the constituents of beauty to sense-perceived qualities. He is an intellectualist in aesthetics, reducing the beautiful to elements of intellectuality. The beautiful, he teaches, is that which universally and necessarily gives disinterested pleasure, without the concept of definite design. It differs, consequently, from the agreeable and the useful. However, Kant is careful to remark that the enjoyment of the beautiful is not purely intellectual, as is the satisfaction which we experience in contemplating the perfect. The perfect appeals to the intellect alone, while the beautiful appeals also to the emotions and to the aesthetic faculty. Closely

allied to the beautiful is the purposive. The same faculty, judgment, which enables us to perceive and enjoy the aesthetic aspect of nature and of art, enables us also to perceive that in the manifold variety of our experience there is evidence of purpose or design. Kant introduced in his "Critique" of the teleological judgment an important distinction between external and internal adaptation. External adaptation, he taught, exists between the organism and its environment, as, for instance, between the plant and the soil in which it grows. Internal adaptation exists among the structural parts of the organism, or between the organism and its function. The former, he believed, could be explained by merely mechanical causes, but the latter necessitates the introduction of the concept of final cause. Organisms act as though they were produced by a cause which had a purpose in view. We cannot clearly demonstrate that purpose. The teleological concept is, therefore, like the "ideas" (the soul, the world, God) not constitutive of our experience but regulative of it. The highest use of the aesthetic faculty is the realization of the beautiful and the purposive as symbols of moral good. What speculative reason fails to find in nature, namely, a beautiful, purposive order, is suggested by the aesthetic judgment and fully attained by religion, which rests on the practical reason.

Kant, as is well known, reduces religion to a system of conduct. He defines religion as "the acknowledgement that our duties are God's commandments". He describes the essence of religion as consisting in morality. Christianity is a religion and is true only in so far as it conforms to this definition. The ideal Church should be an "ethical republic"; it should discard all dogmatic definitions, accept "rational faith" as its guide in all intellectual matters, and establish the kingdom of God on earth by bringing about the reign of duty. Even the Christian law of charity must take second place to the supreme exigencies of duty. In fact, it has been remarked that Kant's idea of religion, in so far as it is at all Scriptural, is inspired more by the Old than by the New Testament. He maintains that those dogmas which Christianity holds sacred, such as the mystery of the Trinity, should be given an ethical interpretation, should, so to speak, be regarded as symbols of moral concepts and values. Thus "historical faith", he says, is the "vehicle of rational faith". For the person and character of Christ he professes the greatest admiration. Christ, he declares, was the exemplification of the highest moral perfection.

EVALUATION OF KANT

Critics and historians are not all agreed as to Kant's rank among philosophers. Some rate his contributions to philosophy so highly that they consider his doctrines to be the culmination of all that went before him. Others, on the contrary, consider that he made a false start when he assumed in his criticism of speculative reason that whatever is universal and necessary in our knowledge must come from the mind itself, and not from the world of reality outside us. These opponents of Kant consider, moreover, that while he possessed the synthetic talent which enabled him to build up

a system of thought, he was lacking in the analytic quality by which the philosopher is able to observe what actually takes place in the mind. And in a thinker who reduced all philosophy to an examination of knowledge the lack of the ability to observe what actually takes place in the mind is a serious defect. But, whatever may be our estimate of Kant as a philosopher, we should not undervalue his importance. Within the limits of the philosophical sciences themselves, his thought was the starting-point for Fichte, Schelling, Hegel, and Schopenhauer; and, so far as contemporary philosophic thought in Germany is concerned, whatever of it is not Kantian takes for its distinguishing characteristic its opposition to some point of Kantian doctrine. In England the Agnostic School from Hamilton to Spencer drew its inspiration from the negative teaching of the "Critique of Pure Reason". In France the Positivism of Comte and the neo-Criticism of Renouvier had a similar origin. Kant's influence reached out beyond philosophy into various other departments of thought. In the history of the natural sciences his name is associated with that of Laplace, in the theory which accounts for the origin of the universe by a natural evolution from primitive cosmic nebula. In theology his non-dogmatic notion of religion influenced Ritschl, and his method of transforming dogmatic truth into moral inspiration finds an echo, to say the least, in the exegetical experiments of Renan and his followers.

Some philosophers and theologians have held that the objective data on which the Catholic religion is based are incapable of proof from speculative reason, but are demonstrable from practical reason, will, sentiment, or vital action. That this position is, however, dangerous, is proved by recent events. The Immanentist movement, the Vitalism of Blondel, the anti-Scholasticism of the "Annales de philosophie chretienne", and other recent tendencies towards a non-intellectual apologetic of the Faith, have their roots in Kantism, and the condemnation they have received from ecclesiastical authority shows plainly that they have no clear title to be considered a substitute for the intellectualistic apologetic which has for its ground the realism of the Scholastics.

WILLIAM TURNER

Stanislaw Karnkowski

Stanislaw Karnkowski

(Karncovious.)

Archbishop of Gnesen and Primate of Poland, born about 1526; died at Lowicz, in the Government of Warsaw, 25 May (*al.*, 8 June), 1603. As early as 1563 (according to Gams not until 1568) he was named Bishop of Wlozlawsk (Wladislavia, Kalisch), and rendered great service to religion and education by founding, besides several schools, a seminary for priests in his episcopal residence. By order of the Synod of

Petrikau (1577), he made a new collection of synodal laws under the title "Constitutiones synodorum metropolitanae ecclesiae Gnesnensis provincialium" (Krakow, 1579). His political and religious influence in contemporary Poland was great. Under King Sigismund II August (1548-72) the Reformation made great progress in Poland, especially the Calvinist teaching, while the Lutherans and Socinians bitterly opposed each other. When Sigismund died, Henry of Valois, later Henry III of France, was elected King of Poland. On his entry into Meseritz, Karnkowski welcomed him in the name of the Polish estates. The archbishop also attended the coronation (1574), and tried to keep the throne new king in Poland, but in the same year the French throne fell vacant and he returned to France. Karnkowski then urged the election of Stephen Báthori, Prince of Transylvania. The latter was suspected of favouring the Reformation, but under the influence of Karnkowski he declared openly for Catholicism, and was crowned king 1 May, 1576, by Karnkowski, as Uchanski, Primate of Poland and Archbishop of Gnesen, had refused to crown him.

Uchanski died 5 April, 1581, and Karnkowski was named his successor in the same year (21 April) in the archiepiscopal See of Gnesen and Primacy of Poland; as such, he governed Poland after the death of Stephen Báthori (12 Dec., 1586). Eventually he succeeded in electing as king Sigismund III Vasa (1587-1632). Through this young king, formerly Crown Prince of Sweden, and reared a good Catholic by his mother Katharina, Karnkowski hoped to stay the progress of the Reformation in Poland. After Cardinal Hosius, the archbishop was the most prominent opponent of the Polish Reformation. He favoured the Jesuits in every way, built a college for them at Kalisch, and a seminary at Gnesen. He established an institute for twelve noble students, which is still extant, under the direction of the cathedral chapter of Gnesen. It was he who urged the Jesuit Jacob Wujek to translate the Holy Scriptures into Polish; this translation was approved by the pope and is still regarded as a classic (Sommervogel, "Bibl. de la C. de J.", VIII, 1234 sp.). Karnkowski wrote several important works, mostly theological; among them are: "Eucharistia", forty discourses in Polish on the Blessed Sacrament (Krakow, 1602); Polish Sermons on the Messiah or the Redemption (Krakow, 1597); "De jure provinciali terrarum civitatumque Prussiae" (Krakow, 1574); "Liber epistolarum familiarium et illustrium virorum" (Krakow, 1584). He is buried in the Jesuit church at Kalisch.

GREGOR REINHOLD

Kaskaskia Indians

Kaskaskia Indians

Formerly chief tribe of the confederacy of Illinois Indians (q. v.). The name is of uncertain etymology, but may possibly have reference to a "hide scraper." With the other Illinois they probably made their first acquaintance with the French at the Jesuit mission station of Chegoimegon (Lapointe near Bayfield, Wisconsin), established by the noted Father Claude Allouez in 1667. In 1673, Father Marquette, on his return from the lower Mississippi, was kindly received at their village, and on their earnest request returned later and founded among them in April, 1675, the Mission of the Immaculate Conception, the first of the Illinois missions, apparently about the present site of Utica, LaSalle Co., Illinois. On his death, a month later, the work was suspended until taken up again in 1677 by Allouez, who remained until the arrival of LaSalle in 1679, by whom the mission was turned over to the Recollects, Fathers Gabriel de la Ribourde and Zenobius Membré. In consequence of the opposition of the Indian priests, the attacks of the Iroquois, and the murder of Father Ribourde by the Kickapoo, the Recollect tenure was brief. In 1684 Allouez returned, but withdrew a second time on the rumoured approach of LaSalle from the south in 1687. In the latter year also the Jesuit Father James Gravier visited the tribe.

In 1692 the celebrated Jesuit Father Sebastian Rasle restored the mission, which continued thenceforward under Jesuit auspices for a period of eighty years. In 1693 Gravier (q. v.) took charge and with Binneteau, Pinet, Marest, and others laboured with much success until his death in 1706 from a wound received at the hands of an unconverted Peoria. He compiled the first grammar of the language, and about the year 1700 was instrumental in settling the tribe in a new village about the present Kaskaskia, Illinois, near the mouth of the river of the same name, which remained their principal town and mission station until their final removal from the State. When visited by Charlevoix in 1721 the Kaskaskia were considered Christian, although a considerable portion of the other Illinois still adhered to their old forms.

Notwithstanding the apparent success of the mission, the whole Illinois nation was in rapid decline from the hostilities of the northern tribes and the wholesale dissipation introduced by the French garrisons. In 1764 the Kaskaskia, who may have numbered originally 2000, were reported at 600, and in 1778 at 210, including 60 warriors. In 1762 the Jesuits were suppressed by the French Government, and any later work was carried on by secular priests. In 1795 the Kaskaskia first entered into treaty relations with the United States, and in 1832, together with the kindred Peoria, they ceded all of their remaining original territory in Illinois and were assigned to a

reservation in what is now north-eastern Oklahoma, were they still reside, the entire confederated band, including Kaskaskia, Peoria, and other representatives of the old Illinois, together with the remnant of the Wea and Piankishaw of Indiana, numbering only 200 souls, not one of whom is full-blood, and not more than a dozen of whom retain the language.

JAMES MOONEY

Upper Kassai

Prefecture Apostolic of Upper Kassai

Erected as a simple mission in 1901, and detached, as a prefecture Apostolic, from the Vicariate of Belgian Congo since 20 August, 1901. The residence of the prefect Apostolic is the mission of St. Joseph de Luluabourg situated a few miles to the south of the station of the Belgian colony of Luluabourg, in the district of Lualaba-Kassai, the chief town of which is Lusambo, residence of the district commissioner. The prefecture, at the time of its creation, comprised almost all the Lualaba-Kassai district. It was bounded on the north by the Vicariate of Belgian Congo (district of the Equateur); on the east by the same vicariate (territory of the Katanga Company); on the south by Portuguese Congo; on the west by the Lubue river. In 1908 it was enlarged by taking as its boundaries on the east the left bank of the Lualaba, and on the west the Prefecture of the Kwango, which is in charge of the Jesuit Fathers.

The climate is hot and damp and the ground marshy. Fever is endemic, while the sleeping sickness makes great ravages among the blacks and may be communicated to white men by the tsetse fly. The languages used are those of the Bena Lulua, the Baluba, Bena Kanioka, the Batetela, the Bakuba, the Bakete, and the Balunda. It is impossible to fix even approximately the number of inhabitants, more than half of the prefecture being as yet unexplored. All that can be said is that the population numbers millions of pagans all devoted to a rude fetichism. Man lives there in the primitive state; in certain regions, among others that of the Bakete, the natives, men and women, go entirely naked. Only one religious order of men is engaged in the evangelization of this country, the Congregation of the Immaculate Heart of Mary of Scheut-les-Bruxelles; there is also but a single religious order of women, the Sisters of Charity of Ghent, Belgium.

Since 15 November, 1891, when P re Cambier arrived alone at Luluabourg to commence the evangelization of these regions, eleven residences have been established. They are, in order of their foundation: (1) St-Joseph de Luluabourg; (2) Mérode Sal-

vator (Kala Kafumba); (3) St-Trudon de Lusambo; (4) Hemptinne St-Bénoit; (5) Tielen St-Jacques; (6) Bena Makima St-Victorien; (7) St-Antoine de Lusambo; (8) Lusambo; (9) Udemba; (10) Pangu-hopital; (11) Liège-Sacrés-Coeurs at Katanga. Besides these large residences, tended by at least three priests or two priests and a lay brother, nineteen *fermes-chapelles* (or Christian villages) have been established in the prefecture. They are named: (1) Louvain-Alma-Mater; (2) Grammont Notre-Dame sur la Montagne; (3) Notre-Dame de Lourdes; (4) Lourdes-Notre-Dame; (5) Ypres; (6) St-Antoine; (7) Flobecq Notre-Dame de la Paix; (8) Tshibata Notre-Dame de Congo; (9) Louvain Adolphe Edmond; (10) Courtrai St-Amand; (11) Kasangai St-Remi; (12) Bakete; (13) Tshifwadi Sacré-Coeur; (14) Tshileta; (15) Kanjiki St-Jean; (16) Hely St-Aignan; (17) Merode Westerloo; (18) Liège St-Urbain; and (19) Harelbeke St-Charles.

The religious in charge are thirty-three priests and thirteen brothers of the Congregation of Scheut, and twenty Sisters of Charity of Ghent, who live in three residences, St-Joseph, St-Trudon de Lusambo and Hemptinne St-Benoit. There are in the prefecture about twenty churches and chapels; over five thousand Catholics and about six thousand catechumens; eleven schools, attended by about eight hundred boys and five hundred girls. Over seven hundred orphans are cared for in orphan asylums.

The Prefect Apostolic of Upper Kassai is Most Rev. Emeri Cambier, born at Flobecq (Belgian Hainault), 2 January, 1865. He was ordained priest 20 November, 1887, arrived in the Congo in 1888, at Luluabourg in 1891, and in 1904 was placed at the head of the newly created prefecture Apostolic. The King of Belgium has lately named him an officer of the Royal Order of the Lion in recognition of his services in South Africa.

BATTANDIER, *Annuaire pontificale catholique* (Paris, 1910); *Missiones catholicæ* (Rome, 1910).

EMERI CAMBIER

Angelica Kauffman

Angelica Kauffmann

Born at Coire, in the canton of Grisons, Switzerland, 30 October, 1741; died at Rome, 5 November, 1807. She was the pupil of her father, Johann Joseph, a painter of mediocre talent, who, nevertheless, had an excellent knowledge of the principles underlying his art, and initiated Angelica at an early age into the difficult use of colours. An astonishingly precocious child, she was summoned to Como by the bishop, Monsignor Nevroni, who desired her to make a portrait of him, at which time she had not yet completed her twelfth year. Francis III of Este, Duke of Modena and Governor of Milan, declared himself her protector. Cardinal Roth invited her to Constance and commissioned her to paint his portrait. At the same time Angelica showed a great

aptitude for music and singing, and some of her father's friends strongly urged her to give up painting, but in vain. This episode in her life she has represented in a picture, showing herself, between Painting and Music, bidding farewell to Music. Nevertheless, while cultivating the latter muse less ardently than the other, she was still a clever musician. Italy again attracted her; after visits to Parma and Florence, successively, she arrived, in 1763, at Rome, where she attended Winckelmann's courses in perspective. On a visit to Venice she made the acquaintance of some English noblemen, and a result of this meeting was her decision to take up residence in London (1766). Reynolds, whose portrait she executed, accorded her a most flattering reception, and conceived for her a passion to which she could never give any encouragement. Among the pictures which she painted in England we may mention "The Mother of the Gracchi", "The Sacrifice of Messalina", the "Meeting of Edgar and Elfrida", and "Cupid and Psyche". She also engraved many of her works. Her vanity made her the victim of a cruel deception: she allowed herself to be captivated by the engaging manners of a stranger who represented himself to be Count Frederick de Horn, and married him (1767). When the imposture was discovered, a separation followed (1768). The talent of Angelica Kauffmann, suggestive of the Reynolds manner, was highly appreciated in England. The Royal Academy of London elected her as one of its original members. Gessner and Klopstock sang of her, and the latter, in recognition, received a sentimental picture. The pretended Count de Horn having died in 1781, Angelica was free to contract a second marriage; she married the Venetian painter, Antonio Zucchi, and they determined to return to Italy. After a sojourn at Venice, during which Angelica painted "Leonardo da Vinci dying in the arms of Francis I", they visited Naples and then went to Rome to establish themselves permanently. There she opened a salon, where G. de Rossi and Seroux d'Agincourt, the latter then engaged on his "Histoire de l'art par les monuments", were frequently to be seen. Goethe, when he visited Rome, was also received in her salon, and speaks of it in the account of his journey. She painted for the Emperor Joseph II, who was then travelling in Italy, the Return of Arminius victorious over the legions of Varus and "Æneas celebrating the Funeral Rites of Pallas". In the last years of her life she was sorely tried by reverses of fortune and by the death of her husband (1795). "The poverty does not terrify me," she confided to an intimate friend, "but the loneliness kills me." She languished for some twelve years. The academicians of St. Luke assisted at her obsequies in the church of S. Andrea delle Frate, where she was buried. It was chiefly as a portraitpainter that Angelica Kauffmann was distinguished; her light touch is not wanting in grace, nor her colouring in brilliancy. In this genre, the portrait of the Duchess of Brunswick, sister of George III, is considered her masterpiece. Her portrait of herself is to be seen in the Berlin Museum. Her historical pictures are altogether inferior; the sentimentalism of the period in which she lived

contributed to their vogue, and they have since declined considerably in the general estimation, chiefly because the drawing leaves too much to be desired.

GASTON SORTAIS

Alexander Kaufmann

Alexander Kaufmann

Poet and folklorist, born at Bonn, 14 May, 1817; died at Wertheim, 1 May, 1893. He came of a well-known patrician family, whose members were prominent during the eighteenth century, some being in the city regiment of Bonn and others in the service of the former Elector of Cologne. Kaufmann was related to the two historical painters, Andreas and Karl Müller. At Bonn he studied jurisprudence, languages, and history; in 1844 he was appointed teacher of Prince Karl von Löwenstein-Wertheim-Rosenberg, who, in 1850, made him keeper of the archives at Wertheim, which post he retained until his death. He published "Gedichte" (1852), "Mainsagen" (1853), and "Unter den Reben" (1871). His original research for Karl Simrock's legends of the Rhine, and his own legends of the Main are very valuable. He collaborated with the highly imaginative poet Georg Friedrich Daumer in *Mythoterpe, ein "Mythen-, Sagen- und Legendenbuch"*; did critical research work on "Cæsarius von Heisterbach" (1850, 1862); and translated "Wunderbare Geschichten aus den Werken des Cæsarius von Heisterbach" (1888-91). His posthumous "Biographie des belgischen Dominikaners Thomas von Chantimpre" was published in 1899.

KARL HOEBER

Leopold Kaufmann

Leopold Kaufmann

Chief Burgomaster of Bonn, brother of the poet and folklorist Alexander Kaufmann, born 13 March, 1821; died 27 Feb., 1898. With his brother Alexander, he attended the grammar school of his native city, and in the autumn of 1840, through Ernst Moritz Arndt, who had shortly before been reinstated in his professorship, Kaufmann was matriculated as student of law at the University of Bonn. Together with his scientific studies he cultivated an intelligent love of music and singing; held inspiring intercourse

with such composers as Felix Mendelssohn Bartholdy, and Franz Liszt, with poets like Gottfried Kinkel, and with his future wife Johanna, *née* Mockel; and with these artistic friends he founded a poetical society called the "Maikäferbund". On the occasion of the first Beethoven festival and of the unveiling of the Beethoven Monument, in the summer of 1845, Kaufmann founded the still extant male choral society of Bonn, the "Concordia". When the revolutionary disturbances broke out in May, 1848, and many of the burgomasters in the Rhenish provinces voluntarily gave up their positions, he was appointed first government referendary of the burgomaster administrator at Unkel on the Rhine, and one year later deputy landrath or president of the District of Zell on the Moselle. In October, 1850, he was elected Burgomaster of Bonn, which at that time contained 18,000 inhabitants, and assumed office in the following May. In 1859 he received the title of chief burgomaster. Among the important enterprises which he planned for the welfare of the city, and which he carried out with prudence and energy, may be mentioned the foundations for extensive docks on the Rhine, the drainage of the entire city, laying out new plans for alignment and rebuilding, and eventually for a canal. For the systematic aid of the poor he laid out the city in districts; he also built an asylum for the insane. He provided for the young by a systematic reorganization of the public schools, and for the support of the orphans. Very successful too were his exertions for the artistic adornment of the beautiful cemetery of Bonn, of the tombs of Schiller's widow and his son Ernst, those of the composer Robert Schumann, and the poet A. W. von Schlegel.

In 1861, Kaufmann was appointed by the King of Prussia a life member of the Upper House on the nomination of the city of Bonn. On the question of reforming the army, he voted with the so-called constitutional deputies on 11 October, 1862, for the budget as arranged by the Lower House. On the hundredth anniversary of Ludwig von Beethoven (b. at Bonn, 12 Dec., 1770), the Beethoven Hall was built. In August, 1871, the Beethoven musical festival, and in August, 1873, the Schumann festival were held, two significant musical events, the success of which was largely due to Kaufmann, and which procured for Bonn the renown of a first-class artistic centre. After the Vatican decree of 18 July, 1870, Bonn and Munich became the centres of the Old Catholic movement. Whilst several of Kaufmann's most esteemed friends joined the new sect, he always remained true to the Church. In 1874 he was unanimously re-elected burgomaster for the third time by the town council of Bonn, for a term of twelve years, but he became a victim of the Kulturkampf. Although he recognized the necessity for the government taking measures with the object of regulating its attitude towards the Church, and declared himself prepared in his official capacity to carry out the May Laws, his confirmation was refused by the administration on 8 May, 1875, a measure which resulted in an interpellation by Windt-Lorst in the Reichstag and the

Prussian Diet. At the end of 1876, Kaufmann was elected to the Lower House from the electoral district of München-Gladbach, joined the Centre party, and soon became a member of its governing committee. In the Reichstag he frequently spoke in the interest of art and science. He was likewise one of the founders of the "Görresgesellschaft", for fostering science in Catholic Germany (1876), and for the first fifteen years was its general secretary. After 1882, he was vice-president of the Borromeo Society for disseminating good books. In 1886 he refused re-election to the Reichstag, and henceforth devoted himself to the promotion of art and of useful undertakings, particularly to the decoration of Bonn cathedral. Among his writings may be mentioned: "Albrecht Dürer" (Cologne, 1881; 2nd ed., 1887); "Bilder aus dem Rheinland" (1884); "Philipp Veit, Vorträge über Kunst" (1891).

KARL HOEBER

Franz Philip Kaulen

Franz Philip Kaulen

Scriptural scholar, born 20 March, 1827, at Düsseldorf; died at Bonn, 11 July, 1907. He attended the gymnasium in his native city, studied theology at the University of Bonn from 1846 to 1849, and was ordained priest at Cologne on 3 September, 1850. For several years he was engaged on the mission in various stations of the Diocese of Cologne, until in 1859 he was appointed lecturer at the *Konvikt* or theological school at Bonn. In 1862 he received the degree of Doctor of Divinity from the University of Würzburg in virtue of a commentary on the Book of Jonas; in 1863 he obtained a chair of Old Testament exegesis at the University of Bonn; in 1880 and 1882 he was appointed extraordinary and ordinary professor of theology at the same university; in 1890 he was raised to the dignity of a domestic prelate by Leo XIII; in 1900 he received the grand cross of the Order of the Knights of the Holy Sepulchre, and in 1903 he was made a member of the Biblical Commission. During the same year (1903) he was compelled to give up teaching owing to an apoplectic stroke.

The study of the Bible was Kaulen's aim from the beginning. He kept it before his mind even when engaged in the ministry or in the conferences at the theological school of Bonn; and nearly all his works refer to it or kindred subjects. His principal works are: (1) "Lingu Mandschuric Institutiones", a grammar of the Manchu language (Ratisbon, 1875); (2) "Die Sprachverwirrung zu Babel", or the confusion of languages at Babel (Mainz, 1861); (3) "Librum Jonae exposuit Fr. Kaulen", or a commentary on the Book of Jonas (Mainz, 1862); (4) "Geschichte der Vulgata", or a history of the Vulgate (Mainz, 1861); (5) "Sprachliches Handbuch zur biblischen Vulgata", or a linguistic manual to the Latin Vulgate (Mainz, 1870); (6) "Einleitung in die Heilige Schrift

Alten und Neuen Testamentes", or Introduction to the Sacred Scripture of the Old and New Testament (Freiburg, 1876-86); (7) "Assyrien und Babylonien" (1876); (8) "Der biblische Schöpfungsbericht", or the Biblical account of the creation (Freiburg, 1902); (9) "Thomas von Villanova, ein Büchlein von der göttlichen Liebe", or a book on Divine love (Freiburg, 1872); (10) three books of devotion, "Alleluja", "Brot der Engel" or Bread of the Angels, and "Die ewige Anbetung" or the perpetual adoration. The books of Kaulen were much in demand; some -- e. g. the grammar to the Vulgate, the "Introduction" and "Assyria and Babylon" -- passed through several editions.

A lasting monument of his theological learning is found in the second edition of the "Kirchenlexikon". The first edition of his work which comprised 11 volumes, a supplement, and a general index, was issued by the publishing firm of Benjamin Herder (q. v.). A second edition soon appeared necessary: in 1877 the editorship was entrusted to Dr. Joseph Hergenröther, then professor in Würzburg, but, at the elevation of the latter to the cardinalate in 1879, was finally given to Dr. Kaulen, who presided over the work until it was completed. The new or second edition comprises twelve volumes and a general index; the first volume appeared in 1886, the last in 1901, and the index, prepared by the Rev. Hermann Joseph Kamp, with an introduction on the divisions of theology by Dr. Melchior Abfalter, in 1903. Kaulen was helped in this gigantic enterprise by the Rev. Dr. Hermann Streber, by the Rev. A. M. Weiss, O.P., who prepared the catalogue of subjects, and by a large number of learned contributors, the list of whom is given at the end of the last volume. The part taken by Kaulen consisted in editing the articles contributed, in revising several articles taken over from the first edition, and in contributing many articles of his own; the enumeration of his personal contributions fills almost five columns in the general list of contributors. The selection of Kaulen for this great theological work was most fortunate. In the preface to the first volume, written in 1882, he declared that the articles should combine depth of learning with ecclesiastical correctness and a clear, intelligible presentation of the subject, which programme was carried out through the entire work.

Mitteilungen der Herderschen Verlagshandlung (Freiburg, September, 1908); *Der Katholik*, no. vi (Mainz, 1907).

FRANCIS J. SCHAEFER

Wenzel Anton Kaunitz

Wenzel Anton Kaunitz

An Austrian prince and statesman, born at Vienna 2 February, 1711; died there 27 June, 1794. His parents had destined him for the Church, and the age of thirteen years he already held a canonry at Münster. Soon, however, he gave up the idea of

becoming an ecclesiastic, and studied law at Vienna, Leipzig, and Leyden. He afterwards made an extensive educational journey through England, and Italy, and was then made aulic councillor in 1735. At the German Diet of Ratisbon in 1739 he was one of the imperial commissaries. In March, 1741, he was sent on a diplomatic mission to Florence, Rome, and Turin, and in August, 1742, was appointed Austrian ambassador at Turin. Two years later he was appointed minister plenipotentiary to the Government of the Netherlands, in which capacity he was to all intents the actual ruler of the Netherlands, because Archduchess Marianne, whom Maria Theresa had invested with the government of the Netherlands, died a week after his arrival, and her husband, Prince Charles of Lorraine, was commanding the Austrian army in Bohemia against the King of Prussia. When Brussels was taken after a three weeks siege by Maurice de Saxe on 20 February, 1746, Kaunitz went to Antwerp, and, when the French army followed him to that place, he left for Aachen, whence his urgent request to be recalled from his difficult position was finally heeded by the empress in June, 1746. In 1748 he represented the interests of Austria at the Congress of Aachen, and reluctantly signed the treaty on 23 October, 1748. Extremely displeased at the treaty which deprived Austria of the provinces of Silesia and Glatz, guaranteeing them to Frederick II, Kaunitz sought a way to regain these provinces and destroy the predominance of the King of Prussia. He advocated an alliance with France, and, when sent as ambassador to Paris in September, 1750, began to lay the foundation for this alliance, which, however, was not concluded until six years later. In 1753 he was recalled and became chancellor of state and minister of foreign affairs.

Towards the end of 1755 he again began negotiations with France concerning an anti-Prussian alliance. This time the circumstances were in his favour. France felt itself slighted at the alliance into which Prussia had entered with England, and a defensive alliance between Austria and France, known as the Treaty of Versailles, was entered into on 1 May, 1756. This treaty, however, was only the preliminary to the so-called Second Treaty of Versailles, signed on 1 May, 1757; in this it was stipulated that the two powers would fight against the King of Prussia, until Silesia and Glantz were restored to Austria. A similar alliance was effected with Russia on 2 February, 1757. Both these alliances owed their existence to Kaunitz who was also practically the supreme manager of Austrian affairs during the ensuing Seven Years War. Empress Maria Theresa placed implicit reliance in his ability and devotion to his country, and no reform of any importance was undertaken during her rule, which did not originate from Kaunitz or at least bear the impress of his co-operation. In 1760 he founded the Austrian Council of State, consisting of six members, improved the financial management, and introduced various other governmental changes. In 1764 he was created a prince of the empire with the title of Count von Rittberg.

The paramount influence which Kaunitz wielded during the reign of Maria Theresa grew considerably less during the reign of her son, Joseph II. In the main, Joseph II and Kaunitz pursued the same ends, viz. Territorial expansion, increase of the central state authority and limitation of the authority of the nobility, entire subjection of the Church to the State, the supervision of the latter over the former even in the minutest ritual and disciplinary regulations, a better education of the common people, and more consideration for their legal rights. But, despite the unity of their aims, they had numerous disagreements, because each was too opinionated to give up his views in deference to those of the other. In addition, Kaunitz was extremely vain and eccentric. He spent hours preparing his elaborate toilet at which he was assisted by a host of servants, having each a particular duty to perform. He manifested a childish fear of contagious diseases and could not bear to hear the word death or plague mentioned in his presence. Emperor Joseph in a letter to his brother Leopold, written about two weeks before his death, says of Kaunitz: "Would you believe that I have not seen him for almost two years. Since the day on which I returned sick from the army I can no longer go to him, and he does not come to me for fear of contagion." Despite his many faults, Kaunitz always had Austria's welfare, as he understood it, at heart, and his long experience and cautiousness often put a wholesome restraint on the rash and impulsive disposition of Joseph II. He favoured the first Partition of Poland in 1772, was instrumental in obtaining Bukowina from the Turks in 1775, and, though unsuccessful in his intended annexation of Bavaria in 1778, he obtained for Austria at the Peace of Teschen in May, 1779, the so-called *Innviertel*, i. e. that part of the territory of Berghausen which lies between the Danube, the Inn, and the Salza.

In matters of religion Kaunitz was one of the foremost adherents of the intellectual movement known as the "Enlightenment" (*Aufklärung*). He even surpassed Joseph II in his endeavours to make the Church and its clergy mere tools in the hands of state officials. When Pius VI visited Vienna in 1782, Kaunitz treated him very rudely and advised that the clergy be forbidden to come to Vienna while the pontiff was visiting there. He also counselled Joseph II on this occasion to make no concessions to the pontiff in ecclesiastical affairs. He imbibed his deep hatred for the clergy as ambassador at Paris, where he had for some time Jean-Jacques Rousseau as private secretary. He was moreover a friend and great admirer of Voltaire and the French Encyclopedists, whose works had become his chief mental pabulum. His influence which was on the wane during the reign of Joseph II grew still less during the reign of Leopold II (1790-2). At the accession of Francis II in 1792 he resigned as chancellor.

MICHAEL OTT

Edward Kavanagh

Edward Kavanagh

American statesman and diplomat, born at Newcastle, Maine, 27 April, 1795; died there, 21 Jan., 1844.

His father, James Kavanagh, came to America from Ireland in 1780, settled in Maine, and became a prosperous merchant and shipowner. His mother, Sarah Jackson, was a native of Boston and a convert to the Catholic Faith. Their home was for many years a centre of hospitality for the missionary priests labouring in Maine. One of these, Father (afterwards Cardinal) Cheverus, was an intimate friend of the family.

Edward Kavanagh entered Georgetown College in 1810, and changed to St. Mary's Baltimore, in 1812. His classical studies were completely in Europe, where he acquired a useful familiarity with modern languages. Returning home, he devoted himself to his father's business, which had suffered severely in the War of 1812, and to the study of law. He was admitted to the Bar, and won esteem as a counsellor. Failing in an attempt to enter the diplomatic service, he turned to politics, was elected to the Maine Legislature in 1826, was secretary of the Senate in 1830, and in 1831, as commissioner, explored the northern frontier of the State and presented to the governor a valuable report on the subject. Elected to Congress in 1831, he served two terms. In 1835 he was named chargé d'affaires at Lisbon, Portugal, and ranked as chief American representative in that country. Though Portugal was in the throes of revolution and bankruptcy during the five years of his residence, Mr. Kavanagh settled all claims pending at his arrival, and negotiated a favourable commercial and navigation treaty. He resigned in 1841, and returning the Maine was elected to the State senate as its presiding officer. The boundary controversy was at fever heat, and he was chosen to be one of four commissioners to negotiate at Washington the preliminaries for the Webster-Ashburton Treaty. On the resignation of Governor Fairfield, Mr. Kavanagh succeeded to the office of governor which he held for nine months.

He suffered much from rheumatism during the latter years of his life. He died sustained by the sacraments of the Church of which he was a faithful and uncomprom-

ising member all his life. Though not eloquent, he was a convincing speaker and an accomplished scholar. Longfellow's story, "Kavanagh", is not founded on the Maine statesman's career. He is buried in the shadow of St. Patrick's church, Newcastle (Damariscotta Mills).

CHARLES W. COLLINS

Julia Kavanagh

Julia Kavanagh

Novelist and biographer, born 7 Jan., 1824, at Thurles, Ireland; died 28 October, 1877, at Nice, France. She was an only child. Her father, Morgan Kavanagh, a poet and philologist, was the author of some curious works on the source and science of languages. At an early age she accompanied her parents to London, but soon removed to France, where she received her education and remained till her twentieth year. This lengthy residence in France, with several other long visits later in life, gave her an insight into French life and character, which she portrayed most faithfully in many of her works. In 1844 she returned to London, and at once embraced literature as a profession. She began by writing tales and essays for the periodicals of the day. Her first book, "The Three Paths", a tale for children, appeared in 1847. It was followed by "Madeleine" (1848), a story founded on the life of a peasant girl of Auvergne. This gave her a literary reputation which was increased by her historical biographical works: "Women in France during the Eighteenth Century" (1850), "Women of Christianity Exemplary for Acts of Piety and Charity" (1852), "French Women of Letters" (1862), and the companion volume "English Women of Letters" (1862). As a biographer she shows great power and a fine sense of discrimination in portraying her characters, though the claims she makes for her heroines are at times somewhat exaggerated. It is, however, as a novelist, that she is best known. Her studies of French life and character, which are worked into almost all her stories, are excellent and show her at her best. Her plots, though not of great depth, are well developed and of sufficient action to hold the interest. "Her writing", remarked a contributor to the London *Athenæum* at the time of her death, "was quiet and simple in style, but pure and chaste, and characterized by the same high-toned thought and morality that was part of the author's own nature." She wrote about twenty novels, which have had a wide circulation in America and in England, and have been translated into French. The best known are "Madeleine" (1848), "Nathalie" (1851), "Daisy Burns" (1853), "Rachel Gray" (1855). About 1853 she made a prolonged tour of the Continent, and in 1858 published her experience under the title of "A Summer and Winter in the Two Sicilies". Her life was rather uneventful; a great part of her time was devoted to the care of her widowed mother, who was an

invalid. At the outbreak of the Franco-German War, Miss Kavanagh, who was living in Paris with her mother, moved to Rouen and thence to Nice, where she died in her fifty-fourth year. After her death appeared a collection of short tales bearing the appropriate title: "Forget-me-nots" (1878).

READ, *Cabinet of Irish Literature* (London, 1891); *Academy* (10 Nov., 1877, London); *Athenæum* (17 Nov., 1877, London); *Irish Monthly*, VI; preface to *Forget-me-nots* (1878).

MATTHEW J. FLAHERTY

Joseph Kehrein

Joseph Kehrein

Educator, philologist, and historian of German literature, born at Heidesheim, near Mainz, 20 October, 1808; died at Montabaur, Hesse-Nassau, 25 March, 1876. In 1823 he entered the gymnasium in connection with the diocesan seminary at Mainz, and after its suppression in 1829 he continued his classical studies at the state gymnasium of the same place, where he graduated in 1831. After studying philology at the University of Giessen from 1831 to 1834, he taught at the gymnasium of Darmstadt, 1835-1837, at that of Mainz, 1837-1845, was pro-rector at the newly founded gymnasium of Hadamar in Nassau, 1845-1846, professor at the same place, 1846-1855, director of the Catholic teachers' seminary at Montabaur, 1855-1876, and at the same time director of the *Realschule* at the same place, 1855-1866. He is the author of numerous works, chiefly on the German language, on the history of German literature, and on pedagogy. The best known among them are: "Die dramatische Poesie der Deutschen" (2 vols., Leipzig, 1840); "Grammatik der neuhsch-deutschen Sprache" (2 vols., Leipzig, 1842-51); *Geschichte der katholischen Kanzeiberedsamkeit der Deutschen* (w vols., Ratisbon, 1843); "Die weltliche Beredsamkeit der Deutschen" (Mainz, 1846); "Grammatik der deutschen Sprache des 15-17. Jahrhunderts" (5 vols., Leipzig, 1854-56; 2nd ed., 1863); "Biographisch-kritisches Lexikon der katholicsch-deutschen Dichter, Volks- und Jugendschriftsteller des 19. Jahrhundertets" (2 vols., Wurzburg, 1868-71); "Handbuch der Erziehung und des Unterrichts" (Paderborn, 1876; 12 ed., 1906); "Ueberblick der Geschichte der Erziehung" (Paderborn, 1873; 11th ed., 1899). He also edited "Katholische Kirchenlieder aus den ältesten deutschen Gesangbüchern" (3 vols., Wurzburg, 1859-65); "Lateinische Sequenzen des Mittelalters" (Mainz, 1873).

MICHAEL OTT

Jacob Keller

Jacob Keller

Controversialist, born at Sackingen, Baden, Germany, in 1568; died at Munich, Bavaria, 23 February, 1631. After entering the Society of Jesus in 1589 and completing his studies, he taught the classics at Freiburg and was professor of philosophy and of moral and dogmatic theology at Ingolstadt. He was appointed rector of the college of Ratisbon in 1605, and of the college of Munich in 1607, which post he held until 1623. In 1628 he was reappointed to the rectorship of Munich, and was still holding the office when a stroke of apoplexy ended his life. Besides his literary and scholastic attainments (for he was regarded as a genius), he possessed uncommon executive ability, and in spite of his extreme humility was consulted not only by his religious superiors, but also by Maximilian I, Elector of Bavaria, who often sought his advice and entrusted to his care affairs of moment, which he discharged with much success.

His principal works are: "Tyrannicidium" (Munich, 1611) and "Catholisch Pabsttumb" (Munich, 1614). The former, which appeared both in German and Latin, was an answer to certain calumnies printed by a Calvinist with reference to the teaching of the Society of Jesus on the subject of Tyrannicide. Father Keller showed that the Jesuit teaching was no other than that of the greatest theologians, both Catholic and Protestant. The work on the papacy was a reply to aspersions cast on the Holy See by Jacob Heilbrunner, and is a veritable treasure-house of answers to the objections of Protestants. It was followed by a public debate between Keller and Heilbrunner, in which the latter was completely silenced. Keller published four other works which were the last word on the subject, and left his adversary utterly defeated. Among his other works are: "Ludovicus IV Imperator defensus contra Bzovium" (Munster, 1618), a work of real historical value; "Vita R.P. Petri Canisii". Of local rather than general interest are a number of other polemical writings, e.g. "Litura seu castigatio Cancellariae Hispanicae a Ludovico Camerario, Excancellario Bohemico, Exconciliario Heidelbergensii . . . instructae"; "An der theil Anhaltischer Cancellay"; "Tubus Galilaeus"; "Rhabarbarum domandae bili quam in apologia sua proritavit Ludov. Camerarius propinatum". He published a large number of other writings, sometimes under his own, sometimes under an assumed name, mostly controversial.

J.H. FISHER

Lorenz Kellner

Lorenz Kellner

Educationist, born at Kalteneber in the district of Eichsfeld, 29 January, 1811; died at Trier, 18 August, 1892. He was the son of Heinrich Kellner who had been a pupil of Pestalozzi at Yverdon and had introduced Pestalozzi's methods at the normal school he conducted, the first of its kind in the Catholic district of Eichsfeld. Out of these private courses for the training of elementary school-teachers developed the still-existing seminary for teachers at Heiligenstadt. Lorenz Kellner graduated at the Gymnasium Josephinum at Hildesheim, and then studied with great success at the evangelical seminary for teachers at Magdeburg. After being a teacher at the Catholic elementary school at Erfurt for two years, he was made rector of the school; in both positions he showed great talent for teaching and a genuine love of children. In 1836 his father's normal school was enlarged into a seminary for teachers, of which the elder Kellner remained the head while Lorenz was made his only assistant. In 1848 von Eichhorn, the Prussian minister of worship and education, called Lorenz to Marienwerder in West Prussia as member of the government district council and of the school-board. After labouring at Marienwerder for seven years Kellner was summoned to fill the same offices at Trier. As there were at this date no institutions for the training of teachers in Trier, Kellner founded several seminaries both for male and female teachers during the twenty-nine years of his official activity here. In his chief work, "Praktischer Lehrgang für den deutschen Unterricht" (1837-40), the teaching of grammar was systematically connected with the reading-book. This was, for that period, a very important advance when contrasted with the current methods of grammatical instruction. In 1850 appeared his best-known work, "Zur Pädagogik der Schule und des Hauses. Aphorismen", which was translated into several languages. It contains altogether 178 essays which cover the entire field of training and teaching. His "Skizzen und Bilder aus der Erziehungsgeschichte" (3 vols., 1862) was the first and also the best treatment of the history of pedagogics by a Catholic author. In 1863 the Academy of Münster in Westphalia made Kellner Doctor of Philosophy *honoris causa*, in recognition of his services on behalf of the German language and of pedagogics. Kellner's "Kurze Geschichte der Erziehung und des Unterrichts" (1877) is a book of practical suggestions for teachers; his "Volksschulkunde" was a theoretical and practical guide for Catholic teachers of both sexes, school inspectors, and seminaries. His "Lebensblätter, Erinnerungen aus der Schulwelt" (1891) is a work of great interest. After his death was published "Lose Blätter, Pädagog. Zeitbetrachtungen und Ratschläge von Kellner" (1897).

KARL HOEBER

Book of Kells

Book of Kells

An Irish manuscript containing the Four Gospels, a fragment of Hebrew names, and the Eusebian canons, known also as the "Book of Columba", probably because it was written in the monastery of Iona to honour the saint. It is likely that it is to this book that the entry in the "Annals of Ulster" under the year 1006 refers, recording that in that year the "Gospel of Columba" was stolen. According to tradition, the book is a relic from the time of Columba (d. 597) and even the work of his hands, but, on palæographic grounds and judging by the character of the ornamentation, this tradition cannot be sustained, and the date of the composition of the book can hardly be placed earlier than the end of the seventh or beginning of the eighth century. This must be the book which the Welshman, Geraldus Cambrensis, saw at Kildare in the last quarter of the twelfth century and which he describes in glowing terms (*Topogr. Hibern.*, II, xxxviii). We next hear of it at the cathedral of Kells (Irish *Cenannus*) in Meath, a foundation of Columba's, where it remained for a long time, or until the year 1541. In the seventeenth century Archbishop Ussher presented it to Trinity College, Dublin, where it is the most precious manuscript (A. I. 6) in the college library and by far the choicest relic of Irish art that has been preserved. In it is to be found every variety of design typical of Irish art at its best.

Some small portions at the beginning and end of the manuscript have been lost, but otherwise it is in a very good state of preservation. It was apparently left unfinished, since some of the ornaments remain only in outline. It is written in part black, red, purple or yellow ink, and it has been thought that the hands of two scribes, neither of whom is known to us by name, are discernible in the writing and illumination of the manuscript. The most characteristic ornaments of the Book of Kells, as of other illuminated Irish manuscripts of the period, are the closely coiled spirals connected with each other by a number of curves and terminating in the so-called "trumpet pattern". Almost equally characteristic are the zoomorphic interlacements, coloured representations of fanciful beings, or of men, animals, birds, horses, dogs, and grotesque, gargoyle-like human figures, twisted and hooked together in intricate detail. Other frequently occurring designs are a system of geometrical weaving of ribbons plaited and knotted together, and a simpler ornamentation by means of red dotted lines. The versatility and inventive genius of the illustrator surpasses all belief. Lines diverge and

converge in endless succession, and the most intricate figures, in lavish abundance and with astounding variety of ornament, are combined and woven into one harmonious design. In spite of the extent of the work and its thousands of exquisite initials and terminals, there is not a single pattern or combination that can be said to be a copy of another. The artist shows a wonderful technique in designing and combining various emblems, the cross, vine, dragon, fish, and serpent. The drawing is perfection itself. It has been examined under a powerful magnifying glass for hours at a time and found to be, even in the most minute and complicated figures, without a single false or irregular line. Some of the most accomplished of modern draughtsmen have attempted to copy its elaborate designs, but, such is the delicacy of the execution, that they had to abandon the task as hopeless. In a space of one inch square were counted no less than 158 interlacings of white ribbon with a black border on either side. On the other hand, the pictures of the personages delineated are feeble and primitive and show but a limited knowledge of the human figure and its relative proportions.

No words can describe the beauty and the extreme splendour of the richly coloured initial letters, which are more profuse in the "Book of Kells" than in any other manuscript. The only thing to which they can be compared is a bed of many coloured crocuses and tulips or the very finest stained glass window, which they equal in beauty of colouring and rival in delicacy of ornament and drawing. The artist possessed a wonderful knowledge of the proportion of colour and the distribution of his material -- sienna, purple, lilac, red, pink, green, yellow, the colours most often used -- and he managed the shading and tinting of the letters with consummate taste and skill. It is remarkable that there is no trace of the use of silver or gold on the vellum. Sometimes the colours are laid on in thick layers to give the appearance of enamel, and are here and there as bright and soft and lustrous as when put on fresh more than twelve hundred years ago. Even the best photographic and colour reproductions give but a faint idea of the beauty of the original. Especially worthy of notice is the series of illuminated miniatures, including pictorial representations of the Evangelists and their symbols, the Blessed Virgin and the Divine Child, the temptation of Jesus, and Jesus seized by the Jews. These pictures reach their culminating point in what is, in some respects, the most marvellous example of workmanship that the world has ever produced, namely the full page monogram XPI which occurs in the text of the Gospel of St. Matthew. It is no wonder that it was for a long time believed that the "Book of Kells" could have been written only by angels.

JOSEPH DUNN

School of Kells

School of Kells

Kells (in Gaelic *Cenannus*) was the chief of the Irish Columban monasteries. It was founded most probably in 554, that is nine years before Columba founded Iona, and during the saint's life was eclipsed by the greater fame of the insular monastery. Kells still contains several ancient monuments which tradition closely connects with Columba's residence there. Of these the most interesting is "Columba's House", a tall high-pitched building, of which the ground floor formed an oratory, while thecroft between the convex arching of the oratory and the roof of the building was the chamber or sleeping compartment of the saint. There are also two fine crosses dating probably from the ninth century, when Kells held the *principatus* of all the Columban monasteries both in Erin and Alba -- one stands in the market-place and the other in the churchyard. The latter is a finely sculptured cross, having on the plinth the inscription *Patricii et Columbae* [*crux*], which would seem to imply that it was intended to commemorate the memory of Patrick, who founded the original church of Kells, and Columba, who founded the monastery. There is also a fine round tower, still ninety feet high, built doubtless during the Danish wars to protect the church and monastery. The "Book of Kells", called also the Great Gospel of Columcille, which legend attributed to the pen of Columcille himself, was preserved in Kells down to Usher's time. It was stolen in 1006, when the gold was stripped off its cover, but the book and case were afterwards found in a bog. It was regarded as the "chief relic of the western world", and Professor Westwood of Oxford declared that "it is unquestionably the most elaborately executed manuscript of so early a date now in existence." It is preserved at present in Trinity College, Dublin.

Kells and Iona were always closely connected. Shortly after the burning of Iona by the Danes in 802, its abbot fortunately got "a free grant of Kells without a battle" -- for it had originally belonged to Columcille. Thereupon a "new religious city" -- the old one being probably in ruins -- was rebuilt in Kells; and the Abbot Cellach of Iona transferred his residence and insular primacy to Kells, which henceforward became the acknowledged head of the Columban houses. The abbot also carried with him the shrine of Columba, which, however, more than once crossed and re-crossed the sea throughout the ninth century. During this and the two following centuries Kells became a great school of learning and art, and continued to flourish in spite of the frequent ravages of the Danes. The celebrated *Cathach*, the battle-standard of the O'Donnells, was preserved in the monastery and enshrined there in a beautifully wrought casket. It contained a psaltery said to have been written by the hand of Columba himself. Mac

Robartaigh, *Comharb* of Kells, had its marvellous cover made in his own house. His family belonged to Tirhugh in County Donegal, and gave many abbots and sages and scholars at this period to the school of Kells. The most famous of them all was the renowned Marianus Scotus -- an Irish Muredach Mac Robartaigh -- a celebrated scribe and commentator on Scripture, to be carefully distinguished from his namesake, Marianus Scotus, the chronicler. Leaving his beloved Kells he journeyed all the way to Ratisbon, a pilgrim for Christ, and there founded for his countrymen in the land of the stranger the celebrated Monastery of St. James. He himself unwearingly copied the Scriptures, and is described by Aventinus in his "Annals of Bavaria" as "a distinguished poet and theologian, second to no man of his time". The poems are lost, but the commentaries survive though still unpublished.

They include a commentary on the Psalms, which was considered so valuable that it was not allowed outside the walls of the monastic library without a valuable deposit being left to secure its safe return. There is also extant in the Cotton collection an unpublished codex containing the treatise of Marianus Scotus consisting of "Extracts from the Writings of Various Doctors on the Gospel". His most famous work, however, was a commentary on St. Paul's Epistles, with marginal and interlinear notes. It is still unpublished amongst the treasures of the Imperial Library of Vienna, and is especially valuable because it contains many entries in the pure Middle Gaelic of the eleventh century, written by a man who was at once an accomplished scribe and most excellent Irish scholar. This learned work shows that Marianus was acquainted with the writings of nearly all the Latin Fathers of the fourth and fifth centuries. It was completed, he tells us himself, on Friday, the sixteenth day before the Kalends of June, 1079. The devoted scribe and commentator, who is commonly and justly styled the Blessed Marianus Scotus, lived for ten years more, and after his death was universally regarded as a saint. He was, after Adamnan, Abbot of Hy, justly esteemed as the greatest glory of the Columban schools. His namesake, the chronicler, died some six years before him.

JOHN HEALY

Ven. John Kemble

Ven. John Kemble

Martyr, b. at Rhydycar Farm, St. Weonard's, Herefordshire, 1599; d. at Widemarsh Common, Hereford, 22 August, 1679; son of John Kemble, formerly of Kemble, Wiltshire, afterwards of Llangarren, and of Urchinfield (now part of the parish of Hardwicke), and Anne, daughter of John Morgan, of The Waen, Skenfrith, Monmouthshire. His uncle, George Kemble, of Pembridge Castle, Welsh Newton, was the father

of Captain Richard Kemble, who saved Charles II at the battle of Worcester. Ordained priest at Douai College, 23 February, 1625, he was sent on the mission 4 June, and in his old age lived with his nephew at Pembridge Castle. Arrested there by Captain John Scudamore of Kentchurch, he was lodged in Hereford Gaol in November, 1678, and condemned under 27 Eliz. c. 2 at the end of March following. Ordered to London with Father Charles Baker, he was lodged in Newgate and interviewed by Oates, Bedloe, and Dugdale. Sent back to Hereford, the aged priest spent three more months in gaol. Before leaving for his execution he smoked a pipe and drank a cup of sack with the under-sheriff, this giving rise to the Herefordshire expressions "Kemble pipe", and "Kemble cup", meaning a parting pipe or cup. Sir John Hawkins in a note to "The Compleat Angler" turns Kemble into a Protestant in Mary's reign. One of the martyr's hands is preserved at St. Francis Xavier's, Hereford. His body rests in Welsh Newton churchyard.

Bromage, Ven. Fr. John Kemble (London. 1902); Catholic Record Society's Publications (London. privately printed 1905-), II. 295. 297; Gillow, *Bibl. Dict. Eng. Cath.*, s.v.; Archbold in *Dict. Nat. Biog.*, s.v.; Challoner, *Memoirs of the Missionary Priests* (Leamington s.d.), II, 411; Walton, *Compleat Angler* (London, 1808), 394.

JOHN B. WAINEWRIGHT

John Kemp

John Kemp

Cardinal, Archbishop of Canterbury, and Chancellor of England; b. at Wye, Kent, about 1380; d. at Lambeth, 22 March, 1454. He was the son of Thomas Kemp of Ollantigh, near Ashford, and Beatrice Lewknor, and was educated at Merton College, Oxford. Having become doctor of laws, he practised as an ecclesiastical lawyer with such success that in 1415 he was made dean of the Court of Arches and vicar-general to the Archbishop of Canterbury. King Henry V also utilized his diplomatic talents in several embassies. Appointed Bishop of Rochester by papal provision, 26 June, 1419, he was consecrated in the following December. In 1421 he was translated to Chichester, and eight months later to London, by provision of Martin V. On the death of King Henry V, whom he had served as Chancellor of Normandy, he was made a member of the new council, in which capacity he supported Cardinal Beaufort against Humphrey, Duke of Gloucester. In 1426 he was made first Chancellor and then Archbishop of York.

His political differences with Gloucester led to his resigning the chancellorship in 1432, but he continued to be active in public life as a supporter of the peace party, who wished to end the long war with France. In 1433 he was the head of the important but

fruitless embassy to the congress of Arras, when a settlement was vainly attempted under the auspices of the papal legates. In 1439 he was created cardinal by Eugene IV, his title being Sancta Balbina. After the deaths of his opponent Gloucester and his friend Beaufort, he set himself to resist the power of the Duke of Suffolk, and in 1450 he was again chancellor. In this capacity he put down the Kentish rebellion, and amid the growing likelihood of civil war remained the mainstay of the king's party against the Yorkists. In 1452 Nicholas V transferred him from York to Canterbury, giving him the pallium on 24 Sept. The same pope made him a cardinal bishop by dividing the See of Porto from that of Santa Rufina and making Kemp bishop of the last-named diocese. His last days were agitated by the tumultuous proceedings of the London citizens, who, supported by the Yorkists, were threatening him with violence, when the end came. He lies buried in Canterbury cathedral. More statesman than bishop, he was accused with reason of neglecting his dioceses, but his private life was distinguished by wisdom, learning and uprightness.

EDWIN BURTON

Vicariate Apostolic of Kenia

Vicariate Apostolic of Kenia

Coextensive with the civil province of Kenia (Kenya) in British East Africa, to which the station of Limuru is added. It extends east as far as the Rivers Tana and Seca, west to the Seca, south to the mountains of Aberdare and the River Guaso-Ugiro, while its northern limits are as yet indeterminate. Originally part of the Vicariate Apostolic of Northern Zanzibar, it was first entered by several priests of the Institute Consolata of Turin. In September, 1905, the Sacred Congregation of the Propaganda erected it into an independent mission, and in 1909 the mission was in turn created a vicariate Apostolic. Its superior, Father Philippus Perlo, was made titular Bishop of Maronia and the first head of the new vicariate. The climate of Kenia is, for the most part, temperate and healthy. The language of the natives is chiefly Kikuyu and Kiswaili. The population is estimated at between 2,000,000 and 3,000,000, almost entirely savage, and given over to various forms of fetichism and nature-worship. Conversions, however, are being gradually effected. The vicariate includes 17 regular priests of the Institute Consolata; 10 European catechists; 80 chapels -- the more important of which are located at Tusu-Kasongori, Fort Hall, Limuru, Kekondi, Niere, Mogoiri, and Karema; schools at the different stations; 1 orphanage; the Order of the Institute Consolata with

8 houses and 27 religious, and the nuns of St. Vincent Cottolengo with 6 houses and 31 sisters.

STANLEY J. QUINN

James Kennedy

James Kennedy

Bishop of St. Andrews, Scotland. Born about 1406; died 10 May, 1466. Of the ancient house of Kennedy of Denure, he was a son of Lady Mary, daughter of King Robert III, and was therefore a cousin of James II, then reigning in Scotland. After studying on the Continent, he was appointed Bishop of Dunkeld in 1438, and Abbot of Scone soon afterwards, and in 1440 he succeeded Henry Wardlaw as Bishop of St Andrews. Appointed chancellor in 1444, he showed himself a vigorous reformer of the civil and ecclesiastical abuses rampant in Scotland, and consequently incurred the enmity of many of the nobles. Kennedy soon resigned the chancellorship, finding it incompatible with his ecclesiastical duties, to which he devoted himself with the greatest assiduity. His zeal for learning was shown by his foundation and munificent endowment, in 1450, of St. Salvator's College, St. Andrews, with the sanction and approval of Nicholas V and Pius II. He introduced the Franciscan Observants into St. Andrews, in 1458; and he also built a vessel -- described by his contemporaries as "a vast ship of great burden" -- for trading purposes, called the St. Salvator, which remained the property of the see till 1472, when it was wrecked. At the death of James II, in 1460, Kennedy was chosen a regent of the kingdom, and exercised the office until his death five years later. The remains of his splendid tomb are still to be seen in the ruined chapel of St. Salvator's. Kennedy was one of the most learned, wise, and pious prelates of the ancient Scottish Church.

D.O. HUNTER-BLAIR

Kenosis

Kenosis

A term derived from the discussion as to the real meaning of [Phil. 2:6](#) sqq.: "Who being in the form of God, thought it not robbery to be equal with God: But emptied [*ekenosen*] himself, taking the form of a servant, being made in the likeness of men, and in habit found as man."

Protestant opinions

The early Reformers, not satisfied with the teaching of Catholic theology on this point, professed to a deeper meaning in St. Paul's words, but Luther and Melancthon failed in their speculations. John Brenz (d. 10 September, 1570), of Tübingen, maintained that as the Word assumed Christ's human nature, so His human nature not only possessed the Divinity, but also had the power to make use of the Divinity, though it freely abstained from such a use. Chemnitz differed from this view. He denied that Jesus Christ possessed the Divinity in such a way as to have a right to its use. The kenosis, or the exinanition, of His Divine attributes was, therefore, a free act of Christ, according to Brenz; it was the connatural consequence of the Incarnation, according to Chemnitz.

Among modern Protestants the following opinions have been the most prevalent:

- Thomasius, Delitzsch, and Kahnis regard the Incarnation as a self-emptying of the Divine manner of existence, as a self-limitation of the Word's omniscience, omnipresence, etc.
- Gess, Reuss, and Godet contend that the Incarnation implies a real depotentiation of the Word; the Word became, rather than assumed, the human soul of Christ.
- Ebrard holds that the Divine properties in Christ appeared under the Kantian time-form appropriate to man; his kenosis consists in an exchange of the eternal for a time-form of existence.
- Martensen and perhaps Hutton distinguish a double life of the Word: In the Man-Christ they see a kenosis and a real depotentiation of the Word; in the world the purely Divine Word carries the work of mediator and revealer. According to Godet, and probably also Gore, the Word in His kenosis strips Himself even of His immutable holiness, His infinite love, and His personal consciousness, so as to enter into a human development similar to ours.

Catholic teaching

According to Catholic theology, the abasement of the Word consists in the assumption of humanity and the simultaneous occultation of the Divinity. Christ's abasement is seen first in His subjecting Himself to the laws of human birth and growth and to the lowliness of fallen human nature. His likeness, in His abasement, to the fallen nature does not compromise the actual loss of justice and sanctity, but only the pains and penalties attached to the loss. These fall partly on the body, partly on the soul, and consist in liability to suffering from internal and external causes.

As to the body, Christ's dignity excludes some bodily pains and states. God's all-preserving power inhabiting the body of Jesus did not allow any corruption; it also prevented disease or the beginning of corruption. Christ's holiness was not compatible with decomposition after death, which is the image of the destroying power of sin. In fact, Christ had the right to be free from all bodily pain, and His human will had the power to remove or suspend the action of the causes of pain. But He freely subjected Himself to most of the pains resulting from bodily exertion and adverse external influences, e.g. fatigue, hunger, wounds, etc. As these pains had their sufficient reason in the nature of Christ's body, they were natural to Him.

Christ retained in Him also the weaknesses of the soul, the passions of His rational and sensitive appetites, but with the following restrictions: (a) Inordinate and sinful motions are incompatible with Christ's holiness. Only morally blameless passions and affections, e.g. fear, sadness, the share of the soul in the sufferings of the body, were compatible with His Divinity and His spiritual perfection. (b) The origin, intensity, and duration of even these emotions were subject to Christ's free choice. Besides, He could prevent their disturbing the actions of His soul and His peace of mind.

To complete His abasement, Christ was subject to His Mother and St. Joseph, to the laws of the State and the positive laws of God; He shared the hardships and privations of the poor and the lowly. (*See COMMUNICATO IDIOMATUM.*)

A.J. MAAS

Kenraghty

Kenraghty

(KIMRACHA, KINRECHTIN, or MAKENRACHTUS; in Irish MACIONNRACHTAIGH, anglicized HANRATTY and ENRIGHT).

Irish priest, d. 30 April, 1585, at Clonmel, Co. Tipperary. He was the son of a silversmith at Kilmallock, embraced the ecclesiastical state, studied abroad, and graduated bachelor in theology. Returning to Ireland, he became chaplain to Gerald, sixteenth Earl of Desmond, and shared the fortunes of his patron's struggle against Queen Elizabeth. In September, 1583, a fugitive with the earl, he was surprised on Sliabh Luachra by Lord Roche's gallowglasses, and handed over to the Earl of Ormond. By Ormond's command he was chained to one Patrick Grant, and sent to prison at Clonmel. Here he lay in irons, exhorting, instructing, and hearing confessions at his prison grate until April, 1585. His jailer was then bribed by Victor White, a leading townsman, to release the priest for one night to say Mass and administer the Paschal Communion in White's house on Passion Sunday. The jailer secretly warned the President of Munster to take this opportunity of apprehending most of the neighbouring recusants at Mass. In the morning an armed force surrounded the house, arrested White and others seized the sacred vessels, and sought the priest everywhere. He had been hidden under straw at the first alarm, and, though wounded when the heap was probed, ultimately escaped to the woods. Learning, however, that White's life could not be saved but by his own surrender, he gave himself up, and was at once tried by martial law. Pardon and preferment were offered him for conforming, but he resolutely maintained the Catholic Faith and the pope's authority, and was executed as a traitor. His head was set up in the market-place, and his body, purchased from the soldiers, was buried behind the high altar of the Franciscan convent. He is one of the Irish martyrs whose cause of canonization is now in progress.

CHARLES MCNEILL

Francis and Peter Kenrick

Francis Patrick and Peter Richard Kenrick

Archbishops respectively of Baltimore, Maryland, and of St. Louis, Missouri. They were sons of Thomas Kenrick and his wife Jane, and were born in the older part of the city of Dublin, Ireland, the first-named on 3 December, 1797, and the second on 17 August, 1806. An uncle, Father Richard Kenrick was for several years parish priest of St. Nicholas of Myra in the same city, and he cultivated carefully the quality of piety which he observed at an early age in both children.

I. FRANCIS PATRICK KENRICK

Francis Patrick was sent by his uncle to a good classical school, and at the age of eighteen was selected as one of those who were to go to Rome to study for the priesthood. Here he became deeply impressed with the gentle bearing of Pius VII, who had just then been restored to his capital after long imprisonment by Napoleon Bonaparte, and the lesson it taught him bore fruit many years afterwards when he was called on to deal with the onslaughts on Catholics and their Church in the United States in the years of the Nativist and Know-nothing uprisings. His progress in his clerical studies was rapid, his sanctity conspicuous -- so much so as to mark him out for early distinction. He confined himself to the study of his class-books, lectures, and the study of the Scriptures, and worked out in his own mind not a few weighty problems. He soon acquired a familiarity with the patristic writings and the Sacred Text that enabled him later on to give the Church in the United States valuable treatises on theological and Biblical literature. He consulted no translations, but took the Hebrew text or the Greek, and pondered on its significance in the light of his own reason and erudition. The rector of Propaganda College Cardinal Litta, had no hesitation in selecting him despite his youth, when a call came from Bishop Flaget for priests for the American field. He was chosen for the chair of theology at Bardstown Seminary, Kentucky. This post he held for nine years at the same time teaching Greek and history in the College of St. Joseph in the same state, and giving in addition professorial help in every educational institution in the state. He also did much valuable work in the missionary field, and engaged in controversy in the public press with some aggressive polemicists of the Episcopal and Presbyterian communions. He made many converts at that time, and in 1826-7 had fifty to his credit, as well as a record of twelve hundred confirmations and six thousand communicants. His fame as a preacher was widespread, and his manner most winning.

In 1829 he attended the Provincial Council of Baltimore as theologian to Bishop Flaget, and was appointed secretary to the assembly. There, among the other weighty subjects, had to be considered the distracted state of the Diocese of Philadelphia, then labouring under the troubles begotten of the Hogan schism. Hogan was an excommunicated priest, who persisted in celebrating Mass and administering the sacraments despite the interdict, and had a considerable following in the city. Bishop Conwell had by this time become enfeebled and nearly blind, and Rev. William Matthews of Washington had been appointed vicar-general to assist him. Before the council rose it had named Father Kenrick as coadjutor bishop and forwarded the nomination to the Holy See. It was soon confirmed, Doctor Kenrick's title being Bishop of Arath *in partibus*. He was consecrated in Bardstown by Bishop Flaget, assisted by Bishops England, Conwell, David, and Fenwick, on 6 June 1830, being then only thirty-four

years old. A quarrel with the trustees of St. Mary's broke out immediately on his arrival, resulting in an interdict being placed upon the church by the new bishop. This brought the trustees to their senses, and they gave up the contest for the control of the funds - the power by means of which they had been to browbeat the preceding ordinaries. Bishop Kenrick soon obtained the passage of a law to prevent the recurrence of such conflicts, by having the bishop's name substituted for those of the trustees in all bequests for the Church. His first thought, after this trouble was over, was the erection of a seminary for the training of young men for the priesthood, the humble quarters in which he began the experiment eventually being succeeded by the present seminary of St. Charles Borromeo at Overbrook.

A terrible outbreak of cholera took place in Philadelphia soon after the bishop's arrival, and he gained the gratitude of the authorities and the people at large for his exertions in the mitigation of the pest. He sent the Sisters of Charity to attend the stricken, and gave the parochial residence of St. Augustine's as a temporary hospital; the local priests, at the same time, went about fearlessly among the stricken, ministering to their spiritual comforts. For these services he was voted public thanks by the mayor and councils of the city. To the Sisters of Charity was tendered a service of plate by the grateful authorities, but this offer was promptly and politely declined by those ladies. Soon after this episode Bishop Kenrick set about the utilization of the press for the spread of Catholic doctrine. He started the "Catholic Herald" placing the paper under the direction of the Reverend John Hughes, afterwards Archbishop of New York. He also began the erection of the Cathedral of St. John the Evangelist to replace St. Mary's, which had been so fruitful a source of trouble to him and his predecessor. Graver trouble soon started up in the form of the anti-Catholic Nativist outbreak of 1844. Furious mobs, maddened by inflammatory harangues about the Bible and the public schools, started out in Philadelphia, as in Boston and other cities, to attack churches and convents. They burned St. Augustine's in Philadelphia and attacked St. Michael's and St. John's, but were driven off by the military. They burned many houses in Kensington, the Catholic district, and killed many unoffending people, but were dispersed at length by the soldiery, leaving several of their number dead.

Bishop Kenrick, during this reign of terror, did everything he could to stem the rioting. He ordered the doors of all the churches to be closed and cessation of Divine worship as a protest against the supineness of the authorities, the clergy went about in ordinary civil attire, and the sacred vessels and vestments were taken from the churches to places of security with private families. These prudent measures had the effect of restoring a state of peace to the city. The Diocese of Philadelphia had earlier included Pittsburg in a large part of New Jersey, and in 1843 it was divided, the Rev. Michael O'Connor being consecrated Bishop of Pittsburg in August of that year by

Cardinal Fransoni at St. Agatha's in Rome. This step proved a great relief to Bishop Kenrick, upon whom the care of his vast diocese and its arduous visitations at a period of primitive crudeness in travelling and accommodation, were beginning to leave a deep mark. In 1845 he visited Rome for the first time since his consecration and was received most graciously by the pope.

In August, 1851, Bishop Kenrick was transferred to Baltimore as successor to Archbishop Eccleston, who had just died. Moreover he received from the Holy See the dignity of Apostolic delegate, and in this capacity he convened and presided over the First Plenary Council of Baltimore in 1852. One of the results of that important gathering was the establishment of branches of the Society for the Propagation of the Faith. It was Archbishop Kenrick also who in 1853 introduced the Forty Hours' devotion into the United States. In 1854 he was called upon by the Holy Father to collect and forward to him the respective opinions of the American bishops on the doctrine of the Immaculate Conception. The latter part of the same year found him back in Rome as a participant in the ceremonies attendant on the proclamation of that dogma.

A fresh outbreak of anti-Catholic fury took place soon after the archbishop's return, occasioned by the arrival of Monsignor Bedini as papal nuncio, and the inflammatory and lying speeches of the ex-priest Alessandro Gavazzi, on the nuncio's action while in Bologna during the rising against Austria. Many churches and convents were burned as in the previous outbreak, and many lives were lost in New England and Kentucky, in Cincinnati and other cities. But no religious disturbances occurred in Maryland to perturb the archbishop's closing years. The Civil War, however, soon came to rend his heart, and he died on the morning after the battle of Gettysburg (8 July, 1863), his end being hastened, it was believed, by rumours of the terrible slaughter that went on not far from his residence. When Bishop Kenrick went to Philadelphia in 1830 there were only four churches in the city and one in the suburbs, and ten priests, when he left at in 1857, the diocese contained 94 churches and many religious institutions, and was the home of 101 priests and 46 seminarians, besides numerous religious orders. The chief literary works of Archbishop Kenrick were a new translation of the Bible, with a commentary; a "Moral and Dogmatic Theology"; a "Commentary on the Book of Job", "The Primacy of Peter", and letters to the Protestant bishops of the United States on Christian unity.

I. PETER RICHARD KENRICK

Peter Richard had to work closely in the scribes office of his father after the latter's death in order to help to maintain his mother and himself, as well as carry on the business, but was enabled by his own industry and his uncle's help to enter Maynooth College at the age of twenty-one. Previous to his entry he had been tolerably well trained in Latin and other essentials by Father Richard, while his taste for secular

literature had been acquired through associations with the unfortunate poet and *littérateur*, James Clarence Mangan, who had for several years worked beside him as a clerk at the scrivener's desk. After five years' assiduous study he was ordained to the priesthood by Archbishop Murray of Dublin, and, on the death of his mother, after a few months of local missionary work, left for the United States on the invitation of his brother and took up work with him in Philadelphia. He was given the post of president of the seminary as well as that of rector of the cathedral and vicar-general of the diocese. This was in the latter part of 1833. During his seven years of missionary work with his brother he produced several works which built up his fame as a theologian, as "Validity of Anglican Ordinations examined" (Philadelphia, 1841), "New Month of Mary", and "History of the Holy House of Loretto" in 1840 he left for Rome, with the idea of entering the Jesuit Order, but was dissuaded from carrying out his intention by the superior in Rome. Bishop Rosati met the young priest there, and requested the Holy See to give him to the See of St. Louis as his coadjutor, so pleased was he with his character and qualities. The Holy See assented, and both returned from Rome to have the ceremony of consecration performed in the United States. This was done in Philadelphia, Bishop Rosati officiating and the new prelate's brother and Bishop Lefevre of Detroit assisting, while Bishop England delivered the consecration.

The new bishop was given the title of Drasa, and had the right of succession in St. Louis. Bishop Rosati died a short time afterwards on a special mission in Haiti, and the care of the diocese devolved upon his young coadjutor at a much earlier period than either could have anticipated. It was no sinecure, for the financial affairs of the Church in St. Louis were in a deplorable condition. There was a very heavy debt on the cathedral, and he found the Catholics of the diocese by no means anxious to remove it. The bishop then saw that he must either resign or get other means of raising funds, and he took the bold course of getting into the real-estate business. He was most successful. A local gentleman named Thornton made a bequest of 300,000 dollars to the Church, others deposited their money with the bishop; he made fortunate investments in real estate; and, when values generally declined on the outbreak of the Civil War, he paid all his depositors in gold. The St. Louis diocese was enormous in extent at that time, as it embraced the whole of the States of Missouri and Arkansas, and half of Illinois, the task of visitation was one of immense toil, but the new bishop did not shrink from it. He had for helper and companion Rev. Thomas Cusack, with whom he had often to ride hundreds of miles on horseback, and sleep at night time in a log cabin or boarded hut. The paucity of churches in the diocese he also found a great drawback, the lack of clergy was another. He soon obtained much help from the Lazarists and Jesuits, as well as from the German population. The Visitation nuns and Sisters of St. Joseph, as well as the Sisters of Charity driven out by fire and flood from

other places, came to St. Louis, and soon matters began to look brighter for the bishop. By a brief from Pope Pius IX, the dignity of archbishop was bestowed upon him; and at the Seventh Provincial Council of Baltimore a petition to have five suffragan bishops appointed -- namely for St. Paul, Dubuque, Nashville, Chicago, and Milwaukee -- was adopted, and was granted by the Holy See. After consecrating many bishops and ordaining many priests, the archbishop went to Baltimore to attend the First Plenary Council, and made a profound impression on the assembly by his logical keenness and his great erudition.

The Civil War found him a resolute defender of the Church's position, when the "Drake Constitution" which proposed a test oath for all ministers of religion, was passed in Missouri. He sent out an order that all his clergy must refuse to take the oath, as its terms were insulting. Some of the clergy were sent to prison for doing so, but the archbishop took their cases from court to court and ultimately succeeded in having the Drake Law declared unconstitutional. At the Vatican Council of December, 1869, he was one of the prelates who were opposed to the definition of the dogma of Papal Infallibility, and voted "non placet" at the preliminary private sitting. He did not attend the session at which the dogma was promulgated, but publicly submitted to the voice of the majority as the authority of the Church, when he learned of the proclamation. For coadjutor bishops he had firstly the Right Reverend P.J. Ryan, and secondly the Right Reverend John J. Kain, who on his death succeeded him. The archbishop's golden jubilee was celebrated with great distinction in 1891, but he was then in very feeble health. He died on 3 March two years afterwards. His best known work, besides "Anglican Ordinations," is the "Month of Mary" (Philadelphia, 1843). The growth of the St. Louis province under his rule was described by Archbishop Hennessy at the jubilee celebration in 1891 as "stupendous". During his episcopate sixteen new Sees were carved out of the original Diocese of St. Louis, viz. Little Rock (1843), Santa Fe and St. Paul (1850); Leavenworth (1851); Alton and Omaha (1857); Green Bay, La Crosse, St. Joseph, and Denver (1868); Kansas City (1880) Davenport (1881) Wichita, Cheyenne, Concordia, and Lincoln (1887).

Kenrick, MS. Diary and Itinerary in Philadelphia Archives and Correspondence in Archives of Baltimore and St. Louis; CLARKE, Lives of Deceased Prelates (New York, 1872); SHEA, Catholic Church in the United States (New York, 1892); O'CONNOR, Archbishop Kenrick and His Work (Philadelphia, 1867); SPALDLING, Sketches (Baltimore, 1800); WEBB, Centenary of Catholicism in Kentucky (Louisville, 1884); WALSH, Jubilee Memoir (St. Louis, 1891); VALETTE, Catholicity in Eastern Pennsylvania in Catholic Record (Philadelphia, 1800).

JOHN J. O'SHEA

Saint Kentigern

St. Kentigern

(Or Mungo)

Bishop, founder of the See of Glasgow, b. about 518; d. at Glasgow, 13 January, 603. His mother Thenaw was daughter of a British prince, Lothus (from whom the province of Lothian was called); his father's name is unknown. According to Jocelyn's life of Kentigern, the saint was born at Culross in Fife, and brought up until manhood by St. Serf (or Servanus) at his monastery there; but Skene shows that this connection between the two saints involves an anachronism, as St. Serf really belongs to the following century. At the age of twenty-five we find Kentigern (the name means "head chief", but he was popularly known as Mungo — in Cymric, Mwyn-gu, or "dear one"), beginning his missionary labours at Cathures, on the Clyde, the site of modern Glasgow. The Christian King of Strathclyde, Roderick Hael, welcomed the saint, and procured his consecration as bishop, which took place about 540. For some thirteen years he laboured in the district, living a most austere life in a cell at the confluence of the Clyde and the Molendinar, and making many converts by his holy example and his preaching. A large community grew up around him, became known as "Clasgu" (meaning the "dear family") and ultimately grew into the town and city of Glasgow.

About 553 a strong anti-Christian movement in Strathclyde compelled Kentigern to leave the district, and he retired to Wales, staying for a time with St. David at Menevia, and afterwards founding a large monastery at Llanelwy, now St. Asaph's, of which he appointed the holy monk Asaph superior in succession to himself. In 573 the battle of Arthuret secured the triumph of the Christian cause in Cumbria, and Kentigern, at the earnest appeal of King Roderick, returned thither, accompanied by many of his Welsh disciples. For eight years he fixed his see at Hoddam in Dumfriesshire, evangelizing thence the districts of Galloway and Cumberland. About 581 he finally returned to Glasgow, and here, a year or two later, he was visited by St. Columba, who was at that time labouring in Strathclyde. The two saints embraced, held long converse, and exchanged their pastoral staves.

Kentigern was buried on the spot where now stands the beautiful cathedral dedicated in his honour. His remains are said still to rest in the crypt. His festival is kept throughout Scotland on 13 January. The Bollandists have printed a special mass for this feast, dating from the thirteenth century.

JOCELYN OF FURNESS, *Life of Kentigern*, c. 1185, printed, with English translation, in PINKERTON, *Lives of the Scottish Saints* (Paisley, 1889-95), is the only ancient authority, except a fragment of c. 1164; see FORBES, *St. Ninian and St. Kentigern* in

Historians of Scotland, V (Edinburgh, 1874); see also STACK, *Life of St. Mungo* (Glasgow); FORBES, *Kalendars of Scottish Saints* (Edinburgh, 1872), 373-82; EDMONDS, *The Early Scottish Church* (Edinburgh, 1906), lx; BELLESHEIM, *Hist. of Cath. Ch. of Scotl.*, I (Edinburgh, 1887), 149-157; *Acta SS.* (Brussels, 1863), II, 97-103.

D.O. HUNTER-BLAIR

Kentucky

Kentucky

A state situated between the parallels of latitude 36° 30 and 39°6' N., and between the meridians 82° and 89°38' W. The name is Indian -- *Kantuckee* -- and is said by some to signify "prairie or meadow land" in allusion to the large treeless area found in the south central part of the state at the time of the advent of the white man; by others it is said to mean "Dark and bloody ground", the region having been a common battle-ground for the various Indian tribes in the adjoining territory. The latter is the more popular interpretation, but there does not seem to be any more satisfactory authority for the one than for the other. The state is bounded on the north and northwest by the Ohio River, separating it from Ohio, Indiana, and Illinois, the low water mark on the northern shore being the state line; on the east by Virginia and the Big Sandy River, which separates it from West Virginia; on the South by Tennessee and Virginia; on the west by the Mississippi River, which separates from Missouri. Its total area is 40,598 Square miles, of which 417 square miles are water. Its greatest length from east to west is about 400 miles, and its greatest width from north to south is about 180 miles.

PHYSICAL CHARACTERISTICS

The southeastern section of the state is mountainous, the general elevation ranging from 1000 to 1500 feet, with some crests near the southeastern border, in the Cumberland and Pine Mountains, rising to a height of 3000 feet. North and west of this section is the famous Blue-Grass Region, gently undulating in formation with an elevation of about 800-900 feet. On the south and west of the Blue Grass country is a limestone plateau sloping from an elevation of about 1200 feet in the east to about 400 feet in the west. Portions of this plateau are marked by cone-shaped hills rising to as height of about 1000 or 1200 feet, and in another portion frequent sinks, or depressions, are found through which the surface water finds its way into underground passages. Many caves or caverns exist in this region, the most notable being the Mammoth Cave, the largest natural cavern in the world. Western Kentucky, particularly west of the Tennessee River, is low and sandy. The mean annual temperature is about 55° Fahrenheit.

Extremes of cold and heat are infrequent and of short duration. The mean rainfall is 46 inches, with a somewhat greater precipitation along the southern border. The Blue-Grass Region, an area of about 10,000 square miles, has a blue limestone sub-structure, the disintegration of which renders the soil very fertile. The bottoms, along the rivers, on account of the alluvial deposit, are likewise very productive. The mountainous southeastern portion of the state is generally unfit for agriculture, and the extreme western portion, where the soil is formed from weathered sandstone, is much less fertile and productive than the limestone territory, though the area incapable of cultivation is less than one-sixth of the whole.

POPULATION AND WEALTH

The population of the state, according to the Federal Census for 1880, was 1,648,690; for 1890 it was 1,858,635; and 2,147,174 for 1900. In 1909 it was estimated (Federal Census Department) at 2,406,859. In 1900 there were 50,249 persons of foreign birth and 284,706 negroes. Ten other states have a larger negro population, and the increase in this race is materially less than among the whites. There are no Indians, and the number of Chinese and Japanese is probably less than 100 in the entire state. The largest cities with their respective populations are as follows: Louisville (1900) 204,731 (Federal estimate for 1909: 236,688); Covington (1900) 42,938 (Federal estimate for 1909: 51,715); Newport (1900), 28,301 (Federal estimate for 1909: 31,345; Lexington (1900), 26,369 (Federal estimate for 1909: 30,690).

MATERIAL RESOURCES

The total assessed valuation of property in 1908 was \$750,393,881 of which \$559,176,016 was real estate and \$191,226,865 was personalty. The new revenue of the State for that year was \$3,601,969.40. In 1909 there were 148 national banks in Kentucky, with an aggregate capital stock of \$17,078,500, an aggregate surplus of \$6,283,739.56, and individual deposits amounting to \$53,487,487.16. The total resources of the national banks of Kentucky aggregate \$114,158,595.84. There are 406 state banks and trust companies with an aggregate capital of \$19,642,770, an aggregate surplus of \$5,304,746, and deposits aggregating \$66,947,965.84.

Mining

The chief mineral products of Kentucky are coal (the most important of all), petroleum, natural gas, fluorspar, clay products, and limestone. The total mineral output for 1907 amounted in value to \$19,294,341.

Agriculture

Of the total area of Kentucky in 1900, farm lands occupied 85.9 per cent, and of this 62.5 per cent was improved. The average size of the farms has steadily decreased. In 1909 the average was 93.7 acres, which is less than half what it was fifty years previ-

ous. More than 67 per cent of the farms are operated by owners of the land. Indian corn (maize) is the principal crop, exceeding in average and value that of all the other leading crops combined. In 1908 the total area planted in Indian corn was 3,336,000 acres; in wheat, 758,000 acres; in oats, 173,000 acres; in hay, 500,000 acres; in tobacco, 240,000 acres. The total value of all principal crops in 1908 was \$92,566,600. Kentucky produces nearly all the hemp grown in the United States; but the demand for this product has so far decreased that in 1900 only 14,107 acres were planted in the state. More tobacco is grown in Kentucky than in any other state in the Union, the product being twice as much as that of North Carolina, which is next in rank. The Kentucky crop, usually equals one-third of the total production of the United States.

Grazing

On account of the climate, the large production of grain, and the excellence of the pasturage, stock-raising is very extensively carried on. The total value of live stock in 1909 was \$95,100,000 horses, \$37,905,000; mules, \$21,942,000; horned cattle, \$25,312,000; other live stock, \$9,941,000. The Blue-Grass Region is the home of the Kentucky thoroughbred, the best known and most highly valued horse in America. No other part of the country devotes so much attention to the raising of horses of fine breed, and nowhere else in America are so many farms devoted exclusively to this business. The centre of the industry is in Fayette County, though many valuable breeding farms are in the adjoining counties.

Manufactures

Kentucky is an agricultural state. Its manufactures depend largely upon the products of its farms. Corn- and grist-mills are its principal manufacturing enterprises. Other enterprises closely allied with the products of the soil are the manufacture of tobacco, distilled and malt liquors, lumber and timber products. A comparison of industrial conditions in 1900 and in 1905 shows an increase in the latter year of 75.4 per cent in capital invested, 26.5 in wages paid, and 20.6 in value of output. Although Kentucky is the leading tobacco-growing state in the country, there has been a decrease in the manufacture of this product in the state, so that Kentucky, formerly the second state in the Union in the value of its output of manufactured chewing and smoking tobacco and snuff, is now third, with a total output of \$13,117,000 for the year 1905.

Transportation

The Ohio River affords a means of transportation along the full length of the state's northern boundary, and the Mississippi River on the west. The Cumberland and Tennessee Rivers are navigable for steamboats across the entire width of the state, and the Kentucky and Green Rivers are navigable for more than one hundred miles of their course. In 1900 there were 3093 miles of railroad, and 3574 miles in 1908. The total

valuation of railroad property for purposes of taxation in 1908 was \$63,753,699; and gross receipts for the same year were \$40,464,504, and the net earnings \$11,641,956.

EDUCATION

The Kentucky State University, a public institution owned by the state, is located at Lexington in Fayette County. Each county is entitled annually to send one student to the university for each 3000 white pupils in its public schools, and one for each fraction of 3000 over 1500, based on the last official census preceding the appointment. Each county is entitled to at least one appointment. Students, except those entered solely in the Departments of law and medicine, are entitled to free tuition, room rent, fuel, light, and all other advantages of the university. This institution was formerly the Agricultural and Mechanical College of Kentucky, and was established in 1865. By an Act of the Legislature, in 1908, the name was changed and it became the State University. The total number of students in all departments in 1909 was 772, and there were 61 professors and assistants. There are two normal schools for the training of white teachers, one at Richmond, in Madison County, and the other at Bowling Green, in Warren County. There is also a normal school for coloured students at Frankfort (the state capital), in Franklin County. All of these institutions are maintained by public taxation.

Each county in the state, excluding cities and towns having separate school systems, and graded school districts whose tax levy is not less than 20 cents, constitutes a school district. Each district is divided into educational divisions. There may be four, six, or eight of these divisions, as deemed expedient. Educational divisions are required to contain as nearly as possible an equal number of pupils. Each of these educational divisions is in turn divided into school districts, and each school district elects one trustee. The trustees from the school districts constitute a division board, and organize as such for the purpose of caring for the schools in their respective educational divisions. The chairmen of the division boards constitute the county board of education, and this county board has general supervision over all educational matters in the county; is authorized to establish, and when established has charge of the county high schools; estimates the needs and requirements of the schools and certifies to the county governing body the amount of money necessary to be raised for school purposes in the county. The county is required to levy a tax on the general school district not exceeding 20 cents on every \$100 of the assessed value of property in the district, to meet the requirements of the County Board of Education. All cities of the first, second, third and fourth classes -- i.e. all cities having a population in excess of 3000 -- maintain separate school systems in accordance with the provisions of their respective charters.

The state at large levies a general tax over the entire state, and this fund is used in the payment of salaries of teachers. The local sub-divisions provide school buildings

and pay all other expenses incidental to the maintenance of the schools. The total number of children of school age, according to the last school census was 739,352. The actual number enrolled in the public schools was 441,377, and the average daily attendance 293,691. The total number of teachers was about 9000. In 1908, there were 24,610 Catholic children attending the Catholic schools of the state. There was expended in the last fiscal year by the state and local taxing districts for public school purposes, exclusive of expenditures for the State University, normal schools, schools for the blind, deaf and dumb, etc., \$3,891,936.65.

CHARITIES AND CORRECTION

There are three asylums for the insane: one situated at Lexington in Fayette County, another at Lakeland in Jefferson County, and third at Hopkinsville in Christian County. All of these institutions have competent superintendents and physicians in charge. Inmates who are without means are maintained by the state. There is an institution for feeble-minded children at Frankfort, where children between the age of six and eighteen years whose condition of mind is such that they can be taught to read or write, and can be educated to do work, are received, and if unable to pay are maintained by the state. At Danville, in Boyle County, the Kentucky School for the Deaf is established, and near Louisville, in Jefferson County, there is an institution for the education of the blind. Indigent and afflicted children are received at these institutions and educated at the expense of the state. The Kentucky Confederate Home, for the benefit of Kentucky's indigent and infirm veterans of the Confederacy, is in Jefferson County, and is maintained by the state. The legislature makes annual appropriations for the support of the Kentucky Children's home society, a private corporation devoted to the care of homeless and destitute children, and it has also made an appropriation for the assistance of a sanitarium at Louisville for the treatment of persons afflicted with tuberculosis.

There are two state prisons: one at Frankfort, and the other Eddyville in Lyon County. The management is by a board of commissioners of three members elected by the Legislature, and the convicts are worked under the contract system. The prison commissioners have the power to parole prisoners, except in cases of rape or incest, or where the prisoner has previously served a term of imprisonment or broken his parole. Prisoners convicted of murder cannot be paroled until they have served at least five years. The governor has the power of granting reprieves or pardons in all cases except treason, in which case the General Assembly alone has the power of granting the pardon. Houses of reform for boys and girls are established in Fayette County. Juvenile offenders under twenty-one years of age are committed to these institutions. The courts are authorized to fix an indeterminate sentence for such offenders, so as to keep them confined until they have attained the age of twenty-one. The management of these institutions is vested in the prison commissioners, who have power to parole

and discharge such inmates whenever their conduct is such as to warrant the belief that they will in future conduct themselves properly.

GENERAL HISTORY

Kentucky was originally a part of Fincastle County, Virginia. It became a separate county in 1776. Dating as far back as 1543, when De Soto's survivor's descended the Mississippi River as far as Kentucky, there are records of numerous expeditions into the state. In 1654 Colonel Wood, an Englishman, is said to have explored as far as what is now the western boundary of the state, and in 1673 the renowned Jesuit missionary, Father Jacques Marquette, descended the Mississippi as far as the Ohio. From Marquette we have the first authentic account of the Indian tribes inhabiting what is now the western portion of the state. In 1730 John Salling, while exploring the Roanoke River, was captured by the Indians and carried through Kentucky to the Tennessee River. He was afterwards captured by the Illinois tribe and taken to Kaskaskia, where he was ransomed. A Frenchman named Longueil descended the Ohio in 1739, and discovered Big Bone Lick in what is now Boone County, and in 1747 Dr. Thomas Walker of Virginia crossed the Cumberland Mountains and discovered the Cumberland and Kentucky Rivers. The most extensive explorations, and the most important as bearing upon the actual settlement of Kentucky, were made about the year 1769 by Daniel Boone, John Findlay, and four others from North Carolina. Part of this expedition returned after a short time, but Boone remained in Kentucky for two years and then returned to North Carolina, intending to lead a party into Kentucky for permanent settlement. In 1774 John Harrod conducted a party of forty persons into the territory and settled at Harrodsburg. The year following, Daniel Boone brought his party and erected a fort and established a settlement at Boonesboro.

These were the first settlements in Kentucky. There were no resident Indian tribes in the central and eastern portion of the territory at this time, but numerous bands of savages traversed it, and the first settlers were constantly harassed, the fort at Boonesboro being attacked three times in 1777 and 1778. In 1775 Richard Henderson purchased from the Cherokee Indians many thousands square miles of land in Kentucky and attempted to organize a separate state under the name of Transylvania. He proceeded to the extent of sending a delegate to Congress, but his representative was not recognized, and Virginia declared his purchase from the Indians invalid. In 1778 about twenty families accompanied General George Rogers Clark upon his expedition against the British posts in Illinois. They landed on a large island just above the Falls of the Ohio River, directly opposite the present site of Louisville, and immediately erected blockhouses and established a settlement. The following year a portion of these settlers moved to the main shore and erected a fort at a point which is now the foot of Twelfth Street. On 17 April 1779, a public meeting was held and the town was definitely estab-

lished by the election of trustees. There is no record indicating the religious belief of any of these early settlers, but from some of the names appearing in the records of the town prior to 1800, it is fair to assume that there were a number of Irish Catholics.

In 1780 Virginia, in order to afford a better government, divided Kentucky into three counties, but the settlers, who had by this time become quite numerous, believed that their interest would be better served by separation from the parent state. Eight separate conventions were held before a satisfactory agreement of separation was arrived at, and it was not until July, 1790, that the territory was formally separated. By an Act of 1 February, 1791, Congress authorized the admission of Kentucky into the Union, the Act to become effective 1 June 1792. In April, 1792, the first Constitutional Convention assembled at Danville in what is now Boyle County, and adopted a constitution. The first Legislature met at Lexington in June, 1792, elected Isaac Shelby governor, and decided upon Frankfort as the capital of the state. In 1799 a second Constitution was adopted, which made the governor and other state officers elective by the people. The second Constitution remained in force from 1800 to 1850, at which time a new Constitution was adopted which remained in force until 1891, when the present Constitution became effective, upon its ratification by the people.

One of the most interesting incidents in the history of Kentucky was what is known as the Old-Court and New-Court controversy. In the early days of Kentucky coin had been very scarce, and commerce among the people had been carried on generally by the bartering of merchandise. In 1802, under the pretext of forming a company for insuring cargoes on the western waters, the Kentucky Insurance company obtained a charter from the Legislature in which there was fraudulently inserted a clause giving it the right to issue paper money. Thus commenced a period of wild-cat money. Between 1806 and 1820 more than forty banks were chartered with similar power and with an aggregate capital of \$9,920,000. These banks were generally conducted in a very loose and unbusinesslike manner. The state was flooded with paper money, and a period of wild speculation followed, resulting in the inevitable panic. To afford relief, the Legislature, between the years 1822 and 1826, passed various laws, but the Court of Appeals held them unconstitutional. In 1824 the Legislature, exasperated by the action of the Court of Appeals, attempted to legislate the court out of office and to establish a new court. One of the bitterest fights in the history of the state followed. The old court declined to recognize the right of the Legislature to oust it from office, and refused to recognize as constitutional the court established by the Legislature. In 1826 the issue of the old court and the new court brought about an election, characterized by the most intense excitement, which resulted in the triumph of the Old-Court party, and the election of a Legislature which repealed the Acts attempting to establish the new court.

Kentucky has taken a very active part in the military affairs of the nation. In the war of 1812 about 7000 troops -- a number far in excess of Kentucky's *pro rata* -- served in the Federal army. A portion of these soldiers served in the North under Harrison, and the balance in the South under Jackson. At the battle of New Orleans fully one-fourth of Jackson's army was made up of Kentuckians. In the Mexican War Kentucky's quota should have been 2400 men, but she sent more than 10,000. And in the Civil War, when the people of the state were divided in their sympathies, about 80,000 men enlisted in the Federal army and about 40,000 in the confederate army.

The Know-nothing lodges made their appearance in Kentucky in 1854, and spread with the utmost rapidity; so much so that in 1855 the American, or Know-nothing Party elected its candidates for governor and the other state offices. Intense bitterness towards Catholics was manifested all over the state at this election, but in the city of Louisville fanatical frenzy reached its climax. A mob dominated the city of election day (Bloody Monday), Catholics were assaulted, their property plundered, and their houses destroyed. Twenty-two persons killed, many wounded, and more than twenty houses of Catholics destroyed, was the sum of the outrages of this day of horrors. The city government was under the control of the Know-nothings and no serious effort was made to protect life or property. Insult and violence were the lot of the Catholic people on all sides. Fortunately, the good sense of the people rebelled against the domination of this party of violence; its candidates were defeated in the general election of the following year, and with a few years the last vestige of the party disappeared. (See also LOUISVILLE, DIOCESE OF.)

RELIGION

Growth of the Church in Kentucky

The Boone family were among the first Catholic settlers of Maryland, and upon the strength of this fact it has been contended that Daniel Boone was a Catholic. Nothing, however, that is recorded of the life of this famous Kentucky pioneer seems to support this contention. In all probability, Dr. George Hart and William Coombes, who accompanied John Harrod, and settled at Harrodsburg in 1774, were the first Catholic settlers. Dr. Hart, if not the first, was certainly one of the first physicians to settle in Kentucky. He practised his profession at Harrodsburg until about the year 1786, when he moved to the vicinity of Bardstown, in what is now Nelson County, in order to join his co-religionists who had recently emigrated from Maryland.

The first distinctively Catholic body of immigrants came from Maryland in the year 1785. A league of sixty families, mostly from St. Mary's County in that state, was formed for the purpose of emigrating to Kentucky, and in the same year twenty-five of these families, under the leadership of Basil Hayden, arrived in Kentucky and settled near the present site of Bardstown (Nelson County). In the following year, a second

settlement, about ten miles distant from the first, but on better lands, was begun by Edward and Charles Beaven. Between this date and 1795 five separate bodies of Catholic immigrants settled in the vicinity of these earlier settlements, and a thriving Catholic colony was begun. In 1786 one of the companies of immigrants, while on its way to join the first settlers in Nelson County, attracted by the beauty and fertility of the country through which they were passing, decided to go no farther, and settled in what is now Scott County, near the centre of the famous Blue-Grass Region. By 1796 it is estimated that there were 300 Catholic families in Kentucky.

The first missionary priest to reach Kentucky was the Rev. M. Whelan, who came in the year 1787 with a band of immigrants under the leadership of Edward Howard. In 1790 Father Whelan returned to Maryland. Six months later the Rev. Wm. De Rohan arrived, but without faculties and unaccredited to Kentucky. He performed such service as he could, but the settlements were without full priestly attention until 1793, at which time the Rev. Stephen Theodore Badin (q.v.) and the Rev. M. Barrières were sent to Kentucky by the Bishop of Baltimore. Father Barrières remained but four months, but Father Badin laboured in the mission for about twenty-six years. After the departure of Father Barrières, for three years Father Badin was the only priest in the whole of Kentucky. In 1797 the Rev. M.J.C. Fournier and, in 1799, the Rev. Anthony Salmon joined Father Badin, but the latter of these two companions of Father Badin was killed by a fall from a horse nine months after his arrival, and Father Fournier died in 1803. Again Father Badin was alone in Kentucky until 1805, when the Rev. Charles Nerinckx, a native of Belgium, joined him. Father Nerinckx laboured in the state for nineteen years, sharing with his associate all the hardships of this most trying mission, and by his wonderful zeal and great piety materially promoting the progress and prosperity of the Church. A French colony under the leadership John A. and Louis Tarascon arrived at Louisville in the year 1806 and settled near the Falls of the Ohio, to engage in the milling business, utilizing the falls for power. These colonists were, or at least should have been, Catholics, but the early missionaries do not appear to have considered them very faithful children of the Church. However, when the first church was built, in 1811, the name of J.A. Tarascon appears on the list of trustees for the new parish. Father Badin was the first pastor, and continued as such until 1817, when he was succeeded by the Rev. G.I. Chabrat, like him, a Frenchman, who was in turn succeeded by the Rev. Philip Horstman, a native American.

In 1808 the Diocese of Bardstown was erected, to include in its jurisdiction the whole of Kentucky as well as Tennessee (see DIOCESE OF LOUISVILLE). In 1841 the see was transferred to Louisville, and in 1853 the establishment of the Diocese of Covington (q.v.) brought into existence the present ecclesiastical division of the State of Kentucky into the two dioceses of Louisville and Covington.

Kentucky enjoys the distinction of having been the first great nursery of the Faith in the United States west of the Alleghenies. Closely connected with this fact (which will be more especially dealt with in the article DIOCESE OF LOUISVILLE) was a remarkably early development of new religious congregations in the old Diocese of Bardstown. In Marion County, the Sisterhood of Loretto, founded in 1812 as "Friends of Mary at the Foot of the Cross", and, in Nelson County, the Sisters of Charity of Nazareth, founded in the same year, were almost, if not quite, the earliest religious institutes to originate in the United States (see LORETTO, SISTERS OF; NAZARETH, SISTERS OF CHARITY OF). Of the older institutes of women, the Sisters of the Third Order of St. Dominic have been established in Kentucky since 1822; the Sisters of the Good Shepherd, since 1842; Ursuline Nuns, since 1858; Benedictine Nuns, since 1859; Sister of the Poor of St. Francis, since 1860; Visitandines, since 1864; Sisters of Mercy, since 1867; Little Sisters of the Poor, since 1869; The Sisters of Notre Dame and others have come into the state more recently.

Among the religious orders of men, the Order of Preachers found their first home in the United States near Springfield, Washington County, Kentucky (St. Rose of Lima, 1806), where they are still flourishing; the Trappists founded their famous Abbey of Gethsemani (q.v.), in Nelson County, in 1848; the Franciscans took charge of the parish of St. Boniface, Louisville, in 1849; the Benedictines came to Covington in 1858. Other male religious orders and congregations in Kentucky are the Passionists, Xaverian Brothers, Brothers of Mary, and Fathers of the Resurrection. The total Catholic Population of the state is estimated at 189,854, about three-fourths of that number (which includes upwards of 4000 coloured Catholics) being in the Diocese of Louisville.

Legislation Directly Affecting Religion

The Bill of Rights of the Constitution of Kentucky guarantees to all citizens the right to worship God according to the dictates of their conscience, and it also provides that no public funds raised for educational purposes shall be used in the aid of any church, or any sectarian or denominational school. It is further provided by statute that no sectarian, infidel, or immoral publications shall be used or distributed in the common schools of the state; nor shall any sectarian, infidel, or immoral doctrine be taught therein. The court of last resort in Kentucky, in construing these provisions of the constitution and Statutes (*Hackett v. Graded School*, 120 Ky. 608), held that they are not violated by reading verses from the King James Version of the Bible, without note or comment, nor by the recital of the following prayer:

Our Father who are in heaven we ask Thy aid in our day's work. Give us wisdom and strength and patience to teach these children as they should be taught, may teacher and pupil have mutual love and respect. Watch over these children both in the schoolroom and on the playground. Keep them from being hurt in any way, and at last when we come to die may none of our number be missing around Thy throne. These things we ask in Christ's name.

The laws of the state provide that no work or business shall be done on Sunday except the ordinary household offices or other work of necessity or charity, or work required in the operation of a ferry, skiff, steamboat, or steam or street railway. But persons who belong to a religious society which observes some other day than Sunday are not liable for the penalties provided in this act if they actually observe as a Sabbath one day in each seven. There are specific enactments penalizing the sale of liquor, barbering, pool and billiard playing, and hunting. The enforcement of the law with reference to Sunday observance is very lax, particularly in the cities. So also with reference to the sale of liquor on Sunday. In some of the cities this law is not enforced at all, in others some effort is made its enforcement, and in some places it is rigidly enforced. The law provides that if any proceeding is directed by law to take place, or any act is directed to be done on a particular day of the month, and that day happens to fall on Sunday, the proceeding shall be had, or the act done on the following day.

Oaths may be administered by any judge of a court, notary public, clerk of a court, examiner, master commissioner, or justice of the peace within his district or county. Persons refusing for conscientious reasons to take an oath may affirm. The oath is ordinarily administered by the officer and the person to be sworn, both raising their right hands, the officer repeating the oath and the person responding: I do. Testimony taken out of the state, to be used in proceedings in the courts of the state, may be taken before a commissioner appointed by the governor or by any other person empowered by commission directed to him by consent of the parties, or by order of a court; or before the judge of a court, justice of the peace, mayor of a city, or a notary public.

Any person profanely cursing or swearing is liable to a fine of one dollar for each offence, and every oath is deemed a separate offence. If the offence is committed in the presence of a court of record or justice of the peace, the said court or justice may instantly, without further proof, inflict the penalty. Instances of the enforcement of this law are very rare.

There is no law providing for prayer at the sessions of the Legislature, but it is the custom to open the daily session of both branches of the general assembly with prayer. The ministers of the various denominations representing the churches of the capital

city are invited without prejudice or partiality. The Catholic priest takes his turn with the others.

The only religious holidays recognized by law are Christmas and New Year's Day. Other legal holidays are Washington's Birthday, Decoration Day (May 30), Independence Day, Labor Day (first Monday in September), and all days specially designated by the President of the United States or the governor of the state.

No clergyman or priest, without the consent of the person confessing, is permitted to testify concerning any confession made to him in his professional character in the course of discipline enjoined by the Church to which he belongs.

Any number of persons may associate to form a corporation, having no capital stock, for religious, charitable or educational purposes. Incorporation may be effected by the persons concerned filing articles of incorporation with the Secretary of State, and having the same recorded in the county court of the county where the corporation intends to conduct its business. The articles must set forth the name of the proposed corporation, the object for which it is organized, and such other facts as the incorporators deem proper to mention. Such corporations have the right to contract and be contracted with, to sue and be sued, to have and use a common seal, and to receive and hold property. They are not subject to the general laws relating to corporations, except that they must designate an agent upon whom service of process may be had, and that they are at all times subject of visitation by the Legislature.

Places actually used for religious worship, with the grounds attached thereto, not exceeding one-half acre in cities and towns, and not exceeding two acres in the country; places of burial not held for profit; institutions of purely public charity and institutions of education not used or employed for gain; all parsonages and residences owned by any religious society and occupied as a home and for no other purpose by the minister of any religious denomination, with not exceeding one-half acre in the city, and two acres in the country, are exempt from taxation. This constitutional provision has been construed so as to bring within its meaning seminaries for the education of young men for the ministry, even though its management is denominational. So also other educational institutions under similar control, even though tuition is charged. Property of the Young Men's Christian Association is also held exempt under this provision of the constitution, so also orphan asylums and homes for sick, indigent, and homeless persons are held exempt, even though they are denominationally controlled; provided they are not operated for gain. The expression "purely public charity" used in the Constitution, has been defined by the Court of Appeals of Kentucky as meaning a charity which performs in whole or in part a duty which the Commonwealth owes to the sick, indigent, homeless, and helpless. All institutions, therefore, which aid the state in the performance of this duty are exempt from taxation. These exemptions,

however, do not apply to local assessments for street-improvements, against which there is no exemption provided by law.

Clergymen are not required to serve on petit juries, though they may do so. But there is not such exemption from service on grand juries. Militia service in actual practice is, of course, purely voluntary, but clergymen are not exempt in the event of enforced enlistment.

Marriage and Divorce

Marriage is prohibited and void (1) when either party is an idiot or lunatic; (2) when either of the parties has a husband or wife living and undivorced; (3) when not contracted in the presence of an authorized person or society, provided, however, that if the person attempting to perform the marriage ceremony had no authority, and yet either of the parties believed he had such authority, and the marriage is consummated under that belief, it will be valid; (4) when at the time of the marriage the male is under fourteen and the female is under twelve years of age; (5) when one person is white and the other is a negro. A man is not permitted to marry his mother, grandmother, sister, or grandchild, nor the widow of divorced with of his father, grandfather, son, or grandson, nor the daughter, granddaughter, mother, or grandmother of his wife, nor the daughter or granddaughter of his brother or sister, nor the sister of his father or mother. A woman cannot marry her father, grandfather, brother, son, or grandson; nor the widower or divorced husband of her mother, grandmother, daughter, or granddaughter; nor the son, grandson, father, or grandfather of her husband; nor the son or grandson of her brother or sister, or the brother of her father or mother. All marriages coming within any of the above-mentioned degrees of relationship are void. If, however, a marriage is valid where contracted it will be recognized as valid in Kentucky. Marriage may be solemnized by a minister or priest of any denomination in regular communion with any religious society, who has obtained a license for that purpose from the county court of the county of his residence. The county judge and such justices of the peace as the county court may authorize may solemnize marriages or it may be solemnized by consent given in the presence of a religious society having no officiating minister, where either party is a member of such religious society, and the ceremony is in conformity with the usage prevailing in such society.

Judgments in divorce cases are entered without the intervention of a jury. Courts of general equity jurisdiction hear and determine all such actions. Divorce may be granted for the following reasons:

- To both parties, first, for such impotency or malformation as prevents sexual intercourse; second, living apart without co-habitation for five consecutive years next before the institution of the action.

- To the party not in fault; first, abandonment for one year; second, living in adultery; third, condemnation for felony; fourth, the existence of some loathsome disease; fifth, force, fraud, or duress in obtaining the marriage; sixth, union with a religious society which forbids husband or wife continuing the marital relation.
- To the wife when not in like fault; first, on account of a confirmed habit of drunkenness accompanied with a wasting of his estate and failure to suitable provide for his family; second, habitually behaving towards his wife, for a period of not less than six months, in a cruel manner; third, such cruel beating or attempted beating or injury as indicates an outrageous temper and probable danger to the wife.
- To the husband; first, where the wife is pregnant by another man at the time of marriage; second, when not in like fault, habitual drunkenness on the part of the wife for not less than one year; third, adultery or such lewd or lascivious behaviour as indicates unchastity.

Divorced persons may marry again, but only one divorce shall be granted the same person, except where adultery or one of the grounds for which divorce may be granted to both parties is charged. Divorce from bed and board may be granted for any of the causes above mentioned or for any other cause deemed sufficient by the court. An absolute divorce restores to the parties all property obtained from the other either before or during marriage in consideration thereof. The custody of children is determined by the chancellor from the proof in the case.

Sale of Intoxicants

Under the operation of local-option laws, 96 of the 119 counties of the state have voted out liquor. The larger cities, however, are not affected by these laws. It is forbidden to ship liquor into local option territory, but this law is generally not effective because it cannot affect shipments from points outside the state.

Wills and Testaments

Every person more than twenty-one years of age may dispose of his or her estate by will. Wills are required to be attested by two subscribing witnesses unless wholly written and signed by the testator in person. There is no limitation upon charitable bequest, but the State imposes a tax of 5 per cent upon all bequests over \$500, including those for charitable purposes, except where made to husband or wife, father or mother, child or children or their lineal descendants, or the husband or wife of a daughter or son.

Cemeteries

All cemeteries not conducted for profit are exempt from taxation. The directors or trustees of incorporated cemeteries are required by law to make a full and complete

report of the financial condition of the association to the stock-holders and lot-owners. Severe penalties are provided for unlawfully disinterring bodies or for the mutilation of graves or monuments.

FRANK M. TRACY Compiled by Pat and Gordon Hermes

Miles Gerard Keon

Miles Gerard Keon

Journalist, novelist, colonial secretary, lecturer, last descendent of the Keons, of Keonbrooke, County Leitrim, Ireland; b. 20 February, 1821; d. at Bermuda, 3 June, 1875. He was the only son of Myles Gerard Keon, barrister, and on his mother's side was descended from the Fallons of Runnymede, County Roscommon. Both parents dying in his infancy, Keon was left to the care of his maternal grandmother and, later, to that of his uncle, Francis Philip, Count Magawly. He studied at the Jesuit college at Stonyhurst, where he wrote the prize poem on Queen Victoria's accession (*Stonyhurst Magazine*, no. 32). An adventurous pedestrian tour across the Continent followed graduation, terminating in a brief service in the French army in Algeria. On his return to England he studied law at Gray's Inn, abandoning it shortly for literary pursuits. In 1843 he published "The Irish Revolution, or What can the Repealers do? And what shall be the New Constitution?" (*Tablet*, IV, 532), and, in 1845, a vindication of the Jesuits (*Oxford and Cambridge Review*, September, 1845), a controversial article that provoked more than passing interest. The results of his pedestrian tour and military service were apparent in a series of contributions to Colburn's "United Service Magazine" (from September, 1845, to October, 1846). For a few months in 1846 he became editor of "Dolman's Magazine", and on 21 November of that year, married Anne de la Pierre, daughter of an English army officer. In 1847 appeared his "Life of Saint Alexis, the Roman Patrician". For the next twelve years he served on the staff of the "Morning Post", becoming its representative at St. Petersburg in 1850. In 1852 his first novel, "Harding, the Money-Spinner", appeared, serially, in the "London Journal", and, in 1856, on the occasion of the coronation of Alexander II, he was again at St. Petersburg representing the "Morning Post". It was on this occasion that he met Boucher de Perthes, in whose reminiscences Keon is pleasantly appreciated. On his return in 1859 from Calcutta, where he had been sent "under a mistaken arrangement"

to edit the "Bengal Hurkaru", he was appointed colonial secretary at Bermuda, a position which he held until his death. In 1866 appeared "Dion and the Sibyls, a romance of the First Century". The year following, at Mechanics' Hall, Hamilton, he gave a course of lectures on "Government, its Source, its Form, and its Means", declining, subsequently to lecture in the United States on account of his official position. He attended the opening of the Council of the Vatican at Rome in 1869.

JARVIS KEILEY

Diocese of Kerkuk

Diocese of Kerkuk

(CHERCHENSIS).

A Chaldean Catholic diocese. The ancient name of the city was Karka of Beit-Slokh in the Beit-Garmai, a province of the Persian Empire. Christianity flourished there very early. In 318 two brothers, Adurpawa and Mihrnarsé, with their sister Mahdoukh, were martyred there. In the fifth century, under King Yezdegert II (438-57), the "History of the city of Beit-Slokh" makes mention of hundreds and thousands of martyrs slain in this city (Moesinger, "Monumenta Syriaca", II). Mention may also be made of a bishop, Mana, in the fourth century, with six nuns: Thekla, Danak, Taton, etc.; the Bishop St. Isaac, in the fifth century; St. Sirina, in 559; etc. The "Synodicon Orientale" (Paris, 1902, 674) mentions nine metropolitans of Beit-Slokh who assisted at various councils between 410 and 612. Lequien (Oriens Christ., II, 1331) speaks of others, many of whom were Catholics. At the beginning of the nineteenth century a number of Nestorians recognized the authority of the pope, who created for them the Diocese of Kerkuk. At present it contains 6000 Catholics, 15 stations, 16 churches and chapels, 22 native priests, and 5 primary schools. The city of Kerkuk itself, which has 30,000 inhabitants and constitutes a sanjak in the vilayet of Mosul, contains only about 300 or 400 Catholics, the remainder of the inhabitants being Mussulmans, Jews, or Nestorians.

S. VAILHÉ

Francis Kernan

Francis Kernan

Lawyer, statesman; born in Steuben County, New York, 14 January, 1816; d. at Utica, New York, 7 September, 1892; son of General William Kernan, who came to America from County Cavan, Ireland, in 1800, and of Rose Anna Stubbs, his wife. He attended Georgetown College, D.C., from 1833 to 1836, studied law in Utica, N.Y., in the office of Joshua A. Spencer, and later became his partner. He won fame as an advocate of ability, especially in legal conflict with such leaders of the bar as Denio, Jenkins, Beardsley, Doolittle, Hunt, and Conkling. His rank in his profession was well summed up by Judge Martin Grover, as being without a superior as an all-round lawyer at the bar of New York State. In dress, manner, decision, learning, and unassuming dignity of bearing and geniality, he was a rare type of the best of the old school of lawyers.

Kernan's political services to his country covered a wide range. He was school commissioner of Utica, manager of the New York State Hospital, official reporter of the Court of Appeals from 1854 to 1857, member of the Constitutional Convention of 1867, regent of the University of the State of New York from 1870 to his death, member of Assembly from 1860 to 1862, member of the House of Representatives from 1863 to 1865, United States Senator from 1876 to 1882. In all these positions he was conspicuous for ability, fidelity to his convictions, zeal in their advocacy, and fairness as a partisan. As a rule, he spoke extemporaneously, with clearness, vigour, and feeling, and to the point; his speeches were models of clear and convincing statement and analysis. He numbered among his friends Abraham Lincoln, Horatio Seymour, Samuel J. Tilden, Thomas F. Bayard, Grover Cleveland, and other distinguished Americans, and his counsel and advice were often sought by them. Both as a member of the New York Assembly and as a congressman, he was a "War Democrat". In Congress he rendered important service as a member of the judiciary committee, and was thoroughly in accord with the national government in its efforts to maintain the integrity of the Union. He showed so decided a spirit of justice and moderation that he was often consulted by President Lincoln on matters pertaining to the conduct of the war.

In July, 1876, at the St. Louis convention, Senator Kernan nominated Samuel J. Tilden for the presidency. In the Democratic convention of 1884, held at Chicago, he was not a delegate, but he was present at the special request of the leaders of his party and was one of the most efficient advocates, outside of the convention, for the nomination of Grover Cleveland. In the disastrous Democratic campaign of 1872, he was a candidate for governor against John A. Dix. He was a devout and practical Catholic,

frequently assisting at Mass and approaching the sacraments. He represented Georgetown College at the Catholic Congress of laymen at Baltimore in 1889, and delivered a memorable address on that occasion. In charity he gave much, considering his means, as he was never a very wealthy man, to his church and to charitable institutions; and his legal advice was often freely given to the clergy and to his Alma Mater, Georgetown College, which bestowed upon him the degree of Doctor of Laws.

Kernan's home life was very happy. In 1843 he married Hannah A. Devereux, daughter of Nicholas Devereux, of Utica, who was one of the principal founders and benefactors of the Catholic Church and its charitable institutions in Central and Western New York. He brought up a family of ten children and was a great home-lover, with no fondness for the theatre, opera, or club life. He was fond of reading, of an innocent game of cards, and was a fine conversationalist. Occasionally, but not often, he attended dinners and receptions in Washington and Utica. Duty, not pleasure, was his watchword. He often worked in his home at night over lawsuits and congressional speeches. In person he was tall, had a good figure, and an attractive, intellectual face. Without pretence or sham, he was one of nature's gentlemen. His old age was calm, genial, peaceful, and contented. He served his country and his Church to the best of his ability and was a shining example of what a Catholic lawyer and statesman should be.

THOMAS P. KERNAN

Diocese of Kerry and Aghadoe

Diocese of Kerry and Aghadoe

The Diocese of Kerry and Aghadoe (*Kerriensis Et Aghadoensis*), suffragan of Cashel, Ireland, is sixty-six miles in length, and sixty-one in breadth, containing a superficial area of 983,400 acres, and extending over the whole County of Kerry and a portion of that of Cork; in 1901 the Catholic population was 187,346. This diocese, in its actual condition, was constituted by the union of two very ancient sees -- Ardfert and Aghadoe, but the precise date of this incorporation cannot now be definitely ascertained. All we know is that it had taken place before the Synod of Rathbrasil (1110), for it is there proposed and sanctioned that the see of the then united Diocese of Ardfert and Aghadoe should be at Rathass near Tralee. Our ecclesiastical historians give a detailed account of the various journeys of St. Patrick, who, though visiting the neighbouring County of Limerick, never set foot in Kerry, being content (as the ancient chroniclers say) with giving this remote corner of Ireland his blessing, while standing on some point of vantage in West Limerick and viewing the lofty mountains and vast bogs of ancient Kerry. Nevertheless, we know from many sources that Christianity

was introduced here at a very early period. This fact is attested not merely by the annalists, but also by the many monuments of great antiquity and Christian character which still exist in various districts of the diocese. The first bishop whom we find mentioned in connection with the history of Kerry, was named Erc, and there can be no reasonable doubt that this bishop was St. Erc of Slane, who died according to the Annals of Ulster in 512. He exercised episcopal jurisdiction in the county before the birth of St. Brendan, and from what we read about his relations with that great saint, must have resided there almost continuously for several years afterwards. It is very probable he came to Kerry soon after the mission of St. Benignus, who was sent by St. Patrick in 450 to preach to the tribes of West Munster, and "to unite them to the Church by the saving waters of baptism". This visit of St. Benignus was comparatively short, for he was called away to North Clare and Connaught, where his apostolic labours may have been more urgently needed. To complete, however, the conversion of Kerry thus auspiciously begun, St. Patrick sent one of his most zealous and devoted bishops, St. Erc, who had spiritual charge not only of Kerry, but also of a wide range of southwest Limerick, in the heart of which lay the convent of St. Ita at Killeedy, over which he seems to have had jurisdiction. He was the special friend and tutor of St. Brendan, the patron of Kerry, whose feast is celebrated on 16 May. There is not among the ancient saints of Erin a more interesting figure than this patron of Kerry. His travels by land, and still more his voyages by sea, have made him famous from the earliest times. Very ancient manuscript copies of his famous seven years' voyage in the Atlantic Ocean are found in several European libraries, while his romantic career was a favorite theme with the poets and romancers of medieval Europe. (See Brendan, Saint.)

The other ancient see included in the modern Diocese of Kerry, is that of Aghadoe. Another native saint, Finan Cam, was the first to build a church at Aghadoe, which in after times became the see of a bishop. It was this saint also who founded the famous monastery and school of Innisfallen, a lovely island in the Lower Lake of Killarney. It was here that one of the greatest of Ireland's kings was educated - Brian Boru, who destroyed the power of the Danes at Clontarf in 1014, while his distinguished professor, Maelsuthain O'Carroll, was most probably the original compiler of the famous Annals of Innisfallen. The principal copy of this valuable work is preserved in the Bodleian Library at Oxford. It begins with a general history of the great empires of the world down to A.D. 430. The remainder, and the more valuable portion of the Annals, contains a brief chronicle of Ireland to 1319. This monastery, owing to its situation, escaped the ravages of the Danes, who had worked such ruin on other churches in Kerry. Unfortunately, there are few records of the early bishops either of Ardfert or Aghadoe previous to the Norman invasion in the twelfth century. All we know is, each had its distinct succession of bishops, and each cathedral had its separate chapter. But these,

in the days of persecution, were allowed to lapse. The chapter of Kerry was re-established by Brief of His Holiness, Pius IX, in 1858. Owing to persecution, and the disturbed state of the country, this diocese had no bishops from 1610 to 1641, and again from 1653 to 1703, being governed during both these periods by vicars Apostolic. From this latter date there has been no interruption in the episcopal succession.

Many of its bishops have been men of distinction. We may mention Dr. Richard O'Connell (1641-1653), who at a very trying time successfully resisted the determined attacks of heresy on the faith of the people. In modern times Kerry had Dr. David Moriarty (1856-1877), a most accomplished pulpit orator, and Dr. Daniel McCarthy (1878-1881), for many years professor in the College of Maynooth, and author of valuable works on Sacred Scripture. The religious orders were introduced into the diocese chiefly through the piety and zeal of some of the ancient lords of the county. The Franciscans came to Ardfert in 1253, to Muckross in 1440, and to Lislaughtin in 1464. The Dominican convent in Tralee was founded in 1213. The Cistercians built the Abbey of Kyrie Eleison in Odorney in 1154, while at a much earlier period religious communities existed at Killagha in the parish of Kilcoleman, at Derrinane, at Rattoo, etc. During the reigns of Henry VIII and Elizabeth all those religious establishments were destroyed, the priests were expelled, while their property was confiscated. The successful career of Cromwell and his lieutenants had a still more disastrous effect on the religious condition of this remote see in southwest Munster. In modern times there has been a satisfactory revival. Though these ancient monasteries, and the parochial churches throughout the diocese, were utterly ruined in days of persecution, there has been a complete restoration from the wreck and disaster of those sad times. The Dominicans are again established in Tralee, while the Franciscans flourish -- if not in lovely Muckross, still in Killarney not far away. The parish churches, which were mostly thatched cabins not so long ago, are now magnificent stone structures raised through the zeal and energy of a faithful priesthood, aided by the generosity and religious spirit of the laity of the county. The ancient cathedrals at Ardfert and Aghadoe are now in ruins, but the modern cathedral of Kerry, canonically erected in the ancient parish of Aghadoe by special Brief dated 18 May, 1858, surpasses even old Ardfert -- still magnificent, though in ruins. It was designed by Pugin and was begun under Bishop Egan in 1840. For over fifty years it remained in an unfinished state, but the present occupant of the See of Kerry and Aghadoe, Most Rev. Dr. John Mangan, has with characteristic energy undertaken the completion of this magnificent structure according to the original designs of its celebrated architect. Dr. Mangan was born in the parish of Listowel in 1843, and was educated at Killarney and Maynooth, where he won the highest academical distinctions. His missionary life in Kerry was mainly spent in the parishes of Glengariff and Kenmare, which, owing to their extent, always

demand great labour on the part of their pastor. As a reward for his energy and zeal, he was appointed archdeacon of Aghadoe, parish priest of Kenmare, and vicar-general of the diocese in 1901. He was raised to the episcopate, 21 July, 1904. This diocese consists of 51 parishes, has 49 parish priests, two administrators, and 69 curates. It has 99 churches, 2 friaries, 5 monasteries, and 17 convents.

DENIS O'CONNOR

Hermann von Kerssenbroch

Hermann von Kerssenbroch

(KERSSENBROICK).

A teacher and historian, b. at Monchshof, near Barntrop (Lippe), about 1520; d. at Osnabruck, 5 July, 1585. He attended school first at Paderborn, and after 1533 at Münster until his parents were banished from that city by the Anabaptists. He completed his studies at Cologne, where, in 1541, he received his degree of Bachelor of Philosophy and the Liberal Arts. In 1545 he left Cologne to teach in a superior school, probably at Dusseldorf, after which he was rector at Hamm (1545-50), and head of the Pauline Gymnasium at Münster, which had formerly held a high reputation. After twenty-five years of fruitful activity there, he was obliged to leave Münster, and he was placed in charge of the Schola Salentina at Dusseldorf, founded by the Electoral Prince salentin of Cologne, where he remained, however, only three years. In 1578 he took charge of a superior school at Werl, which he soon gave up to return to Osnabruck, where he remained as rector of the cathedral school for the rest of his unsettled life. He was a remarkable teacher, and it is chiefly owing to his farsightedness that the school system of Westphalia, which was on the decline, began in a short time to show signs of new life. His first care was to place on a better financial footing the wretchedly paid teachers of the time who were chiefly dependent on the meagre contributions from the parents of their pupils. A still extant programme or studies of the Pauline Gymnasium for the year 1551, entitled "Ratio studiorum scholae Monasteriensis, saeculi, XVI" (in Driver, "Bibliotheca Monasteriensis", Münster, 1799, 165-72), shows that as teacher he laid greatest stress on a thorough grounding in Latin and Greek, advocating also the study of Hebrew, but utterly disregarding the exact and historical sciences (*Realien*). He required a high degree of skill in the preparation of written work, and careful and constant practice in oral recitation. Pupils flocked to him as to a revered master, while as a practical organizer of the school system he was received everywhere with open arms.

But while in his capacity of teacher he was held in high repute, as historian he suffered much unpleasantness and even persecution, his literary work had a strong

influence on his career, being the cause, as it was, of his frequent change of habitation. His first known work, written while he was at Cologne, was a poem in dactylic hexameters, "Brevis descriptio belli Monasteriensis contra anabaptistica monstra gesti", skilful in workmanship, but of slight importance. His principal work deals with the same subject, "Historia Anabaptistarum Monasteriensium". As might be expected from a humanist it is embellished with rhetorical flourishes which produce at times an unpleasant effect. It was written on a broad scale, forming a history of the whole city from 1524 to 1554. The author had at his disposal ample sources of information, in addition to the amounts of many eyewitnesses and his own experiences, which placed him in a position to give a complete picture of the bloody disturbances of these times. He lacked, however, the essential qualifications of an historian, the critical faculty and an impartial judgment, so that the work, written at the instance and with the assistance of the cathedral chapter, was in parts most biased, to the prejudice of the municipal authorities and the patricians. Their anger roused, they compelled him to retract several passages as being erroneous, to deliver over his manuscript, and to promise on oath to write no more books. This work was published in 1730 at Leipzig by Meneke in "Scriptores Rerum Germanicarum", vol. III, and in a German translation at Frankfort in 1771 under title "Geschichte der Wiedertäufer zu Münster nebst einer Beschreibung der Hauptstadt", Detmer brought out a revised edition: "Hermanni a Kerssenbroch anabaptistici furoris Monasterium inclitam Westphaliae metropolim evertentis historica narratio" (Münster, 1899), parts of it being extremely instructive. Kerssenbroch's position in Münster having become insupportable, he went to Paderborn, and while there, in spite of his oath, he published "Catalogus episcoporum paderbonensium eorumque acta" (Lemgo, 1578), availing himself of Gobelinus Persona and others. The open violation of his oath lost him the respect of many friends, and forced him to leave Paderborn. At Werl he prepared a vindication which, however, was never printed, "Causarum captivitatis M. Hermanni a Kerssenbrock succinta narratio cum earundem vera et solida confutatione". To revenge himself upon his enemies, he resorted to a means which imperilled his life; he wrote a biting satire "Noctua", in which he so exasperated his opponents that they sent a delegation to Werl to call him to account for perjury and breaking his oath, and his only safety lay in flight.

DETMER, Hermann von Kerssenbroch's Leben und Schriften (Münster, 1900); Allg. Deut. Biog., s. v.; Geschichtsquellen des Bistums Münster, II (Münster, 1853), pp. xxxvii-lx.

PATRICIUS SCHLAGER

Baron Kervyn de Lettenhove

Baron Joseph-Marie-Bruno-Constantin Kervyn de Lettenhove

Belgian statesman and historian, b. at Saint-Michel-lez-Bruges, 17 August, 1817; d. there, 3 April, 1891. He entered very early on a political career, and in 1861 was sent to the Chamber of Representatives by the district of Eecloo. He took an active part in most parliamentary debates on foreign affairs and public instruction and in 1870 upon the accession of his party, the Constitutional Catholics, he received the portfolio of the Interior. His ministerial career, however, was short-lived; he made the mistake of appointing to the governorship of Limburg P. de Decker, a former minister whose name had been connected with a financial failure (see BELGIUM) and was compelled to resign. He remained in the Chamber of Representatives, but gradually withdrew from politics and devoted his time to historical researches. He had already won some fame in that field: in 1856 the French Academy had crowned his work "Etudes sur les Chroniques de Froissart." Kervyn travelled extensively in Europe, visiting most libraries and archives of note, gathering data for his historical works, some of which have modified on a number of points the prevailing opinion of his time. His style is grave and polished but somewhat bombastic. He has been charged, but without sufficient reason, with unfairness to Queen Elizabeth, William the Silent, and Marnix de Sainte Aldegonde. His most important works besides the one already mentioned are: "Histoire de Flandre" (Brussels, 1847-50); "Lettres et négociations de Philippe de Commines" (Brussels, 1867); "Chroniques relatives à l'histoire de la Belgique sous la domination des ducs de Bourgogne" (Brussels, 1870-7), "Marie Stuart" (Paris, 1889); "Relations de la Belgique et de l'Angleterre sous le règne de Philippe II" (Brussels, 1882-91).

KERVYN DE LETTENHOVE, Biography, I (Bruges, 1900); Memoirs and Bulletins of the Royal Academy of Belgium (Brussels): Bibliographie de Belgique (Brussels, 1890); Bibliographie Academique (Brussels, 1855).

PIERRE MARIQUE

Matthias Kessels

Matthias Kessels

Sculptor, b. at Maastricht, 1784; d. at Rome, 3 March, 1836. He was first apprenticed to a goldsmith at Venloo, but went early to Paris and studied at the Beaux Arts. In 1806 he found his way to St. Petersburg, and abode there eight years, making silver

and was models and sculptures of various kinds. In 1814 he returned to Paris and attached himself to the atelier of Girodet; finally, having decided to go Rome, he was received into the studio of Thorvaldsen; it is of interest to know that he worked on the famous reliefs of "Day" and "Night" (1819). In a competition opened by Canova for young artists, Kessels won the highest award with his "St. Sebastian pierced with arrows", a piece of frank and beautiful workmanship. For the Duke of Alba, Kessels executed his small "Disk-thrower reclining", and the "Cupid whetting his darts", for the Prince of Orange, "Paris resting" a colossal marble placed at Laeken, and which obtained for him the Order of Leopold; for the Duke of Devonshire, the heroic "Disk-thrower in action".

He also made a group in marble of figures in the Deluge, and the tomb in Rome of the Countess de Celles, wife of the Ambassador of the Netherlands. Lesser works are the "Woman weeping over an Urn", the "Genius of Art," and a bust of Admiral Tromp. Kessels excelled particularly in religious subjects: "Christ at the Column", colossal busts of Christ and the Virgin Mary, a low relief of the head of Our Saviour, the Four Evangelists in terra-cotta, and a "Pieta". He was engaged on a "St. Michael overcoming the Hydra of Anarchy", for the church of Ste-Gudule, Brussels, when death claimed him. Kessels is not much known, but he belongs to the Roman School, founded by Canova and Thorvaldsen, which adhered strictly to idealism and to the laws prescribed by the antique. He is one of the group with Schadow, Wolff, and others. He was a member of the Academy of St. Luke and of the Institute of the Netherlands. A "Disk-thrower" by him is in the gardens of the Palais des Academies, Brussels.

M.L. HANDLEY

Wilhelm Emmanuel, Baron von Ketteler

Wilhelm Emmanuel, Baron von Ketteler

Bishop of Mainz, b. at Münster, in Westphalia, 25 Dec., 1811; d. at Burghausen, 13 July, 1877. He was about to enter the Prussian bureaucracy when, in 1837, the persecution conducted by Prussia against Archbishop Droste-Vischering of Cologne touched Ketteler's religious spirit and led him to resign. In 1841 he studied theology at Munich University, and in 1843 he completed his preparation for the priesthood at the Seminary of Münster. In 1844 he became a curate at Beckum and in 1846 rector of Hopsten in Westphalia. Elected by the District of Tecklenburg und Warendorf to the Frankfurt Parliament in 1848, Ketteler distinguished himself by his broad and discerning intelligence of the social movements of his time. In the oration which he

delivered, 21 Sept., 1848, at the funeral of General Auerswald and Prince Lichnowsky, victims of a riot, he exonerated the great body of the German people from responsibility for the crime. At the Catholic Congress of Mainz (Oct., 1848), one of the first of the great meetings of German Catholics, he offered a toast to "the plain people" and declared that as religion has need of freedom, so has freedom need of religion. Finally, during the Advent of 1848, he preached at Mainz two sermons, on the Catholic theory of property and on the duties of Christian charity, developing the sociology of St. Thomas Aquinas, and demonstrating the manner in which it answered every social need of the times. He became rector of St. Hedwig in Berlin, Oct., 1849, where Bishop Diepenbrock of Breslau entrusted him with the task of bringing back to Catholicism the famous Protestant novelist, Ida von Hahn-Hahn. He reorganized the large St. Hedwig Hospital, and for the first time since the Reformation led a Corpus Christi procession through the streets of Berlin.

In 1849 the nomination of Professor Schmid as bishop by the canons of Mainz was rejected by Pius IX, to whom Schmid's views were justly an object of suspicion. The chapter after some opposition proposed three names to Pius IX, among them Ketteler's and on 15 March, 1850, the pope named him bishop of that see. The circumstances of his nomination and its acceptance by the grand-ducal Government of Hesse marked a defeat for the Josephist bureaucracy which for twenty-five years had tyrannized over the Church in all the small states of the ecclesiastical province of the Upper Rhine. Ketteler immediately inflicted two more defeats upon this bureaucracy: he reopened in 1851 the theological seminary of Mainz and thereby freed his clergy from the influence of the theological faculty of Giessen, where the State had hitherto required Catholic seminarians to study; moreover he called a "concursum" for some vacant rectories without asking the permission of the State. Through his institution of diocesan conferences and the introduction of numerous male and female congregations, Mainz became a model diocese. The Brothers of St. Joseph and the Sisters of Providence, two orders founded by Ketteler, were destined to a larger growth. As to the relations between the Church and the State in the Grand Duchy of Hesse, they rested chiefly on the good understanding between Ketteler and Dalwigk, the minister. Their written agreement (1854) was not approved by Rome, which preferred that all the bishops of the ecclesiastical province of the Upper Rhine should act as a unit in their struggle against the legislation which the smaller German states were seeking to impose on all of them. The new agreement, which after a visit to Rome, Ketteler negotiated with Dalwigk (1856), was sent to Rome by the bishop for approval, but was never returned. Until 1870 religious peace was maintained in Hesse through the harmonious relations between the bishop and the minister.

Religious Conflicts in Baden

Ketteler played a very active part in the difficulties which broke out between the Baden government and Archbishop Vicari; he published a *brochure* defending the latter and a visit of Ketteler's to Karlsruhe, in January, 1854, almost brought about an understanding between Vicari and the Prince Regent of Baden. Bismarck, however, then Prussia's plenipotentiary at Frankfurt, exercised such a strong influence over the Baden ministry that the attempted reconciliation failed. In 1865, when the opposition of the Catholics to the Baden school law caused a severe persecution, Ketteler invoked the intervention of Emperor Francis Joseph, and in two pamphlets refuted the formula of Minister Lamey, according to which "law was the public conscience superior to private consciences." After Archbishop Vicari's death (1868) it was again Ketteler who defended against Minister Jolly the electoral right of the Freiburg canons. At Ketteler's suggestion, on the occasion of the eleventh centenary of St. Boniface, were inaugurated the conferences of German bishops; since then they have grown more frequent and are almost annual since 1869. In this way he was the chief promoter of an institution which for the past forty years has greatly aided the cohesion and strength of the German episcopate. During 1864-66 his name was mentioned for the archbishoprics of Posen or Cologne, and Bismarck seemed for a moment to favour the nomination.

Ketteler as a Social Reformer

Ketteler thought that he was not exceeding his rights as a bishop when he spoke authoritatively on social questions. In 1848 he believed that social reform had to begin with the interior regeneration of the soul. Later he was to enter more deeply into economical problems. When about 1863, the Liberal Schulze-Delitzsch and the Socialist Lassalle made forcible appeals to the German workingmen, Ketteler studied their doctrines and even consulted Lassalle in an anonymous letter on a scheme of founding five small co-operative associations of workingmen.

The Labour Question and Christianity

In a book published in 1864, "The Labour Question and Christianity," he adopted Lassalle's criticism of the modern treatment of labour, and admitted the reality of an insurmountable law. In opposition to Schulze-Delitzsch he pointed out the futility of the remedies proposed by the Liberals; he advocated labour associations, and even accepted the idea of co-operative unions to be established, not as Lassalle wished, by state subvention, but by generous aid from Christian capitalists. In a Socialistic meeting at Rondsorf, 23 May, 1864, Lassalle paid homage to Ketteler's book. On his side, Ketteler, whom three Catholic workmen had asked in 1866 if they could conscientiously join the "workingmen's association" founded by Lassalle, was disposed to dissuade them from so doing owing to the anti-religious spirit of Lassalle's successors; nevertheless in his reply he duly acknowledged Lassalle's "respectful recognition of the depth and truth of Christianity." At this time he counted particularly upon the initiative of

Christian charity for the organization of productive co-operative associations destined to restore social justice on a more equal scale. In 1869 he went still further: in a sermon preached near Offenbach, 25 July of that year, he particularized certain urgent reforms (increase of wages, shorter hours of labour, prohibition of child-labour in factories, prohibition of women's and young girls' labour); these claims, he thought, should be presented to the public authorities. In Sept., 1869, at the Fulda conference of the German bishops, he showed how necessary for the removal of economic evils was the intervention of the Church in the name of faith, morals, and charity. He also made clear the right of workingmen to legal protection and urged that in every diocese some priests should be selected to make a study of economic questions. This Fulda discourse of Ketteler brought the Church of Germany into closer relations with the new social activity; on the other hand, his programme for protection of labour, taken up again in 1873 in his pamphlet on "Catholics in the German Empire," long served the German Centre as a basis for their social claims.

Doctrinal Controversies; The Vatican Council

Though not professionally a theologian, Ketteler made his influence felt in the various doctrinal controversies of his time. In his "Liberty, Authority, and Church" (1862) he took a stand on the question of Liberalism and set forth the Christian attitude towards the various meanings of the word *liberty*. The theological "school" which Ketteler established in his seminary at Mainz, and whose chief representatives were Moufang and Heinrich, was noted for its adherence to Scholastic theology and its hostility to the anti-Roman tendencies of "Germanism" and "German Science" represented by Döllingerer and the Munich School. The former urged with much tenacity the theological seminaries, as preferable to the theological faculties of the universities, for the education of the Catholic clergy, and earnestly strove since 1862, for the establishment of that free Catholic university in Germany which is yet a desideratum. Despite this firm attitude, Ketteler had great intellectual charity, and could understand theological views that differed somewhat from his own, and when necessary could be their advocate; it was doubtless to him that Kuhn of Tübingen was indebted for escaping condemnation at Rome.

On the eve of the Vatican Council, Ketteler was not very favourably inclined towards the dogmatic definition of papal infallibility: "In our time it is not opportune to increase the number of dogmas," he wrote to Bishop Dupanloup. Enemy as he was of political absolutism and centralization, he feared that a declaration of papal infallibility would result in religious absolutism and centralization. He submitted to the episcopal assembly at Fulda (1 Sept., 1869) a series of observations which he had asked from Francis Brentano, professor at Würzburg, and in which the definition of papal infallibility was treated as inopportune; at the same time he rough-drafted the letter in which

this assembly urged all Christians to submit to the future council. Though belonging to the minority in the council, he protested more than once against the "Roman Letters" of Döllingerer, published at Munich under the pseudonym of "Quirinus." He circulated in the council a pamphlet of the Jesuit Quarella, which in some respects seemed to militate against the doctrine of infallibility, but he did not personally accept all the theories of this work. It was he who suggested the petition of May, 1870, in which a number of bishops demanded that the eleven chapters of the "Schema" on the Church be taken up before entering on the discussion of infallibility. On 23 May he declared in a plenary meeting that he had always believed in papal infallibility, but he asked whether the theological proofs put forward sufficed to justify its dogmatic definition. He was not present at the final vote and left Rome after a written declaration that he submitted beforehand to the decision of the council. In September, 1870, he signed, with other German bishops, the Fulda declaration in favour of the newly defined dogma.

Ketteler and German Unity

The political changes that now took place in Germany, and the indirect effect they might have upon Catholic interests, were a source of much anxiety to him. When Austria's defeat at Sadowa (1866) filled the Catholics of Germany with consternation, and proved that their dream of an Austrian Germany was quite over, Ketteler tried to revive their courage in his "Germany after the War of 1866." He advised them to meet halfway the coming changes, and to let no one surpass them in their love of the German Fatherland. On the other hand, he besought Prussia not to be misled by those who would make her an instrument of Protestantism or of certain philosophical theories, and urged the respect of all existing political and social autonomies.

After the establishment of German unity (1870-71) Ketteler's chief concern was to obtain for German Catholics in the new empire such liberties and guarantees as the Constitution granted them in Prussia. This much he demanded in a letter to Bismarck (1 Oct., 1870), also during a visit he paid him in the spring of 1871, and in a speech in the Reichstag (3 April, 1871), where he served as a deputy from the Baden constituency of Waldürn-Tauberbischofsheim. The National Liberal party, on the contrary, urged the new empire towards religious persecution. Ketteler conferred once more with Bismarck, on 16 March, 1871, again pleaded with him for the Catholics, and then, on 14 March, 1872, resigned his seat in the German Parliament. He kept in touch, however, with religious politics, and wrote important pamphlets against the Prussian Kulturkampf, also against similar measures which the National Liberals, yet influential with Dalwigk's successors, were inaugurating in Hesse. During the Kulturkampf his share in the Fulda episcopal conferences was often predominant. He and Archbishop Melchers of Cologne were potent in the decision passed in 1873 urging the bishops to

oppose the May Laws by absolute passive resistance, and, on the other hand, advocating a conciliatory attitude towards the Prussian law on the administration of church property. In 1873 his views on the rights of Christianity and of a bishop led him to enter the broader political field in his book on "The Catholics in the German Empire" in which he drew up a platform for the Centre Party and offered wise direction to the State. He contrasted frequently the Liberalism of 1848, sincerely respectful of religious belief, with the "National Liberalism" of Bismarckian Germany, the old German idea of local autonomy with the idea of centralization borrowed from France. He hated in Bismarckian Germany the spread of political absolutism quite as in modern industrialism he hated the development of capitalist absolutism. The spirit of initiative which characterized this bishop is well set forth in a letter written, 6 May, 1870, to Haffner, future Bishop of Mainz: "I am heart and soul attached to the new forms which in days to come the old Christian truths will create for all human relations." Of him Windthorst said, in 1890: "We venerate him unanimously as the doctor and leading champion of Catholic social aspirations."

RAICH, Briefe von und an Ketteler (Mainz, 1879); PFUELF, Bischof Ketteler (Ibid., 1899), a three volume work of first-class importance; IDEM, in Stimmen aus Maria Laach (1908), 550-561, an account of Ketteler's ideas on the school question and on ecclesiastical reforms; DE GIRARD, Ketteler et la question ouvriere (Berne, 1896); DECURTINS, preface to Oeuvres choisies de Mgr de Ketteler (Bale, 1892); GOYAU, L'Allemagne religieuse: le catholicisme, 1800-1870, II-IV (Paris, 1905-1909); IDEM, Ketteler (Paris, 1907), treats of the principal social ideas of Ketteler. A complete bibliography of Ketteler's works is given at the end of the third volume of Pfuelf.

GEORGES GOYAU

Erasmus Darwin Keyes

Erasmus Darwin Keyes

Soldier, convert, b. at Brimfield, Massachusetts, U.S.A., 29 May, 1810; d. at Nice, France, 14 October, 1895. His father, Justus, was a prominent physician and surgeon. Receiving an appointment to the West Point Military Academy, young Keyes graduated there in 1832 and was commissioned a lieutenant in the Third Artillery. After service in the South during the Nullification troubles, 1832-33, he was military aide to General Scott, with the rank of captain (1837-41), on duty connected with the Indian conflicts. From 1854 to 1858 he was instructor of calvary and artillery tactics at West Point, and received his commission of major, 12 Oct., 1858. Gen. Scott appointed him military secretary, 1 January, 1860, and he became colonel of the 11th Infantry, 14 May, 1861, and soon after brigadier-general of the volunteers, the Civil War having broken out.

General Keyes participated in the first battle of Bull Run, and commanded a corps in the Army of the Potomac. For gallantry at the battle of Fair Oaks, he received the brevet of brigadier-general in the regular army. On 6 May, 1864, he resigned from the army and went to California, where he engaged in mining and other business enterprises. He became a Catholic in San Francisco, in 1866. His death took place in France, but his remains were brought back to New York for interment. He was the author of "Fifty Years' Observation of Men and Events" (New York, 1884), which contains many anecdotes of public interest.

CULLUM, Biog. Register of the Officers and Graduates of the U.S. Military Academy at West Point, N.Y. (New York, 1868).

THOMAS F. MEEHAN

Power of the Keys

Power of the Keys

The expression "power of the keys" is derived from Christ's words to St. Peter (in [Matthew 16:19](#)). The promise there made finds its explanation in Isaias 22, in which "the key of the house of David" is conferred upon Eliacim, the son of Helcias, as the symbol of plenary authority in the Kingdom of Juda. Christ by employing this expression clearly designed to signify his intention to confer on St. Peter the supreme authority over His Church. For a consideration of the text in its dogmatic bearing, see POPE; PRIMACY. In the present article our sole purpose is to give a brief historical account of the meaning attached to the expression by ecclesiastical writers.

I. THE FATHERS

(1) In the Fathers the references to the promise of [Matthew 16:19](#), are of frequent occurrence. Almost invariably the words of Christ are cited in proof of the Church's power to forgive sins. The application is a natural one, for the promise of the keys is immediately followed by the words: "Whatsoever thou shalt bind upon earth", etc. Moreover, the power to confer or to withhold forgiveness might well be viewed as the opening and shutting of the gates of heaven. This interpretation, however, restricts the sense somewhat too narrowly; for the remission of sins is but one of the various ways in which ecclesiastical authority is exercised. We have examples of this use of the term in such passages as August., "De Doctrina Christi", xvii, xviii: "Quid liberatius et misericordius facere potuit. . . nisi ut omnia donaret conversis. . . Has igitur claves dedit Ecclesiae suae ut quae solveret in terra soluta essent in coelo" (How could He [Christ] have shewn greater liberality and greater mercy. . . than by granting full forgiveness to those who should turn from their sins. . . He gave these keys to His Church,

therefore, that whatever it should remit on earth should be remitted also in heaven) (P.L., XXIV, 25; cf. Hilary, "In Matt.", xvi, P.L., IX, 1010).

It is comparatively seldom that the Fathers, when speaking of the power of the keys, make any reference to the supremacy of St. Peter. When they deal with that question, they ordinarily appeal not to the gift of the keys but to his office as the rock on which the Church is founded. In their references to the *potestas clavium*, they are usually intent on vindicating against the Montanist and Novatian heretics the power inherent in the Church to forgive. Thus St. Augustine in several passages declares that the authority to bind and loose was not a purely personal gift to St. Peter, but was conferred upon him as representing the Church. The whole Church, he urges, exercises the power of forgiving sins. This could not be had the gift been a personal one (tract. 1 in Joan., n. 12, P.L., XXXV, 1763; Serm. ccxcv, in P.L., XXXVIII, 1349). From these passages certain Protestant controversialists have drawn the curious conclusion that the power to forgive sins belongs not to the priesthood but to the collective body of Christians (see Cheetham in "Dict. Christ. Antiq.", s.v.). There is, of course, no suggestion of this meaning. St. Augustine merely signifies that the power to absolve was to be imparted through St. Peter to members of the Church's hierarchy throughout the world.

Some few of the Fathers, however, are careful to note that the bestowal of this power upon St. Peter alone, apart from the other Apostles, denoted his primacy among the twelve (Optatus, "De Schism. Don.", vii, 3, in P.L., XI, 1087). Origen dilates at length on this point, but teaches erroneously that the power conferred upon the Twelve in [Matthew 18:18](#), could only be exercised within certain restrictions of place, while that conferred upon St. Peter in [Matthew 16:18](#), was of universal extent (Comm. in Matt., P.G., XIII, 1179).

(2) Occasionally, though infrequently, Christ's promise is not restricted to signify the power to forgive sins, but is taken in the fuller meaning of the gift of authority over the Church. Thus St. Gregory in his letter to the Emperor Maurice, after quoting Christ's words in [Matthew 16:18-19](#), writes: "Behold he [Peter] received the keys of the kingdom of heaven, the power of binding and loosing is committed to him, the care of the whole Church and its government is given to him [cura ei totius Ecclesiae et principatus committitur (Epist., lib. V, ep. xx, in P.L., LXXVII, 745)]. St. Maximus in a sermon on the feast of Saints Peter and Paul (P.L., LVII, 403) says that to St. Peter was given the key of power (*clavis potentioe*), to St. Paul the key of knowledge (*clavis scientioe*). The idea of a key of knowledge is clearly derived from Christ's words to the Pharisees, [Luke 11:52](#): "You have taken away the key of knowledge." This distinction of the *clavis potentioe* and *clavis scientioe* recurs frequently in the medieval writers, though without reference to St. Paul.

II. THE SCHOLASTICS

By the Scholastic theologians the precise significance of the term was closely analysed.

(1) The view which is now universally accepted is exposed at length by Suárez (De Poenit., disp. xvi). According to him, the phrase as employed by Christ in His promise to St. Peter denotes the gift of ecclesiastical authority in its widest scope. This authority was to be in a sense peculiar to St. Peter and his successors in the chief pastorate; for they alone were to possess it in its fullness. But it was to be exercised in due measure by the other members of the Divinely instituted hierarchy according to their several degrees. Thus understood, the *potestas clavium* includes

- the power of order, namely power exercised in regard to sacrifice and sacrament,
- the power of jurisdiction, and
- the power to define in questions of faith and morals.

The various powers thus conferred upon the Church were held to belong either to the *clavis potentioe* or to the *clavis scientioe*, the latter of these two being understood to signify the power to teach, while the other departments of authority pertained to the *clavis potentioe*. The distinction is, however, a theological refinement, and is not involved in the expression itself. As Suarez urges, Christ, when using the plural form, did not intend to indicate that the gift was twofold.

(2) The meaning attached to the term by the older Scholastics was, however, different from this. They followed the patristic tradition, and confined its significance to the judicial authority exercised in the Sacrament of Penance. The power of the keys, St. Thomas tells us (Summa Theologica Supp:17:2, ad 1um), is a necessary consequence of the sacerdotal character. It is, in fact, identical in essence with the power to consecrate and to offer the Holy Sacrifice of the Mass. The one sacerdotal gift is applied to different ends in the different sacraments. Such, too, appears to be the teaching of Pope John XXII in a well-known passage dealing with this subject (Extravag., tit. xiv, De verborum signif., c. v, Quia quorundam). The definition, "Clavis est specialis potestas ligandi et solvendi qua iudex ecclesiasticus dignos recipere et indignos excludere debet a regno" (The keys are a special power of binding and loosing by which the ecclesiastical judge should receive the worthy [into the kingdom of heaven] and exclude the unworthy therefrom), generally accepted in the Scholastic period (Pet. Lomb., "Sent.", IV, dist. xviii; John XXII, loc. cit.; St. Thomas, loc. cit.), might seem indeed to include jurisdiction in the external as well as in the internal forum. But in point of fact it was not so understood. The distinction between the *clavis potentioe* and the *clavis scientioe* was employed

here. By the *clavis scientioe* was understood the priestly authority to interrogate the penitent and thus obtain cognizance of the facts of the case; by the *clavis potentioe*, the authority to grant or refuse absolution.

The view just exposed is inadmissible as an interpretation of Christ's words. For it is plain that He desired to confer by them some special prerogative on Peter, while, according to this interpretation, the *potestas clavium* is common to all priests.

(3) Hence there were not wanting theologians who narrowly restricted the scope of the gift, and asserted that it denoted the special prerogatives appertaining to St. Peter and his successors, and these alone. Thus Cardinal Cajetan (Opusc., I, tract. iii, De Rom. Pont., c. v) held that while the power of binding and loosing belonged to all priests, the power of the keys -- authority to open and shut -- was proper to the supreme pontiff; and that this expression signified his authority to rule the Church, to define dogma, to legislate, and to dispense from laws. A similar opinion would seem to have been held by the Franciscans whose views are rejected by John XXII (loc. cit.). They contended that the popes held a *clavis scientioe* and a *clavis potentioe*; and that, though in the case of the *clavis potentioe* a decision arrived at might be reversed by a subsequent act, no reversal was possible where the *clavis scientioe* had been employed.

(4) Macedo in his treatise "De Clavibus Petri" (Rome, 1660), attributes to certain theologians and canonists the opinion that the keys denote the supreme authority in the civil and ecclesiastical spheres, and that Christ conferred upon the pope a direct supremacy over both orders. We have, however, been unable to verify this statement. Indeed the writers who attributed to the pope an indirect authority only, in regard to civil governments, found an argument for their views in this very passage. They pointed out that it was the keys of the kingdom of heaven, and not of the kingdoms of this earth, which Christ bestowed upon His vicar.

MACEDO, De Clavibus Petri (Rome, 1660); SUAREZ, De Poenitentia, disp. xvii; ST. THOMAS, Summa Theol., Suppl., Q. xvii; the Scholastic commentators on the Lib. Sent. in lib. IV, dist. xviii; A LAPIDE, In Matt., xvi, 18.

G.H. JOYCE

Kharput

Kharput

Armenian Uniat diocese created in 1850. The city of Kharput, Armenian Kharput, which means "rocky fortress", is very ancient. Although it was built under the first Armenian kings it has nevertheless no history. It is situated on a mountain about 4350 feet high and there are still to be seen the ruined fortress and ancient tower, also walls rather well preserved. Because of its height and also owing to its lack of water, Kharput

is being by degrees abandoned by its inhabitants, who have preferred to take up their abode in Mezré, a city about three miles distant in the plain. The two cities are in constant communication and Kharput still contains 30,000 inhabitants. It is the capital of the vilayet of Mamouret-ul-Aziz recently created. The Armenian Catholic diocese numbers 3000 faithful, 8 parishes, 6 churches, 3 chapels, 14 stations, 14 primary schools, chiefly at Kharput-Mezré and Malatia. There are about 72,000 Christians throughout the vilayet, which contains about 600,000 inhabitants. The Armenian Protestants have a large American mission at Kharput, which is the headquarters of all those in Armenia.

S. VAILHÉ

Kiang-Nan

Kiang-nan

(Vicariate Apostolic)

The present Vicariate comprises the two provinces of Kiang-su and Ngan-hwei. Its alluvial lands make it, especially Kiang-su, one of the richest and most populous countries of China. The number of inhabitants of both provinces exceeds 60,000,000. Father Matteo Ricci, S. J., was its first missionary, introducing the Catholic religion into this country at the end of the sixteenth century. He found a powerful aid in the person of the emperor's minister, the famous academician Paul Siu Kwang-k'i, whom he met first at Kwang-tung and later at Peking. Baptized in 1603 at Nan-king, Paul Siu returned to Shang-hai, his native place, and there converted many pagans. In 1607 he took with him from Peking Father Lazzaro Cattaneo, who built a residence and a chapel still to be seen at Shanghai. Returning to Peking, he first followed the Jesuit fathers in their disgrace, was restored to favour in 1628, and died there in 1633. In 1641 his remains were transferred to Zi-ka-wei, where they still rest, and the principal establishment of the new mission is in the vicinity his tomb. The Jesuits Franciso Brancati and Geronimo de Gravina were at this period building the churches of Sun-kiang, Su-chou, Tsong-ming; Father Sambriani, those of Nan-king, Shanking, Yang-chou, Hwai-ngan. The mission of Kiang-nan enjoyed peace from 1644 to 1661, but the missionaries were too few for the work. In 1660 the Vicariate Apostolic of Kiang-nan was created and confided to Bishop Ignazio Cotolendi of the Paris Society of Foreign Missions. During the persecutions from 1664 to 1671 twenty Jesuits were exiled to Macao, Father Verbiest in Peking obtaining their release in the latter year. After the death of K'ang-hi, Yung Chen exiled all the missionaries of the provinces; a few, however, succeeded in hiding themselves, and, helped by twelve or fifteen Chinese

priests, attended to the wants of the Christians. In 1690 Alexander VIII created the Diocese of Nan-king, placing it under the jurisdiction of the Archbishop of Goa and with authority over the provinces of Kiang-nan and Ho-nan. The first bishop of Nan-king was Alessandro Ciceri of Milan, a Jesuit, consecrated at Macao on 2 Feb., 1696. His last successor was Gaietano Pires-Pireira, a Portuguese Lazarist (d. at Peking, 1846). After 1836 the Diocese of Nan-king was governed by Apostolic administrators until 1856, when the episcopal see was abandoned.

In 1736 the mandarins commenced a bloody persecution which lasted a whole century. At Kiang-nan Fr. Tristan of Athemis was the first priest arrested. The superior of the mission, Father Anthony Joseph Henriquez, was pursued and surrendered on 21 Dec., 1747. Both missionaries were strangled at Su-chou 17 Sept., 1748. The process of their beatification is not yet finished. Three Jesuit missionaries followed in Kiang-nan, viz., Fathers Ignatius Perez, Martin Correa, and Godefroy of Lambeckhoven, named Bishop of Nan-king on 15 May, 1752, and consecrated at Macao on 22 July, 1756. He remained thirty years at Kiang-nan with two Chinese Jesuit priests, Mark Kwan and John Yau. It is related that in 1784 Bishop Godefroy entered Su-chou as a chair-dealer to ordain some new priests. He died on 22 May, 1787, but not before sorrowfully proclaiming, as bishop, the dissolution of his own Society. Before his death he obtained the favour of re-entering the Society, yet surviving in Russia. For the next fifty years only Chinese priests conducted the Kiang-nan mission. In 1830, two Portuguese Lazarists, Fathers Maranda and Henriquez, arrived in Kiang-nan. From 1835 to 1840 Father Ferdinand Faivre and Peter Lavaissière made temporary sojourns in the mission. In reality, from 1787 to the return of the Jesuits in 1840, Kiang-nan was governed by native priests, who kept alive the Faith.

In 1833 Gaietano Peres-Pereira was made Bishop of Kiang-nan, and resided at Peking, relegating his powers to Father Henriquez, a Lazarist like himself residing at Macao. On 1 Oct., 1838, Mgr Peres, last Bishop of Nan-king, conferred the powers of vicar-general to Father Louis de Besi, named in 1841 Vicar-Apostolic of Shan-tung and administrator of the diocese of Nan-king and consecrated titular Bishop of Canopus. He arrived at Kiang-nan in 1842, and obtained some French Jesuits from Propaganda, and from Father Roothan, then General of the Society of Jesus. Fathers Gotte-land, Benjamin Brueye, and François left Europe on 28 April, 1840. In 1842 a treaty between England and China resulted in the opening of five Chinese ports, among them Shanghai. Five new fathers and one brother left France for China in 1842. They made the voyage with M. de Lagrené, ambassador of France to Peking, who in 1844 obtained permission for the preaching of the Catholic religion in China. Bishop de Besi appointed Fr. Brueye to found the seminary, which was opened on 3 Feb., 1843, with twenty-three students. In 1853 it was established at Song-kia-tu. In 1849 all the Christian set-

tlements were confided to the French Jesuits; they contained four thousand seven hundred and fifty Christians. The rebels invaded in 1853 a great part of the province and remained there eleven years. The Jesuit Fathers established themselves in 1847 at Za-ka-wei, near the tomb of Paul Siu, at which period of the orphanages of the mission were commenced. An asylum for girls was founded in 1855 near Wang-tan. In 1853 the Chang-mau rebels (Tai-ping) took possession of Nan-king, then of Shanghai, but abandoned the latter in 1854.

Bishop de Besi left for Rome in 1847, leaving the government of the mission to his co-adjutor, Bishop Maresca. In 1849 the latter was named administrator of the Diocese of Nan-king, but returned to Europe, owing to ill-health, on 8 April, 1855. On 13 Nov. of the same year he died at Naples. The Diocese of Nan-king was then suppressed, and the Vicariate Apostolic of Kiang-nan entrusted to the French Jesuits. Father Pierre André Borgniet became administrator Apostolic in 1856. During the eight years of his administration the rebels laid waste all the Christian missions of Kiang-nan except that of Shanghai. Then followed the wars of the French and English against China, beginning in 1857. A treaty was signed in 1858, but the war was renewed in 1860, at the end of which entrance into China was obtained. In 1859 the rebels held only Nan-king, but suddenly became stronger. Father Massa was arrested by them but made his escape; his brother Louis, however, was killed by defending the orphanage of Tsai-kia-wan. The orphan asylum was pillaged and burned, and many Christians were massacred. A few Christian natives of Manila were able to defend Tung-kia-tu and Za-ka-wei. In 1862 Admirals Hope and Protet opened a campaign, but the latter was killed at Nan-kiau. Major Gordon, who commanded some four to five thousand men, gained some advantage, but was dismissed in 1866 by the Chinese. At the end of the same year the rebels were driven out of every place they had held. The missions, however, suffered much in the meantime. Father Vuillaume was killed on 4 March, 1862; between 1856 and 1864 twenty-four missionaries died, and before the close of 1865 six or seven were victims of typhus. Bishop Borgniet died of cholera on 31 July, 1862. Mgr Hippolyte Adrien Languillat, Bishop of Sergiopolis and Vicar Apostolic of Chi-li since Sept., 1856, was named Vicar Apostolic of Kiang-nan on 2 Feb., 1865, and at once undertook to restore the ruins occasioned by the rebels. He went in Rome in 1867 and brought back with him religious Helpers of the Souls in Purgatory and some Carmelites. He founded the observatory about the same period, and took part in the Vatican Council in 1870, but in 1874 a stroke of apoplexy almost disabled him for any active service. The following are the statistics for the years 1865 and 1878. In 1865, 42 European priests and 12 Chinese priests, 184 missions, 71,184 Christians, and 5038 pupils in the schools; in 1878, 56 European and 26 native priests, 585 missions, 93,310 Christians, 9135 pupils in the schools.

Father Carrère suffered much at Nan-king. Driven out of this city by Li Hung Chang, he was recalled by the consul of France from Shanghai; he died on 17 Aug., 1868. A hospital for aged men was established at Shanghai in 1867, and the St. Francis Xavier School was opened. A severe persecution broke out in 1876. In March some residences were pillaged, and a catechist massacred. On 13 July a Chinese priest was massacred with some of his students and a boy from the school. The chapel was set afire, and the bodies of the victims were consumed. The girls of the school and their teachers were taken into captivity. Everywhere the property of the Christians were pillaged, and their chapels burned. Bishop Languillat died during this persecution, at Zi-ka-wei, on 29 Nov., 1878. Bishop Valentine Garnier, already chosen coadjutor, was named his successor; he was fifty-four years old, and governed the mission nineteen years. The accounts of his administration from 1879 to 1878 are as follows: in 1879, 50 European and 29 Chinese priests, 580 missions, 345 schools for boys with 6222 pupils, 213 schools for girls with 2791 pupils, 91,175 Christians; in 1898, 116 European and 40 Chinese priests, 896 missions, 390 schools for boys with 10,663 pupils, 449 schools for girls with 5208 pupils, 155,177 Christians.

The fathers succeeded in establishing themselves finally in the centre of Ngan-hwei. In 1882, Bishop Garnier sent missionaries to Su-chou-fu, the most northern prefecture of the province of Kiang-su. The fathers bought a house in the city, and then commenced their difficulties, which lasted fourteen years. On 5 Feb., 1889, the European concession of Chin-kiang was attacked by the Chinese, the consulate of the United States was pillaged and burned, but the church and residence of the mission was spared. On 2 May, 1891, some of the rabble besieged the orphanage of the mission, but soldiers rescued the orphans. On 12 May, 1891, Wu-hu and then Ngan-king were attacked, but the presence of a French vessel saved them. However, five or six chapels were pillaged and burned in the interior of the province. Tranquility was restored, thanks to the presence of Admiral Besnard. Bishop Garnier died on 14 July, 1898. Bishop Simon was named Vicar Apostolic in Jan., 1899, and consecrated on 25 June; he died on 25 Aug. of the same year at Wu-hu. At the end of 1900, Bishop Paris, superior of the mission, was named Vicar Apostolic and titular Bishop of Silanda. The following was the condition of the mission in 1907: 1 bishop; 142 Jesuits of whom 26 are Chinese; 35 native priests; 696 churches or chapels; one grand seminary at Zi-ka-wei with 29 students; one little seminary with 15 students; 558 schools for boys with 14,175 pupils; 604 schools for girls with 9360 pupils; two colleges for boys with 408 students; 2 colleges for European girls with 766 students (in Shanghai); 1 English school with 543 pupils; 1 French schools with 336 pupils; 6 hospitals with 3898 patients; 6 asylums for old men with 198 inmates; 37 orphanages with 6584 children; 29 Little Brothers of Mary; 32 Carmelite nuns, 20 of whom are natives; 91 Helpers of the Souls in Purgat-

ory, 33 of whom are natives; 31 Sisters of Charity; 9 Little Sisters of the Poor; 173 Chinese religious; 145,219 Catholics, and 92,018 catechumens. (See China).

Eastern Kiang-Si

Eastern Kiang-si

(Vicariate Apostolic)

The mission of Eastern Kiang-si was separated from the mission of Northern Kiang-si in 1885. It includes 8,000,000 inhabitants and is formed from the four prefectures of Fu-chou-fu, Yao-chou-fu, Kwang-sin-fu, and Kien-chang-fu. The first vicar Apostolic is the present incumbent, Mgr Casimir Vic, a Lazarist, named in 1885 titular bishop of Metellopolis. He resides at Fu-chou-fu. The Catholic seminary included in 1899: 1 bishop, 16 Lazarists (including three Chinese), six native priests, six Sisters of Charity, forty-eight Sisters of St. Ann, fifty-six schools with 1910 pupils, sixty-six churches and chapels, ten orphanages with 622 children. In 1908: 1 bishop, 21 Lazarists, ten native priests, 96 churches and chapels, 2 seminaries with 31 students, 73 schools with 1787 pupils, 2 hospitals, one leper house, 13 hospices for aged men with 150 inmates, 13 orphanages with 539 children, 6 Sisters of Charity, 12 Chinese Sisters of St. Joseph, 16,295 Catholics, 3500 catechumens.

Missiones Catholicæ (Rome).

Northern Kiang-Si

Northern Kiang-si

(Vicariate Apostolic)

Father Matteo Ricci of the Society of Jesus was the first missionary who entered the province of Kiang-si at the end of the sixteenth century. It was during his voyage from Canton to the capital of China that he remained for some time in this province, and preached the Gospel with success. After him, during the seventeenth century, some missionaries belonging to different religious orders came. Innocent XII organized this province into a vicariate Apostolic, and entrusted it to Rev. Fr. Alvares Benavento of the Augustinian order, appointing him titular Bishop of Ascalon. The new vicar fixed his residence in Kan-chou-fu. During his administration, the Jesuit fathers built

beautiful churches and founded flourishing Christian communities at Yao-chou, Kiang, and Nan-change, capital of the province. Bishop Benavento died at Macao, 1705. He was not replaced on account of the persecution. The mission was entrusted to Bishop Ventallot, Vicar Apostolic of Fu-kien. The vicars Apostolic of Fu-kien maintained the mission of Kiang-si under their jurisdiction until the appointment of Bishop Carpena, who obtained in 1838 that the missions of Kiang-si and Che-kiang be removed from his jurisdiction and transferred to the Lazarist Fathers. In 1722 we find Father Entrecolles, S. J., at King-te-chen, whence he sent a magnificent study on the art of Chinese moulding. In 1785 the first Lazarist missionaries arrived at Peking to take the place of the Jesuit missionaries. They were charged with the missions of Kiang-si and Kiang-nan. Unable to get themselves into those missions on account of the persecutions of Youn-ching and Kien-long, they delegated the native priests to visit the Christians. In 1790, Blessed Clet was sent to Kiang-si, where no European missionaries had set foot during the preceding forty years. He remained alone during three years. The persecution broke out again during the reign of Kia-king. Blessed Clet, assisted by the Chinese Lazarists, administered during this time the missions confided to the Lazarist Fathers. He was arrested in Ho-nan in 1819, and on 18 Feb., 1820, suffered death by strangulation at the age of seventy-two. In 1832, Father Laribe arrived in Kiang-si.

In 1838, at the request of Bishop Carpena, Kiang-si and Che-kiang were separated from the Vicariate Apostolic of Fu-kien. Bishop Rameaux, former missionary of Hu-pe, was named vicar Apostolic of the new vicariate formed by the union of Kiang-si and Che-kiang. At this time there were approximately 9000 Catholics in Kiang-si. In 1845, Bishop Rameaux died of apoplexy. The mission of Che-kiang was separated from that of Kiang-si and Bishop Laribe was named vicar Apostolic of Kiang-si. From 1856 to 1860 the ravages of Changmau (Tai-ping) reduced the Christians to 6000. In 1870, at the arrival of Bishop Bray, there were 7388 Christians and more than 1050 catechumens. There were then four European missionaries and ten native priests. In 1879 Leo XIII divided Kiang-si into the vicariates of Southern Kiang-si and Northern Kiang-si. Finally, in 1885, the Vicariate Apostolic of Eastern Kiang-si was separated from Northern Kiang-si. Bishop Paul Ferrant was named co-adjutor to Bishop Bray in 1898, and titular Bishop of Barbalissus; he assumed the direction of the mission in 1905. In the succeeding years, the mission of Northern Kiang-si was the scene of bloody persecutions. Father Laruche and five Little Brothers of Mary were massacred at Nan-chang on 25 Feb., 1906; the mission and the school were burned. Three other missionaries and five Daughters of Charity saved their lives by fleeing to Kiu-kiang.

The mission of Northern Kiang-si comprises to-day (1910) the six following civil prefectures: Kiu-kiang-fu, residence of the vicar Apostolic, Yoci-chou-fu, Nan-chang-

fu, capital of the province, Nan-kang-fu, Lin-kiang-fu, and Yuan-chou-fu. It contains about ten million inhabitants. In 1899 the Catholic mission included: 2 bishops, 11 Lazarist priests, of whom 2 were Chinese, 2 native priests, 14 Daughters of Charity, 1471 Catholics. Condition of the mission in 1907: 1 bishop, 16 European missionaries, 4 native priests, 98 churches and chapels, two seminaries with 24 students, 50 schools with 1439 scholars, 1 school directed by the Little Brothers of Mary, 24 Daughters of Charity, 8395 Catholics. In 1908: 1 bishop, 18 European missionaries, 4 native priests, 110 churches and chapels, 11,397 Catholics.

Missiones Catholicæ.

V.H. MONTANAR

Southern Kiang-Si

Southern Kiang-si

(Vicariate Apostolic)

Southern Kiang-si was separated from the mission of Northern Kiang-si in 1879, and organized into an independent Vicariate Apostolic. The mission possessed at the time 2000 Catholics among a population of ten million. This part of Kiang-si had been greatly neglected up to this time, due to its remoteness. Father Rouger, a Lazarist, was the first superior of the new mission. He retained the title of pro-vicar until 1884, when he was named vicar Apostolic. He established his residence at Ki-ngan-fu. At his death in 1887, Mgr Cogret assumed the direction of the mission. The latter came from Peking, and found only two missionaries in the mission. Southern Kiang-si was often a prey to persecution. In 1884 the Christian districts were pillaged. In August, 1900, the chapels on the frontiers of Kwang-tung were again pillaged, and then burned, and the Christians driven from their homes. Later, toward the end of 1907, Father Candugler, an Italian Lazarist, and more than sixty Christians were massacred at Ta-ho-li; the churches and more than twenty Christian villages were pillaged and destroyed by fire. The following is the account rendered at different periods of the condition of the mission. In 1890: 1 bishop, 16 priests, 27 chapels and churches, 2 seminaries with 28 students, 4 colleges with 87 students, 7 native Daughters of St. Anne, 4 orphan asylums with 136 children, 5229 Catholics, and more than 4000 catechumens. In 1908: 1 bishop, 15 missionaries, 6 native priests, 43 chapels and churches, 2 seminaries with 42 students, 1 college with 30 students, 4 orphan asylums with 317 children, 4 Little Brothers of Mary, 5 Daughters of Charity, 15 native Daughters of St. Anne, 8637 Catholics, and about 3000 catechumens.

Missiones Catholicæ.

Kickapoo Indians

Kickapoo Indians

Apparently corrupted from a longer term signifying "roamers", a tribe of Algonquian stock, closely related dialectically to the Sauk and Foxes, and living when first known in south central Wisconsin, whence they gradually moved southward, taking up a position about the lower Wabash in Illinois and Indiana, upon lands seized from the Illinois and Miami. In their general habit, as well as in their mythology and general forms, they closely resembled the Sauk and Foxes. They were agricultural, occupying fixed villages of bark houses in summer, and oval mat-covered lodges in winter, and making frequent excursions into the plains beyond the Mississippi to hunt buffalo and steal horses. As their name implies, they were known for their roving and adventurous disposition. Their religious beliefs centred about two mythic hero brothers, to whom all good was attributed, and who ruled over the spirit world. They held the dog particularly sacred. They had a systems of eleven clans (see Indians), which is still kept up, descent following the male line, and the name of the individual indicating the clan to which he belonged. As a people the Kickapoo have usually been hostile to the white man and his civilization. They are possibly identical to the tribe mentioned by the Jesuit Druillettes in 1658, but were first definitely met by Alloues in 1869, as visitors, with other tribes, to the Francis Xavier Mission, on Green Bay, Wisconsin. In 1680 they killed the Recollect missionary Father Gabriel de la Ribourde on the banks of the Illinois. They joined the Foxes against the French in the long war beginning in 1712, and in 1728, together with the Maseoutens, captured Father Ignatius Guignas and condemned him to the stake, but afterwards adopted him, and through his influence made peace with the French the next year. They aided the Pontiacs against the English in 1764, aided the northern tribes in the ensuing destruction of the Illinois, and joined the same tribes and the English in the Revolutionary War and the War of 1812.

Between 1809 and 1819 they ceded all their lands in Illinois and Indiana, removing first to Missouri and later to Kansas. About this period a noted prophet named Kanakuka rose among them, preaching the doctrine of temperance, peace, and a return to the old Indian life. About the year 1852 a large party left the main body in Kansas and moved down into Texas and thence to Mexico, where they were later joined by others and became known as the Mexican Kickapoo. In 1873 a part of these were induced to return and settled in central Oklahoma, but the rest remained in Mexico, upon a reservation granted by the Mexican Government, in the Santa Rosa mountains, eastern Chihuahua. Both in Kansas and Oklahoma they are noted for their conservative and

unprogressive tendency. Through the operation of an unfortunate allotment agreement in 1891 with power to sell their allotted lands, the Oklahoma band has been rendered practically homeless. A few are under the influence of the Catholic mission at Sacred Heart, or of the Friends working in the same region, but the majority are still heathen.

From a possible two thousand when first known, they have decreased to about eight hundred souls in 1908, of whom one hundred and ninety-five were in Kansas, two hundred and thirty-four in Oklahoma, and the rest in Mexico, there having been a constant movement from Oklahoma to Mexico in the past five years.

JAMES MOONEY

Kielce

Kielce

(Russian *Kieltzy*; Latin *Kielcensis*)

Diocese in the southern part of Russian Poland, comprises the government (province) of Kielce and a part of the government of Piotrkow. Kielce, the episcopal see, contains four Catholic churches, one Orthodox and one Protestant church, and a Jewish synagogue. The church of the Assumption, now the cathedral, was founded in 1173 by Gedeon, Bishop of Cracow. The beautiful church of the Holy Trinity was founded in 1646. The church of St. Adalbert (twelfth century) is built where, according to tradition, the saint suffered martyrdom. The church of St. Michael the Archangel was founded in 1221 by Ivan Odrowazi, Bishop of Cracow. The diocesan seminary was founded by Bishop Szaniawski in 1727, and now (1910) has ten professors and seventy-nine seminarians. Kielce has also a hospital, in charge of the Sisters of Charity, and two high schools. The Diocese of Kielce, first erected in 1807 by Pius VII, was separated from and made subject to the Archdiocese of Cracow. At present it is a suffragan of Warsaw. The first bishop, Adalbert de Boza Gorski (1753-1817), of Cracow, incurred the enmity of the Russians, and on his death the diocese was suppressed and again added to Cracow. Afterwards, owing to strong Russian supervision, it was detached from Cracow and placed under Warsaw. Pope Leo XIII re-established the diocese 26 December, 1882. The second bishop was Thomas Theophilus Kulinski (1823-1907), who was on fairly harmonious terms with the Russian Government, but since his death the see has been vacant. The diocese, divided into eight deaneries, has (1910) 944,604

Catholics; 5325 Orthodox; 3560 Protestants; and 103,759 Jews; 242 parish churches; 21 other churches; 141 chapels; 339 secular clergy, and 8 Franciscans, the only regular clergy permitted by the Government; 1 convent of Norbertines with 12 nuns; and 10 establishments of the Sisters of Charity with 47 sisters.

ANDREW J. SHIPMAN

Saints Kieran

Sts. Kieran

There are many Irish saints of this name, but the most celebrated is St. Kieran of Clonmacnoise (see CLONMACNOISE). Of the others, St. Kieran of Seir-Kieran and St. Kieran of Disert-Kieran are the best known. The former is founder of Seir-Kieran, Kings County (about A.D. 450), and also of the See of Ossory (see OSSORY, DIOCESE OF). His history is obscure, but he flourished during the greater part of the fifth century, and is venerated in England, Brittany, Wales, and Scotland, on 5 March. St. Kieran of Disert-Kieran, Co. Meath, called by the Irish annalists "Kieran the Devout", wrote a "Life of St. Patrick." He died in 775 on 14 June, on which day his feast is celebrated. St. Kieran, patron of Clonsost, is commemorated on 30 April, and St. Kieran, son of Colga, on 19 May.

W.H. GRATTAN-FLOOD

School of Kildare

School of Kildare

Kildare (Irish: *Cill-Dara*), originally known as *Druim Criaidh*, or the Ridge of Clay, situated in *Magh Liffe*, or the Plain of the Liffey, came to be known as *Cill-Dara*, or the Church of the Oak, from the stately oak-tree so much loved by St. Brigid, who under its branches laid the foundations of what in process of time became a monastic city. Through the influence and talent for rule and organization possessed by the holy foundress the little oratory she built soon expanded into a large double establishment, one portion being for women, the other for men, and crowds of devotees flocked thither from far and near to make pilgrimages or hear words of heavenly wisdom from the lips of the "Mary of the Gael". "Seeing, however," says her biographer, "that this state of things could not exist without a pontiff to consecrate her churches and ordain

the sacred ministers, she chose an illustrious anchorite, celebrated for his virtues and his miracles, that as bishop he might aid her in the government of the Church, and that nothing should be wanting for the proper discharge of all ecclesiastical functions." In these words of the biographer, "ut ecclesiam in episcopali dignitate cum eâ gubernaret", there is surely nothing to justify the absurd statement sometimes made that Brigid claimed to have authority over, or give canonical jurisdiction to, this illustrious anchorite. She simply selected him to govern the establishment under her advice and guidance, and he got his jurisdiction in the ordinary way. In those days of violence and turmoil a needed sense of security would be afforded a convent of nuns by having hard by a house of monks with a prudent bishop at their head. And not only did Brigid procure the renowned St. Conlaeth to rule and ordain, but she had another bishop, St. Nadfraoich, to preach and teach the Gospel, and thus she hoped to make Kildare a great and independent home of sanctity and learning. And such in truth it became.

Cogitosus, a monk of Kildare in the eighth century, and the author of what is known as the "Second Life of St. Brigid", calls Kildare "the head-city of all the bishops", and Conlaeth and his successors "arch-bishops of the bishops of Ireland", and goes on to refer to the primacy of honour and domestic jurisdiction acknowledged in the abbess of this city by all the abbesses of Ireland. To this primacy, maintained all along, is due the unique distinction enjoyed by Kildare of having recorded by the annalists, till comparatively recent times, the succession of its abbesses in parallel columns with that of its abbots. Cogitosus also makes mention of the enormous crowds that, in his time, used to come to Kildare from "all the provinces of Erin", especially on St. Brigid's feast-day, 1 February, to pray and to have cures effected at her venerated shrine. From the interesting description he gives of the church we learn that it was very spacious and beautiful, that it had divisions rigidly distinct for the men and the women, and was lavishly adorned with pictures and embroidered hangings, which set off its highly ornamental windows and doorways. Unhappily, no portion of this church now remains, nor indeed of any of the ancient buildings, with the exception of the Round Tower. This tower, the loftiest in Ireland - being 136 feet 7 inches high - has an elaborately worked doorway of a graceful finish rarely met with in those hoary sentinels of the past. Bishop Conlaeth, himself a man of remarkable artistic genius, founded at Kildare a school in metal work which grew and prospered as the years went on. And from Gerald Barry we learn to what a high pitch of perfection the art of illumination had been brought in that city. Nothing, he says, that he saw at Kildare impressed him so much as the "Evangelistarium", or manuscript of the Four Gospels, according to the version of St. Jerome, which, by reason of the extraordinary grace and ingenuity displayed in the letters and figures, looked rather like the work of angels than of men.

The famous "Book of Leinster" was probably copied from originals preserved in the School of Kildare, by Finn MacGorman, who became Bishop of Kildare in 1148.

Even during the most stormy periods of the school's history we find recorded interesting facts and dates concerning its professors. We read of Cobthac, who died in 1069, and was celebrated for "his universal knowledge of ecclesiastical discipline"; and of Ferdomhnach, the Blind, who was deeply versed in knowledge of the Sacred Scriptures. In 1135 Diarmaid MacMurrough, of contemptible memory, "forcibly carried away the Abbess of Kildare from her cloister, and compelled her to marry one of his own people"; and in the following year Diarmaid O'Brien and his brothers sacked and set fire to the town. But the School of Brigid continued in spite of the ravages of native and foreign despoiler. The holy fire called the "inextinguishable", which had probably been kept alight since the days of Brigid, was put out by order of Henry de Londres, Archbishop of Dublin, who perhaps thought the practice savoured of superstition. Our opinion is that it simply arose from a desire on the part of the spiritual daughters of St. Brigid to secure a means by which lamps might be kept perpetually burning before the shrines of their sainted foundress. Be that as it may, the fire was kindled again by the Bishop of Kildare, and with a steady flame it burned till the fierce storm of persecution in the reign of Elizabeth extinguished it and every other monastic light in Ireland.

COLGAN, *Trias Thaumaturga* (Louvain, 1647); STOKES, *Lives of the Saints from the Book of Lismore* (Oxford, 1890); O'HANLON, *Lives of the Irish Saints*; HEALY, *Ireland's Ancient Schools and Scholars* (5th ed., Dublin, 1908).

JOHN HEALY

Kildare and Leighlin

Kildare and Leighlin

(KILDARENSIS ET LEIGHLINENSIS)

One of the four suffragans of Dublin, Ireland. These two dioceses continued to be separate from their foundation until 1678, when, owing to the extreme tenuity of the episcopal revenues — about fifteen pounds sterling a year each — the Diocese of Leighlin was given *in commendam* by the Holy See to the Bishop of Kildare, Dr. Mark Forstall. The Diocese of Kildare includes the northern half of that county, the eastern portion of King's County, as far as Tullamore, and the two northern baronies of Queen's County, and it embraces the ancient territories of Offaly, Carbury, and Hy Faelain. Its direction lies east and west. The Diocese of Leighlin lies north and south, including one half of Queen's County, all County Carlow, and portions of Kilkenny, Wexford, and Wicklow Counties. It embraces ancient Leix, which connects it with Kildare and a portion of Ui Ceinnsealaigh. The united diocese is one of the largest dioceses in Ire-

land, comprising 1,029,829 acres; and the Catholic population according to the census of 1901, was 130,377, out of a total of 149,168.

History

When St. Patrick had preached the Gospel in the North and West of Ireland, he turned his steps to the South, and coming into Leinster from Meath by Druim Urchailli he passed through Straffan and Clane to Naas. Pitching his tent on its green, he there baptized its joint kins, Ailill and Illan, sons of Dunling, and Ailill's two daughters, Mogain and Fedelm. Their people seeing this soon embraced the Gospel also, and Patrick placed his nephew, Auxilius, as bishop at Kilashee, a few miles south of Naas, and Iserninus with Mac Tail as bishops at Old Kilcullen. From here he went towards Athy, founding churches at Narraghmore and other places, and, crossing the Barrow, continued his journey by Ballyadams and Stradbally to Morett. Here he built a church and then turning north re-crossed the Barrow south of Rathangan, and going by Lullymore, Allen, and Kilcock, he returned to Tara. These events occurred about the year 448. Later on St. Patrick made a second journey into Leinster, and coming to Rathvilly in County Carlow he baptized King Crimthan, his wife Mel, and his son and heir, Dathi. He translated Iserninus (Fith) from Kilcullen to Aghade. At Donaghmore in Ui Ceinnsealaigh he met his old friend Dubtach, the chief bard of Erin, who alone amongst King Laoghaire's hosts had stood up to salute him at Tara. He was accompanied by Fiacc, his gifted pupil and successor- apparent. Patrick, being in need of a suitable candidate for the episcopacy, consecrated Fiacc on Dubtach's recommendation, and placed him at Domnach Fiacc, midway between Clonmore and Aghold. Years afterwards he transferred him to Sletty, blessing his church there, and making his see quasi-metropolitan. This pre-eminence afterwards passed to Ferns, then to Kildare, and later on to Dublin. The fame of Fiacc's virtues and miracles followed him from Domnach Fiacc, bringing crowds of pilgrims to Sletty, and soon a large monastery grew up of which he was the first abbot. St. Fiacc practiced extraordinary austerities even in his old age, spending each Lent in the cave of Drum Coblai (the doon of Clopook), so that the fame of his sanctity still survives in the district. He died in 510. In the next century the See of Sletty was transferred to Leighlin, which means either "the half glen" or "the white plain."

St. Laserian (also called Molaise) was the first bishop and patron saint of Leighlin, b. 566; d. 18 April, 639. He was the son of Cairel de Blitha, a Ulidian noble, and Gemma, daughter of a Scottish king. Part of his youth was spent in Scotland. On his return home he refused the chieftainship of his clan, went into retirement, and ultimately set out for Rome, where he studied for fourteen years and was ordained by Gregory the Great. Returning to Leighlin he entered the great monastery which St. Gobban had established, and soon found himself its abbot, St. Gobban having retired in his favour

and gone into Ossory. This establishment soon became famous, and contained as many as 1500 monks. St. Laserian took the leading part in settling the Easter controversy. In the Synod of Magh-lene he successfully defended the Roman computation, and was sent by the council as delegate to Rome. There, in 633, he was consecrated first Bishop of Leighlin by Honorius I. On his return from the centre of Catholic unity Laserian pleaded the cause of the Roman practice so powerfully at another synod in Leighlin that the controversy was practically ended for the greater part of the country. The list of his successors, sometimes called abbots and sometimes bishops, is practically complete. The cathedral of Leighlin was built about the middle of the twelfth century in the plainest Gothic, to replace the original church of wood. It was plundered several times both by the Danes and by the native chieftains, and the great religious establishments of Sletty and Killeshin shared the same fate. In the reign of Henry VIII it was seized by the Reformers, was made a Protestant church, and has continued as such ever since. The sufferings of the Catholics were so intense during the persecutions which raged over Ireland for more than two centuries, that towards the end but a remnant of the clergy remained. What the number of the clergy was in these dioceses before the Reformation, we cannot say for certain; but from the ecclesiastical ruins we have the means of forming a fair estimate. Over these dioceses, at the present day, there lie scattered the mouldering ruins of 240 churches and 63 religious houses, bearing mute but eloquent testimony to the persecutions borne by the Catholics, and to the numbers of the clergy who suffered banishment or death. Nor were these convents small or unimportant; there were many large monasteries of the different religious orders, including the four great Cistercian Abbeys of Abbeyleix, Baltinglass, Duiske, and Monasterevan. The abbey church of Duiske, Graignamanagh, is one of the few abbey churches at present in possession of their rightful owners, and actually devoted to the service of the old religion. There were eight round towers in these dioceses, two of which are still entire, Kildare and Timahoe. The earthen rampart of the Pale can be traced for a mile between Clane and Clongowes College.

Abbey and Shrine of St. Brigid

Before the time of St. Laserian of Leighlin, St. Conleth and St. Brigid were the patron saints of Kildare. The latter was a native of the district, though born at Faughart, near Dundalk. In 487 she received the religious habit from St. Macaille, Bishop of Croghan in Offaly, and coming to Kildare formed a community of the pious virgins who flocked around her. Her first house was a humble cell under a large oak, which gave Kildare its name — *Cill-Dara*, the cell of the oak. The fame of her sanctity attracted such a concourse of pilgrims to Kildare that a city soon sprang up which included a religious community of men. To meet the spiritual wants of the new city St. Brigid requested the appointment of a bishop. Great deference was paid to her wishes, and,

as she had recommended St. Conleth, he was consecrated the first Bishop of Kildare about 490. He had been leading the life of a recluse at Old Connell near Newbridge, was a skillful artificer in gold and silver; and the ancient crosier in the museum of the Royal Academy is believed to be the work of his hands. It is said that as bishop he made a journey to Rome, and returned with vestments for his church at Kildare, in which latter place he died, 3 May, 519. A fire was kept burning day and night at Kildare by St. Brigid for the use of pilgrims and travellers, and for the same purpose, as well as in memory of the saint, it was continued till the total suppression of the religious houses at the Reformation. The firehouse was a cell or vault twenty feet square, and its ruins existed till 1792. The first church of Kildare was probably of wood, and, being designed for two communities of different sexes, the nave was divided by a partition or screen. For an account of the church and its relics see BRIGID, SAINT. Kildare with its church was plundered and burned frequently. Sometimes it suffered from the Danes, sometimes from the native chieftains, and sometimes by accident. Its records give about twenty-five catastrophes of the kind. At the Reformation the cathedral was seized by the Protestants, and a portion of it was used for a church. The rest of the building became a ruin, and so remained till 1875-96, when it was completely restored by private contributions, and is now the Protestant cathedral.

Bishops of Kildare

The bishops of Kildare were frequently called abbot-bishops and bishops of Leinster down to the Synod of Kells. The record of succession is practically complete down to the union of the two dioceses. For the episcopal lists see, besides Gams and Eubel, Brady, "Episcopal Succession in England, Scotland, and Ireland" (Rome, 1877). Dr. Leverous (1497-1577) was consecrated Bishop of Kildare in 1555, and early in Elizabeth's reign, when the bishops of Ireland were summoned before the Lord Deputy to take the oath of supremacy, the Bishop of Kildare pre-emptorily refused, and being asked the reason of his refusal replied: "All ecclesiastical authority is from Christ, Who has never conferred it on a woman, even His blessed mother. How then can it be sworn that in future ages God would confer it on a woman?" He added: "The Apostle has commanded that no woman should dare even to speak with authority in the church much less to preside and govern there." He was deprived of his temporalities, forced to fly for safety to Adare, Co. Limerick, where he conducted a school, and finally returning he died at Naas, aged 80.

The school of Kildare was among the most famous in Ireland (see KILDARE, SCHOOL OF). There were also great and ancient schools at Sletty, Killeslin, Tullow, Clonenagh, and elsewhere in the diocese. A synod was held at Geashill in 550 (most probably), a national synod at Clane in 1162, to establish codes of morality for both laity and clergy; a provincial synod at Tierhogar, Portarlinton (28 Jul., 1640), to

provide for the exigencies of the penal times, and a national synod at Tullow, in 1809, to condemn the teachings of the Abbe Blanchard.

Diocesan Writers

Among the writers of the diocese and the works attributed to them are the following: St. Fiacc of Sletty, a poem in Irish on the life of St. Patrick, a poem in Latin on St. Brigid, other compositions and prayers; St. Eimhin (Emin) of Monasterevan (about 600), the "Tripartite Life" of St. Patrick, the "Life of St. Congall," "Emin's Tribute (or Rule)," the "Lay of the Bell of St. Emin," etc.; St. Moling (see FERNS), a poem on Clonmore-Maedoc, one on the Borumha tribute of which he obtained the remission; St. Brogan of Clonsast, a litany in Irish on the B.V. Mary, indulged by Pius IX, a poem foretelling the Danish invasion, the lost "Book of Clonsast"; St. Aedh, Bishop of Sletty (698), a life of St. Patrick; Aengus the Culdee, 830, the "Feilire," the "Martyrology of Tallaght," "Litany of the Saints," "De sanctis Hiberniae lib. V," a history of the Old Testament in metre, the "Saltair-na-rann"; Siadhail (Sedulius), Abbot of Kildare, 827, notes on the Epistles of St. Paul; Anmchadh (Animosus), Bishop of Kildare, 980, the fourth life of St. Brigid; Finn Mac Gorman, Bishop of Kildare, 1160, the "Book of Leinster" — a most valuable historical work; Maguire, Bishop of Leighlin, 1490, the "Yellow Book (or Long Book) of Leighlin"; Gallagher, Bishop of Kildare and Leighlin, 1737-51, Irish sermons; Doyle (J.K.L.), Bishop of Kildare and Leighlin (q.v.); Rev. D.W. Cahill (q.v.); Comerford, coadjutor Bishop of Kildare and Leighlin, history of the diocese in three vols., books of devotion; Rev. J. Farrell, sermons and lectures. Among the priceless works which have been lost to the diocese and Ireland are the following: the "Book of Clonsast," the "Book of Clonenagh"; the "Yellow Book of Leighlin"; the "Book of Kildare" — if it be not the existing "Book of Kells," as many suppose.

When the storm of persecution had spent its force, the revival of Catholicism was as marvellous here as over the rest of Ireland, and the following is a summary of what a century has seen accomplished in the diocese: Carlow ecclesiastical college, the first to be established in Ireland since the Reformation; 1 diocesan lay college; 2 colleges of religious; 21 convents with their schools; 9 Christian schools; 234 primary schools; 1 cathedral; 164 churches. There are 49 parishes in the diocese, with 133 secular and 18 regular clergy. The present occupant of the see is The Most Rev. Patrick Foley, D.D., b. at Mensal Lodge near Leighlinbridge, in 1858; ordained priest at Carlow in 1881; and, having spent the interval in Carlow College as professor and president, consecrated bishop in May, 1896. He is a Commissioner of National Education (1905) and a member of the governing body of the Dublin College of the National University of Ireland (1908).

COMERFORD, Collections relating to the diocese of Kildare and Leighlin (Dublin, 1883); O'HANLON, Lives of the Irish Saints (Dublin, 1875-); O'DONOVAN, Four

Masters; IDEM, Ordnance Survey of Ireland; WARE-HARRIS, *Writers and Antiquities of Ireland* (Dublin, 1764); LEWIS, *Topographical Dictionary* (Dublin, 1839); SHEARMAN, *Loca Patriciana* (Dublin, 1874); WALSH, *The Irish Hierarchy* (Dublin, 1854); HEALY, *Ireland's Ancient Schools and Scholars* (Dublin, 1902), IDEM, *Life and Writings of St. Patrick* (Dublin, 1909); *Irish Catholic Directory* (1909).

E. O'LEARY

St. Kilian

St. Kilian

(Killena, Cillíne).

Apostle of Franconia and martyr, born about 640 of noble parents probably in Ireland (according to others in Scotland though *Scottica tellus*, as it is called by the elder "Passio", may also in medieval times have meant Ireland. The later "Passio" says: "Scotia quæ et Hibernia dicitur"); died 8 July, probably in 689. He was distinguished from his youth for his piety and love of study, and, according to the later "Passio", embraced the monastic life. Trithemius and later writers say that he was a monk in the celebrated monastery of Hy: that he was later the abbot of this monastery is also held by Trithemius; however, that, a supposition, cannot be proved. The statement in the older "Passio" that Kilian was raised to the purple before leaving his native land may be accepted as trustworthy, although the later "Passio" refers this event to his sojourn in Rome. In accordance with the custom then prevailing in the Irish Church, he was assigned to no particular diocese, but was district bishop or travelling bishop. One day he made up his mind to be a missionary, left his native country with eleven companions, travelled through Gaul, thence across the Rhine, and finally reached the castle of Würzburg, inhabited by the Thuringian (Frankish) Duke Gozbert, who was, like his people, still pagan. Kilian resolved to preach the Gospel here, but first journeyed with his companions to Rome to receive missionary faculties from the pope. John V, whom he expected to find, had died meanwhile (2 August, 686), and was succeeded by Conon from whom Kilian obtained his faculties. From the sources already cited, we learn that the arrival of St. Kilian and his companions at Würzburg and the journey to Rome occurred in the summer of 686, that they arrived in the latter city in the late autumn, and that their labours at Würzburg continued during 687 and the following years. The original group separated on the return journey -- some departing to seek other fields of missionary work, while St. Kilian with two companions, the priest Coloman and the deacon Totnan, came back to Würzburg. He took this town as the base of his activity, which extended over an ever-increasing area in East Franconia and Thuringia, and converted Duke Gozbert with a large part of his subjects to

Christianity. Concerning the cause of the martyrdom of the three missionaries, the early documents supply the following information: After Duke Gozbert had become a Christian, St. Kilian explained to him that his marriage with Geilana, his brother's widow, was unlawful under the Christian dispensation, and secured the duke's promise to separate from her. In consequence of this action, Geilana plotted vengeance against the saint, and caused him and his two companions to be secretly murdered in the absence of the duke, their corpses being immediately buried at the scene of the crime together with the sacred vessels, vestments, and holy writings. This is generally held to have happened on 8 July, 689, although opinions vary as to the exact year. The early documents relate further that, after the duke's return, Geilana at first denied any knowledge of what had become of the missionaries; the murderer, however, went mad, confessed his crime, and died miserably, Geilana also dying insane. Recent critics, especially Hauck and Riezler (see bibliography), question without sufficient grounds the authenticity of these statements in the matter of detail, especially as regards the cause and the immediate circumstances of the martyrdom of the three missionaries. Through prejudice against the Irish Church the Protestant party has also disputed the absolutely reliable information about the journey to Rome undertaken by St. Kilian and his assistants. His missionary labours through Eastern Franconia and his martyrdom are, however, accepted without question by everyone. Although Kilian's work was not continued after his death, St. Boniface on his arrival in Thuringia found at least evidence of his predecessor's influence. The relics of the three martyrs, after wonderful cures had brought renown to their burial place, were transferred in 743 by Saint Burchard, first Bishop of Würzburg, to the Church of Our Lady, where they were temporarily interred. Later, when Burchard had obtained Pope Zachary's permission for their public veneration, they were solemnly transferred -- probably on 8 July, 752 -- to the newly finished Cathedral of the Saviour. Still later they were buried in St. Kilian's vault in the new cathedral erected on the spot where tradition affirms the martyrdom to have taken place. The New Testament belonging to St. Kilian was preserved among the treasures of Würzburg Cathedral until 1803, and since then has been in the university library. Kilian is the patron saint of the diocese, and his feast is celebrated in Würzburg on 8 July with great solemnity.

The chief source of information is the older and shorter "Passio" (which begins "Fuit vir vitæ venerabilis Killena nomine"), formerly considered to date from the tenth or ninth century. Emmerich (after the example of the "Histoire littéraire de la France", IV, Paris, 1738, p. 86), and Hefner (see below) on very good grounds now connect the appearance of this chronicle with the solemn translation of the relics in 752, which raises its historic value beyond the reach of attack. The later and more voluminous "Passio" is an amplified and embellished version of the earlier one and cannot be relied

upon when the accounts differ. Both have been published by H. Canisius, "Antiquae lectiones", IV, pt. ii (Ingolstadt, 1603), pp. 625-47; by Mabillon, "Acta Sanctorum O.S.B.", II (Paris, 1669), p. 991-3; in the "Acta Sanctorum" for 8 July (see below), and finally, with a collection of later sources and with the office of St. Kilian of the Würzburg Church, by Emmerich (see below).

Acta SS., II, July (Paris and Rome, 1867), 599-619; Eckhart, Commentarii de rebus Franciæ orientalis, I (Würzburg, 1729), 270-83, 451 sqq.; Gropp, Lebensbeschreibung des hl. Kiliani und dessen Gesellen (Würzburg, 1738); Stamminger, Franconia sancta, I (Würzburg, 1881), 58-133; Emmerich, Der heilige Kilian, Regionarbischof u. Martyrer (Würzburg, 1896; Göpfert, St. Kilianus-Büchlein (Würzburg, 1877; 2nd ed., 1902); Bellesheim, Gesch. der kath. Kirche in Irland, I (Mainz, 1890), 168-71; Schrödl in Kirchenlex., s.v.; O'Hanlon, Lives of the Irish Saints, VII (Dublin, s.d.), 122-43; Moore in Dict. Nat. Biog., s.v. Cilian. The authenticity of the older "Passio" is combated by: Hauck, Kirchengesch. Deutschlands, I (3rd and 4th ed.), 386 sq.; Riezler, Die Vita Kiliani in Neues Archiv der Gesellschaft für ältere deutsche Geschichtskunde, XXVIII (1903), 232-4. In opposition to the views put forward in these works, the authenticity of the document is upheld in Hefner, Das Leben des hl. Burchard in Archiv des historischen Vereins von Unterfranken u. Aschaffenburg, XLV -- published separately (Würzburg, 1904), pp. 33, 57; cf. also Hagiographischer Jahresbericht für die Jahre 1904-1906 (Kempten and Munich, 1908), 110.

FRIEDRICH LAUCHERT

Killala

Killala

(ALLADENSIS).

Diocese. It is one of the five suffragan sees of the ecclesiastical Province of Tuam, and comprises the north-western part of the County Mayo with the Barony of Tireragh in the County Sligo. In all there are 22 parishes, some of which, bordering on the Atlantic Ocean, consist mostly of wild moorland, sparsely inhabited. Lewis's Topographical Dictionary sets down the length of the diocese as 45 miles, the breadth 21 miles, and the estimated superficies as 314,300 acres — of which 43,100 are in the County Sligo, and 271,200 in the County Mayo. In the census returns for the year 1901 the Catholic population is given as 61,876, and the non-Catholic as 3576. The foundation of the diocese dates from the time of St. Patrick, who placed his disciple St. Muredach over the church called in Irish Cell Alaid. In a well that still flows close to the town, beside the sea, Patrick baptized in a single day 12,000 converts, and on the same occasion, in presence of the crowds, raised to life a dead woman whom he also baptized.

Muredach is described as an old man of Patrick's family, and was appointed to the Church of Killala as early as 442 or 443. His feast-day is 12 August. It is probable that he resigned his see after a few years, and retired to end his life in the lonely island in Donegal Bay which has ever since borne his name, Innismurray. It was at Killala that Patrick baptized the two maidens whom he met in childhood at Focluth Wood by the western sea, and whose voices in visions of the night had often pathetically called him to come once more and dwell amongst them. He did come, and he baptized them, and built them a church where they spent the rest of their days as holy nuns in the service of God.

Little or nothing is known of the successors of Muredach in Killala down to the twelfth century. Of the sainted Bishop Cellach, for example, we learn merely that he came of royal blood, flourished in the sixth century, and was foully murdered at the instigation of his foster-brother. His name is mentioned in all the Irish martyrologies. Beyond doubt, however, the most illustrious of them all belongs to modern times. With pardonable pride the people of Killala still, and will ever, recall the fact that John McHale, Archbishop of Tuam, was a child of their diocese, and, if we may so speak, served his apprenticeship as bishop amongst them. He was born at Tubbernavine, at the foot of Mount Nephin, 6 March, 1791; became Coadjutor Bishop of Killala in 1825, bishop in 1834, and later in the same year was transferred to Tuam, where for nearly half a century he exercised a more potent influence on the civil and ecclesiastical history of Ireland than perhaps any of his contemporaries, with the single exception of O'Connell. He died 7 November, 1881, and is buried in the sanctuary of the Tuam cathedral. After him came Doctor Finan, a Dominican priest of remarkable piety and attainments, but rather unfit, owing to his continental training, to direct the affairs of an Irish diocese. On his resignation in the year 1838, a parish priest of the Archdiocese of Tuam, Rev. Thomas Feeney, who had formerly been professor and president of St. Jarlath's College, Tuam, was chosen for the task of repairing the injury that ecclesiastical discipline had suffered during his reign. Feeney is said to have been a most happy selection under the circumstances. Thirty-five years of his firm and resolute rule obliterated practically all traces of the wretched controversies that distracted the diocese under his predecessor.

The town of Killala is remarkable in Irish history as the place where the French under General Humbert landed in 1798. The exact spot is by the rocky ledge in the outer estuary of the Moy known as "St. Patrick's Rocks", from which it is said that the saint set sail when making his escape as a poor young slave from Ireland. The French officers occupied the palace of the Protestant bishop where they lived for a short time with his lordship and family. The bishop (Stock) has written a most interesting and authentic account of the "Invasion", and of the sayings and doings of these gentlemen

which he himself saw and heard. Along the left bank of the river are the ruins of several monasteries. Rosserk, a Franciscan house of strict observance, was founded in 1460. The beautiful Abbey of Moyne still stands nearly perfect on a most picturesque site just over the river, and further on, north of Killala, was the Dominican Abbey of Rathfran, also delightfully situated. On the promontory of Errew running into Lough Conn there was another monastery which existed as such till comparatively recent times. A fine round tower in Killala itself, still in perfect preservation, indicated the ancient celebrity of the place as an ecclesiastical centre. Indeed it may be safely stated that in no other portion of Ireland of equal extent were the labours of St. Patrick and the holy founders of religious institutions who came after him so arduous and full of interest as in this beautiful district of Tirawley.

Tireragh and Tirawley need not rely entirely for their fame on the traditions of the past, near or remote. Under the present occupant of the See of Killala religion has made quiet but very gratifying progress. One may judge of the learning and ability of Dr. Conmy from the fact that in Maynooth he held a distinguished place in the class that produced such men as the Cardinal Primate of Ireland and Archbishop Carr of Melbourne. After several years of fruitful labours as professor and missionary priest he was called in 1892 from the parish of Crossmolina to wield the crosier of Muredach. His rule has been characterized by prudence, and justice that is well tempered with mercy. Amongst his most conspicuous services to the twin cause of religion and education must be reckoned the building and equipping, from funds raised almost exclusively from his own faithful priests and people, of the splendid seminary that now graces the town of Ballina, and bids fair to revive the olden name of the School of Killala founded by St. Patrick. The bishop lives in a plain but commodious dwelling in Ballina, hard by the diocesan seminary, which since its opening has been the dearest object of his episcopal zeal.

JOHN HEALY

Killaloe

Killaloe

(LAONIA)

A suffragan diocese of Cashel; it comprises the greater part of County Clare, a large portion of Tipperary, and parts of King's and Queen's Counties, Limerick, and Galway. Its Irish name is Cill-da-Lua, so named from St. Lua, an abbot who lived about the end of the sixth century, and whose oratory can still be seen in Friar's Island, near the town of Killaloe. Though St. Lua gave his name to the diocese, St. Flannan is its patron saint. He was of royal lineage, his father being the saintly Theodoric, King of Thomond, who towards the close of his life received the monastic habit from St. Colman at Lismore. St. Flannan was the first Bishop of Killaloe, and is said to have been consecrated at Rome by John IV about 640. In the time of St. Flannan, the Diocese of Killaloe was not so extensive as it is at present. It did not then include the old dioceses of Roscrea and Inniscathy. It was only when these were suppressed at the Synod of Rathbresail in the first quarter of the twelfth century, that Killaloe assumed its present shape, which is almost coterminous with the boundaries of the ancient Kingdom of Thomond. The parish of Seir Kieran in King's County, though in Thomond, was allowed to remain subject to the Diocese of Ossory, out of respect to the memory of St. Kieran.

The old See of Roscrea grew around a monastery founded there by St. Cronan about the middle of the sixth century. This monastery became a famous school, and it was within its walls that the scribe Dimma wrote for St. Cronan the copy of the Four Gospels now in the Library of Trinity College, Dublin, for which Tatheus O'Carroll, chieftain of Ely, made a costly shrine in the twelfth century. The Diocese of Roscrea was coextensive with the territory of the O'Carrolls, added to that of the O'Kennedys. Ware holds that St. Cronan was Bishop of Roscrea, but Lanigan thinks that Ware has been misled by the fact that Roscrea became an episcopal see. Like the Diocese of Roscrea, the Diocese of Inniscathy grew around the monastery of Inniscathy, founded by St. Senan in the early portion of the sixth century. There is no question about St. Senan being the first bishop of the Diocese of Inniscathy, which comprised the Baronies of Moyarta, Clonderlaw, and Ibricken, in Clare; the Barony of Connello, in Limerick; and in Kerry, the ancient region of the Hy-Fidgente. The last Bishop of Inniscathy was Hugh O'Beachain, who died in 1188. Nevertheless, there were titular bishops of the see up to the close of the fourteenth century. The remains of the cathedral church of Inniscathy and a round tower now mark the ancient see of St. Senan. The Clog-oir, too, still in existence in County Clare, is a highly-prized relic of Inniscathy. St. Breacan's churches of Carntemple, Doora, and Clooney, St. Tola's church at Dysert O'Dea, St. Senan's hermitage at Bishop's Island, near Kilkee, St. Caimin's church and school at Iniscaltra, St. Brendan's and St. Cronan's abbeys at Birr and Roscrea may be named amongst hundreds of churches, schools, and hermitages, which covered Killaloe like

a network and which in their decay attest to the devotion to the Catholic Faith of the far-famed Dalgais.

Some of these foundations deserve mention. Iniscaltra, a green little island in Lough Derg, was celebrated nursery of sanctity and learning in Thomond. It is associated principally with St. Caimin, who made Iniscaltra the seat of a very famous school, which attracted pupils even from foreign countries. A fragment of the commentary on the Psalms collated with the Hebrew text, written by St. Caimin (640), is preserved in the Franciscan convent, Merchant's Quay, Dublin. Birr also was a celebrated seat of learning in Thomond, founded by St. Brendan (550). The Gospels of McRegol, now in the Bodleian Library, were written by McRegol, Abbot of Birr, in 820. Terryglass also was a school of great repute founded by St. Columba (552). It was here that St. Patrick is said to have baptized the Dalgais from Northern Thomond, who crossed Lough Derg in their coracles to meet him. The monastery of Lorrha, founded by St. Ruadhan (550), can claim that it was within its walls that the famous Stowe Missal, now in the library of Lord Ashburnham, was written; but the desertion of Tara owing to the alleged cursing of St. Ruadhan, is without historical foundation. The abbeys at Ennis and Quin are striking illustrations of the piety and munificence of the foremost chieftains of the Dalgais.

About 1240 Donogh Cairbreach O'Brien built the monastery for Conventual Franciscan friars. It was considered one of the finest houses of the order in Ireland, and ultimately it became the occasion of Ennis being made the capital of County Clare. Even in ruin it is beautiful; the east window especially is much admired for its size, grace, and symmetry. Here are buried some of the Kings of Thomond and their chieftains. The Abbey of Quin is one of the noblest remains of monastic antiquity in Ireland, and is in so perfect a state of preservation that little more than a roof is required to make it fit to house the monks and have their chant daily re-echo within its walls. It was founded by Sheda McNamara in 1402. In 1641 a college was opened at the abbey, which soon had eight hundred students. But the most interesting historical remains are to be found at the picturesque little town of Killaloe, the ancient seat of the bishop, which is built on a ridge commanding a fine view of Lough Derg. For here we have the oratory of St. Lua in Friar's Island, the very perfect stone-roofed oratory of St. Flannan, and St. Flannan's cathedral, built in 1160 by Donald O'Brien, King of Limerick, near the site of Brian Boroimhe's royal palace of Kincora. St. Flannan's cathedral was, till the early years of Elizabeth's reign, the Catholic cathedral of the Diocese of Killaloe. Since then it has been in Protestant hands. Owing to the cruel persecution of the Catholic religion and its bishops and priests, and the suppression of the monasteries in Clare at the opening of the reign of Queen Elizabeth, the churches and monasteries fell into decay and ruin, the Holy Sacrifice of the Mass being offered up on some rock

on a mountain-side, or some lowly "Mass house." It is only since the time of Catholic Emancipation, a glorious era in the annals of Killaloe when the priests of Clare gave powerful aid to O'Connell to win the Clare election, that a "second spring" has come, and that Thomond has been again covered with handsome and commodious churches.

The first successor of St. Flannan in the Diocese of Killaloe whose name has come down to us, is Cormacan O'Mulcaishel, who died in 1019; and from the death of St. Flannan to the time of the learned O'Lonergain in 1150, the names of only five prelates have been recorded. But from this period the succession becomes regular and complete. In 1179, Constantine O'Brien, fifth in descent from Brian Boroimhe, was Bishop of Killaloe; he attended the Council of Lateran. Conor O'Heney, another Bishop of Killaloe, also attended the Council of Lateran in 1215. Cornelius Ryan, a Franciscan friar, and brother of a chieftain, was consecrated Bishop of Killaloe in 1576. He had a remarkable career. From the time of his appointment he used his marked ability and great organizing power in aid of the Earl of Desmond, who championed the Catholic cause, and succeeded in obtaining for him the support of Gregory XIII and Philip of Spain. For years he shared in all the perils of the insurrection, and he was regarded by Elizabeth and her minions as a most formidable opponent. When the Desmond insurrection ended in disaster, he escaped to the Continent and died at Lisbon in 1617.

John O'Moloney was another eminent Bishop of Killaloe. He was born in Kiltanon, County Clare, in 1617, was a doctor of the Sorbonne and, before his appointment to Killaloe, had been canon of Rouen, in France. He was named bishop by Propaganda in 1671, at the urgent request of the Catholics of the diocese, his qualifications for the exalted office being set forth in various testimonials from the doctors of the University of Paris, and several French bishops and archbishops. In 1673 he was deputed by the Irish bishops to visit France and endeavour to induce the French king and his minister to found an Irish ecclesiastical college in Paris. He succeeded in his mission, and a few years later the Irish college, of which he is regarded as the founder, was opened. In 1689 he was named Bishop of Limerick, retaining Killaloe in administration, but he was soon forced to flee to France, where he died in 1702 at the Sulpician house at Issy, near Paris. The present bishop is the Most Reverend Dr. Fogarty, born in 1859 near Nenagh, County Tipperary. Before his elevation to the episcopate he was vice-president of Maynooth College, where he had been for fifteen years previously a distinguished professor of dogmatic and moral theology. His consecration took place in 1904, at the procathedral at Ennis, the seat of the bishop and also of a well-equipped diocesan college.

The diocesan chapter, including dean, archdeacon, and canons, was re-established by papal decree on 11 February, 1903. Catholic population, 137,574, according to census of 1901; non-Catholic population, 8329; parishes, 57; secular clergy, 142; paro-

chial and district churches, 143; houses of regular clergy, 2, viz. Franciscans at Ennis, Cistercians at Roscrea; convents of Sisters of Mercy, 12; Convent of Sacred Heart, 1; number in community, 198; monastic houses, 6; number in community, 63.

MICHAEL BREEN

Kilmore

Kilmore

(KILMORENSIS)

Diocese in Ireland, includes almost all Cavan and about half of Leitrim. It also extends into Fermanagh, and has half a parish in both Meath (Kilmainham Wood) and Sligo (Ballinrillick). It is accordingly seen to be roughly coincident with ancient Breffney, embracing both Breffney O'Rourke and Breffney O'Reilly. St. Fedlemid, or Felim, who flourished in the early part of the sixth century, is the first known Bishop of Kilmore. He is patron of the diocese, and his feast is celebrated on 9 August, the day of his death. A holy well near the old Catholic cathedral of Kilmore still bears his name. From Hugh O'Finn, appointed 1136, to Andrew MacBrady, consecrated in 1445, the bishops of this see were often styled *Episcopi Breffiniae*; and no bishop outside of Breffney is known to have ever claimed jurisdiction over it. With a hiatus or two, all its rulers during this period have been ascertained. Many of them are also sometimes called bishops of Triburna, probably from the name of a village near Butlersbridge, close to which village was the episcopal church and most probably the episcopal residence. The spot now marked by the graveyard of Urney (Triburna) contains some remains of this very ancient structure.

Towards the middle of the fifteenth century, the above-mentioned Andrew MacBrady (1445-55) rebuilt on a much larger scale the primitive church of St. Fedlemid, situated about seven miles due south of Triburna, and in 1454, with the approval of Pope Nicholas V, made it his cathedral. Thenceforth this church (*cill mor*, i.e. great church) imparted its name to the surrounding parish and also to the diocese, just as the church of Triburna did before, or just as the town of Cavan has given its name to the whole County of Cavan. Bishop MacBrady lived at Kilmore. During the penal times many of his successors, in striving to discharge their sacred functions, suffered untold hardships. Richard Brady (1580-1607), for instance, was three times thrown

into chains. In 1601 the friary of Multifarnam, in which he sought refuge, was burned over his head by the English soldiers. As late as the middle of the eighteenth century, Bishop Andrew Campbell (1753-1769 or 1770), to escape the dangers that beset him, had to go on his visitations disguised as a Highland piper. A beautiful oil-painting representing him so attired is preserved in the dining-room of the diocesan college at Cavan. The cathedral chapter of Kilmore originally consisted, besides the bishop, of eleven canons, together with a dean and an archdeacon. But in 1636 the latter two titles alone remained. Of later years they too have wholly disappeared. The seal of the ancient chapter of "Tirbrina" was dug up at Urney about sixty years ago.

In 1636 Kilmore was described as having forty parishes. In July, 1704, in compliance with the provisions of the act passed the previous year for "registering the popish clergy," thirty-nine Kilmore "popish parish priests" gave in their names. "Curates or assistants" were excluded, being placed on the same footing as regulars, and "had to depart out of this Kingdom before the 20th July" under divers pains and penalties. It is worth noting that twelve of these thirty-nine priests had been ordained by Oliver Plunket, the saintly Primate of Armagh; and one of them, the Rev. Owen McHugh of Killesher, at Rome, in 1682, by Pope Innocent XI. Three parishes claim to have been founded by St. Patrick in person: Drumlease, Cloonclare, and Oughteragh (now Ballinamore). Father Maguire, a well-known controversialist, died parish priest of the last-mentioned place. Drumlease derives its name (*drum-lias*, ridge of the huts) from the sheds St. Patrick is said to have raised there; and the neighbouring village of Dromahair was for long called *Carrig-Padruig*, or Patrick's Rock. The saint, struck by the scenic beauty of the surroundings, designed to establish there his primatial see. For twenty years he left his foster-son and destined successor, Benignus, in charge of it; and it was only towards the end of his life that he reluctantly changed his intention, and adopted Armagh. In the seventh century the diocese gave illustrious names to the Church, to the parish of Mullagh we owe St. Kilian (d. 688), the Apostle of Franconia; to Killinkere, St. Ultan (d. 656); and to Templeport, St. Aidan, or Mogue (d. 651). Inishmagrath, in the next century, was probably the birthplace of the scholarly St. Tighernach; Ballaghameehan, in the previous century, was under the care of St. Molassius (or Laserian, d. 563), the founder of Devenish; his copy of the Gospels, which was encased in a reliquary about the year 1001, is now in the Dublin Museum.

The most famous religious house in Kilmore was St. Mary's friary in Cavan town, founded by the O'Reillys in 1300. The Dominicans were the first religious to be introduced; in 1393 they left and were replaced by Franciscans. After the Suppression, in the time of James I, the monastery was converted into a courthouse; in the beginning of the last century it was used as a Protestant place of worship. The crumbling tower of this church is all that remains of it. In its graveyard the remains of three noted Irish-

men were interred: Owen Roe O'Neill, Ireland's noblest soldier, who died at Clough Oughter in 1649; Hugh O'Reilly, Bishop of Kilmore (1625-28), Primate of Armagh (1629-52), and founder of the Catholic Confederacy; most probably also Myles O'Reilly, surnamed the Slasher, Ireland's greatest swordsman. Their graves were purposely concealed through fear of desecration, and cannot now be pointed out. The other chieftain family of Breffney, the O'Rourkes, founded Creevelea (*creeve*, branch, and *liath*, grey) beside Dromahair in 1508, and brought thither the Franciscans. A beautiful chased silver chalice, bearing an inscription declaring that it was presented to this monastery in 1619 by Mary the wife of "Thaddeus Ruaire," is still in use in Butlersbridge chapel in the parish of Cavan. Creevelea, as the annals declare and as its ruined chancel and cloisters attest, was one of the most imposing of the many noble structures that the Franciscans had. The priory of Drumlane, established before 550, was confiscated in 1670. Its round tower is still in a good state of preservation. An abbey yet traceable beside St. Fedlemid's church in Kilmore is said to date from the sixth century, and to have been founded by St. Columbcille. On Trinity Island, two miles to the west of it, the White Canons of St. Norbert established in 1237 or 1239 the Abbey of Holy Trinity. It was confiscated in 1570. A beautifully carved doorway, transferred from its ruins, now adorns the vestry of Kilmore Protestant cathedral, the memorial church of the Anglican bishop Bedell.

The Protestant cathedral and episcopal palace and gardens are located on the sites once sanctified by St. Fedlemid and St. Columbcille. At Mounterconnaught, at Ballylinch in Kilmore, and also at Drumlumman there existed as late as the seventeenth century hospitals for the poor. They were dissolved, says Archdall, though chargeable with no crime but that of being endowed; in 1605 they were granted by King James I to Sir Edward Moore, ancestor of the Earls of Drogheda. Kilmainham Wood, County Meath, a preceptory belonging to the Knights Templars, was erected by the Preston family some time in the thirteenth century. On the shores of Lough Melvin in Ballaghameehan, Leitrim, St. Tighernagh founded a convent for his mother St. Mella, who died before 787. It was known as Doiremelle. He also built for himself the monastery of Killachad somewhere in County Cavan. On Church Island in the lake just mentioned St. Sinell (d. 548), St. Patrick's bell-founder, had a retreat called Kildareis. Finally on Lackagh Mountain, near Drumkeeran, St. Natalis (d. 563) founded the monastery of Kilnaile, whose beehive cells may still be traced on the bleak mountain top amid the rocks and brown heather.

The Catholic population of the diocese in 1901 numbered 109,319 — a decline of nearly one-third since the census of 1871 — and its non-Catholic population, 24,447, a somewhat greater decrease. It has 42 parishes and usually 104 or 105 priests. St. Patrick's College, Cavan, opened by Dr. Conaty in 1874, replaces St. Augustine's

Seminary, established by Dr. Browne in 1839; it is one of the finest diocesan buildings in Ireland. The Poor Clares, brought to Cavan town in 1861, care for an industrial school or orphanage. In 1872 they established a second convent at Ballyjamesduff. The Sisters of Mercy have convents at Belturbet, Ballinamore, and Cootehill. All the communities are in charge of technical and primary schools. Intermediate schools for boys are at Manorhamilton and Ballyjamesduff. The Most Rev. Andrew Boylan, C.S.S.R. (b. 1842), a native of the diocese, consecrated Bishop of Kilmore in 1907, died on 25 March, 1910.

JOSEPH MEEHAN

Robert Kilwardby

Robert Kilwardby

Archbishop of Canterbury, Cardinal-Bishop of Porto and Santa Rufina; died at Viterbo, 11 Sept., 1279. Nothing is known of his birth or early life, except that he studied at Paris and probably Oxford. For many years he taught grammar and logic at Paris with special success, devoting particular attention to the development of the use of the syllogism, during which time he composed numerous treatises on grammar and philosophy. Of these the work "*De divisione scientiarum*" was widely studied, as is evidenced by the numerous MS. codices still extant. Later in life he also wrote some theological works: "*De passione Christi*", "*De sacramento altaris*", and some commentaries on Scripture. Feeling called to the Order of Preachers, he abandoned his secular career and became a Dominican, devoting himself to theology and the study of the Scriptures and the Fathers. In 1261 he was chosen provincial of the order in England, an office which he held till 1272. Shortly after he ceased to be provincial he was chosen by Pope Gregory X to fill the See of Canterbury, which had then been vacant for two years. As archbishop-elect he, together with other nobles and prelates, proclaimed Edward I as King of England on the death of Henry III, and appointed a regency to govern the kingdom till the new king returned from the Crusades. He was consecrated at Canterbury on 26 Feb., 1273, by the Bishop of Bath and Wells, William Bytton, the pope having allowed him to nominate the consecrating prelate. On 8 May he received the pallium, and he was enthroned at Canterbury in September of the same year, he being the first friar to become metropolitan.

As archbishop he showed little interest in politics, but was very energetic in the administration of the spiritual duties. Having held a convocation in London, he entered

upon a thorough visitation of the province. This was interrupted in 1274, as he had to leave England to attend the Council of Lyons. Here he distinguished himself as an ardent supporter of the pope's authority, and his own reputation as a great master of theology added weight to his advocacy. On his return to England he resumed his canonical visitation, traveling through the large dioceses of Winchester and Lincoln. In 1276 he visited the University of Oxford, where he condemned several errors, deprived masters who held erroneous opinions, and took other measures for safeguarding purity of doctrine. In the same year (16 June, 1276) he had the consolation of attending the translation of the relics of St. Richard at Chichester, whose life he had encouraged his brother Dominican, Ralph Boeking, to write. As primate he held two important provincial synods in 1273 and 1277, in which the lower clergy were granted fuller representation than had formerly been allowed. In his private life he was noted for his sanctity, his charity to the poor, and his success as a peacemaker. He was a great benefactor of his own order, and bought the site for a Dominican house at Castle Barnard in London. In 1278 Pope Nicholas III nominated Kilwardby as Cardinal-Bishop of Porto and Santa Rufina, and on 25 July he left England for Italy, taking with him all the registers and archives of Canterbury Cathedral. This unfortunate loss has never been recovered, and the earliest records of the see are those of his successor Archbishop Peckham, who vainly endeavoured to recover the lost papers. The change of life was too severe for an old man, and he fell ill shortly after joining the papal court at Viterbo. There he died in the following year and was buried in the convent of his own order.

EDWIN BURTON

Benedictine Abbey of Kilwinning

Benedictine Abbey of Kilwinning

Located in Ayrshire, Scotland, in the town of the same name, where a church was said to have been founded early in the eighth century by St. Winning. Winning has been identified by some scholars with St. Finnan of Moville, an Irish saint of much earlier date; other authorities say he was a Welshman, called Vynnyn, while the Aberdeen Breviary (published 1507) gives Scotland as his birthplace. What is certain is that there was a Christian church at Kilwinning, and also a monastery of Culdees, several centuries before the foundation of the Benedictine house by Hugh de Morville, Constable of Scotland, and a great territorial magnate of the district, somewhere between

1140 and 1162. Timothy Pont, who had seen the cartulary of the abbey, now lost, and who wrote in 1608, gives 1171 as the date, and Richard de Morville (one of the murderers of St. Thomas of Canterbury) as the founder; but the weight of evidence is in favour of Hugh and the earlier date. "The structure of this monastery," says Pont, "was solid and grate, all of freestone cutte, the church fair and staitly after ye modell of yat of Glasgow, with a fair steiple of 7 score foote of height, yet standing quhen I myselve did see it." The length of the church was 225 feet, breadth of the nave sixty-five feet; and the monastic buildings covered several acres.

A community of Tyronensian Benedictines was brought from Kelso; the abbey was soon richly endowed by royal and noble benefactors, possessing granges, large estates, and the tithes of twenty parish churches, and a revenue equivalent to some 20,000 pounds sterling a year. For nearly four centuries Kilwinning remained one of the most opulent and flourishing Scottish monasteries. The last abbot was Gavin Hamilton, who whilst favouring the Reformation doctrines, was a strong partisan of Queen Mary. He was killed in a fight outside Edinburgh in June, 1571. The suppression and destruction of the abbey soon followed and its possessions, held for a time by the families of Glencairn and Raith, were erected in 1603 into a temporal lordship in favour of Hugh, Earl of Eglinton, whose successors still own them. The Earls of Eglinton have taken some pains to preserve the remains of the buildings, which include the great west doorway with window above, the lower part of the south wall of nave, and the tall gable of south transept with its three lancet windows. The "fair steiple" was struck by lightning in 1809, and fell down five years later.

Collections towards a History of the Abbey of Kilwinning in Arch. and Histor. Collect. of Ayr and Wigton, I (Edinburgh, 1878), 115- 222; PONT, Cunninghame, ed. DOBIE (Glasgow, 1876), 254 etc.; HAY, Scotia Sacra in MS. Advoc. Library, Edinburgh, 505; KER, Kilwinning Abbey (Ardrossan, s.d.); WYLIE, Hist. of Mother Lodge, Kilwinning, with Notes on the Abbey, (Glasgow, 1878); GORDON, Monasticon (Glasgow, 1868), 494.

D.O. HUNTER-BLAIR

Kimberley

Kimberley

(KIMBERLIENSIS)

Vicariate apostolic; suffragan of Adelaide, erected by Leo XIII, 5 May, 1887. The Vicariate of Kimberley embraces the whole district of that name, and is under the Apostolic administration of the Bishop of Geraldton. The territory forms one of the six land districts into which Western Australia is divided, and in this, the northwest

portion of the state, a plentiful supply of gold is found. The Bishop of Perth, Dr. Matthew Gibney, whose diocese was charged with the administration of the Kimberley Vicariate, was early engaged in determining upon a suitable place to organize a new settlement for the aborigines of the district. On 4 June, 1890, he set out in person, with Abbot Ambrose of the Trappist Order, to observe the conditions of the locality, and the journey resulted in the establishment of a mission station, the Holy House of the Sacred Heart, at Beagle Bay. In response to the invitation of Dr. Gibney, supported by the recommendation of Cardinal Moran, the fathers of La Trappe took charge of the mission. The natives, computed at between five hundred and six hundred, were found mostly on the western coast in the vicinity of Beagle Bay. The country was well wooded, deficient in water courses, but abounding in springs, with luxuriant vegetation in the neighbourhood of the swamps. A temporary monastery was constructed of wood covered with large sheets of bark, and at a few yards distance was erected a church of the same poor material. Difficulty was experienced in maintaining the staff of not less than ten promised to the Government in return for certain concessions, and the abbot was forced to leave the community for a year (February, 1891-March, 1892) through the necessity of obtaining recruits.

On the departure of the Trappists for Europe, the Pallotine Fathers, or Fathers of the Pious Society of Missions, were installed in their stead through the instrumentality of the Bishop of Geraldton, under whose jurisdiction the vicariate had meantime passed. Besides the chief house at Beagle Bay, the mission has flourishing stations at Broome and Disaster Bay, and from the beginning good results have been achieved in the work of Christianizing the natives. In 1903 stability was given to the undertaking of the erection of a commodious monastery and convent; the missionary body, too, was strengthened by the coming of one priest and five lay brothers. Since that date a new chapel and school have been raised. In June, 1907, nine sisters of the Order of St. John of God arrived at the mission from Subiaco, Perth. The community, under the direction of Mother Antonia O'Brien, is especially concerned with training the girls and caring for the sick. During the last three years remarkable progress has been made; the mission at the present time (1910) numbers four priests, twelve brothers, and nine sisters. There are churches at Beagle Bay and at Broome. Schools have also been established at these two centres: the former, a mixed school founded from Perth, has an attendance of 56 girls and 55 boys; the latter, also a mixed school founded from the Beagle Bay institution, has 39 pupils. Both are in charge of the sisters of St. John of God. (See AUSTRALIA, *Period of Comparative Calm.*)

Australasian Catholic Directory (1910); Annuaire Pontifical Catholique (Paris, 1909); *Missiones Catholicae* (Rome, 1907), 677; MORAN, *History of the Catholic Church in Australasia* (Sydney, s.d.), 583 sqq.; *Gerarchia Cattolica* (1910).

P.J. MACAULEY

Kimberley in Orange

Kimberley in Orange

(KYMBERLEYENSIS IN ORANGIA).

The portion of South Africa which at the present day forms the Vicariate of Kimberley in Orange became in the division of the Vicariate of Good Hope part of the Eastern District, and later on part of the Vicariate of Natal. In 1886 it became a separate vicariate comprising Basutoland, Griqualand-West, Bechuanaland, and the Orange River Colony (then Free State). On 8 May, 1894, Basutoland was separated and made an independent prefecture. At the present day the vicariate includes the Orange River Colony, Griqualand-West, and Bechuanaland, and since the late Anglo-Boer war all this territory is under British rule. The whole vicariate lies between the Tropic of Capricorn and the southernmost point of the Orange River Colony, and between 22 deg. and 30 deg. East Longitude. Before the discovery of diamonds the white population was practically composed of Boers. The number of Catholics was insignificant. The towns now in existence were then mere small villages or had no existence at all. But in 1870 Kimberley began to attract attention; diamonds had been first discovered about three years previously by John O'Reilly, and immigration brought to South Africa and especially to Kimberley multitudes of Europeans, most of them Irish and English. By the time Kimberley was leaping into existence there was already a priest in Bloemfontein, Father Hoendervangers of the Order of Saint Norbert, who had followed the troops as military chaplain during a war between the British and Boers in 1854. He built a church which was replaced by a new one in 1880. When Father Hoendervangers left Bloemfontein he was replaced by Father Victor Bompert, sent by Dr. Jolivet to minister to the scanty Catholic population. For some time the number of Catholics remained limited to eight or ten. All of them were poor and consequently unable to support the priest who very often saw himself on the verge of starvation. However, Father Bompert never swerved from his duty; he was always ready to face sacrifice. His greatest trial was neither starvation nor physical sufferings, but the fruitlessness of the soil he had to cultivate. Being obliged to live in the midst of an element prejudiced against anything which might remind them of Rome and hating the very name of Catholic, his labours were to remain apparently fruitless for several years. The Boers were at that time, as they are now, unwilling to hear of another creed than their own. Their ministers never wearied of railing at and abusing pope and priests. Owing to such a spirit conversions have been always few; many prejudices, however, have been overcome by schools conducted by nuns of various orders.

When Kimberley started into existence the number of Catholics in the locality necessitated the frequent visit of the priest and very soon the establishment of a permanent mission. Fathers Bompert, Lebihan, and Hidien used to visit them occasionally. Father Hidien finally established a Catholic Society and began the erection of a hospital. A poor and small chapel was first erected, but owing to the increase of the Catholic congregation, a larger and more substantial one was planned and built. Its erection is due to the indefatigable Father Hilary Lenoir, O.M.I. The whole vicariate is greatly indebted to him for all the missions he has founded or helped to found; Kimberley, Mafeking, and Harrismith have, thanks to him, their churches and presbyteries. When, in 1886, a separate vicariate was erected, the Right Reverend Anthony Gaughren, O.M.I., was appointed the first Vicar Apostolic; he was elected in May, 1886, consecrated on 10 August, 1886, and died in Kimberley on 15 January, 1901. On 29 January, 1902, his brother, the Right Rev. Matthew Gaughren, O.M.I., was elected to replace him, and was consecrated Bishop of Tentyra on 16 March, 1902. Under the jurisdiction of these two bishops the Vicariate of Kimberley has seen its churches and schools multiplied. In 1910 the vicariate possesses: 16 churches and chapels; 19 priests (of whom 16 belong to the Order of the Oblates of Mary Immaculate); one college under the management of the Christian Brothers, where over 300 boys receive a thorough education. The Sisters of the Holy Family conduct 6 parochial schools and 3 boarding schools. The Sisters of Mercy have two schools, a boarding school in Mafeking and a parochial school in Vryburg. The Sisters of St. Jacut conduct at Taungs a school for natives. Taungs has been up to the present day the only native mission. It was founded in May, 1898, by Father Porte, O.M.I., and counts over 400 Catholics. The total number of children frequenting Catholic schools is at present over 1200. Besides the schools, there is in the Vicariate of Kimberley an establishment for orphans, the poor, and the aged; it is managed by the Sisters of Nazareth. The devotedness and self-sacrifice of these Sisters have not a little contributed to overcome the prejudices of Protestants who help them generously in the upkeep of their establishment, where over one hundred and fifty children and aged persons are cared for; it may be mentioned that all the primary schools are in part supported by the Government. Besides the 16 Oblates and the 3 secular priests, 3 lay brothers, 11 Christian Brothers (Irish), 42 Sisters of the Holy Family of Bordeaux, 14 Sisters of Nazareth, 5 Sisters of Saint Jacut, and 12 Sisters of Mercy are carrying out the work of regeneration in the vicariate.

One of the great obstacles to evangelization in this vicariate is caused by the fact of the population being scattered and unsettled. This prevents the priest from being in continual touch with his flock. The small number of priests has not permitted an increase of mission work amongst the natives, who far outnumber the white population. At present the mining industry seems to be the only source of material wealth, and its

duration is uncertain. In the farming districts, though communication has been facilitated by the construction of railways, the future seems precarious owing to droughts, cattle diseases, locusts, etc. As a consequence the population is unsettled and shifting, and sacerdotal vocations within the vicariate are hardly to be expected for the present. Catechisms and prayer books in the native language have, however, been compiled by Father Porte who made an expedition into Bechuanaland, in 1898, and discovered that the natives, while akin in race and speech to the Basutos, are more rooted in fetishism.

A. LANGOUET

Kingdom of God

Kingdom of God

(In Matthew, generally, *Kingdom of Heaven*).

In this expression the innermost teaching of the Old Testament is summed up, but it should be noted that the word *kingdom* means *ruling* as well; thus it signifies not so much the actual kingdom as the sway of the king -- cf. Dan., iv, 28-29. The Greek *basileia* of the New Testament also has these two meanings -- cf. Aristotle, "Pol.", II, xi, 10; II, xiv; IV, xiii, 10. We find the theocracy sketched in Ex., xix, 6; in the establishment of the kingdom, I Kings, viii, 7: "They have not rejected thee, but me, that I should not reign over them." Still more clearly is it indicated in the promise of the theocratic kingdom, II Kings, vii, 14-16. It is God Who rules in the theocratic king and Who will avenge any neglect on his part. All through the Psalter this same thought is found; cf. Ps. x, 5; it is constantly insisted that God's throne is in heaven and that there is His kingdom; this may explain St. Matthew's preference for the expression "kingdom of heaven", as being more familiar to the Hebrews for whom he wrote. The Prophets dwell on the thought that God is the Supreme King and that by Him alone all kings rule; cf. Isaias, xxxvii, 16, 20. And when the temporal monarchy has failed, this same thought of God's ultimate rule over His people is brought into clearer relief till it culminates in the grand prophecy of Dan., vii, 13 sq., to which the thoughts of Christ's hearers must have turned when they heard Him speak of His kingdom. In that vision the power of ruling over all the forces of evil as symbolized by the four beasts which

are the four kingdoms is given to "one like the son of man". At the same time we catch a glimpse in the apocryphal Psalms of Solomon of the way in which, side by side with the truth, there grew up among the carnal-minded the idea of a temporal sovereignty of the Messiah, an idea, which was (Luke, xix, 11; Matt., xviii, 1; Acts, I, 6) to exercise so baneful an influence on subsequent generations; cf. especially Ps. Sol., xvii, 23-28, where God is besought to raise up the King, the Son of David, to crush the nations and purify Jerusalem, etc. In the Greek Book of Wisdom, however, we find the most perfect realization of what was truly implied by this "rule" of God -- "She [Wisdom] led the just man through direct paths and shewed him the kingdom of God", i.e. in what that kingdom consisted.

In the New Testament the speedy advent of this kingdom is the one theme: "Do penance: for the kingdom of heaven is at hand", said the Baptist, and Christ's opening words to the people do but repeat that message. At every stage in His teaching the advent of this kingdom, its various aspects, its precise meaning, the way in which it is to be attained, form the staple of His discourses, so much so that His discourse is called "the gospel of the kingdom". And the various shades of meaning which the expression bears have to be studied. In the mouth of Christ the "kingdom" means not so much a goal to be attained or a place -- though those meanings are by no means excluded; cf. Matt., v, 3; xi, 2, etc. -- it is rather a tone of mind (Luke, xvii, 20-21), it stands for an influence which must permeate men's minds if they would be one with Him and attain to His ideals; cf. Luke, ix, 55. It is only by realizing these shades of meaning that we can do justice to the parables of the kingdom with their endless variety. At one time the "kingdom" means the sway of grace in men's hearts, e.g. in the parable of the seed growing secretly (Mark, iv, 26 sq.; cf. Matt., xxi, 43); and thus, too, it is opposed to and explained by the opposite kingdom of the devil (Matt., iv, 8; xii, 25-26). At another time it is the goal at which we have to aim, e.g. Matt., iii, 3. Again it is a place where God is pictured as reigning (Mark, xiv, 25). In the second petition of the "Our Father" -- "Thy kingdom come" -- we are taught to pray as well for grace as for glory. As men grew to understand the Divinity of Christ they grew to see that the kingdom of God was also that of Christ -- it was here that the faith of the good thief excelled: "Lord, remember me when thou shalt come into thy kingdom." So, too, as men realized that this kingdom stood for a certain tone of mind, and saw that this peculiar spirit was enshrined in the Church, they began to speak of the Church as "the kingdom of God"; cf. Col., I, 13; I Thess., ii, 12; Apoc., I, 6, 9; v, 10, etc. The kingdom was regarded as Christ's and He presents it to the Father; cf. I Cor., xv, 23-28; II Tim., iv, 1. The kingdom of God means, then, the ruling of God in our hearts; it means those principles which separate us off from the kingdom of the world and the devil; it means the benign sway of grace; it means the Church as that Divine institution whereby we may make sure

of attaining the spirit of Christ and so win that ultimate kingdom of God Where He reigns without end in "the holy city, the New Jerusalem, coming down out of heaven from God" (Apoc., xxi, 2).

HUGH POPE

Kingisel

Kingisel

The name of two abbots who ruled Glastonbury in the seventh and eighth centuries respectively.

KINGISEL I

Kingisel I, whose name also appears as Hemgisel, Hengislus, and Hanigestus, became abbot in A.D. 678. According to William of Malmesbury it was during his first year of office that King Kentwine granted six hides to the abbey upon condition that the monks should always have the right of freely electing their abbot according to the Rule of Saint Benedict. In 681 King Baldred granted to him and his successors the manor of Pennard near Glastonbury. In this charter, which is given by Dugdale from the Ashmolean MS., the abbot's name is spelled differently in two sentences, a slip which has led Bishop Tanner (*Notitia Monastica*) and Mr. Eyston (*Little Monument*) to suppose that two different persons were referred to. It was during the reign of this abbot that King Ina began his series of munificent benefactions to the abbey. Kingisel I died in the year 705 and was succeeded by Berwald.

KINGISEL II

Kingisel II, whose name is also found as Cingislus, Cengillus, and Hengissingus, was apparently fourth abbot after his namesake; he succeeded to the position in the year 729 and died in 744. William of Malmesbury states that Ina's successor, Edelard, made him grants of land, and the Ashmolean MS. gives a charter of Cudred, or Cuthred, King of the West Saxons, which confirms to the abbey all the previous grants made to it. In this charter the name is spelled Hengisilus. His successor was Cumbertus. Almost the only record of these abbots consists in the various charters in which they are named. The question as to the genuineness of these early charters is a difficult one, but it may be safely said that at the present day the general trend of opinion is more favourable to them than was the case in 1826, at which date, however, Warner, in his "History of

the Abbey of Glaston," wrote concerning Ina's charter, "The reasons for questioning its genuineness do not appear to be serious." (See also GLASTONBURY ABBEY).

G. ROGER HUDLESTON

First and Second Samuel

First and Second Books of Kings

(Also know as the First and Second Books of Samuel.

For the First and Second Books of Kings in the Authorized Version see Kings, Third and Fourth Books of.

In the Vulgate both titles are given (*Liber Primus Samuelis, quem nos Primum Regum dicimus*, etc.); in the Hebrew editions and the Protestant versions the second alone is recognized, the Third and Fourth Books of Kings being styled First and Second Books of Kings. To avoid confusion, the designation "First and Second Books of Samuel" is adopted by Catholic writers when referring to the Hebrew text, otherwise "First and Second Books of Kings" is commonly used. The testimony of Origen, St. Jerome, etc., confirmed by the Massoretic summary appended to the second book, as well as by the Hebrew MSS., shows that the two books originally formed but one, entitled "Samuel". This title was chosen not only because Samuel is the principal figure in the first part, but probably also because, by having been instrumental in the establishment of the kingdom and in the selection of Saul and David as kings, he may be said to have been a determining factor in the history of the whole period comprised by the book. The division into two books was first introduced into the Septuagint, to conform to the shorter and more convenient size of scrolls in vogue among the Greeks. The Book of Kings was divided at the same time, and the four books, being considered as a consecutive history of the Kingdoms of Israel and Juda, were named "Books of the Kingdoms" (*Basileiôn biblíá*). St. Jerome retained the division into four books, which from the Septuagint had passed into the Itala, or old Latin translation, but changed the name "Books of the Kingdoms" (*Libri Regnorum*) into "Books of the Kings" (*Libri Regum*). The Hebrew text of the Books of Samuel and of the Books of Kings was first divided in Bomberg's edition of the rabbinical Bible (Venice, 1516-17), the individual books being distinguished as I B. of Samuel and II B. of Samuel, I B. of Kings and II B. of

Kings. This nomenclature was adopted in the subsequent editions of the Hebrew Bible and in the Protestant translations, and thus became current among nonCatholics.

CONTENTS AND ANALYSIS

I-II Books of Kings comprise the history of Israel from the birth of Samuel to the close of David's public life, and cover a period of about a hundred years. The first book contains the history of Samuel and of the reign of Saul; the second, the history of the reign of David, the death of Saul marking the division between the two books. The contents may be divided into five main sections: (1) I, i-vii, history of Samuel; (2) viii-xiv or, better, xv, history of Saul's government; (3) xvi-xxxi, Saul and David; (4) II, i-xx, history of the reign of David; (5) xxi-xxiv, appendix containing miscellaneous matter. The division between (3) and (4) is sufficiently indicated by the death of Saul and by David's accession to power; the other sections are marked off by the summaries, vii, 15-17; xiv, 47-58; xx, 23-26; xv, however, which is an introduction to what follows, according to the subjectmatter belongs to (2).

(1) History of Samuel

Samuel's birth and consecration to the Lord, I, i-ii, 11. Misdeeds of the sons of Heli and prediction of the downfall of his house, ii, 12-36. Samuel's call to the prophetic office; his first vision, in which the impending punishment of the house of Heli is revealed to him, iii. The army of Israel is defeated by the Philistines, Ophni and Phinees are slain and the ark taken; death of Heli, iv. The ark among the Philistines; it is brought back to Bethsames and then taken to Cariathiarim, v- vii, 1. Samuel as judge; he is instrumental in bringing the people back to the Lord and in inflicting a crushing defeat on the Philistines, vii, 2-17.

(2) History of Saul's Government

The people demand a king; Samuel reluctantly yields to their request, viii. Saul, while seeking his father's asses, is privately anointed king by Samuel, ix-x, 16. Samuel convokes the people at Maspha (Mizpah) to elect a king; the lot falls on Saul, but he is not acknowledged by all, x, 17-27. Saul defeats the Ammonite king, Naas, and opposition to him ceases, xi. Samuel's farewell address to the people, xii. War against the Philistines; Saul's disobedience for which Samuel announces his rejection, xiii. Jonathan's exploit at Machmas; he is condemned to death for an involuntary breach of his father's orders, but is pardoned at the people's prayer, xiv, 1-46. Summary of Saul's wars; his family and chief commander, xiv, 47- 52. War against Amalec; second disobedience and final rejection of Saul, xv.

(3) Saul and David

David at Court

David, the youngest son of Isai (Jesse), is anointed king at Bethlehem by Samuel, xvi, 1-33. He is called to court to play before Saul and is made his armourbearer, xvi,

14-23. David and Goliath, xvii. Jonathan's friendship for David and Saul's jealousy; the latter, after attempting to pierce David with his lance, urges him on with treacherous intent to a daring feat against the Philistines by promising him his daughter Michol in marriage, xviii. Jonathan softens his father for a time, but, David having again distinguished himself in a war against the Philistines, the enmity is renewed, and Saul a second time attempts to kill him, xix, 1-10. Michol helps David to escape; he repairs to Samuel at Ramatha, but, seeing after Jonathan's fruitless effort at mediation that all hope of reconciliation is gone, he flees to Achis, King of Geth, stopping on the way at Nobe, where Achimelech gives him the loaves of proposition and the sword of Goliath. Being recognized at Geth he saves himself by feigning madness, xix, 11-xxi.

David as an Outlaw

He takes refuge in the cave of Odollam (Adullam), and becomes the leader of a band of outlaws; he places his parents under the protection of the King of Moab. Saul kills Achimelech and the priests of Nobe, xxii. David delivers Ceila from the Philistines, but to avoid capture by Saul he retires to the desert of Ziph, where he is visited by Jonathan. He is providentially delivered when surrounded by Saul's men, xxiii. He spares Saul's life in a cave of the desert of Engaddi, xxiv. Death of Samuel. Episode of Nabal and Abigail; the latter becomes David's wife after her husband's death, xxv. During a new pursuit, David enters Saul's camp at night and carries off his lance and cup, xxvi. He becomes a vassal of Achis, from whom he receives Siceleg (Ziklag); while pretending to raid the territory of Juda, he wars against the tribes of the south, xxvii. New war with the Philistines; Saul's interview with the witch of Endor, xxviii. David accompanies the army of Achis, but his fidelity being doubted by the Philistine chiefs he is sent back. On his return he finds that Siceleg has been sacked by the Amalecites during his absence, and Abigail carried off with other prisoners; he pursues the marauders and recovers the prisoners and the booty, xxix-xxx. Battle of Gelboe; death of Saul and Jonathan, xxxi.

(4) History of the Reign of David

David at Hebron

He hears of the death of Saul and Jonathan; his lament over them, II, i. He is anointed King of Juda at Hebron, ii, 1-7. War between David and Isboseth, or Esbaal (Ishbaal), the son of Saul, who is recognized by the other tribes, ii, 8-32. Abner, the commander of Isboseth's forces, having quarrelled with his master, submits to David and is treacherously slain by Joab, iii. Isboseth is assassinated; David punishes the murderers and is acknowledged by all the tribes, iv-v, 5.

David at Jerusalem

Jerusalem is taken from the Jebusites and becomes the capital, v, 6-16. War with the Philistines, v, 17-25. The ark is solemnly carried from Cariathiarim to Sion, vi.

David thinks of building a temple; his intention, though not accepted, is rewarded with the promise that his throne will last forever, vii. Summary of the various wars waged by David, and list of his officers, viii. His kindness to Miphiboseth, or Meribbaal, the son of Jonathan, ix. War with Ammon and Syria, x.

David's Family History

His adultery with Bethsabee, the wife of Urias, xi. His repentance when the greatness of his crime is brought home to him by Nathan, xii, 1-23. Birth of Solomon; David is present at the taking of Rabbath, xii, 24-31. Amnon ravishes Tamar, the sister of Absalom; the latter has him assassinated and flies to Gessur; through the intervention of Joab he is recalled and reconciled with his father, xiii-xiv. Rebellion of Absalom; David flies from Jerusalem; Siba, Miphiboseth's servant, brings him provisions and accuses his master of disloyalty; Semei curses David; Absalom goes in to his father's concubines, xv-xvi. Achitophel counsels immediate pursuit, but Absalom follows the advice of Chusai, David's adherent, to delay, and thus gives the fugitive king time to cross the Jordan, xvii. Battle of Mahanaim; Absalom is defeated and slain by Joab against the king's order, xviii. David's intense grief, from which he is aroused by Joab's remonstrance. At the passage of the Jordan he pardons Semei, receives Miphiboseth back into his good graces, and invites to court Berzellai, who had supplied provisions to the army, xix, 1-39. Jealousies between Israel and Juda lead to the revolt of Seba; Amasa is commissioned to raise a levy, but, as the troops are collected too slowly, Joab and Abisai are sent with the bodyguard in pursuit of the rebels; Joab treacherously slays Amasa. Summary of officers, xix, 40-xx.

(5) Appendix

The two sons of Respha, Saul's concubine, and the five sons of Merob, Saul's daughter, are put to death by the Gabaonites, xxi, 1-14. Various exploits against the Philistines, xxi, 15-22. David's psalm of thanksgiving (Ps. xvii), xxii. His "last words", xxiii, 1-7. Enumeration of David's valiant men, xxiii, 8-39. The numbering of the people and the pestilence following it, xxiv.

UNITY AND OBJECT

I-II Books of Kings never formed one work with III-IV, as was believed by the older commentators and is still maintained by some modern writers, although the consecutive numbering of the books in the Septuagint and the account of David's last days and death at the beginning of III Kings seem to lend colour to such a supposition. The difference of plan and method pursued in the two pairs of books shows that they originally formed two distinct works. The author of III-IV gives a more or less brief sketch of each reign, and then refers his readers for further information to the source whence he has drawn his data; while the author of I-II furnishes such full and minute details, even when they are of little importance, that his work looks more like a series

of biographies than a history, and, with the exception of II, i, 18, where he refers to the "Book of the Just", he never mentions his sources. Moreover, the writer of III-IV supplies abundant chronological data. Besides giving the length of each reign, he usually notes the age of the king at his accession and, after the division, the year of the reign of the contemporary ruler of the other kingdom; he also frequently dates particular events. In the first two books, on the contrary, chronological data are so scant that it is impossible to determine the length of the period covered by them. The position taken by the author of III-IV, with regard to the facts he relates, is also quite different from that of the author of the other two. The former praises or blames the acts of the various rulers, especially with respect to forbidding or allowing sacrifices outside the sanctuary, while the latter rarely expresses a judgment and repeatedly records sacrifices contrary to the prescriptions of the Pentateuch without a word of censure or comment. Lastly, there is a marked difference in style between the two sets of books; the last two show decided Aramaic influence, whereas the first two belong to the best period of Hebrew literature. At the most, it might be said that the first two chapters of the third book originally were part of the Book of Samuel, and were later detached by the author of the Book of Kings to serve as an introduction to the history of Solomon; but even this is doubtful. These chapters are not required by the object which the author of the Book of Samuel had in view, and the work is a complete whole without them. Besides, the summary, II, xx, 23-26, sufficiently marks the conclusion of the history of David. In any case these two chapters are so closely connected with the following that they must have belonged to the Book of Kings from its very beginning.

The general subject of I-II Kings is the foundation and development of the Kingdom of Israel, the history of Samuel being merely a preliminary section intended to explain the circumstances which brought about the establishment of the royal form of government. On closer examination of the contents, however, it is seen that the author is guided by a leading idea in the choice of his matter, and that his main object is not to give a history of the first two kings of Israel, but to relate the providential foundation of a permanent royal dynasty in the family of David. This strikingly appears in the account of Saul's reign, which may be summarized in the words: elected, found wanting, and rejected in favour of David. The detailed history of the struggle between David and Saul and his house is plainly intended to show how David, the chosen of the Lord, was providentially preserved amid many imminent dangers and how he ultimately triumphed, while Saul perished with his house. The early events of David's rule over united Israel are told in few words, even such an important fact as the capture of Jerusalem being little insisted on, but his zeal for God's worship and its reward in the solemn promise that his throne would last forever (II, vii, 11-16) are related in full detail. The remaining chapters tell how, in pursuance of this promise, God helps him to extend

and consolidate his kingdom, and does not abandon him even after his great crime, though he punishes him in his tenderest feelings. The conclusion shows him in peaceful possession of the throne after two dangerous rebellions. The whole story is thus built around a central idea and reaches its climax in the Messianic promise, II, vii, 11 sqq. Besides this main object a secondary one may be observed, which is to convey to king and people the lesson that to obtain God's protection they must observe His commands.

AUTHOR AND DATE

The Talmud attributes to Samuel the whole work bearing his name; this strange opinion was later adopted by St. Gregory the Great, who naïvely persuaded himself that Samuel wrote the events which occurred after his death by prophetic revelation. Rabbinical tradition and most of the older Christian writers ascribe to this prophet the part referring to his time (I, i-xxiv), the rest to the Prophets Gad and Nathan. This view is evidently based on I Par., xxix, 29, "Now the acts of king David first and last are written in the book of Samuel the seer, and in the book of Nathan the prophet, and in the book of Gad the seer." But the wording of the text indicates that there is question of three distinct works. Besides, the unity of plan and the close connection between the different parts exclude composite authorship; we must at least admit a redactor who combined the three narratives. This redactor, according to Hummelauer, is the prophet Nathan; the work, however, can hardly be placed so early. Others attribute it to Isaias, Jeremias, Ezechias, or Esdras. None of these opinions rests on any solid ground, and we can only say that the author is unknown.

The same diversity of opinion exists as to the date of composition. Hummelauer assigns it to the last days of David. Vigouroux, Cornely, Lesêtre, and Thenius place it under Roboam; Kaulen, under Abiam the son of Roboam; Haevernick, not long after David, Ewald, some thirty years after Solomon; Clair, between the death of David and the destruction of the Kingdom of Juda. According to recent critics it belongs to the seventh century, but received retouches as late as the fifth or even the fourth century. No sufficient data are at hand to fix a precise date. We can, however, assign certain limits of time within which the work must have been composed. The explanation concerning the dress of the king's daughters in David's time (II, xiii, 18) supposes that a considerable period had elapsed in the interval, and points to a date later than Solomon, during whose reign a change in the style of dress was most likely introduced by his foreign wives. How much later is indicated by the remark: "For which reason Siceleg belongeth to the kings of Juda unto this day." (I, xxvii, 6). The expression *kings of Juda* implies that at the time of writing the Kingdom of Israel had been divided, and that at least two or three kings had reigned over Juda alone. The earliest date cannot, therefore, be placed before the reign of Abiam. The latest date, on the other hand,

must be assigned to a time prior to Josias's reform (621 b.c.). As has been remarked, the author repeatedly records without censure or comment violations of the Pentateuchal law regarding sacrifices. Now it is not likely that he would have acted thus if he had written after these practices had been abolished and their unlawfulness impressed on the people, since at this time his readers would have taken scandal at the violation of the Law by such a person as Samuel, and at the toleration of unlawful rites by a king like David. The force of this reason will be seen if we consider how the author of II-IV Kings, who wrote after Josias's reform, censures every departure from the Law in this respect or, as in III, iii, 2, explains it. The purity of language speaks for an early rather than a late date within the above limits. The appendix, however, may possibly be due to a somewhat later hand. Moreover, additions by a subsequent inspired revisor may be admitted without difficulty.

SOURCES

It is now universally recognized that the author of I-II Kings made use of written documents in composing his work. One such document, "The Book of the Just", is mentioned in connection with David's lament over Saul and Jonathan (II, i, 18). The canticle of Anna (I, ii, 1-10), David's hymn of thanksgiving (II, xxii, 2-51; cf. Ps. xvii), and his "last words" were very probably also drawn from a written source. But besides these minor sources, the writer must have had at hand, at least for the history of David, a document containing much of the historical matter which he narrates. This we infer from the passages common to I-II Kings and the First Book of Paralipomenon (Chronicles), which are shown in the following list:-

I K., xxxi	I Par., x, 1-12	I K., viii	I Par., xviii
II K., iii, 2-5	iii, 1-4	x, 1-xi, 1	xix, 1-xx, 1
v, 1-10	xi, 1-9	xii, 26-31	xx, 1-3
v, 11-25	xiv, 1-16	xxi, 18-22	xx, 4-8
vi, 1-11	xiii, 1-14	xxiii, 8-39	xi, 10-46
vi, 12-23	xv, 25-29	xxiv	xxi
" ""	xvi, 1-3, 43		
vii	xvii		

Although these passages often agree word for word, the differences are such that the author of Paralipomenon, the later writer, cannot be said to have copied from I-II Kings, and we must conclude that both authors made use of the same document. This seems to have been an official record of important public events and of matters pertaining to the administration, such as was probably kept by the court "recorder" (II Kings, viii, 16; xx, 24), and is very likely the same as the "Chronicles of King David" (I Par., xxvii, 24). To this document we may add three others mentioned in I Par. (xxix,

29) as sources of information for the history of David, namely, the "Book of Samuel", the "Book of Gad", and the "Book of Nathan". These were works of the three Prophets, as we gather from II Par., ix, 29; xii, 15; xx, 34, etc.; and our author would hardly neglect writings recommended by such names. Samuel very probably furnished the matter for his own history and for part of Saul's; Gad, David's companion in exile, the details of that part of David's life, as well as of his early days as king; and Nathan, information concerning the latter part, or even the whole, of his reign. Thus between them they would have fairly covered the period treated of, if, indeed, their narratives did not partially overlap. Besides these four documents other sources may occasionally have been used. A comparison of the passages of I-II Kings and I Par. given in the list above shows further that both writers frequently transferred their source to their own pages with but few changes; for, since one did not copy from the other, the agreement between them cannot be explained except on the supposition that they more or less reproduce the same document. We have therefore reason to believe that our author followed the same course in other cases, but to what extent we have no means of determining.

THE CRITICAL THEORY

According to recent critics, I-II Kings is nothing but a compilation of different narratives so unskillfully combined that they may be separated with comparative ease. In spite of this comparative ease in distinguishing the different elements, the critics are not agreed as to the number of sources, nor as to the particular source to which certain passages are to be ascribed. At present the Wellhausen-Budde theory is accepted, at least in its main outlines, by nearly the whole critical school. According to this theory, II, ix-xx, forms one document, which is practically contemporary with the events described; the rest (excluding the appendix) is chiefly made up of two writings, an older one, J, of the ninth century, and a later one, E, of the end of the eighth or the beginning of the seventh century. They are designated J and E, because they are either due to the authors of the Jahwist and Elohist documents of the Hexateuch, or to writers belonging to the same schools. Both J and E underwent modifications by a revisor, J² and E² respectively, and after being welded together by a redactor, RJE, were edited by a writer of the Deuteronomic school, RD. After this redaction some further additions were made, among them the appendix. The different elements are thus divided by Budde:—
J.—I, ix, 1-x, 7, 9-16; xi, 1-11, 15; xiii, 1-7a, 15b-18; xiv, 1-46, 52; xvi, 14-23; xviii, 5-6, 11, 20-30; xx, 1-10, 18-39, 42b; xxii, 1-4, 6-18, 20-23; xxiii, 1-14a; xxvi; xxvii; xxix-xxxi.
II, i, 1-4, 11-12, 17-27; ii, 1-9, 10b, 12-32; iii; iv; v, 1-3, 6-10, 17-25; vi; ix-xi; xii, 1-9, 13-30, xiii-xx, 22.
J².—I, x, 8; xiii, 7b-15a, 19-22.
E.—I, iv, 1b-vii, 1; xv, 2-34; xvii, 1-11, 14-58; xviii, 1-4, 13-29; xix, 1, 4-6, 8-17; xxi, 1-9; xxi, 19; xxii, 19-xxiv, 19; xxv; xxviii. II, i, 6-10, 13-16; vii.

E².-I, i, 1-28; ii, 11- 22a, 23-26; iii, 1-iv, 1a; vii, 2-viii, 22; x, 17-24; xii.

RJE.-I, x, 25-27; xi, 12-14; xv, 1; xviii, 21b; xix, 2-3, 7; xx, 11-17, 40-42a; xxii, 10b; xxiii, 14b-18; xxiv, 16, 20-22a. II, i, 5.

RD.-1, iv, 18 (last clause); vii, 2; xiii, 1; xiv, 47-51; xxviii, 3. II, ii, 10a, 11; v, 4-5; viii; xii, 10-12.

Additions of a later editor.-I, iv, 15, 22; vi, 11b, 15, 17-29; xi, 8b; xv, 4; xxiv, 14; xxx, 5. II, iii, 30; v, 6b, 7b, 8b; xv, 24; xx, 25- 26.

Latest additions.-I, ii, 1-10, 22b; xvi, 1-13; xvii, 12-13; xix, 18-24; xx, 10-15; xxii, 5. II, xiv, 26; xxi-xxiv.

This minute division, by which even short clauses are to a nicety apportioned to their proper sources, is based on the following grounds. (1) There are duplicate narratives giving a different or even a contradictory presentation of the same event. There are two accounts of Saul's election (I, viii, 1-xi), of his rejection (xiii, 1-14 and xv), of his death (I, xxxi, 1 sqq., and II, i, 4 sqq.), of his attempt to pierce David (I, xxiii, 10-11, and xix, 9-10d). There are also two accounts of David's introduction to Saul (I, xvi, 14 sqq. and xvii, 55-58), of his flight from court (xix, 10 sqq., and xxi, 10), of his taking refuge with Achis (xxi, 10 sqq., and xxvii, 1 sqq.), of his sparing Saul's life (xxiv, and xxvi). Lastly, there are two accounts of the origin of the proverb: "Is Saul too among the prophets?" (x, 12; xix, 24). Some of these double narratives are not only different, but contradictory. In one account of Saul's election the people demand a king, because they are dissatisfied with the sons of Samuel; the prophet manifests great displeasure and tries to turn them from their purpose; he yields, however, and Saul is chosen by lot. In the other, Samuel shows no aversion to the kingdom; he privately anoints Saul at God's command that he may deliver Israel from the Philistines; Saul is proclaimed king only after, and in reward of his victory over the Ammonite king, Naas. According to one version of Saul's death, he killed himself by falling on his sword; according to the other, he was slain at his own request by an Amalecite. Again, in xvi, David, then arrived at full manhood and experienced in warfare, is called to court to play before Saul and is made his armour-bearer, and yet in the very next chapter he appears as a shepherd lad unused to arms and unknown both to Saul and to Abner. Moreover, there are statements at variance with one another. In I, vii, 33, it is stated that "the Philistines . . . did not come any more into the borders of Israel . . . all the days of Samuel"; while in ix, 16, Saul is elected king to deliver Israel from them, and in xiii a Philistine invasion is described. In I, vii, 15, Samuel is said to have judged Israel all the days of his life, though in his old age he delegated his powers to his sons (viii, 1), and after the election of Saul solemnly laid down his office (xii). Finally, in I, xv, 35, Samuel is said never to have seen Saul again, and yet in xix, 24, Saul appears before him. All this shows that two narratives, often differing in their presentation of the facts, have

been combined, the differences in some cases being left unharmonized. (2) Certain passages present religious conceptions belonging to a later age, and must therefore be ascribed to a later writer, who viewed the events of past times in the light of the religious ideas of his own. A difference of literary style can also be detected in the different parts of the work. If all this were true, the theory of the critics would have to be admitted. In that case much of I-II Kings would have but little historical value. The argument from the religious conceptions assumes the truth of Wellhausen's theory on the evolution of the religion of Israel; while that from literary style is reduced to a list of words and expressions most of which must have been part of the current speech, and for this reason could not have been the exclusive property of any writer. The whole theory, therefore, rests on the argument from double narratives and contradictions. As this seems very plausible, and presents some real difficulties, it demands an examination.

DOUBLETS AND CONTRADICTIONS

Some of the narratives said to be doublets, while having a general resemblance, differ in every detail. This is the case with the two accounts of Saul's disobedience and rejection, with the two narratives of David's sparing Saul's life, and of his seeking refuge with Achis. Such narratives cannot be identified, unless the improbability of the events occurring as related be shown. But is it improbable that Saul should on two different occasions have disregarded Samuel's directions and that the latter should repeat with greater emphasis the announcement of his rejection? Or that in the game of hide-and-seek among the mountains David should have twice succeeded in getting near the person of Saul and should on both occasions have refrained from harming him? Or that under changed conditions he should have entered into negotiations with Achis and become his vassal? Even where the circumstances are the same, we cannot at once pronounce the narratives to be only different accounts of the same occurrence. It is not at all strange that Saul in his insane moods should twice have attempted to spear David, or that the loyal Ziphites should twice have betrayed to Saul David's whereabouts. The two accounts of Saul among the prophets at first sight seem to be real doublets, not so much because the two narratives are alike, for they differ considerably, as because both incidents seem to be given as the origin of the proverb: "Is Saul too among the prophets?" The first, however, is alone said to have given rise to the proverb. The expression used in the other case—"Wherefore they say, Is Saul also among the prophets?"—does not necessarily imply that the proverb did not exist before, but may be understood to say that it then became popular. The translation of the Vulgate, "Unde et exivit proverbium", is misleading. There is no double mention of David's flight from court. When in xxi, 10, he is said to have fled from the face of Saul, nothing more is affirmed than that he fled to avoid being taken by Saul, the meaning of the expression "to flee from the face of" being to flee for fear of some one. The double narrative of

Saul's election is obtained by tearing asunder parts which complement and explain one another. Many a true story thus handled will yield the same results. The story as it stands is natural and well connected. The people, disgusted at the conduct of the sons of Samuel, and feeling that a strong central government would be an advantage for the defence of the country, request a king. Samuel receives the request with displeasure, but yields at God's command and appoints the time and place for the election. In the meanwhile he anoints Saul, who is later designated by lot and acclaimed king. All, however, did not recognize him. Influential persons belonging to the larger tribes were very likely piqued that an unknown man of the smallest tribe should have been chosen. Under the circumstances Saul wisely delayed assuming royal power till a favourable opportunity presented itself, which came a month later, when Naas besieged Jabes. It is objected, indeed, that, since the Jabesites did not send a message to Saul in their pressing danger, chap. xi, 4 sq., must have belonged to an account in which Saul had not yet been proclaimed king, whence a double narrative is clearly indicated. But even if the Jabesites had sent no message, the fact would have no significance, since Saul had not received universal recognition; nothing, however, warrants us to read such a meaning into the text. At all events, Saul on hearing the news immediately exercised royal power by threatening with severe punishment anyone who would not follow him. Difficulties, it is true, exist as to some particulars, but difficulties are found also in the theory of a double account. The two accounts of Saul's death are really contradictory; but only one is the historian's; the other is the story told by the Amalecite who brought to David the news of Saul's death, and nothing indicates that the writer intends to relate it as true. We need have little hesitation in pronouncing it a fabrication of the Amalecite. Lying to promote one's interests is not unusual, and the hope of winning David's favour was a sufficient inducement for the man to invent his story.

With regard to the apparent contradiction between xvi, 14-23, and xvii, it should be remarked that the Vatican (B) and a few other MSS. of the Septuagint omit xvii, 12-31 and xvii, 55-xviii, 5. This form of the text is held to be the more original, not only by some conservative writers, but by such critics as Cornill, Stade, W. R. Smith, and H. P. Smith. But though this text, if it were certain, would lessen the difficulty, it would not entirely remove it, as David still appears as a boy unused to arms. The apparent contradiction disappears if we take xvi, 14-23, to be out of its chronological place, a common enough occurrence in the historical books both of the Old and of the New Testament. The reason of the inversion seems to be in the desire of the author to bring out the contrast between David, upon whom the spirit of the Lord came from the day of his anointing, and Saul, who was thenceforth deserted by the spirit of the Lord, and troubled by an evil spirit. Or it may be due to the fact that with xvii the author begins to follow a new source. This supposition would explain the repetition of some

details concerning David's family, if xvii, 17-21, is original. According to the real sequence of events, David after his victory over Goliath returned home, and later, having been recommended by one who was aware of his musical skill, he was called to court and permanently attached to the person of Saul. This explanation might seem inadmissible, because it is said (xviii, 2) that "Saul took him that day, and would not let him return to his father's house." But as "on that day" is often used in a loose way, it need not be taken to refer to the day on which David slew Goliath, and room will thus be left for the incident related in xvi, 14-23. It is not true, therefore, that it is impossible to reconcile the two accounts, as is asserted. The so-called contradictory statements may also be satisfactorily explained. As vii is a summary of Samuel's administration, the words "the Philistines . . . did not come any more into the borders of Israel" must be taken to refer only to Samuel's term of office, and not to his whole lifetime; they do not, therefore, stand in contradiction with xiii, where an incursion during the reign of Saul is described. Besides, it is not said that there were no further wars with the Philistines; the following clause: "And the hand of the Lord was against the Philistines, all the days of Samuel", rather supposes the contrary. There were wars, indeed, but the Philistines were always defeated and never succeeded in gaining a foothold in the country. Still they remained dangerous neighbours, who might attack Israel at any moment. Hence it could well be said of Saul, "He shall save my people out of the hands of the Philistines" (ix, 16), which expression does not necessarily connote that they were under the power of the Philistines. Ch. xiii, 19-21, which seems to indicate that the Philistines were occupying the country at the time of Saul's election, is generally acknowledged to be misplaced. Further, when Samuel delegated his powers to his sons, he still retained his office, and when he did resign it, after the election of Saul, he continued to advise and reprove both king and people (cf. I, xii, 23); he can therefore be truly said to have judged Israel all the days of his life. The last contradiction, which Budde declares to be inexplicable, rests on a mere quibble about the verb "to see". The context shows clearly enough that when the writer states that "Samuel saw Saul no more till the day of his death" (xv, 35), he means to say that Samuel had no further dealings with Saul, and not that he never beheld him again with his eyes. Really, is it likely that a redactor who, we are told, often harmonizes his sources, and who plainly intends to present a coherent story, and not merely a collection of old documents, would allow glaring contradictions to stand? There is no sufficient reason, then, why we should not grant a historical character to the section I, i-II, viii, as well as to the rest of the work. Those internal marks—namely, lifelike touches, minuteness of detail, bright and flowing style—which move the critics to consider the latter part as of early origin and of undoubted historical value, are equally found in the first.

THE HEBREW TEXT, THE SEPTUAGINT, AND THE VULGATE

The Hebrew text has come down to us in a rather unsatisfactory condition, by reason of the numerous errors due to transcribers. The numbers especially have suffered, probably because in the oldest manuscripts they were not written out in full. In I, vi, 19, seventy men become "seventy men, and fifty thousand of the common people." In I, xiii, 5, the Philistines are given the impossible number of thirty thousand chariots. Saul is only a year old when he begins to reign, and reigns but two years (I, xiii, 1). Absalom is made to wait forty years to accomplish the vow he made while in Gessur (II, xv, 7). In I, viii, 16, oxen are metamorphosed into "goodliest young men", while in II, x, 18, forty thousand footmen are changed into horsemen. Michol, who in II, vi, 23, is said to have had no children, in II, xxi, 8, is credited with the five sons of her sister Merob (cf. I, xviii, 19; xxv, 44; II, iii, 15). In II, xxi, 19, Goliath is again slain by Elchanan, and, strange to say, though I Par., xx, 5, tells us that the man killed by Elchanan was the brother of the giant, some critics here also see a contradiction. Badan in I, xii, 11, should be changed to Abdon or Barak, and Samuel, in the same verse, to Samson, etc. Many of these mistakes can readily be corrected by a comparison with Paralipomenon, the Septuagint, and other ancient versions. Others antedate all translations, and are therefore found in the versions as well as in the Massoretic (Hebrew) text. In spite of the work of correction done by modern commentators and textual critics, a perfectly satisfactory critical text is still a desideratum. The Septuagint differs considerably from the Massoretic text in many instances; in others the case is not so clear. The Vulgate was translated from a Hebrew text closely resembling the Massoretic; but the original text has been interpolated by additions and duplicate translations, which have crept in from the Itala. Additions occur: I, iv, 1; v, 6, 9; viii, 18; x, 1; xi, 1; xiii, 15; siv, 22, 41; xv, 3, 12; xvii, 36; xxi, 11; xxx, 15; II, i, 26; v, 23; x, 19; xiii, 21, 27; xiv, 30; duplicate translations, I, ix, 15; xv, 32; xx, 15; xxiii, 13, 14; II, i, 18; iv, 5; vi, 12; xv, 18, 20.

F. BECHTEL

Third and Fourth Books of Kings

Third and Fourth Books of Kings

The historical book called in the Hebrew *Melakhim*, i.e. Kings, is in the Vulgate, in imitation of the Septuagint, styled the Third and Fourth Book of Kings. This designation is justified, inasmuch as the historical narration contained in I and II Kings is herein continued, and, especially, because the history of David's life, begun in I and II, is here concluded. It is, on the other hand, an independent work, distinct from the Books of Samuel (i.e. I and II Kings) in its origin and its style, as well as by reason of the purpose it has in view. Its division into two books--at an awkward place, just in the middle of the history of Ochozias--did not exist in early times, and has only been introduced later into the Hebrew editions from the Septuagint and the Vulgate. A division into three parts would be more in keeping with the contents. The first part (III Kings, i- xi), beginning with David's enactments concerning the succession to the throne and his last instructions, comprises the history of Solomon: his God-given wisdom, the building of the temple and royal palace, the splendour of his reign, his great fall on account of which God announced to him the breaking up of his realm. The second part (III Kings, xii-IV Kings, xvii) gives an historical survey of the kindred Kingdoms of Juda and Israel: Jeroboam's falling away from God and worship of the golden calf, the continuous wars between the succeeding kings of Israel and Juda up to Achab, the endeavours on the part of Elias to bring back to God the people misled by Achab, the destructive alliances between the house of Achab and the house of David, the miracles, prophecies, and activity of Eliseus, the destruction of the race of Achab by Jehu, Athalia's abortive attempt to destroy the house of David, the further line of contemporaneous kings of Juda and Isreal until the end of the last-named

kingdom, with an epilogue setting forth the causes of the fall of the latter. The third part (IV Kings, xviii-xxv) treats of the history of the Kingdom of Juda after the reign of Ezechias: his miraculous deliverance from the power of the Assyrians, his boastful conniving with the Babylonians, which gave rise to the Babylonian Captivity and Exile, the historical account of the reign of Manasses, whose sins evoked the pronouncement of the ruin of Juda, of Josias, who restored the temple, renewed the covenant with God, and endeavoured to stamp out idolatry, of the last kings up to the destruction of Jerusalem by the Babylonians, with a short postscript concerning the Judeans who had remained behind, and the delivery of King Joachim from his imprisonment. The Books of Kings were not completed in their present form before the middle of the Exile. Indeed IV Kings, xxv, 27-30, relates that Joachim was released from bondage (562), and admitted to the court of Babylon for "all the days of his life".

According to the Babylonian Talmud (*Baba bathra*, fol. 15, 1), the Prophet Jeremiah is the author. Not a few among both older and more recent exegetes consider this probable. It is indeed remarkable that Jeremiah's activity is not alluded to--his name not even being mentioned--although he stood in close relation to the events of the last few years, while everything other prophets (e.g. Elias, Eliseus, Isaias) did for kings and people is carefully noted. In case Jeremiah was the author, we have to accept the explanation that he did not consider it suitable to relate here what he had set forth at length in his prophecy. Furthermore, *Jer.*, lii, the narrative of the events in which Jeremiah's predictions were fulfilled, is taken almost verbatim from IV Kings, xxiv, 18-xxv, 30. The compiler of the Prophecy of Jeremiah felt justified in doing this, inasmuch as, in his opinion, the Books of Kings were by the same author. There is an undoubted resemblance in language and style between this historical book and the Prophecy of Jeremiah. The same expressions occur in both writings (compare, for instance, III Kings, ii, 4, with *Jer.*, xxxiii, 17; III Kings, ix, 8 with *Jer.*, xviii, 16, and xix, 8, also *Lam.*, ii, 15; IV Kings, xxi, 12, with *Jer.*, xix, 3; IV Kings, xxi, 13, 14, with *Jer.*, xxx, 16, and xxii, 17, also *Lam.*, ii, 8). If Jeremiah be indeed the author, it must be accepted as probable that he wrote the book not long before, or shortly after, the fall of Jerusalem (587 b.c.); the last verses (xxv, 27-30) have possibly been added by a different hand. The style, especially in the second chapter, is entirely different from that of the Books of Samuel (I and II Kings). The well-developed and comprehensive presentation of those books differs noticeably from the dry and chronicle-like reports about most of the kings. Besides, the Books of Samuel never refer to those lost books which served as sources and which contained fuller particulars, while the Books of Kings are full of such references. In the latter books the chronology is very clearly set down; for instance, as long as the two kingdoms exist simultaneously, in considering the history of one king, the year in which the contemporary king of the other kingdom acceded to the

throne and the length of his reign are both indicated. Such notices are entirely absent from the Books of Samuel. From them it is even impossible to discover how long Samuel and Saul governed. Moreover, the historian of III and IV Kings himself passes judgment on every king of Israel and of Juda as to whether he did right or wrong in the eyes of God; whereas the Books of Samuel simply give the judgments of other historians or leave it to the reader to judge for himself.

The Books of Kings cover a period of about four centuries, from the time of the last years of David until the fall of Jerusalem. They do not give the complete history of Israel during this period; such was not the purpose of the writer. He omits many important events or barely alludes to them. For the political history of the two kingdoms, the military exploits of the kings, their public achievements, he constantly refers to three other writings which, at that time, were still in existence. By these references he wishes to indicate that he does not intend to relate everything which may be found in those sources. Whoever wanted information concerning the wars, the treaties, and public acts was to consult the writings referred to. In the Book of Kings, as is shown by its contents, another matter predominates, namely, the relation of each king to revealed religion. For this reason, the narrator judges the conduct of each king, treats more extensively the history of those kings who fostered or brought religion to a flourishing state (such as Solomon, Ezechias, Josias), or who had, on the contrary, wrought it great harm (Jeroboam I, Achab, and Joram); and therefore he relates particularly what the prophets did to bring back the kings and people to the observance of the laws of religion and to spur them on. The object the writer had in view he indicates very clearly in the epilogue which follows the story of the fall of Israel (IV Kings, xvii, 7 sqq.). With emphasis he points out the cause: "They worshipped strange gods . . . and they hearkened not [to the warnings of the prophets] . . . and they rejected the covenant that he [God] made with their fathers . . . And the Lord was very angry with Israel, and removed them from his sight, and there remained only the tribe of Juda. But neither did Juda itself keep the commandments of the Lord their God; but they walked in the errors of Israel . . . And the Lord cast off all the seed of Israel." III Kings, ii, 3, 4; ix, 3-9; xi, 11, 33-39; xiv, 7-11; xvi, 12 sqq.; IV Kings, x, 30-33; xiii, 3; xxi, 11-16; xxii, 15-17; xxiv, 3-20, bring out the same idea. In this manner the writer teaches that the unlawful cult offered in the high places and the idolatry practised both by kings and people in spite of the admonitions of the prophets were the cause of the downfall of Israel and of Juda. Still this is not the entire purpose of the work. The repeated calling to mind of the promises of the God Who had pledged a permanent reign to David, the acknowledgment of the mercy of the God Who, on account of David, Ezechias, and Josias, had suspended the judgment pronounced upon Juda--all this served to revive the hope and confidence of the remnant of the people. From this they

were to learn that God, just in His wrath, was also merciful in His promises to David and would be faithful to His promise of sending the Messiah, whose kingdom should endure. Not unappropriately this whole work may be called an historical elucidation and explanation of Nathan's oracle (II Kings, vii, 12-16).

The writings upon which the Books of Kings are based and to which they refer more than thirty times are: the "book of the words of the days of Solomon" (III Kings, xi, 41), the "book of the words of the days [A. V. book of the chronicles] of the kings of Israel" (xiv, 19; etc.), and the "book of the words of the days of the kings of Juda" (xiv, 29; etc.). In the opinion of many, these "chronicles" are the official annals kept by the chancellors of the different kings. However, it is by no means certain that the office designated by the Hebrew word *mazkir* signifies chancellor (Vulg. *a commentariis*); still less certain is it that it was part of the duty of the chancellor, who belonged to the king's household, to keep these annals. It is true that David (II Kings, viii, 16), Solomon (III Kings, iv, 3), Ezechias (IV Kings, xviii, 18), and Josias (II Par., xxxiv, 8) counted among their officials a *mazkir*, but whether the other kings of Juda and of Israel employed such an officer we find nowhere indicated. Even if it were historically certain that so-called year-books were kept in the two kingdoms by the chancellors, and had been preserved in Israel in spite of so many revolutions and regicides, there remains still the question whether these are really the "chronicles" which serve as a basis for the Books of Kings. The chronicles of other peoples, as far as they have been preserved in cuneiform characters and otherwise, contain exclusively that which contributes to the glory of the kings, their deeds of arms, the edifices they built, etc. Our historical work, however, also relates the sins, prevarications, and other atrocities of the kings, which were not likely to be recorded in the year-books by court officials during the lifetime of their kings. According to IV Kings, xxi, 17, "The acts of Manasses . . . and his sin which he sinned, are they not written in the book of the words of the days [A. V. book of the chronicles--II Kings, xxi, 17] of the kings of Juda?"

We may endeavour to determine the nature of these sources in another way. By comparing the accounts in the Books of Kings and those in II Par., one is immediately struck by two things: With frequent verbal similarity, both works carefully indicate the sources which have been consulted. The history of Solomon's reign, III Kings, i-xi, is told in II Par., i-ix, in almost the same manner, and while III Kings, xi, 41, refers to the "book of the words of the days of Solomon", II Par., ix, 29, refers in the same formula ("The rest of", etc.) to "the words of Nathan the prophet, and the books of Abias the Silonite, and the vision of Addo the seer". The history of Roboam the author of the Books of Kings takes from the "book of the chronicles of the kings of Judah" (A. V. I Kings, xiv, 29). The writer of II Par., x-xii, gives an account of the same which in contents and form is almost identical, and refers to "the books of Semeias the prophet,

and of Addo the seer" (II Par., xii, 15). The same holds for the history of the following kings of Juda. After an account, often in almost the same words, now elaborate and then again more concise, we find in the Book of Kings the "book of the chronicles" and in II Par. the "prophetic writings" given as sources. It must be added that, while in the life story of four of the seven kings in II Par., reference to the source is omitted, these are also absent in the Books of Kings. Is it then not probable that it is one and the same source whence both writers have gathered their information? The "book of the chronicles" quoted in III and IV Kings the writer of II Par. designates by the then usual appellation, "the book of the kings of Juda and Israel". The prophetic writings referred to by this writer are divisions of the last-named book. This the writer states explicitly (II Par., xx, 34) of "the words [or the writings] of Jehu the son of Hanani" (his source for the history of Josaphat): they are "digested into the books of the kings of Israel [and Juda]"; also (II Par., xxxii, 32--Vulg.) of "the vision of Isaias, son of Amos": it is embodied in "the book of the kings of Juda and Israel". Consequently, the source utilized by both writers is nothing else but the collection of the writings left behind by the successive prophets.

That the author of the Book of Kings has thoroughly consulted his sources, is constantly evident. Thus he is able to describe the labours and miracles of Elias and Eliseus with such minuteness and in so fresh and vivid a manner as to make it plain that the original narrator was an eyewitness. This is why he consults the sources and refers the reader to them in his account of the life of almost every king; not a few expressions have been taken over verbally (cf. III Kings, viii, 8; ix, 21; xii, 19; IV Kings, xiv, 7, etc.). The authenticity of his history is further strengthened by its agreement with the accounts of II Par. The difficulties which appear at the superficial perusal of these Sacred Writings vanish after an attentive study, what seemed contradictory proving to be an amplification or else entirely new matter. In many places the historical reliability of the Books of Kings is confirmed by what the prophetic writings of Isaias, Jeremias, Osee, Amos, Micheas, and Sophonias report concerning the same events, either by direct mention or by allusion. Even profane historians of antiquity, Berosus, Manetho, and Menander, are quoted by Flavius Josephus and Eusebius as witnesses to the reliability of our book of sacred history. Especially notable in this respect are the inscriptions concerning the Oriental races discovered during the last century.

JOS. SCHETS

Chronology of the Kings

Chronology of the Kings

First, we append a table in which the data of the Bible are put together. For the kings of Juda, s. signifies son, b., brother, of the preceding.

KINGS OF JUDA								KINGS OF ISRAEL					
King	Age	Length of Reign			Year of Ascension	Bible Reference		King	Length of Reign			Year of Ascension	Bible Reference

Since the deciphering of the AssyroBabylonian inscriptions, the chronology of the period of Kings before 730 b.c. has become untenable. We give here the points of chronological contact between the AssyroBabylonian history and Sacred Scripture, as also those of Egyptian history.

A. From Assyrian Inscriptions.--

- (1) 854 b.c.. Salmanasar II, in the summer of his sixth year, vanquishes Benadad of Syria (III Kings, xx, 1), the predecessor of Hazael, with other kings, among them Achab of Israel, in the battle of Karkar.
- (2) 842 b.c. Salmanasar II, in his eighteenth year, receives tribute from Jehu.
- (3) 738 b.c. Theglathphalasar III (Phul, IV Kings, xv, 19) receives, in his eighth year, tribute from Manahem.
- (4) 733-2 b.c. War between Theglathphalasar and Rasin of Syria; siege of Damascus. "Joachaz of Juda", i.e. Achaz, brings presents from Theglathphalasar. Conquest of Israel- itish territory by Theglathphalasar.
- (5) 731-0 (?) b.c. "Pakacha", i.e. Phacee (Hebr. *Pekach*), is killed, and "Ausi", i.e. Osee, is set over Israel by Theglathphalasar.
- (6) 722-1 b.c. Samaria is taken possession of, in the early part of Sargon's reign, by the Assyrians.

B. From Scripture.--

- (1) Towards the end of Solomon's reign, Jeroboam I fled into Egypt to Sesac. In the fifth year of the reign of Roboam, Jerusalem was plundered by the same Sesac (III Kings, xi, 40; xiv, 25). Sesac I probably reigned about 940-19 b.c.
- (2) In, or shortly before, the fifteenth year of Asa's reign, "Zara the Ethiopian" (Hebr. *Zerach*) declared war against Asa (II Par. [A. V. II Chron.], xiv, 9; cf. xv, 10 sqq.). Some commentators think that Zara was a king of Egypt, namely, Osorkon I or II. The first was the successor of Sesac I. The second cannot be placed chronologically.
- (3) Benadad II (III Kings, xx, 1), the contemporary of Salmanasar II, was contemporary with Achab and Joram of Israel. Joram died during the reign of Benadad's successor, Hazael. According to Assyrian sources. Benadad was, in 846, still King of Syria.
- (4) Hazael, who, according to Assyrian inscriptions, was already ruling in 842, was contemporary with Jehu, Joas of Juda, and Joachaz of Israel (IV Kings, xiii, 22). In 803, Rammannirari III conquered Damascus under the Syrian King Mari, who was possibly the Biblical Benadad (III), contemporary of Joas of Israel (*ibid.*, v, 25).
- (5) Manahem honours Phul, King of the Assyrians, with presents (IV Kings, xv, 19-20). That Phul is identical with Theglathphalasar III is apparent enough from the fact that, in the year 729, according to Assyrian inscriptions, Tukultiapalisarra, and Babylonian inscriptions Pulu, becomes King of Babylon, and that this same king, according to the same sources, died in 727.
- (6) Phacee and Rasin, King of Syria, besiege Achaz at Jerusalem (IV Kings, xvi, 5). Achaz calls Theglathphalasar to his assistance (*ibid.*, v, 8).
- (7) Damascus is taken by Theglathphalasar, and Rasin is killed (IV Kings, xvi, 9). Achaz visits Theglathphalasar at Damascus (*ibid.*, v, 10).

(8) Theglathphalasar, during the reign of Phacee, takes possession of Israel's territory. Phacee is conspired against and slain by Osee, and the latter becomes king (IV Kings, xv, 29, 30).

(9) Salmanasar beleaguers Samaria, which, in the third year of the siege, the sixth of Ezechias, and the ninth of Osee, is taken by the Assyrians (IV Kings, xvii, 5, 6; xviii, 10, 11). Salmanasar reigned from January, 726, to January, 721. Sua (or Seve), mentioned in IV Kings, xvii, 4, as "king of Egypt", is not identified with certainty. Some think him to be Sabaka, whose chronology, as also that of Theraca (IV Kings, xix, 9), has not been determined. Under Sargon of Assyria is mentioned, in the year 707, one Sib'u, or Sib'e, as "prince [*turtan*, or sultan] of Musri".

(10) Ezechias received, in or shortly after his fourteenth year, an embassy from MerodachBaladan (D. V. Berodach Baladan), who was King of Babylon from 721 to 710, and again, for 9 months, in 703. See IV Kings, xx, 1, 6, 12.

(11) Sennacherib of Assyria besieged Ezechias at Jerusalem. The date given for this event, "in the fourteenth year of King Ezechias" (IV Kings, xviii, 13; and Is., xxxvi, 1) is either misplaced or incorrect. The event took place, according to IV Kings, xx, 6, after the recovery of Ezechias in his fourteenth year (i.e. fifteen years before his death), and after the arrival of the Babylonian embassy.

(12) Death of Josias in a combat with Nechao, King of Egypt (IV Kings, xxiii, 29). Nechao (Necho II) ascended the throne in 610.

(13) Battle near Carchemish (Charcamis, Karchemis) between Nechao and Nabuchodonosor of Babylon in the fourth year of Joakim (Jer., xlvi, 2; cf. xxv, 1; and IV Kings, xxiv, 1). According to the account of Berosus in Flavius Josephus, Nabuchodonosor, after having slaughtered the Egyptian army near Carchemish, marched on to Syria and Palestine in order to invade Egypt. Arrived at the confines of this country, he received the news of the death of his father, Nabopolassar. Returning to Babel to assume his administration, he confided the Jewish, Phoenician, and Syrian prisoners of war to the chiefs of his army. In consequence of this Juda also rose in revolt against him (cf. II Par., xxxvi, 6; and Dan., i, 1). Nabopolassar died in the beginning of the summer of 605 b.c. The fourth year of Joakim is in Jer., xxv, 1, designated as the first year of Nabuchodonosor, and, according to v. 3 of the same, was the twentieth-third after the thirteenth year of Josias.

(14) Nabuchodonosor takes Joachin (Jechonias) as a prisoner to Babylon, according to Jer., lii, 28, in the seventh, according to IV Kings, xxiv, 12, in the eighth year of his reign. Chapter lii, 28-34, in Jeremias, follows the Babylonian manner of dating (post-dating), whereas the other texts count the initial year of any reign as the first. According to Babylonian dating, the first year of Nabuchodonosor was 604, but, according to Israelitish dating, it was 605. Jer., lii, 31, "In the seven and thirtieth year of the captivity

of Joachin, king of Juda, in the twelfth month, the five and twentieth day of the month, Evilmerodach king of Babylon, in the first year of his reign (i.e. 562 b.c.), lifted up the head of Joachin, king of Juda, and brought him forth out of prison" (incorporated in IV Kings, xxv, 27), evidently follows the Babylonian dating. All these datings point to 598 as the year when Joachin was carried away.

(15) In his eighth year, or the beginning of his ninth year, Sedecias revolted against Nabuchodonosor and called to his assistance Egypt, namely, the newly elevated Pharaoh Hophra (D. V. Ephree), who ascended the throne in 589 (probably the first half of the year)--IV Kings, xxiv, 20 (cf. xxv, 1); Jer., xxxvii, 4 (A. V. xxxvii, 5); xlv, 30; Ezech., xvii, 15.

(16) The siege of Jerusalem began in the tenth month of the ninth year of Sedecias (IV Kings, xxv, 1; Jer., xxxiv, 1; lii, 4). According to Jer., xxxii, 1, the tenth year of Sedecias coincides with the eighteenth of Nabuchodonosor. Jerusalem was taken in the eleventh year of Sedecias, the nineteenth year of Nabuchodonosor, in the fourth month (IV Kings, xxv, 8; Jer., lii, 12). According to Babylonian chronology, this was the eighteenth year of Nabuchodonosor (Jer., lii, 29).

(17) The fourth month of the eleventh year of Sedecias falls in the nineteenth year (Israelitish chronology) of Nabuchodonosor. From this it appears that the fourth month (Thammuz) of the first year of Sedecias falls in the ninth year of Nabuchodonosor. As Joachin's abduction took place in the eighth year of Nabuchodonosor, it is very probable that Sedecias became king in this, the eighth year.

The celebrated seventeenthcentury Jesuit Petavius composed in a very ingenious manner two chronological tables which, as brought by him into relation with the preChristian chronology have, with few alterations, been in vogue for a long time. These tables are here combined and presented as one.

Juda	Year	Israel	Year	Re- marks	Juda	Year	Israel	Year	Re- marks

The table below gives the chronology of the kings of Juda and of Israel, as nearly as possible in accordance with the figures of the Bible, in conjunction with the data of profane history. In this connection it must be noted that: (1) The years b.c. are figured from Nisan to Nisan, which month usually began with the new moon about the vernal equinox; (2) the years during which the kings reigned are understood to be enumerated in accordance with their accession to the throne, and not according to the beginning of the year (religious or civil). The number of inaccuracies has by this means been reduced to a minimum, and we are justified in this hypothesis because nothing is known with any degree of certainty concerning the system of chronology covering the years of the kings of Juda and of Israel.

From the present uncertainty as to the dates of accession it follows that the precise year b.c. in which any king began his reign cannot, in most cases, be determined. The inexactness is increased by the fact that the duration of any one reign is given in round numbers of years, so that, in the absence of any determining data, it is impossible to know whether the time is too long or too short by a fraction of a year. We have, therefore, to consider the dates b.c. here given as--within a year, earlier or later--more or less inaccurate. Dates marked with an asterisk (*) may, however, be regarded as reasonably exact.

The inaccuracies in the chronology of the Bible are attributable to various causes. In many cases they are due to wouldbe "corrections" on the part of the copyists, who did not understand certain passages or sought to bring certain dates into agreement with an error of long standing. Thus the discrepancy of twenty years excess in the reign of Azarias has also been carried through the synchronisms of the Israelitish kings, Zacharias, etc. The synchronistic comparisons between Joatham, Achaz, and Ezechias, on the one hand, and Phacee and Osee, on the other, form a very inaccurate combination, brought into the Bible by the speculations of successive copyists and commentators.

The statement, tolerably accurate chronologically, concerning the beginning of Osee's reign, "in the twentieth year of Joatham" (IV Kings, xv, 30), who, be it noted, only reigned sixteen years (v. 33), seems to have originated with some one who did not wish to mention the godless Achaz. The twenty years of the reign of Phacee, in whose second year Joatham became king, stand in relation to the twentieth year of Joatham like cause and effect. The synchronisms of Ezechias with Osee got into the Bible through the undoubtedly genuine "twelfth year of Achaz", during which Osee became an independent king, by means of the following arithmetical calculation:--

Phacee became king in the 52nd year of Azarias.
 Achaz " " "17th " " Phacee.
 Osee " " "12th " " Achaz
 Total 81 years to Osee.
 Azarias reigned 52 years
 Joatham " 16"
 Achaz " 16"
 Total 84 years to Ezechias.
 Subtract 81 years to Osee
 There remain 3 years of Osee till Ezechias became king.

That the reverse is not the case, that is, that the twelfth year of Achaz is not the result of a calculation, is shown by the fact that the other possible calculations would produce the fourth, and not the twelfth, year of Achaz. The other reckonings are as follows:--

52 years of Azarias 52 years of Azarias.
 20 " " Phacee 16 " " Joatham.
 Total 72" to Osee 68" to Achaz.
 Less 68" to Achaz
 There remain 4" of Achaz when Osee becomes king.
 The year 68 of Azarias = 17 Phacee = 16 Joatham = 0 Achaz.
 4 4 4 4

The year 72 of Azarias=21 Phacee=20 Joatham=4 Achaz=1 Osee.

From this it appears that not the "twelfth year of Achaz", but the "twentieth year of Joatham", is

reckoned. The calculation was correct in regard to Osee's beginning as vassal of Assyria. But some one else confused this with the declaration of independence of Osee in the twelfth year of Achaz, and thus arrived at the "third year of Osee" before the beginning of Ezechias, whence resulted further synchronistic statements between Osee and Ezechias. That these synchronisms are not historical, but must have been introduced into the Bible by a "speculator", is proved by what follows:--

- (1) That which is added, II Par., xxx, 5-9, 11, 25; and xxxi, 1, about the first year of Ezechias, was not possible while a king ruled in the kingdom of the Ten Tribes.
- (2) If Ezechias became king six or seven years before the capture of Samaria, consequently in 728-7, then his reign of twenty-nine years must have ended in 69908, and his recovery must have taken place fifteen years before, about 713. On this occasion

the promise is made to Ezechias that he and his city Jerusalem shall be delivered "out of the hand of the king of the Assyrians" (IV Kings, xx, 6). This king was Sennacherib, who ascended the throne only in 705, while this event, according to Assyrian sources, took place not earlier than 701. There is no ground for assuming that strained relations existed between Ezechias and Sargon (722-705), who, nevertheless, just about 713, was engaged with the Philistines, and in 711 conquered Azotus (cf. Is., xx, 1). The cause of serious animosity between Ezechias and Assyria was evidently the embassy of Merodach-Baladin, who had no relations whatever with the King of Juda, and who did not send to him a magnificent embassy to congratulate him on his recovery without some ulterior motive. We cannot but regard this as an expression of the unfriendly attitude towards the Assyrians which was favoured by Ezechias. This is the light in which we can understand the war of the Assyrian against Juda. But cause and effect must be connected according to time. As to the year 713 or shortly afterwards (for the delivery of Ezechias), there can, then, be no discussion. The year 703 is probably correct; Merodach-Baladan had then regained the throne of Babylon, and Sennacherib already ruled in Assyria. Thus the recovery of Ezechias would have taken place in about 704. While this would be his fourteenth year, 718-7 would then be his first, which calculation also agrees with other data. Cf. Winckler, "Alttest. Unters.", 135.

(3) If Ezechias became king in 728-7, then Achaz could not have reigned more than seven or eight years, and in this case the father would at most have been only seven years older than the son (cf. what follows). For a joint reign of Ezechias and Achaz is out of the question, and the supposition that Ezechias was not his son is, in view of IV Kings, xviii, 1, and II Par., xxviii, 27, without sufficient basis. Neither can another interpretation of the word *son*, accepted a number of times in the Books of Kings by Herzog, be considered a fortunate hypothesis.

By the anticipation of the twenty-nine years' reign of Ezechias there resulted a shortage of ten years which has probably been made up by lengthening the reign of Manasses by ten years.

The year 730 as the beginning of Osee's reign is, according to Biblical statistics, reasonably certain. For in his sixth or seventh year, and in the twelfth year of Achaz, he rose against Salmanasar (IV Kings, xviii, 9; cf. xvii, 4), and in his sixth year Samaria was taken. The year 722-1 being the ninth, 730 is consequently the first. The Assyrian account of the death of Phacee and the nomination of Osee is usually placed by Assyriologists at about 734-732, since Theglathphalasar was not in Palestine again after 732. This reason is, however, not convincing. The course of events after 735-4 is probably as follows. The anti-Assyrian party in Palestine, of which Rasin of Damascus was the head and moving spirit, organized an uprising and endeavoured to draw the other nations into it. Hence the alliance between Rasin and Phacee against Juda, which de-

clined to participate in the uprising, and their endeavour, on the death of Joatham, to keep his son Achaz from the throne. Achaz appealed to Theglathphalasar for assistance. The latter immediately made for his object, namely, the subjection of Syria and the conquest of Damascus, without neglecting to occupy also the surrounding districts which belonged to Israel. Cf. IV Kings, xvi, 7-9; and xv, 29. After the fall of Damascus in the summer of 732, Tyre and Israel must have been conquered, but, when winter approached, Theglathphalasar turned all further operations over to his *rabsak* (whom he, according to his own inscriptions, dispatched against Tyre), and retired to Ninive. The territory of Israel was taken possession of, perhaps partly while the monarch was still in command; but before Samaria could be taken, Osee, supported by the Assyrian party, had executed his stroke and caused Phacee to fall. Various circumstances assign the subjection of Tryre, Israel, and Ascalon to 731-30, and the appointment of Osee as Assyrian vassal king over Israel need not be placed before 730. (Cf. Winckler, op. cit., 132 sqq).

The chronology of the kings of Juda, as approximately determined above, has still to be compared with their ages at the commencement of their respective reigns--given in Holy Scripture for most of them. If we assume that, in the coregencies which we have considered, the age at the beginning of the coadministration is indicated, we arrive at about the following dates of birth:--

David 1042	Achas, s. (753 or) 758
Roboam (grandson)973	Ezechias, s. 742
Josaphat (great-gs.)909	Manasses, s. 700
Joram, s. 881	Amon, s. 665
Ochozias, s. 864	Josias, s. 649
Joas, s. 843	Joachaz, s. 633
Amasias, s. 821	Joakim, b. 634
Azarias, s. 783	Joachin, s. (606 or) 616
Joatham, s. 774	Sedecias, s. of Josias619

The variants 42, 20, and 8, in connection with Ochozias, Achaz, and Joachin, must be considered as erroneous.

The year 774 in connection with Joatham is impossible, because his father was born in 783. In order to avoid other difficulties, we shall, in connection with Joatham, write 15 instead of 25 (years old when he began to reign). The year of his birth thus becomes 764. By this Achaz, who is supposed to have been born in 758 (or 753), reaches into the same period, however. Let us here, also, write 15 instead of 25. Now Achaz is born in 748. But, in this case, Ezechias cannot have been born in 742. If we again change the 25 years, in the case of Ezechias, to 15, then the year of his birth becomes 732. (If we suppose the reign of Ezechias to begin in 728-7, there is no way of accounting

for Ezechias as the son of Achaz.) The confusion in the duration of the various reigns of the period was responsible for the increase in the different lifetimes. The change from the singular `eser (ten) to the plural `esrim (twenty) was but a step.

More errors need not be supposed in the enumerative statement of the various ages. In the above list only the following changes have to be made: Joatham 764; Achaz, 748; Ezechias, 732.

A reasonably complete bibliography is found in Herzog, *Die Chronologie der beiden Königsbücher* (Münster, 1909). We mention the most noted works among a very rich literature: Eusebius, *Chronicon* in P.G., XI; and ed. Schoene, ii (Berlin, 1875); Georgios Synkellos, *Chronographia* (ed. Dindorf, Bonn, 1829); Bede, ed. D.A.W.H. SLOET

Kingston

Kingston

(KINGSTONIENSIS or REGIOPOLITANA)

The Archdiocese of Kingston comprises the territory from the eastern line of Dundas County to the western boundary of Hastings County in the Province of Ontario, Canada, and includes the Counties of Addington, Dundas, Frontenac, Grenville, Hastings, Lanark, Leeds, Lennox, and Prince Edward. The territory of the present archdiocese was a portion of the old Diocese of Quebec. In 1817 the Diocese of Quebec was erected into an archdiocese, the western portion, Upper Canada, now the Province of Ontario, being made a vicariate, and the Rev. Alexander Macdonell, Pastor at St. Raphael, Glengarry, since 1804, was nominated first Vicar Apostolic of the district. His consecration took place on 31 December, 1820, in the Ursuline chapel at Quebec. The bishop continued to reside for some years at St. Raphael which thus became the first episcopal see in the new province and the second established in all Canada. It was to Glengarry that the bishop brought, in 1803 and 1804, the members of the famous Highland Catholic regiment of Glengarry Fencibles, disbanded in Scotland in 1802. In 1804, to minister to the scattered Catholic settlers and Indians in the vast Province of Upper Canada, there were but two priests, the Rev. Alexander Macdonell (afterwards bishop) and an assistant. About 1816 the number of priests had increased to six, two at St. Raphael, one at Perth, one at Kingston, and two at Sandwich. The vicariate was created a diocese by Pope Leo XII in a Brief dated 27 January, 1826, and Kingston was named the see. It was the first diocese established in a British colony since the so-called Reformation. In this year Bishop Macdonell applied for a coadjutor, and the Rev. Thomas Weld, an English priest, was consecrated Bishop of Amycla and coadjutor of Upper Canada on 6 August, 1826. The state of his health did not permit Bishop Weld to come to Canada. He remained some years in England, and, going to Rome, he was made Cardinal by Pius VIII in 1830.

The beginning of a diocesan seminary was made at St. Raphael, where Bishop Macdonell established the College of Iona, under the direction of Rev. William P. Macdonald, afterwards vicar-general for twenty years. He was also the editor of "The

Catholic," the first Catholic journal published in the English language in Canada. It was a vigorous polemical weekly, and was issued at Kingston in 1830-31, and at Hamilton from 1841 to 1844.

The bishop had resided at York, now Toronto, for some years, and came to Kingston in 1836. One of his earliest acts was to obtain from the Legislature an Act of Incorporation for the Regiopolis College at Kingston. The cornerstone of the college was laid on 11 June, 1838. This building is now used as a hospital by the Sisters of the Hôtel Dieu. The college became a famous seat of learning, and continued its usefulness till 1869, when it was temporarily closed. On another site in the city, Regiopolis College was reestablished by the late Archbishop Cleary, and is now in a flourishing condition under the presidency of the archbishop, the Most Reverend Dr. Gauthier. A new coadjutor was appointed in 1833 in the person of the Rev. Remigius Gaulin, who became the second Bishop of Kingston on the death of Bishop Macdonell in 1840. At this date (1840) there were 48 churches in the diocese. The western region was erected into the Diocese of Toronto in 1841, and the eastern territory, the Diocese of Ottawa (Bytown), was formed in 1848. Bishop Gaulin died on 8 May, 1857, and the Right Rev. Patrick Phelan, who had been his administrator since 1852, was placed in charge of the diocese. Bishop Phelan's episcopate lasted but one month, as he died on 6 June following, and the Rt. Rev. Edward J. Horan succeeded him. Under Bishop Horan the diocese was enriched with many valuable charitable and educational institutions, but sickness and growing infirmities compelled him to resign his see shortly before his death (15 Feb., 1875), to make way for the Rt. Rev. John O'Brien, whose episcopate lasted till 1 Aug., 1879. The rapidly increasing numbers of Catholic inhabitants necessitated another division of the diocese, and in 1874 the Vicariate Apostolic of Northern Canada was erected, to become, in its turn, the Diocese of Peterborough, in 1882. The Right Rev. J.V. Cleary, at one time president of St. John's College, Waterford, Ireland, had been consecrated in Rome, 21 Nov., 1880, to succeed Bishop O'Brien, and when the diocese was made an archdiocese by a Brief dated 28 July, 1889, he became the first archbishop. With the formation of the archdiocese the Counties of Glengarry, Stormont, and Cornwall were separated from the Diocese of Kingston, erected into the separate Diocese of Alexandria, which, with the Diocese of Peterborough, became suffragan of Kingston. In the incumbency of the present archbishop, the Most Rev. Charles H. Gauthier, the suffragan Diocese of Sault Ste. Marie has been added (16 Sept., 1904).

The capital city of the archdiocese is Kingston. A gathering ground of old for the neighboring Indian tribes, it was made the seat of Government in 1841 on the union of the two Canadas, and remained such for four years. The Cathedral of the Immaculate Conception is located there, as is Regiopolis College, also two schools for girls, with an attendance of 314, a school for boys, with 250 pupils, a mother-house of the Sisters

of Charity of Providence, with 140 sisters, which cares for 300 old and infirm, as well as an annexed orphanage. The Hôtel Dieu and Orphan Asylum, in charge of the Hospital Sisters of St. Joseph, has charge of 45 orphan girls, and there is a convent of the Sisters of Notre Dame with 139 pupils. Schools are also maintained by the Sisters of Charity of Providence at Belleville, 400 pupils; Brockville, 250 pupils; Chesterville, 70 pupils; Perth, 230 pupils; Prescott, 300 pupils; and Trenton, 180 pupils. These sisters have also established hospitals at Brockville and Smith's Falls. The Sisters of Notre Dame are in charge of schools at Brockville, 170 pupils, and Westport, 147 pupils. The Archdiocese of Kingston now has 38 churches with resident priests, and 22 missions with churches; 61 priests, 54 secular and 7 of the Fathers of the Congregation of Mary; 1 college for boys, with 100 students; 3 academies for young ladies, with 295 pupils; 46 parochial schools, with 6500 pupils; 2 orphan asylums, with 85 orphans; 3 hospitals. The Catholic population of the archdiocese approximates 43,000. (See MACDONELL, ALEXANDER.)

STANLEY J. QUINN

Kinloss

Kinloss

(Gaelic *ceann-loch*, "head of the loch").

Cistercian abbey on the coast of Morayshire, Scotland, founded in 1150 or 1151 (authorities differ) by King David I, in gratitude, according to the popular legend, for having been guided into safety by a white dove when he had lost his way hunting in the adjacent forest. The monastery was colonized from Melrose and the greater part of the church and buildings were erected before 1200. Pope Alexander III confirmed the royal foundation to the second abbot, Reinerius, in 1174; and by 1229 the abbey was in a position to send out a colony to the newly-founded monastery of Culross in Perthshire. Kinloss was richly endowed by David's successors, and also by private benefactors, among its possessions being the valuable salmonfishings on the River Findhorn, granted by Robert Bruce and confirmed by James I and James IV. The abbots were mitred, with a seat in Parliament, and the house had a special prominence and importance as the only abbey in the extensive province of Moray. In the autumn of 1303 King Edward I, while on his progress through the north of Scotland, stayed at Kinloss for three weeks with a large retinue, and received the fealty of Abbot Thomas. Abbot Chrystal (1504-1535) did much for the material welfare of the house providing

furniture for the church and books for the library; but the most illustrious of the twenty-four abbots who ruled the monastery was his successor Robert Reid, who held the priory of Beaulieu *in commendam*, together with the Abbacy of Kinloss. This wise, learned, and excellent prelate was sent as the king's commissioner to Henry VIII to treat for peace, and again to France in connection with the marriage of James V. He erected a new library and other buildings at his abbey, and carefully administered the property of the house. He became Bishop of Orkney in 1541, and his nephew Walter succeeded him as abbot. Walter conformed to Protestantism, and alienated most of the lands, which were erected into a temporal lordship in 1601 in favour of Edward Bruce, created Lord Bruce of Kinloss, a title still enjoyed by his descendant the Earl of Elgin, although the lands of Kinloss were sold in 1843 to Brodie of Lethen, which family now owns them. Only a few fragments remain of the abbey buildings, including the west cloister wall, two fine Norman arches, and a two-storied building with groined roof, traditionally called the "prior's chambers". The church has entirely disappeared.

D.O. HUNTER-BLAIR

Eusebius Kino

Eusebius Kino

A famous Jesuit missionary of the seventeenth and eighteenth centuries; b. 10 August, 1644, in Welschtirol (Anauniensis); d. 15 March, 1711. Kühn (his German name; Kino representing the Italian and Spanish form) entered the Upper German Province of the Society of Jesus on 20 November, 1665. He was professor of mathematics for some years at Ingolstadt, and went to Mexico in 1680. There he founded the mission of Lower California (Clavigero, "Historia della California", Venice, 1787, I, 163 sqq.), the mission first beginning to develop when Father Kino, who had been working since 1687 in Sonora, crossed the Rio Colorado on a bold voyage of exploration, and discovered the overland route to California, which he thus demonstrated to be a peninsula. We owe our first exact information about this vast and at that time almost unknown country to the reports and cartographical sketches of Father Kino, who thoroughly explored the country several times, covering, according to Clavigero, more than 20,000 miles. On his apostolic activity in Sonora, Shea writes ("The Catholic

Church in Colonial Days", New York, 1886, p. 526 sq.): "He entered Upper Pimeria, 13 March, 1687, and established his first mission at Nuestra Señora de los Dolores, having gained a chief named Coxi as his first convert. From this point he extended his influence in all directions, evincing wonderful ability in gaining the Indians, and in presenting the truths of Christianity in a way to meet their comprehension and reach their hearts." Venegas (*Noticia de la California*, Madrid, 1757, II, 88) and Alegre (*Hist. de la Comp. de Jesús en Nueva España*, II, 54 sq., 155 sq.) speak in terms of the greatest admiration of this extraordinary man. According to a manuscript account of Father P. A. Benz, S. J., Father Kino was shot by rebel Indians on 15 March, 1711. "No life", writes Shea regretfully (*loc. cit.*), "has been written of this Father, who stands with the Venerable Anthony Margil as the greatest missionaries who laboured in this country."

Manuscript sources extant of Father Kino among others: *Diario del viaje hecho por las orillas del río Grande; Descripción de la Pimeria alta, Paso por tierra á la California, descubierto y demarcado por el P. Eus. Fr. Kino 1689-1701; Mapa del paso por tierra á la California, 1706*. The map (*Tabula Californæ anno 1702, ex autopica observatione delineata R. P. Chinoe, S. J*) is printed in the *Neuer Welt-Bott*, pt. II, pp. 74-5; *g Lettres édifiantes et curieuses*, V (Paris, 1708); Scherer, *Atlas novus*, II, 98; *The Journal de Trévoux* says of the map (1704, p. 1238; cf. 1703, p. 676; 1705, p. 745): "Father Kino a German Jesuit and very clever in mathematics has made a very exact map of this whole journey". See also *Viajes á la nación Pima en California en 1694 por los PP. Jesuitas Kino y Kappus*; the *Historia de Sonora*, cited by Alegre.

Printed sources: Several accounts and letters in the *Docum. para la hist. de México*, III, I, pp. 804 sqq; Scherer, *op. cit.* II, 101 sqq. g Extracts from letters in the *Neuer Welt-Bott*, pt. I, pp. 106, 109. Cf. Sommervogel, *Bibl. des écrivains de la Comp. de Jésus* (Brussels).

For further details of Kino's life, see: Platzweg, *Lebensbilder deutscher Jesuiten* (Paderborn, 1882), 171 sqq.; Baegert, *Nachrichten aus Californien* (Mannheim, 1771), 198 and passim; Pfefferkorn, *Sonora* (Cologne, 1794), I, 3 sqq.; II, 319 sqq.; Gleeson, *The Catholic Church in California*, II, 94; vom Rath, *Arizona* (Heidelberg, 1885), 306 sqq.; *Notes upon the first discovery of California* (Washington, 1878); *Woodstock Letters*, X, 29 sqq.; 158 sqq. On the first discovery of the Casa Grande by Father Kino see (e.g.) Schoolcraft, *Hist. Cond. and Pros. of American Indians*, III (1853), 301.

A. HUONDER

Kiowa Indians

Kiowa Indians

(Pronounced *Kai-o-wa*, Latin spelling. Spanish form: *Caygua*; Comanche form: *Kaiwa*, from *Kai-i-gwu*, the name used by themselves, of uncertain etymology.)

An important Plains tribe, constituting a distinct linguistic stock, the Kiowan, now located in western Oklahoma, but formerly residing in the mountains about the head of the Missouri River, in western Montana, in close alliance with the Crows. From this position they gradually drifted southward along the Plains, and after having been driven from the Black Hills region by the Sioux about 1800, made their principal headquarters upon the upper Arkansas. About the year 1790, they made peace with the Comanche, who whom they have ever since been closely confederated, and in company of whom they made constant raids far down into Texas and old Mexico, even as far as Zacatecas, until finally confined upon a reservation in 1869. In this southern movement they were accompanied by a small detached tribe of Athapascan stock, commonly known as Kiowa-Apache, who, in everything but language, are a component part of the Kiowa tribe. The Kiowa made their first treaty with the Government in 1837. In 1867 they joined with the Camanche, Cheyenne, and Arapaho in the noted Medicine Lodge treaty, in which they agreed to go upon a reservation, but it was not until the decisive battle of the Washita, under General Custer, 27 November, 1868, that they fulfilled their promise. Among their noted chiefs of this period were Setangya, or Satank, "Sitting Bear", Settainti or Satanta, "White Bear", the "orator of the plains", and "Gui-pägo", Lone Wolf. In the later troubles Setangya was shot to pieces while resisting military arrest, Settainti committed suicide in prison, and Lone Wolf, with a number of others, was deported to Florida for a period of three years.

In 1873 the first educational work in the tribe was undertaken by the Quaker teacher, Thomas C. Battey, but he was compelled to desist a few months later, in consequence of the general outbreak of the confederated southern Plains tribes (1874-1875), in which Lone Wolf headed the hostile Kiowa. Since then there has been no serious disturbance. Since an agreement negotiated in 1892, but held up and finally modified before its final ratification in 1900, the reservation of the associated tribes was thrown open to white settlement, each Indian receiving an allotment of 160 acres, besides his share of the selling proceeds, and they are now American citizens. Before their subjection to reservation restrictions the Kiowa were a typical equestrian Plains tribe, living in buffaloskin tipis, wearing buckskin, with paint and feathers, depending almost entirely upon the buffalo for subsistence, without agriculture, pottery, basketry, or fixed abode, constantly raiding in every direction, and with a reputation even among

Indians for turbulent ferocity. Their weapons were the bow, lance, and shield, which latter was made of toughened buffalo hide. There was no single head chief. Instead of a clan system (see Indians) they had a division into six (formerly seven) bands, including the Kiowa-Apache. On occasion of tribal gatherings, as at their great annual Sun Dance, each of these bands occupied an appointed place in the camp circle.

They also had a military organization of six orders, each with its own dance and regulations, together with a heraldic system based upon the shield and tipi. Their principal deities were the Sun, the Buffalo, the Peyote plant, and the tribal palladium, the sacred Taime image, exposed to view only at the Sun Dance. Polygamy existed, marriage was simple, and divorce as easy. The dead were buried in the ground or in rock caves. The property of the deceased, including dogs and horses, were destroyed near the grave. The relatives, particularly the women, cut off their hair, gashed themselves with knives, chopped off portions of their fingers, wailed day and nights for weeks, changed their names, and even dropped from the language for a time any word that might suggest the name of the dead. The same custom was noted by the Jesuit Dobritzhoffer among the Abipone of Argentina one hundred and fifty years ago. They named years by consecutive Sun Dances, and preserved a chronological pictograph record going back to 1833. They are now nearly all in houses, wearing citizen's dress, largely Christianized and making some effort at farming, but depending more upon the income from their rented lands and treaty funds. With the exception of some songs and a vocabulary by Mooney, very little has been published of their language, which is strongly nasal and explosive, but sonorous, and comparatively simple in grammar. From perhaps 1800 souls in 1800, they number now about 1270, besides about 160 Kiowa-Apache. After Battey, the first missionary work in the tribe was begun in 1887 by the Methodists, followed by the Presbyterians, Baptists, and Catholics. The Methodists have since withdrawn, and the Presbyterian work is limited to the Apache. The Catholic mission of St. Patrick, at Anadarko, the agency centre, was begun in 1891 through the assistance of Mother Catherine Drexel, and is now in flourishing condition under the Benedictine Fathers assisted by Franciscan Sisters, with over 400 communicants in the associated tribes.

JAMES MOONEY

Athanasius Kircher

Athanasius Kircher

Celebrated for the versatility of his knowledge and particularly distinguished for his knowledge of the natural sciences, b. 2 May, 1601, at Geisa, a small town on the northern bank of the Upper Rhone (*Buchonia*); d. at Rome, 28 Nov., 1680.

From his birthplace he was accustomed to add the Latin epithet *Bucho*, or *Buchonius*, to his name, although later he preferred calling himself *Fuldensis* after Fulda, the capital of his native country. The name *Athanasius* was given him in honour of the saint on whose feast he was born.

John Kircher, the father of Athanasius, had studied philosophy and theology at Mainz, without, however, embracing the priestly calling. As soon as he had obtained the doctor's degree in the latter faculty, he went to lecture on theology in the Benedictine house at Seligenstadt. Athanasius studied humanities at the Jesuit College in Fulda, and on 2 Oct., 1618, entered the Society of Jesus at Paderborn. At the end of his novitiate he repaired to Cologne for his philosophical studies. The journey thither was, on account of the confusion caused by the Thirty Years' War, attended with great danger. Together with his study of speculative philosophy the talented young student devoted himself especially to the natural sciences and the classical languages, for which reason he was shortly afterwards called to teach these branches at the Jesuit colleges in Coblenz and Heiligenstadt. In Mainz, where Kircher (1625) began his theological studies, he attracted the notice of the elector through his ability and his skill as an experimentalist. In 1628 he was ordained priest, and hardly had he finished his last year of probation at Speyer when the chair of ethics and mathematics was given to him the University of Würzburg, while at the same time he had to give instructions in the Syrian and Hebrew languages. However, the disorders consequent on the wars obliged him to go first to Lyons in France (1631) and later to Avignon.

The discovery of some hieroglyphic characters in the library at Speyer led Kircher to make his first attempt to solve the problem of hieroglyphical writing, which still baffled all scholars. At Aix he made the acquaintance of the well-known French senator, Scolas Peiresc, whose magnificent collections aroused in Kircher the highest interest. Recognizing in Kircher the right man to solve the old Egyptian riddle, Peiresc applied direct to Rome and to the General of the Jesuits to have Kircher's call to Vienna by the emperor set aside and to procure a summons for the scholar to the Eternal City. This generous intention was favoured by Providence, inasmuch as Kircher on his way to Vienna was shipwrecked near Civit  Vecchia, and arrived in Rome before the knowledge of his call thither had reached him. Until his death (28 Nov., 1680), Rome was

now to be the principal scene of Kircher's many-sided activity, which soon developed in such an astonishing way that pope, emperor, princes, and prelates vied with one another in furthering and supporting the investigations of the learned scholar. After six years of successful teaching in the Roman College, where he lectured on physics, mathematics, and Oriental languages, he was released from these duties that he might have freedom in his studies and might devote himself to formal scientific research, especially in Southern Italy and Sicily. He took advantage of a trip to Malta to explore thoroughly the various volcanoes which exist between Naples and that island. He studied especially in 1638 the Strait of Messina, where, besides the noise of the surge, a dull subterranean rumble attracted his attention. At Trapani and Palermo his interest was aroused by the remains of antediluvian elephants. But before all else he tried to discover the subterranean power of the volcanoes of Etna and Stromboli, then in eruption; public attention had been called to such mysterious phenomena by the frightful eruption of Vesuvius in 1630.

When Kircher left Messina in 1638 to return to Naples, a terrible earthquake occurred which destroyed the city of Euphemia. Like Pliny before him (A.D. 79), Kircher wished to study at close range this powerful convulsion of nature. On reaching Naples he at once climbed Vesuvius, and had himself lowered by means of a rope into the crater of the volcanic mountain and with the help of his pantometer ascertained exactly the different dimensions of the crater and its inner structure. As the firstfruits of his travels he published, for the Knights of Malta, "*Specula Melitensis Encyclica sive syntagma novum instrumentorum physico-mathematicorum*" (Messina, 1638). It was forty years later that the fully matured results of these investigations appeared in Kircher's great work, the "*Mundus Subterraneus*", in two volumes (Amsterdam, 1678), which enjoyed the greatest repute in his time; not only did it give an incentive to the more searching investigation of subterranean forces, but it contributed much to their final explanation. When again in Rome, Kircher began collecting all kinds of antiquities and ethnologically important remains, thus laying the foundation of the well-known museum which, as the "*Museum Kircherianum*", still attracts today so many visitors to the Roman College. Epoch-making also were Kircher's labours in the domain of deciphering hieroglyphics, and, on the excavation of the so-called Pamphylian obelisk, he succeeded in supplying correctly the portions which had been concealed from him. It must be remembered that in those days little or no attention was paid to this subject, and that it was therefore in itself a great service to have taken the initiative in this branch of investigation, however lacking his efforts may have been in the fundamental principles of the science as it is known today. Kircher also gave an impetus to the intimate study of the relations between the different languages: Latin, Greek, Hebrew,

Chaldaic, Syrian, Samaritan, Arabic, Armenian, Coptic, Persian, Ethiopian, Italian, German, Spanish, French, Portuguese.

Thus in the most varied branches of science Kircher played the rôle of pioneer. Even medicine received his attention, as is shown for example by his treatise, "Scrutinium physico-medicum contagiosæ luis, quæ pestis dicitur" (Rome, 1658). He also tried to form a universal language ("Polygraphia seu artificium linguarum, quo cum omnibus totius mundi populis poterit quis correspondere", Rome, 1663). His scientific activities brought him into scientific correspondence with scholars labouring in the most different fields, as the numerous volumes of his extant letters show. It is to his inventive mind that we owe one of the earliest of our counting machines: the speaking-tube and æolian harp were perfected by him. He was also the inventor of the magic lantern which has since been brought to such perfection and is today almost indispensable.

That the most varied judgments should be formed and expressed on a man of such encyclopædic knowledge was only to be expected. He tried to find a grain of truth even in the false sciences of alchemy, astrology, and horoscopy, which were still in his time much in vogue, nor is it surprising that in the province of astronomy he did not at this early date defend the Copernican System.

With all his learning and vast amount of adulation which he received on all sides, Kircher retained throughout his life a deep humility and a childlike piety. In 1629 he had intimated to his general his desire to devote his life exclusively to the spreading of the Faith in China, but this wish remained unfulfilled, and, to console himself for this disappointment, he erected during his last years a sanctuary (della Mentorella) in honour of the Mother of God on the crest of the Sabine Hill near Rome, whither, during his lifetime as now, thousands made pilgrimages and found help and consolation. In this sanctuary Kircher's heart was buried, and at the beginning of the twentieth century this place of pilgrimage was distinguished by a gigantic statue of our Divine Redeemer on the neighbouring crest of Guadagnole.

To give an approximate idea of Kircher's literary activity it is only necessary to remark that during his sojourn in Rome no less than forty-four folio volumes came from his pen. A full list of his writings is to be found in Sommervogel, "Bibl. Scriptorum S.J.". Besides the works already named, it is sufficient to mention here: "Magnes sive de arte magnetica" (Rome, 1640; Cologne, 1643, 1654); "Lingua ægyptiaca restituta" (Rome, 1643); "Ars magna lucis et umbræ" (Rome, 1644); "Musurgia universalis sive ars consoni et dissoni" (Rome, 1650); "Itinerarium extaticum s. opificium coeleste" (Rome, 1656); "Iter extaticum secundum, mundi subterranei prodromus" (Rome, 1657); "Obeliscus Pamphylus" (Rome, 1650).

P. Athan. Kircheri vita a semetipsa conscripta (manuscripts at Vienna and Munich), ed. LAUGENMANTEL (1684); PFAFF, *Vita A. Kircheri* (Fulda, 1631); BEHLAU, *P.*

A. Kircher, *eine Lebensskizze* (Heiligenstadt, 1874); BRISCHAR, P. A. Kircher. *Ein Lebensbild* (Würzburg, 1877); *Biog. universelle ancienne et moderne*, XXII, 440-7; *Allgem. deutsche Biog.*, XVI (1882).

ADOLF MÜLLER

Kirkwall

Kirkwall

A parish, also a royal and parliamentary burgh and chief or county town of Orkney, in the north of Scotland (the name is Scandinavian, "Kirkjuvagr", i.e. "church-bay"). The original church was dedicated to St. Olaf (killed in 1033), and the landward part of the parish is still called St. Ola. The importance of Kirkwall is due, first, to its having long been the residence of the Norse earls of Orkney, who, while nominally under the Kings of Norway, were practically independent; and, second, from its having become the seat of the bishops of Orkney. Magnus, Earl of Orkney, was treacherously killed by his cousin Haco about 1115; and his nephew Ronald undertook, if he recovered possession of the islands from Paul, Haco's son, to build a stone minster at Kirkwall in memory of his uncle Magnus, whose sanctity was said to be attested by miracles soon after his death. Ronald eventually became sole ruler of Orkney, and St. Magnus' church was begun in 1137, and was constituted the cathedral of the See of Orkney, which had been founded in 1102 (as a suffragan of Trondhjem, in Norway), the bishop's seat having been originally at Birsá.

The cathedral was not completed by the founder, but additions were made by successive bishops of Orkney, this fact accounting for the great variety of architecture which it presents. It is one of the two ancient Scottish cathedrals (the other being Glasgow) which have been preserved entire to the present day; and, though not of any great size, remains, both within and without, one of the most striking and impressive churches in the kingdom. Its total length (outside) is 234 feet, width of transepts 101 feet, height of tower 133 feet. The tall steeple surmounting the tower was struck by lightning in 1671. The three bells in the tower are all of pre-Reformation date, though one was recast in 1682. The cathedral escaped destruction in the sixteenth century, owing to the zealous efforts of the bishop; but it fell into decay in succeeding centuries, there being no funds to keep it in repair, until in 1805 and 1845 a certain amount of restoration was done by private benefactors and by the Government. Many ancient tombs of former earls and bishops remain in the cathedral, the choir of which is now used as a Presbyterian place of worship. Only a fragment of the episcopal palace--a tower built by Bishop Reid in 1540--now remains, and the earl's castle has entirely disappeared.

Antiq. of Scotland (Edinburgh, 1848-52).

D.O. HUNTER-BLAIR

Kisfaludy

Kisfaludy

Sándor Kisfaludy

Born at Suemeg, Hungary, 27 Sept., 1772; died at Suemeg, 28 October, 1844. He went to school at Raab and later studied philosophy and law at Presburg. In 1792 he gave up the study of law, and having joined the army, was appointed to the Hungarian lifeguards in Vienna. During his sojourn there he was especially attracted to the Hungarian writers living in Vienna at that time. In 1793 he was transferred to Italy, and stationed at Milan. After the surrender of that city to Napoleon in 1796, Kisfaludy was sent a prisoner of war to France, and confined in Provence, but was given his freedom the same year, went to Klagenfurt, and from there was transferred to the Wallis regiment and sent to Wuerttemberg. He took part in the Rhine campaign in 1799, but sent in his resignation the same year. He married his early love, Rosa Szegedy, in 1800.

In 1802 Kisfaludy participated in the insurrection of the Hungarian nobles, as orderly officer to the Palatine, by whose command he later wrote an account of the uprising. He became a member of the Hungarian Academy in 1830, and was chosen an honorary member in 1835. He lost his wife in 1832 but later married again, shortly after which his second wife also died. The last years of his life were spent in his native town. Kisfaludy is particularly prominent as a lyric poet. His love-songs, which appeared under the name of "Liebeslieder Himfy's," the first part in 1801, the second in 1807, assured him an immense popularity among his associates. The songs revealed the influence of Rosa Szegedy's love, both before and after their marriage. The metrical rendering of his verses is that of the sonnet; they undeniably show the influence of his stay in Provence, and the impress of Petrarch's songs, and yet they are in no wise servile imitations of the latter. His "Maerchen aus der Ungarischen Vorzeit" is the best of his later works; he also tried the field of drama, but with little success.

(2) Károly Kisfaludy

Author, brother of the above; b. at Tét, 5 Feb., 1788; d. at Pesth, 21 Nov., 1830. He was the originator of the romantic tendency in the national Hungarian literature and

comedy, also pioneer in the field of Hungarian novelwriting. His birth having cost his mother her life, he was brought up by his sister. He pursued his studies at Raab, but did not finish them as he, as well as his brother, chose a military career, taking part in the wars with Italy. He resigned his commission in 1811, causing a breach with his father, which, in spite of repeated attempts at reconciliation, was never healed; nevertheless he was not disinherited. Even during his military career, Kisfaludy assiduously cultivated literature, and henceforth he devoted himself to it. When he could no longer expect any pecuniary assistance from home, he earned his living as an artist in Vienna and Italy and, later, on his return to Hungary. At the same time his literary energy was not dormant. Besides poetry, he wrote plays and dramas. In 1818-19 he experienced not a little dramatic success. About this time he published his first work in the field of Hungarian comedy which likewise met with popular favour. He made up for his lack of early education by deep study; he became still more careful of his language, more modern, his productions little by little bearing evidence of this culture.

His style was rather romantic than classical, and not infrequently approached modern realism. His influence especially on the public, became ever greater so that in a certain sense he was the centre of the Hungarian literary life in Pesth. In 1821 he published the first volume of his annual "Aurora," the leading literary review of his time, which numbered the most prominent writers among its contributors. After Kolesy, he was the first to cultivate the ballad, he also wrote elegies, Italian verse, and national songs. Of his prose works, his humorous ones are better than the more serious, as his comedies are better than his dramas; the Hungarian novel also owes its ascendancy to him. An early death snatched him away in the midst of his literary activity. The Kisfaludy Society, so named in honour of him, was established in 1836, and is devoted to the cultivation of good literature. The Hungarian national theatre also honours him by giving yearly one of his plays. He survives not alone in his books, but much more in his personal influence over the writers of his day, whose leader and model he was, in this way proving himself of immortal service as the regenerator of Hungarian literature. Many editions of his works were issued by Franz Toldy, and one in six volumes by Banoczy (Budapest, 1893).

TOLDY, *Lives of Hungarian Poets* (Pesth, 1870), in Hungarian; SZINNYEY, *Lives and Works of Hungarian Writers* (Budapest, 1899), IV, 400-27, in Hungarian.

A. ALDASY

Kiss

Kiss

Four times in the Epistles of St. Paul we meet the injunction, used as a sort of formula of farewell, "Salute one another in a holy kiss" (*en philemati hagio*), for which St. Peter (1 Pet., v, 14) substitutes "in a kiss of love" (*en philemati agapes*). It has been suggested by F. C. Conybeare (The Expositor, 3rd Ser., ix, 461, 1894) on the ground of two passages in Philo's "Quæstiones in Exodum" (ii, 78 and 118) that this was an imitation of a practice of the Jewish synagogues. The evidence adduced, however, is very slight. In any case it seems probable that in these very early days the custom of Christians so saluting each other was not necessarily confined to the time of the liturgy. Such salutations were no doubt used somewhat promiscuously even between those of opposite sexes in token of fraternal solicitude and charity (*pietatis et caritatis pignus*, as St. Ambrose, "Hexaem.", VI, ix, 68, points out), and the modesty and reserve which so many of the pre-Nicene Fathers inculcate when speaking of this matter must be held to have reference to other occasions than the kiss of peace in the liturgy. This is also implied by Tertullian, who speaks of the pagan husband's reluctance that his Christian wife should "meet one of the brethren with a kiss" (*alicui fratrum ad osculum convenire*, "Ad Uxor.", ii, 4). Not improbably St. Paul's injunction was so interpreted that any synaxis of the faithful where there was reading of the Scriptures terminated in a salute of this kind, and it is even possible that the appearance of the kiss in certain liturgies at the Mass of Catechumens is due to the same cause. In any case we have definite evidence that a kiss was on some occasions bestowed outside the actual liturgy. After baptism the newly initiated, whether infants or adults, were embraced first by the baptizer and then by the faithful who were present (see Cyprian, "Ad Fidum Epis.", Ep. lix, 4, and Chrysostom, Hom. I, "De Util. leg. Scrip."). The use of the formula *Pax tecum* in some of the later rituals of baptism is probably a survival of this practice.

Again a kiss was and still is given to the newly ordained by the bishop who ordains them. Similarly after the consecration of a bishop and, at a later date, after the coronation of a king, the personage so exalted, after he was enthroned, was saluted with a kiss, while a kiss, no doubt suggested by the Scriptural example of the prodigal son, was enjoined in many of the rituals for the absolution of a penitent. Of the kiss solemnly exchanged between those newly betrothed something will be said under MARRIAGE (q.v.), but we may note here the custom for Christians to bestow a last kiss, which then had a quasi-liturgical character, upon the dying or the dead. The prohibition against kissing the dead which was issued by the Council of Auxerre, A. D. 578, almost certainly had some relation to the abuse at that time prevalent of placing the Blessed Sacrament

in the mouth of the dead or burying It with them. It may be added that throughout the Middle Ages an almost religious solemnity attached to the public exchange of a kiss as a token of amity. Remarkable examples of this may be found in the history of the quarrels of Henry II with St. Thomas of Canterbury, and of Richard Coeur de Lion with St. Hugh of Lincoln. In the latter case the bishop is recorded to have taken hold of Richard by his mantle and to have positively shaken him until the king, overcome by such persistence, recovered his good humour and bestowed on the saint the salute which was his due.

KISS OF PEACE

It is not easy to determine the precise link between the "holy kiss" and the liturgical "kiss of peace", known in Greek from an early date as *eirene* (i.e. *pax*, or peace). This latter may be quite primitive, for it meets us first in the description of the liturgy given by St. Justin Martyr (Apol., I, 65), who writes: "When we have completed the prayers we salute one another with a kiss [*allelous philemati aspazometha pausamenoï ton euchon*], whereupon there is brought to the president bread and a cup of wine." This passage clearly shows that in the middle of the second century the usage already obtained — a usage now claimed as distinctive of the liturgies other than Roman — of exchanging the kiss of peace at the beginning of what we call the Offertory. The language of many Oriental Fathers and of certain conciliary canons further confirms this conclusion as to the primitive position of the Pax. Thus St. Cyril of Jerusalem (Cat. Myst., v, 3) speaking of the time between the washing of the celebrant's hands and the *Sursum Corda* which introduces the Anaphora, or Preface, says, "Then the deacon cries out aloud: 'Embrace ye one another and let us salute each other. . . . This kiss is the sign that our souls are united and that we banish all remembrance of injury'." Many other Fathers (e.g. Origen, Pseudo-Dionysius, and also St. John Chrysostom, "De Comp. Cordis", 1, 3) speak in a similar tone and use language which implies that the Pax preceded the oblation of the elements. Even the so-called "Canons of Hippolytus", referred by some to Rome in the third century, though Funk ascribes them to a much later date, imply that the kiss was given at the Offertory. The same was undoubtedly the case in the Mozarabic and the Gallican liturgies. In Rome, however, the kiss of peace was more closely united to the Communion, and it must have followed shortly after the *Pater Noster* as it does at present. Thus Pope Innocent I in his letter to Decentius (a.d. 416) blames the practice of those who give the Pax before the Consecration and urges that it was meant as a token that "the people give their assent to all things already performed in the mysteries".

Another clear testimony of about the same date occurs in a sermon attributed to St. Augustine, but probably written by St. Cæsarius of Arles (P. L. XXXVIII, 1101): "After this [the Lord's prayer], Pax vobiscum is said, and the faithful salute each other

with the kiss which is the sign of peace." The Roman Ordines, the Stowe Missal which represents Irish usage at an early date, and a chorus of liturgical writers from the eighth century onwards attest that wherever Roman influence prevailed the Pax invariably followed the great consecratory prayer and the Pater. It is easy to understand that the usage which placed the kiss of peace before the Offertory was prompted by the remembrance of those words of our Lord (Mat., v, 23-24): "If therefore thou offer thy gift at the altar, and there thou remember that thy brother hath anything against thee; leave there thy offering before the altar, and go first to be reconciled to thy brother: and then coming thou shalt offer thy gift." It seems to be pretty generally held that this position before the Offertory was the primitive position of the liturgical kiss of peace even at Rome. Dom Cabrol and others incline to the view that the kiss formed the natural sequel to the commemoration of the living and of the dead, and that all these three elements, which originally found a place at the Offertory, were deliberately transferred elsewhere in the course of some early revision of the Roman Liturgy, the commemoration of the living and of the dead being inserted separately in the great consecratory prayer, or Canon of the Mass, while the Pax was made to follow the Pater Noster, having been attracted to that position by the words "Forgive us our trespasses", etc. (Cabrol, "Origines Liturgiques", Paris, 1906, pp. 360-361). However, the rival theory, that there were originally two occasions when the kiss of peace was given, one before the Offertory and the other before the Communion, does not lack probability; for St. John Chrysostom, the Prayer Book of Serapion, and Anastasius Sinaita seem all to know of some such rite before Communion, and the practice of kissing the bishop's hand before receiving the Blessed Sacrament (see Card. Rampolla, "S. Melania giuniore", note 41) may possibly be connected with it. According to this second theory of the double kiss of peace, both the Roman and the Oriental liturgies omitted one of these salutations, the Oriental retaining that at the Offertory, the Roman that at the Communion. In any case it is certain that in the early Middle Ages the kiss of peace was most intimately associated in idea with the reception of Communion (see Pseudo-Egbert, "Confessionale", xxxv, in Wasserschleben, "Bussordnungen", p. 315), and it seems probable that the omission of the Pax in Masses for the Dead was due to the fact that Communion was not distributed to the faithful at such Masses.

From a very early date, also, the abuses to which this form of salutation might lead were very carefully guarded against. Both in the East and the West women and men were separated in the assemblies of the faithful, and the kiss of peace was given only by women to women and by men to men. Then in about the twelfth or thirteenth century the use of the *instrumentum pacis*, or *osculatorium*, known in English as the "pax-board" or "pax-brede", was gradually introduced. This was a little plaque of metal, ivory, or wood, generally decorated with some pious carving and provided with a

handle, which was first brought to the altar for the celebrant to kiss at the proper place in the Mass and then brought to each of the congregation in turn at the altar rails. But even this practice in course of time died out, and at the present day the Pax is only given at High Mass, and is hardly anywhere communicated to the congregation. The celebrant kisses the corporal spread upon the altar (he used formerly in many local rites to kiss the sacred Host Itself) and then, placing his hands upon the arms of the deacon, he presents his left cheek to the deacon's left cheek but without actually touching it. At the same time he pronounces the words *Pax tecum* (Peace be with thee); to which the deacon replies, *Et cum spiritu tuo* (And with thy spirit). The deacon then conveys the salute to the sub-deacon, and the subdeacon to the canons or clergy in the stalls. The Western Church, however, has not been the only one to discover that the ceremony of the Pax could not be decorously maintained when manners had grown less austere. Among the Greeks hardly a trace of the original salute is preserved. Just before the Creed, which itself precedes the Anaphora, the celebrant says, "Peace be to all", and then he kisses the gifts (veiled), while at the same time the deacon kisses his own orarion, or stole. In the Syrian rites, the deacon touches the priest's hands, then moves his own hands down his face and gives them to be touched by someone else. In this way the salute is passed on. Dean Stanley declares that in the Coptic Rite the kiss is still passed among the people from lip to lip, but the truth seems to be that each one merely bows to his neighbour and touches his hand (see Brightman, "Liturgies Eastern and Western", 1896, p. 585).

KISSING THE ALTAR

It is clear that from the earliest times a kiss was not only a token of love, but also under certain circumstances a symbol of profound respect. For example, the son of Sirach (Ecclus., xxix, 5) describes how would-be borrowers, when they wish to ingratiate themselves "kiss the hands of the lender, and in promises they humble their voice". It is in accordance with this symbolism, so universally understood and practised, that the Church enjoins the kissing of many holy objects, e.g. relics, the book of the Gospels, the cross, blessed palms, candles, the hands of the clergy and nearly all the utensils and vestments connected with the liturgy. In particular the altar is repeatedly kissed by the celebrant in the course of the Mass, and this practice is of very ancient date. The earliest of the Ordines Romani mentions it twice, but only twice: first, when the bishop ascends to the altar at the beginning, and secondly, at the Offertory, when he comes again to the altar from his throne. Innocent III speaks of the altar being kissed three times, but in the days of Durandus nine such salutations were in use, as at present. By a symbolism prevalent from a very early period the altar was regarded as typical of Christ, the God-Man, abiding permanently with His Church in the Sacrifice of the Mass, and this conception is preserved, for example, in the address now made to the

candidate in the ordination of a subdeacon. The appropriateness of kissing the altar before the salutation *Dominus vobiscum* need not be insisted upon: it clearly implies that the greeting comes, not from the priest only, but from Christ, the head and cornerstone, to the faithful who are the members of His Church. On the other hand the prayer said by the priest, on first ascending to the altar, indicates that this kiss has also special reference to the relics therein enshrined.

KISSING OF THE FEET

The veneration shown in the kissing of a person's hand or the hem of his garment is accentuated in the kissing of the feet. This is probably implied by the phrase of Isaias (xlix, 23): "Kings...shall lick up the dust of Thy feet." Under the influence, no doubt, of the ceremonial of king-worship, as manifested in the cultus of the Roman emperors, this particular mark of veneration came to prevail at an early date among the usages of the papal court (see Lattey, "Ancient King-Worship", Lond., 1909 C. T. S. pamphlet). We read of it in the first "Ordo Romanus" belonging to the seventh century, but even earlier than this the "Liber Pontificalis" attests that the Emperor Justin paid this mark of respect to Pope John I (523-26), as later on Justinian II also did to Pope Constantine. At the election of Leo IV (847) the custom of so kissing the pope's foot was spoken of as an ancient one. It is not, therefore, wonderful that a practice supported by so early a tradition should still be observed. It is observed liturgically in a solemn papal Mass by the Latin and Greek subdeacons, and quasi-liturgically in the "adoration" of the pope by the cardinals after his election. It is also the normal salutation which papal etiquette prescribes for those of the faithful who are presented to the pope in a private audience. In his "De altaris mysterio" (VI, 6) Innocent III explains that this ceremony indicates "the very great reverence due to the Supreme Pontiff as the Vicar of Him whose feet" were kissed by the woman who was a sinner.

HERBERT THURSTON.

Julian Klaczko

Julian Klaczko

Polish author, b. at Vilna, 6 November, 1825, of Jewish parents; d. at Cracow, 26 November, 1906. After taking the doctor's degree in 1847 at the University of Königsberg, he went to Heidelberg to continue his studies under Gervinus, who appointed him a collaborator on the "Deutsche Zeitung", a periodical for Russian and Polish affairs. In 1848 he spent some time in the Grand Duchy of Posen and published at Berlin his first political pamphlet, "Die deutschen Hegemonen", an open letter to Gervinus against the incorporation of Posen in the German Confederation. About this time he resolved to become a Christian, but deferred his baptism for a time owing to parental opposition. His father having met with financial reverses, Klaczko was left without means, and in 1850 went to Paris, where he supported himself by his literary labours. His articles written in French and published chiefly in the "Revue de Paris", were so brilliant as to win speedy fame for the young author. The death of his father, meanwhile, left him free to enter the Church, and he was accordingly baptized. From 1857 to 1860, with the collaboration of Valerian Kalinka, he published a monthly, "Wiadomosci Polskie" (Polish News), the general tone of which was opposed to revolutionary impulses and sudden uprisings. Viewed from a political, as well as from a literary and aesthetic standpoint, Klaczko's articles were the most effective and most brilliant that had ever appeared in the Polish language. The periodical was put under the ban in Russian Poland and Galicia, and in 1860 also in Prussia, after which it had to be discontinued on account of a lack of subscribers.

In 1862 there appeared in the "Revue Des Deux Mondes" Klaczko's "Le poete anonyme", the first adequate appreciation of Sigmund Krasinski, and so excellently done that it became the basis of all later account of the poet. This paper assured Klaczko's literary reputation among the French. Soon afterwards occurred the unfortunate uprising of 1863. While any Polish organization or activity outside of Poland itself was now impossible, Klaczko did not forget the cause of his country. From official diplomatic sources he compiled information on all the details of the Danish and Polish questions, and in 1866 published his "Etudes de diplomatie", a sharp but veiled criticism of the policy of the Powers, to the disadvantage of all save Russia and Prussia. The "Etudes" caused a great sensation, which was increased by the author's subsequent work "Les preliminaires de Sadowa", in which he shows how Austria was drawn into war with Prussia (1886).

Klaczko's writings bore such strong testimony to his political talents that he was appointed by Count Benst on the Ministry of Foreign Affairs, holding in addition a

seat in the Galician Diet at Lemberg, and in the Diet which was out of harmony with Austria's policy of neutrality during the war of 1870 he signed his public offices and returned to Paris penniless, to devote himself with renewed vigour to the artistic and literary pursuits of his youth. After several years of work he published "Causeries florentines", a study of Dante in the form of a dialogue, containing in one volume the substance of all that scholars and critics had said on the subject. Even before this he had produced, in 1875, his "Deux chanceliers", a brilliant portrayal of the characters and policies of Princes Bismarck and Gortschakoff. Finally, he planned an extensive work under the title of "La papaute et la renaissance", to show the effects produced on the papacy by the worldly spirit of some pontiffs, without in the least derogating from the greatness of any epoch. Of the three volumes "Julius II", "Leo X", and "Clement VII and the Sack of Rome", only the first was completed, and by the time of its publication Klaczko was already in the state of paralysis in which he spent the last eight years of his life. Mass was celebrated in his little drawing-room twice a week until his death. Klaczko was by far the most powerful intellect and the most brilliant writer of Poland during the latter half of the nineteenth century.

S. TARNOWSKI

Heinrich Klee

Heinrich Klee

German theologian and exegete, b. at Münstermaifeld, in the Rhine province, 20 April, 1800; d. at Munich, 28 July, 1840. At the age of seventeen he entered the seminary at Mainz, where he distinguished himself by his piety, his talent and that unremitting application to study which characterized him throughout his later life. In 1824, a year after his ordination, he was appointed to the professorship of exegesis and ecclesiastical history in the same seminary, and in the following year also to that of philosophy. In the meantime he obtained the Doctorate of Theology from the University of Würzburg after presenting the thesis "Tentamen theologico-historicum de chiliasmo primorum saeculorum". In 1829 the government of Baden tendered him the chair of exegesis at Freiburg, vacated by Hug, and at the same time the Prussian authorities offered him a professorship either at Breslau or Bonn. He chose Bonn; but his position there was a difficult one. Hermes and Hermesianism reigned supreme, and the presence of Klee, an exponent of sound Catholic principles, was viewed with unconcealed disfavour by his Rationalistic colleagues. His tact and genial manners, his attractive lectures and learned works, however, gradually won him influence. After ten years' stay at Bonn, during which he taught dogmatic and moral theology, the history of dogma and exegesis, Klee was induced by the conflict between the Archbishop von Droste-

Vichering of Cologne and the Hermesian professors to accept the call to the University of Munich as successor to Möhler in the chair of dogmatic theology and exegesis, but a premature death carried him off within a year. Klee's intense devotion to work enabled him to publish a number of works within a comparatively short period. "Die Beicht", a work which shows his close acquaintance with the Fathers appeared at Frankfort in 1827. Then followed in rapid succession; "Commentar über das Evangelium nach Johannes" (Mainz 1829); "Commentar über den Romerbrief" (Mainz 1830); "Enclcylopädie des Theologie" (Mainz 1832; "Auslegung des Briefes an de Hebräer" (Mainz 1883); "Die Ehe, dogmatisch-arch-älogische Abhandlung" (Mainz 1833; 2nd Ed., 1835). His most important work is the "Katholische Dogmatik" in three volumes which went through four editions (Mainz 1834-5, 1840, 1844 and 1861), and next to it the "Lehrbuch der Dogmengeschichte" in two volumes (Mainz, 1837-8). A posthumous work, "Grundris der Ethik" was edited by Himioben (Mainz, 1843; 2nd ed. 1847). Although Klee was animated by a thoroughly Catholic spirit, and by his "Katholische Digmantik" helped to promote sounder Catholic ideas among the German clergy, then largely effected with Liberalism, some of his views as for instance on the origin of the human soul and on the fate of children who die without baptism, are open to criticism.

SAUBEN in KLEE, *Katholische Dogmatik*, (3rd and 4th ed.); HURTER, *Nomenclater*, III, 773; HEINRICH, in *Kirchlex.*, s.v.

F. BECHTEL

Melchior Klesl

Melchior Klesl

A cardinal and Austrian statesman, b. at Vienna, 19 February, 1552; d. at Wiener-Neustadt, 18 September, 1630. While France was governed by Cardinal Richelieu, Austria also had her cardinal minister of State; but whereas the former had but one *journée des dupes*, the latter lamented his downfall for years. Klesl's parents were Protestants, and his father was a baker. He studied philosophy at the University of Vienna, and was with his parents brought into the fold of the Church by the court chaplain, Father Georg Scherer, S.J. He received minor orders in 1577, when he was assigned a canonry, and, even while in minor orders, he preached and held conferences at Korneuburg and in the vicinity, making many conversions. In 1579 he became doctor of philosophy and provost of St. Stephen's at Vienna, which dignity carried with it the chancellorship of the university, and was finally ordained to the priesthood. As early as the following year he was appointed councillor of the Bishop of Passau for Lower Austria. Rudolf II, impressed by the vigour and success of his campaign against Protestantism, entrusted him with the work of the counter-Reformation, which became

his life work. He brought back into the fold the cities of Baden, Krems, and Stein, though not without great difficulty, nor indeed without actual risk of his life. In 1585 he was made imperial councillor by Rudolf II, who three years later appointed him court chaplain and administrator of the Diocese of Wiener-Neustadt. It took him but a very short time to restore the Catholic rule in this thoroughly disorganized bishopric. He was compelled in doing so to be constantly on his guard against the monastic council, which, in a memorial on the subject, he calls, "the cause of all evil, the champion of godless prelates and priests against their bishop, a parasite".

In 1598 Klesl was named Bishop of the Diocese of Vienna, which was spiritually and materially in a state of degradation. He was not consecrated until 1614, and received the purple from Paul V in 1616. In 1611 Matthias placed Klesl at the head of his privy council. As such he held full sway in the Government. He himself admits that he "spoke, wrote, and negotiated" for the emperor. It was the question of the succession to the throne which caused his downfall. Klesl had every reason to fear that his influence would wane, if Archduke Ferdinand were once formally declared to be the heir apparent. For this reason he delayed the settlement of this question. When the Bohemians, having thrown their governor out of the window of the palace at Prague for the second time, broke out into open rebellion, and Klesl could not be induced to take energetic measures against them, the Archdukes Max of Tyrol and Ferdinand of Steiermark caused the cardinal (20 July, 1618) to be seized in an antechamber of undecided emperor, and had him conveyed to the fortress of Ambra. A few days later he was brought to the castle of Innsbruck, whence he was transferred after a year to the monastery of Georgenberg. In November, 1622, the Castle of Sant' Angelo in Rome became his place of confinement. He was granted his freedom by the emperor in June of the following year, but was to remain in Rome. He lived to enjoy the satisfaction of seeing himself solemnly brought back to Vienna on 25 January, 1628, and reinstated as bishop. He decreed that the Feast of the Immaculate Conception on 8 December be henceforth observed in his dioceses "in the same manner as Sundays and other prescribed holy days", and in spite of the nuncio's protestation, he strove to maintain the peculiarly Viennese custom whereby Holy Communion was distributed on Good Friday. His heart reposes before the high altar of the cathedral of Wiener-Neustadt, while his body rests in the cathedral of St. Stephen's.

C. WOLFSGRUBER

Josef Wilhelm Karl Kleutgen

Josef Wilhelm Karl Kleutgen

German theologian and philosopher, b. at Dortmund, Westphalia, 9 April, 1811; d. at St. Anton near Kaltern, Tyrol, 13 Jan., 1883. He began his studies with the intention of becoming a priest, but owing to the Protestant atmosphere of the school which he attended, his zeal for religion gradually cooled. From 28 April, 1830, to 8 Jan., 1831, he studied philology at the University of Munich. He was intensely interested in Plato's philosophy and the Greek tragic poets. Though he clung to the Faith, it ceased to be the ruling principle of his life, and he fell into a deep melancholy. In this state he was about to enter upon a secular career, when he suddenly received what he always regarded as a special illumination from heaven. Still he was not at rest. During the preceding years he had imbibed certain ideas from Lessing's and Herder's writings, which he could not reconcile with the Christian Faith. After several weeks of internal conflict he betook himself to prayer, and to his astonishment many of his difficulties vanished at once; the remainder disappeared gradually. At Easter, 1832 he entered the theological academy of Munster, and after two terms went to the seminary at Paderborn, where he was ordained subdeacon on 22 Feb., 1834. On 28 April he entered the Society of Jesus at Brig, Switzerland, and, to avoid any trouble with the German Government in the matter of military service, he became a naturalized citizen in one of the Swiss cantons, and changed his name to "Peters". After his ordination to the priesthood in 1837 he was professor of ethics in Fribourg, Switzerland, for two years; he then taught rhetoric in Brig from 1840 till 1843. In 1843 he was appointed professor of sacred eloquence in the German College, Rome.

During his residence in Rome and the vicinity (1843-74), besides pastoral work and the composition of his principal writings, he was substitute to the secretary of the general of the Jesuits (1843-56), secretary (1856-62), consultor of the Congregation of the Index, and collaborator in the preparation of the Constitution "De fide Catholica" of the Vatican Council. He composed the first draft of the Encyclical "Æterni Patris" of Pope Leo XIII on Scholasticism (1879). He played a leading part in the revival of Scholastic philosophy and theology, and so thorough was his mastery of the teachings of St. Thomas Aquinas that he was called *Thomas redivivus* (Thomas returned to life). With the object of combating the doctrines of Hermes, Hirscher, and Gunther, he composed his "Theologie der Vorzeit" and "Philosophie der Verzeit", works which upon their appearance were pronounced in many quarters to be epoch-making. When he died, Leo XIII said of him: "Erat princeps philosophorum" (he was the prince of philosophers). Some years before the Vatican Council Kleutgen was confessor ex-

traordinary to the Benedictine Convent of St. Ambrose in Rome. The nuns of this convent honoured as a saint one of their sisters who had died fifty years before. This was reported to the Holy Office and everyone concerned was severely punished; Kleutgen and the ordinary confessor (both men of exceptionally holy lives) were suspended, because of lack of prudence in directing the nuns, for awhile even from saying Mass.

Kleutgen consequently left Rome and went to the secluded shrine of Our Lady in Galoro, where he wrote the greater part of his "Theologie der Vorzeit" and "Philosophie der Vorzeit". After the opening of the council, at the urgent request of several bishops, especially Archbishop Stein, Apostolic Vicar of Calcutta, his superior general recalled him to Rome to place his talents and learning at the disposal of the council, and Pius IX removed all ecclesiastical censures as soon as he became acquainted with the work which Kleutgen had written. In 1879 some Old Catholics spread the report that Kleutgen had been condemned by the Roman Inquisition to an imprisonment of six years on account of complicity in the poisoning of a Princess von Hohenlohe; but, on 7 March, Juvenal Pelami, Notary of the Inquisition, testified that Kleutgen had never been summoned before the Inquisition upon such a charge, and consequently had not been punished by it. Possessed of high gifts and vast erudition, and, in consequence, very much in the public eye, Kleutgen was also a model religious and a man of austere simple life. He was very fond of the poor, and they in turn almost worshipped him. When he preached, his plain, straightforward, simple language had an appeal even for the intelligence of the most illiterate; and when in conversation with the learned, who often came to consult him, his flow of speech was as free, copious, and unembarrassed as though he were reading from a book.

Kleutgen's principal works are: "Die alten und die neuen Schulen" (Mainz, 1846, Münster, 1869); "Ueber den Glauben an das Wunderbare" (Münster, 1846); "Ars dicendi" (Rome, 1847; Turin, 1903); "Die Theologie der Vorzeit" (3 vols., Münster, 1853-60, 5 vols., 1867-74), "Leben frommer Diener und Dienerinnen Gottes" (Münster, 1869); "Die Philosophie der Vorzeit" (2 vols., Münster, 1860-3; Innsbruck, 1878), translated into French and Italian; "Die Verurteilung des Ontologismus" (Münster, 1868); translated into French and Italian; "Zu meiner Rechtfertigung" (Münster, 1868); "Vom intellectus agens und den angeborenen Ideen"; "Zur Lehre vom Glauben" (Münster, 1875); "Die Ideale und ihre wahre Verwirklichung" (Frankfurt, 1868); "Ueber die Wünsche, Befurechtungen und Hoffnungen in Betreff der bevorstehenden Kirehensammlung" (Münster, 1869); "Briefe aus Rom" (Münster, 1869), "Predigten" (Regenbburg, 1872; 2 vols., 1880-5); "Die oberste Lehrgewalt des römischen Bischofs" (Trier, 1870), "De ipso Deo" (Ratisbon, 1881); "Das evangelium des heiligen Matthäus" (Freiburg, 1882).

LANGHORST in Stimmen aus Maria-Laach (1883); LIESEN in Der Katholik, I (1883); GRANDERATH, Gesch. des vatikantschen Konzils, II (Freiburg, 1903); DUHR, Jesuiten-Fabeln (Freiburg, 1891); SACHS in Buchberger's Kirchliches Handlex, (Munich, 1908), s. v.; SOMMERVOGEL, Bibl. de la C. de at (Paris, 1803).

JOHN J. TOOHEY

Klinkowstrom

Klinkowström

Friedrich August von Klinkowström

Artist, author and teacher; b. at Ludwigsburg in Swedish Pomerania on 31 August, 1778; d. at Vienna, 4 April, 1835.

This famous convert came from an old Pomeranian noble family. At the age of sixteen, in deference to the wishes of his father, a lieutenant-colonel in the Swedish army, Friedrich adopted the military calling, but only remained in the service from 1793 to 1802. After this he was allowed to follow his own inclination and become a painter. To perfect himself in his studies, he went to the famous Dresden Gallery. His early pictures as well as the whole earnest bend of his mind showed a strong leaning towards the Catholic Church. After four years of successful study he was called home and obliged to remain there quietly for two years, owing to the gloomy political condition of the country after the battle of Jena. Then a great longing seized him for Rome, the home of all art. He journeyed first through Paris where the victorious Napoleon had amassed the ripest art treasures from all lands. His stay in Paris lasted nearly two years, and terminated happily with his engagement. Finally in 1810 he started for Rome. But the quickly formed friendship with Thorwaldsen, Rauch, Overbeck, and other artists, unfortunately only lasted a year, as Klinkowström was obliged to look about for an assured position. This led him to Vienna to take a place as instructor, and his marriage followed in 1812. But the grave political situation after the battle of Leipzig led the quiet artist once again to join the army. He displayed great activity in forming the volunteer corps in Leipzig, Dresden, and Aachen. After the Treaty of Paris he returned to Vienna, where he found that during his absence his wife had been received into the Catholic Church by Father Klemens Hofbauer. When he was told of this, he exclaimed: "So Louise has become a Catholic before me". A few months after this he followed the example of his "dear Louise". Then there came three quiet years of painting and literary work. He devoted himself particularly to children's books for which he provided designs and illustrations gradually working up to his true calling, the instruction of youth. There had been a plan under discussion for some time in Vienna to found a school for the sons of the higher nobility. But the difficulty was to

find the right man, one qualified to undertake the work and carry it out within the provisions of the Austrian School Laws. Such a one was found in Klinkowström. The new foundation was opened in 1818, and enjoyed the personal favour of the emperor, the fact that the empress also showed an active interest in it naturally lent additional prestige to the school. The founder devoted himself unsparingly to its direction, maintenance, and advancement, and his efforts were eminently successful. Contemporaneous opinion is unanimous in declaring that for excellence and importance Klinkowström's school took precedence of all other educational institutions of the day. His untiring zeal used up all his strength, so that owing to ill-health and increasing suffering, he was obliged in 1834, after sixteen years of personal guidance, to give over the schools to other hands. He died six months after this, his wife having died before him, in 1821. Both of his oldest and youngest sons, Joseph and Max, entered the Jesuit Order, and became renowned preachers. The third son, Klemens the head of the house in Austria, has acquired as Imperial and Royal Archivist a literary fame, while to the fourth son, Alphons we are indebted for an excellent biography of his father. The only daughter joined the Order of Salesians after her father's death.

Joseph von Klinkowström

Eldest son of the preceding, b. 30 August, 1813; d. 30 March, 1876. He received his early education at his father's school, and in 1831 entered the Jesuit novitiate at Graz. After completing his novitiate and the study of rhetoric and philosophy, he taught for three years in the lower forms of the gymnasium. He made his theology in Rome, where he was ordained priest in 1846. On his return to Graz he taught rhetoric, and subsequently, during the confusion caused by the revolution of 1848, held the position of tutor in a noble Westphalian family. When, two years later, the great popular missionary movement began in Germany, Father Klinkowström was allotted to the German missionaries, proved himself to be unusually efficient. He continued his efforts in Austria in 1852, and his sermons caused so great a sensation in Vienna that the emperor expressed a desire to see him. The result of the interview was the establishment of a Jesuit community in Vienna. Here from 1859 to 1872, in which year his strength began to fail, Klinkowström continued his preaching activity, his great gift of eloquence and his deep religious fervour making a great impression, especially on educated laymen.

Max von Klinkowström

Youngest son of Friedrich, b. 21 October, 1819; d. 28 March, 1896. Until his ordination Father Max was educated on the same general lines as his brother Joseph. From that time, however, the young scholastic led a more active life. Even while making his theology in Innsbruck he took part, under the direction of the celebrated Francis X. Weninger, in the popular missions in Tyrol and Vorarlberg. During the revolutionary

year of 1848 he was appointed curate-in-charge at Kirchberg, to him an unwelcome change. This was followed by a still sadder experience, when he was chosen to accompany a band of Catholic emigrants to Australia. This expedition resulted for him only in suffering and privations. After two years of this labour he was allowed to resume his chosen work of popular missions. He was a regular and highly esteemed preacher on Sundays and holy days, now at Vienna and Prague and now at Innsbruck and Presburg, from 1857 to 1887, save for two short interruptions in 1859, when he served as chaplain in Northern Italy, and in 1871, when he escorted a band of pilgrims to the Golden Jubilee of Pius IX. His last office, which he occupied from 1887 to 1891, was that of superior and preacher at the cathedral of Laibach. Then, after a slight apoplectic stroke, his health failed, and he spent the remainder of his life at Kalksburg near Vienna.

N. SCHEID

Onno Klopp

Onno Klopp

Historian, b. on 9 October, 1822, at Leer (East Friesland); d. at Vienna, 9 August 1903. After finishing his studies at the gymnasiums of Leer and Emden, he devoted himself, from 1841 to 1845 to the study of philology and theology at Bonn, Berlin, and Göttingen, receiving the degree of Doctor of Philosophy at Jena in 1845. He was then appointed to teach at the gymnasium in Osnabrück, retaining this post until 1858. Meanwhile he devoted himself diligently to the composition of works on pedagogy, publishing first, "Die Reform der Gymnasien in betreff des Sprachunterrichts" (Leipzig, 1848), in which he pleaded for modern languages, maintaining that lingual studies should begin with living, not dead languages. He also wrote some books for the young founded on German legends and history, such as "Gudrun. Der deuchen Jugend erzählt" (Leipzig, 1850); "Geschichten, charakterstische Züge und Sagen der deutschen Völkstämme aus der Zeit der Völkerwanderung bis zum Vertrag von Verdun" (2 parts, Leipzig, 1851); "Leben und Taten des Admirals de Ruiter" (Hanover, 1852, 1858, 1905); "Geschichte und Charakterzüge der deutschen Kaiserzeit von 843-1125" (Leipzig, 1852, 1905); "Deutsche Geschichtsbibliothek oder Darstellungen aus der Weltgeschichte für Leser aller Stände" (4 vols. Hanover, 1853-56), with the collaboration of various scholars. The Revolution of 1848 incited him to scientific historical researches, by

means of which he tried to explain the existing phenomena by tracing the evolution of historic conditions. His pamphlet entitled "Die Grundrechte des deutschen Volkes" (Osnabrück, 1849) bears evidence of this.

His most important work at this time was, his "Geschichte von Ostfriesland" (3 vols., Hanover, 1854-58). The East Friesland Estates furnished him with funds for the publication of this work, but, on the appearance of the third volume, they could not refrain from calling attention to the fact that it showed a hostile attitude towards King Frederick II of Prussia. Klopp considered himself unjustly blamed, and declined to receive the subvention for this volume. His action caused a great sensation, and King George V of Hanover, who had awarded him a gold medal for the second volume, paid the subvention from his private purse and offered to take him into his service. However, no suitable position was vacant at the time, and Klopp retired from public office to devote himself entirely to his historical studies. At the same time he took a great interest in the problems of the day, and soon became one of the most important leaders of the greater German party in Northern Germany, the Austrian Ambassador in Hanover aiding him in his efforts. In 1865 the King of Hanover created a commission for the care of the state archives and made Klopp reporter with the title of archivist. He went over the state archives, instituting important innovations in the manner of preserving them, which have been also adopted in the Prussian archives. During the war of 1866 he spent his time at headquarters near the king, in whose services he made two dangerous journeys to Frankfurt and Bavaria. After the capitulation of Langensalza he went to Vienna, where he drew up a petition for peace for his sovereign to King William of Prussia. He now settled permanently in Vienna, and to the end remained a faithful subject as well as a devoted admirer of George of Hanover, as shown by his book, "King George V. Every inch a King" (Hanover, 1878). In 1873 he became a convert to Catholicism. In consequence of his historical investigations he had been for years convinced of the truth of the Catholic Church, giving expression to this view in his three works, "Studien über Katholizismus, Protestantismus und Gewissensfreiheit" (Schaffhausen, 1857), "Wird Deutschland wieder Katholisch werden?" (Schaffhausen, 1859), and "Der evangelische Oberkirchenrat in Berlin und das Konzil" (Freiburg, 1869).

His numerous historical writings can be divided into three groups. The first deal with German and Prussian history, the most important works being the following: "Das Restitutionsedikt im nordwestlichen Deutschland" (Göttingen, 1860); "Der König Friedrich II. von Preussen und die deutsche Nation" (Schaffhausen, 1860-7); "Tilly im dreissigjährigen Kriege" (2 vols., Stuttgart, 1861), enlarged edition under the title: "Der dreissigjährigen Krieg bis zum Tode Gustav Adolfs" (Paderborn, 1891); "Die preussische Politik des Friederieianismus nach Friedrich II." (Schaffhausen, 1867); "Rückblick auf

die preussische Annexion des Konigreichs Hannover" (Munich, 1868). The work on Tilly found great favour among Catholics, and the Emperor of Austria, as well as the Kings of Bavaria, Belgium, and Hanover, almost simultaneously sent him their gold medals for science and art. On the other hand, his works on Frederick II evoked sharp criticism from Prussian circles, and brought forth many replies, most of which he answered convincingly, as in his "Kleindeutsche Geschichtsbaumeister" (Freiburg, 1863).

The second group of writings are on the philosopher Leibniz. In 1861 Klopp made a proposition to the King of Hanover to publish Leibniz's works. For this purpose he thoroughly examined his entire literary remains, and subsequently published: "Die Werke von Leibniz gemass seinem handschriftlichen Nachlass in der Bibliothek zu Hannover. Erste Reihe: Historischpolitische und staatswissenschaftliche Schriften" (11 vols., Hanover, 1864-84). The completion of this work, however, was made impossible, as Bismarck forbade him the use of the Hanoverian library. The French Academy of Sciences in a letter to Klopp lamented this interdiction on behalf of science. Later Klopp gave himself up to the exhaustive study of the history of the Stuarts. He had taken up this study with great zeal when he was in England in 1859, and in 1870 instituted further investigations of the English archives. The most important work that we have to thank him for on this subject, and one which is perhaps his masterpiece, is: "Der Fall des Hauses Stuart und die Succession des Hauses Hannover im Gross-Britannien und Irland im Zusammenhang der europäischen Angelegenheiten von 1660-1714" (14 vols., Vienna, 1875-88).

The interest he took in the history of Austria, his second home, is shown in his works: "Das Jahr 1683 und der folgende grosse Turkenkrieg bis zum Frieden von Carlowitz, 1699" (Graz, 1882), and "Corrispondenza epistolare tra Leopoldo I imperatore ed il P. Marco d'Aviano Cappucino" (Graz, 1886), which was dedicated to Pope Leo XIII on the jubilee to celebrate his fiftieth year as a priest. We are indebted to Klopp above all for the new lines of historical research which he pointed out to Catholics, his works proving incontrovertibly in defiance of all attacks that the study of original documents based on these lines and carried on with an incorruptible love of truth, will expose the errors of existing history.

Compare the biography written by his son in *Biographisches Jahrbuch*, VIII (Berlin, 1905), 117-23.

PATRICIUS SCHLAGER

Joseph Knabl

Joseph Knabl

A master of religious plastic art, b. at Fliess, Tyrol, in 1819; d. at Munich in 1881. He was the son of poor parents, and was first apprenticed to Renn, a wood-carver at Imst, after which he studied ancient German wood-carving at Munich under Entres. Later he worked in the studio of Sickinger, and became, in 1859, a professor at the polytechnical school of the "Verein für Hebung des Gewerbes". In 1859 he entered the art institute of Mayer. The chair of ecclesiastical sculpture at the Academy of Munich was entrusted to him (1863) in recognition of his principal work, the "Coronation of The Virgin" in the Frauenkirche. The figure of Mary, which is more than life size, stands at the middle of the high-altar, with six angels doing her reverence. The crown is laid on her head by the Heavenly Father and His Divine Son, between whom hovers the Holy Ghost; forms of saints and angels appear in the beautiful framework. The composition and execution, the harmonious grouping and draping of the figures, show a masterly technique. Knabl also studied antique art as well as nature. His manner was original. From the Middle Ages he seems to have derived only religious inspiration; the above-mentioned work breathes genuine piety. His other works chiefly in wood, are characterized by a strong and deeply religious feeling, not at all sentimental, the softness and delicacy of his colouring are perhaps in many cases excessive. Knabl is one of the Romantics, and frequently recalls Overbeck and Fuhrich. Like these he is a lover of the German Middle Ages and of what appeals to the German people, into whose life and character his travels through Tyrol, Swabia, and the Rhine country gave him a deep insight. His work at the Mayer Institute, where he not only produced numerous drawings and sketches, but also trained capable scholars, was of very important practical benefit for the diffusion of a cultivated taste in religious art. Most of his works are in Bavaria (Munich, Haidhausen, Passau, Eichstadt, Velden), but there are also some in Stuttgart, Mergentheim, and in other places. The subjects are: "Christ and the Apostles", "Christ on the Cross", several single statues of the Madonna (one for Lord Acton), the Madonna in a group, St. Anne (much admired at the Munich Exposition of 1858 on account of its artistic draping). A group of St. Afra (Augsburg) was the first of the artist's works to attract attention. He left a son, Karl (d. 15 June, 1904), who studied painting in the school of Piloty and became a successful landscape artist.

REGNET, *Gesch. der Munchener Kunst* (Leipzig, 1871); PECHT, *Gesch. der Munchener des 19. Jahrh.* (Munich, 1888).

G. GIETMANN

Sebastian Kneipp

Sebastian Kneipp

Bavarian priest and hydrotherapist, b. at Stephansreid, Bavaria, 17 May, 1821; d. at Wörishofen, 17 June, 1897. The child of poor parents, he became a weaver like his father, but, during his time as a journeyman, constantly cherished the hope of becoming a priest and spent all his spare time in study. With the aid of a friendly priest he was enabled to enter the gymnasium. Five years of severe study and privation brought with it a breakdown in health and young Kneipp developed consumption. His attention was called to the value of hydrotherapy and he began some experiments on himself. While at Dillingen during the winter of 1849, he used to bathe for a few minutes two or three times a week in the Danube, and then hurry home to his room. He says: "I never derived any harm from these cold exercises but also, as I deemed, small benefit." His health was somewhat improved the next year, and he entered the Georgianum, a seminary for theological students at Munich, when he was nearly thirty. Here he continued his hydrotherapeutic exercises and induced a fellow student to practice them. He soon found that the old suggestions as to the use of water were entirely too violent. He was ordained priest in 1852 and became chaplain successively in Biberach, Boos, and St. George in Augsburg. In 1855 he was made confessor to the nuns at the convent of Wörishofen and assistant in the parish; in 1880 he became the parish priest.

While still a curate he practiced hydrotherapy for the benefit of the poor, and his success in curing their ailments attracted wide attention. People from neighbouring parishes began to flock to him; the rich as well as the poor came to be treated, and his fame spread throughout Germany. His little book, "My Water Cure", went through many editions and was translated into many languages, while people from all over Europe began to flock to him. Many of them were greatly benefited. Pfarrer Kneipp's system consisted of the regulation of the daily life, through simplicity of diet, and the plentiful use of cold water internally and externally. Many of the recommendations of cold water popularly attributed to him are exaggerations. He says most emphatically: "I warn all against too frequent application of cold water. Three times I concluded to remodel my system and relax the treatment from severity to mildness and thence to greater mildness still." His general rules were early to bed and early to rise, with a walk in the dewy grass in the bare feet, simple meals, no stimulants, not too much meat, and an abundance of cereals. To him we owe the idea of a cereal drink to replace tea and coffee. Kneipp Societies were formed in Germany and in the United States for the better execution of his regulations. Since his death they have dwindled, and his methods are being lost sight of, showing that it was the personality of the man rather than his

system which gave him fame. He discovered nothing new, but systematized what was known before and had been allowed to lapse. Many well-known Europeans became his personal friends, and many prominent, and even royal, personages took up his method of treatment and were benefited. His "So sollt ihr leben" (1889) has been translated into many languages. Leo XIII made him a monsignor.

KNEIPP, *Meine Wasserkur* (1886-, tr. Edinburgh, 1891), contains a sketch of his life.

JAMES J. WALSH

Ven. William Knight

Ven. William Knight

Put to death for the Faith at York, on 29 November, 1596; with him also suffered Venerables George Errington of Herst, William Gibson of Ripon, and William Abbot of Howden, in Yorkshire.

William Knight was the son of Leonard Knight and lived at South Duffield, Hemington. On coming of age he claimed some property, left to him by his father, from his uncle, a Protestant, who denounced him to the authorities for being a Catholic; he was at once seized and committed to the custody of Colyer, a pursuivant, who treated him with indignity and severity. He was sent in October, 1593, to York Castle, where William Gibson and George Errington were already confined, the latter having been arrested some years previously for participation in a rising in the North. A certain Protestant clergyman chanced to be among their fellow prisoners. To gain his freedom he had recourse to an act of treachery: feigning a desire to become a Catholic, he won the confidence of Knight and his two companions, who explained the Faith to him. With the connivance of the authorities, he was directed to one Henry Abbot, then at liberty, who endeavoured to procure a priest to reconcile him to the Church. Thereupon Abbot was arrested and, together with Knight and his two comrades, accused of persuading the clergyman to embrace Catholicism -- an act of treason under the penal laws. They were found guilty, sentenced to be hanged, drawn, and quartered, and suffered their martyrdom with joy and fortitude at York, on 29 November, 1596.

A.A. MACERLEAN

Henry Knighton

Henry Knighton

(CNITTHON)

A fourteenth-century chronicler. Nothing is known of his career except that he was a canon of St. Mary's, Leicester, and that he was present when Edward III visited Leicester Abbey in 1363. His chronicle was first published by Twysden in "Historiae Anglicanae scriptores decem" (1652); a critical edition by Lumby in the Rolls Series contains an exhaustive study of the only two manuscripts which have survived. Both are now in the British Museum. This work consists of five books and covers the history of England from the accession of Edgar in 959 to the year 1366, in which it abruptly ends. The sudden conclusion suggests that the writer died in or about that year, though from an earlier passage in the work we know that he was threatened with blindness, so that he may have been forced to desist through loss of sight. A later writer from the same community continues the story (book V) from 1377 to 1395. The first three books are of no historical value, as they consist of admitted transcripts from Higden, whom Knighton supplements with unacknowledged extracts from Walter of Hemingburgh. He ensured the preservation of his own name by arranging that the initial letters of the chapters in books I and II should spell *Henricus Cnitthon*. The really important part of his work is the fourth book, which was written from his own knowledge, and which contains facts, particularly with regard to domestic history, not to be found in any other chronicler. A feature of special value is the economic particulars in which the work abounds. He carefully records the rate of wages, the prices of grain, wine, and cattle. He throws much light on the effects of the Black Death on the labour market, and on the inroads made on the feudal system by the liberation of the *adscripti gleboe*. He also details the evil effects of the pestilence which caused a dearth of priests that was supplied by the ordination of candidates ill-prepared and but little suited for the sacred ministry.

Chronicon Henrici Knighton vel Cnitthon Monachi Leycestrensis, ed. LUMBY in Rolls Series (London, 1889); LUARD in Dict. Nat. Biog., s.v.

EDWIN BURTON

Knights of Columbus

Knights of Columbus

A fraternal and beneficent society of Catholic men, founded in New Haven, Connecticut, 2 February, 1882, and incorporated under the laws of Connecticut, 29 March, 1882.

The organizers and incorporators were the Reverend M.J. McGivney, the Reverend P.P. Lawlor, James T. Mullen, Cornelius T. Driscoll, Dr. M.C. O'Connor, Daniel Colwell, William M. Geary, John T. Kerrigan, Bartholomew Healey, and Michael Curran. The purpose of the society is to develop a practical Catholicity among its members, to

promote Catholic education and charity, and, through its insurance department, to furnish at least temporary financial aid to the families of deceased members.

On 15 May, 1882, the organizers, as a Supreme Committee, instituted the first subordinate council, San Salvador, No. 1, New Haven. From this time on, subordinate councils were organized in the different cities and towns throughout the State of Connecticut, but it was not until 15 April, 1885, when a subordinate council was established at Westerly, Rhode Island, that the order was extended beyond the borders of the parent state. The Supreme Committee then enacted a law providing that a Supreme Council should be established, composed of the Supreme Committee and delegates from the subordinate councils, each council being entitled to one delegate for each fifty members. The number of delegates under this arrangement proving too large, the Supreme Council, on 14 May, 1886, resolved itself into a Board of Government, composed of the Board of Directors, formerly the Supreme Committee, and the Grand Knight and a Past Grand Knight of each subordinate council of the society.

Owing to the rapid growth of the society, the Board of Government, in 1892, provided for the organization of State Councils, composed of two delegates from each subordinate council in the state. On 29 April, 1893, the Board of Government was succeeded by the National Council, composed of the State Deputy and last Past State Deputy of each State Council, and by one delegate from every thousand members of the insurance class. In October, 1893, associate members were first admitted to the order. The establishment of the associate class was intended for those advanced in years, or unable to pass a physical examination, but has gradually been extended to comprehend all eligible men not desiring the insurance feature. On 22 February, 1900, the first instance of the fourth degree took place in New York City, when more than twelve hundred candidates from all parts of the United States received this degree.

The order is now established in every state and territory of the United States, in every province of Canada, in Newfoundland, the Philippine Islands, Mexico, Cuba, Panama. Councils are to be established in Puerto Rico and in South America. The membership, divided into two classes, insurance and associate, included, on 1 March, 1910, 74,909 insurance members, and 160,703 associate members, a total of 235,612. Insurance policies are issued for \$1000, \$2000, and \$3000, to desirable risks between the ages of 18 and 60. The rate of each member increases every five years until the age of 60 is attained, after which he pays a level premium based upon his age at initiation. The society has paid to the beneficiaries of deceased members \$4,438,728.74.

The Knights of Columbus have done notable work in promoting Catholic education and charity, providing education and homes for Catholic orphans, endowing scholarships in Catholic colleges, providing lectures on Catholic doctrine, endowing hospital beds, providing sanatoria for its sick members, maintaining employment bureaux, and,

in general, performing the work of the apostolate of the laity. In 1904 the order presented to the Catholic University at Washington \$50,000 for a chair of American History, besides several thousand dollars for library purposes, and is at present engaged in raising \$500,000 to endow 50 scholarships in the University.

The work of lectures to non-Catholics on questions of Catholic teaching and belief has always appealed to the spirit of the order, and of late years has been taken up with no little success. Splendid results have attended the lectures so far delivered. They have led to a better understanding of the Catholic faith on the part of non-Catholics, and a more friendly attitude towards it; they have shown that bigotry is on the wane, and that the non-Catholic mind is open to conviction. The series of lectures delivered by the Right Reverend Bishop J.J. Keane of Cheyenne, Wyoming, in Denver, in 1909, inaugurated the work. At Cedar Rapids, Iowa, eighty-five per cent of the audience, at the lecture under the auspices of the Knights of Columbus, was non-Catholic. The work has been taken up successfully in Buffalo, Milwaukee, Houston, Los Angeles. It is a movement which does not aim at attacking any man's belief, but at building up charity among men "and", in the words of Bishop Keane, "bringing us all closer to God Almighty". In several cities the Knights have established Catholic libraries, and in many others have catalogued the Catholic books in the public libraries.

The erection of a memorial to Christopher Columbus, in the City of Washington, by the United States Government, is due in a measure to the work of the Knights of Columbus. "Columbus Day" (12 October), which is observed at present in fifteen states of the Union (California, Colorado, Connecticut, Illinois, Kentucky, Maryland, Massachusetts, Michigan, Missouri, Montana, New Jersey, New York, Ohio, Pennsylvania and Rhode Island), was instituted largely through the efforts of the Knights, who are now striving to make it a national holiday.

EDWARD HEARN

Knights of the Cross

Knights of the Cross

(Ordo Militaris Crucigerorum cum Rubra Stella.)

A religious order famous in the history of Bohemia, and accustomed from the beginning to the use of arms, a custom which was confirmed in 1292 by an ambassador of Pope Nicholas IV. The grand master is still invested with a sword at his induction into office, and the congregation has been recognized as a military order by Popes Clement X and Innocent XII, as well as by several emperors.

There is much discussion as to the real beginnings of this order, some authorities, among others the Bollandists, tracing it back to Palestine, where the first members

were supposed to have borne arms against the Saracens. On the other hand, however, is the contemporary custom of establishing a religious congregation at the time of the foundation of a hospital, as well as the fact that in no document is there any trace of the Palestinian Cruciferi having gone to Bohemia. Moreover, in a parchment Breviary of the order dated 1356 the account of foundation contains no allusion to such a lineage. The order is first found in Bohemia as a fraternity attached to a hospital at Prague under a community of Clarisses, established by Princess Agnes, daughter of Przemysl Ottokar I and Queen Constantia, in 1233. In 1235 the hospital was richly endowed by the queen with property formerly belonging to the German order, a gift confirmed by Pope Gregory IX (18 May, 1236), who stipulated that the revenues should be divided with the Clarisse monastery. After three years, during which the head of the congregation had gone to Rome as the accredited representative of Abbess Agnes, and the congregation had been formally constituted an order under the Rule of St. Augustine by Gregory IX (1238), the abbess (1239) resigned all jurisdiction over the hospital and its possessions into the hands of the Holy See. Twelve days later the pope formally assigned these to the recently confirmed Knights of the Cross, who were to hold them forever in fief to the Holy See, on condition of the yearly payment of a nominal sum. Blessed Agnes for the order a new hospital at the Prague Bridge, which was taken as the mother-house, and to the title of the order was added *in latere (pede) pontis (Pragenis)* [at the foot of the (Prague) bridge]. She also petitioned the Holy See for some mark to distinguish these knights from other Cruciferi, with whom they bore in common the red crusader. To this was added by Bishop Nicholas of Prague, on the authorization of the pope, a red six-pointed star (10 Oct., 1250), probably from the arms of the first general, Albrecht von Sternberg.

The order, which by 1253 had extensive possessions in Bohemia, soon spread to neighbouring lands. The Breslau house in particular was the centre of many other foundations. It is Bohemia, in an especial manner, to which the knights have rendered incalculable services. Their success in hospital work is evidenced by the rapidity with which their houses multiplied, and the frequent testimony borne to it in documents of kings and emperors. Within two decades after their foundation the care of souls had become as important as their hospital work, so quickly had the majority of lay brothers been replaced by priests. Numberless churches were entrusted to them in all parts of Bohemia, particularly the West, where they formed a bulwark of the Faith during the ravages of heresy in that region; the Taborites murdered the pastor of St. Stephen's at Prague, and the Hussites destroyed the mother-house and brought the order almost to the point of dissolution, but it recovered sufficiently to offer strenuous resistance to the advance of the Reformed teachings. In the war with Sweden the members of the order justified their claim to the title of knights during the siege

of Eger, fighting side by side with the townspeople, and sharing with them their last crust. Their hospital at Prague was also the first refuge of other orders who came to work for souls in Bohemia, among others the Jesuits (1555) and Capuchins (1599). For almost a hundred and fifty years the archbishops of Prague held the post of grand master and were supported almost entirely by the revenues of the order. Only on the restoration of the possessions of the archdiocese at the end of the seventeenth century was the grand master again elected from among the members, and a general reform instituted. George Ignatius Paspichal (1694-99), the first grand master under the new regime, showed great zeal for the restoration of the primitive ideals, especially that of charity. Even to the present day the Prague monastery supports twelve pensioners and distributes the so-called "hospital portion" to forty poor.

Many knights have won enviable reputations in the world of learning, among others Nicholas Kozarz Kozar owa (d. 1592), celebrated mathematician and astronomer: John Francis Be kowsk (d. 1725), who established at Prague an herbarium which is still in existence, and Zimmermann, the historian.

At the present time, besides the mother-house at Prague, there are about 26 incorporated parishes, and 85 professed members, several of whom are engaged in gymnasia and the University of Prague. There are benefices at Hadrisk, Vienna, where the order has been established since the thirteenth century, Eger, Brüx, and Schaab.

HÉLYOT, *Histoire des ordres religieux* (Paris, 1859); JANSSEN in *Kirchenlex*; JACKSCHE, *Gesh. des ritterl. Ordens der Kreuzherren mit dem roten Sterne* (Vienna, 1882); *Regula, statuta et constitutiones ordinis crucigerorum* (Prague, 1880); VON BRENNENBERG, *Analekten zur Geschichte des Militär-Kreuzordens mit dem rothen Stern* (Prague, 1787).

F.M. RUDGE

Ignatius Knoblecher

Ignatius Knoblecher

Catholic missionary in Central Africa, born 6 July, 1819, at St. Cantian in Lower Carniola; died 13 April, 1858, at Naples. He studied at the gymnasium of Rudolfswerth, at the lyceum and the theological seminary of Laibach, and at the college of Propaganda in Rome. On 9 March, 1845, he was ordained priest, and a year later was graduated at Propaganda as doctor of theology. When the Vicariate Apostolic for Central Africa was erected on 3 April, 1846, the Congregation of Propaganda selected Knoblecher as one of the missionaries for that country. Before leaving for Central Africa he spent eight months on the Lebanon and at other places in Syria to acquaint himself with the rites and customs of the Oriental Christians. Towards the end of September, 1847, he

left Cairo in company of Maximilian Ryllo, S.J., the Pro- Vicar Apostolic of Central Africa, and four other missionaries, and arrived at Khartoum on 11 February, 1848. Here they erected a school for young negroes whom they had purchased in the slave-market and who subsequently assisted them on their missions. Through them Knoblecher became acquainted with the languages spoken in the interior of Africa, and was soon enabled to compile a sort of dictionary of these languages. When Father Ryllo died, on 17 June, 1845, Knoblecher succeeded him as pro-vicar Apostolic. From Khartoum Knoblecher made an expedition into the interior of Africa in the fall of 1849. He ascended the Bahr-el-Abiad (White Nile) and was the first white man to penetrate into the land of the Bari tribe as far as 4 degrees 10 minutes north latitude. In 1850 he went back to Austria to recruit missionaries and collect money for the African missions. He returned to Africa in 1852 with five new missionaries, erected a mission among the Bari tribe at Gondokoro, and in 1854 another among the Denka or Jangeh tribe at Angweyn (Heiligenkreuz). The missionaries were hampered in their apostolic labours by European merchants and slave-traders, to whose interest it was to keep the tribes of Central Africa in a state of savagery and heathenism. The deadly climate also cut short the lives of many missionaries, and Knoblecher himself died while making a journey to Europe to regain his health. Valuable accounts of his travels in Central Africa were published in "Jahresberichte des Marienvereins" (Vienna, 1852-58). His large ethnographical and ornithological collections are preserved in the cabinets of natural curiosities at Vienna and Laibach, and the studies which he prepared on the Denka and Bari languages are to be seen in the Imperial Library of Vienna.

MITTERRUTZNER, *Dr. Ignaz Knoblecher, apostolischer Provicar der Kath. Miss. In Central-Africa* (Brixen, 1869).

MICHAEL OTT

Albert Knoll

Albert (Joseph) Knoll

Dogmatic theologian of the Order of Friars Minor Capuchins, born at Bruneck in northern Tyrol, 12 July, 1796; died at Bozen, 30 March, 1863. He was ordained to the priesthood in November, 1818, and five years later was appointed to teach dogmatic theology in the Capuchin convent at Meran. He held this position for twenty-four years. Having been elected to the office of definitor general in 1847, he went to Rome, but returned to Bozen, in 1853, when his term of office had expired. While at Rome he wrote his "Institutiones Theologi Dogmatic Generalis seu Fundamentalis" (Innsbruck, 1852). The following year he published at Turin the first volume of his "Institutiones Theologi Theoretic seu Dogmatico-Polemicæ", which was followed by five

other volumes, the last one appearing in 1859. In this work the author observes the order of treatment usually followed by the text-books. His brief but accurate descriptions of both ancient and modern heresies, his frequent and happy quotations from the writings of the Fathers, the masterly way in which he handles such difficult subjects as grace, free-will, and original sin, place him among the foremost theologians of the nineteenth century. He wrote a compendium in two volumes of the "Institutiones Theologiæ Theoreticæ" which was published at Turin in 1868. The last edition of the larger work, corrected and amended by Father Gottfried of Graun, was published at Innsbruck in 1893. Knoll's "Exposito Regulæ Fratrum Minorum", a treatise on the obligations of the Franciscan rule, has been commended as a faithful interpretation of the spirit of St. Francis.

HURTER, *Nomenclator Literarius*, III, 931-2.

STEPHEN M. DONOVAN

Knowledge

Knowledge

- I. Essentials of Knowledge
- II. Kinds of Knowledge
- III. The Problem of Knowledge

Knowledge, being a primitive fact of consciousness, cannot, strictly speaking, be defined; but the direct and spontaneous consciousness of knowing may be made clearer by pointing out its essential and distinctive characteristics. It will be useful first to consider briefly the current uses of the verb "to know". To say that I know a certain man may mean simply that I have met him, and recognize him when I meet him again. This implies the permanence of a mental image enabling me to discern this man from all others. Sometimes, also, more than the mere familiarity with external features is implied. To know a man may mean to know his character, his inner and deeper qualities, and hence to expect him to act in a certain way under certain circumstances. The man who asserts that he knows an occurrence to be a fact means that he is so certain of it as to have no doubt concerning its reality. A pupil knows his lesson when he has mastered it and is able to recite it, and this, as the case may be, requires either mere retention in memory, or also, in addition to this retention, the intellectual work of understanding. A science is known when its principles, methods, and conclusions are understood, and the various facts and laws referring to it co-ordinated and explained. These various meanings may be reduced to two classes, one referring chiefly to sense-

knowledge and to the recognition of particular experiences, the other referring chiefly to the understanding of general laws and principles. This distinction is expressed in many languages by the use of two different verbs--by *gnônai* and *eidénai*, in Greek; by *cognoscere* and *scire*, in Latin, and by their derivatives in the Romance languages; in German by *kennen* and *wissen*.

I. ESSENTIALS OF KNOWLEDGE

(1) Knowledge is essentially the consciousness of an object, i.e. of any thing, fact, or principle belonging to the physical, mental, or metaphysical order, that may in any manner be reached by cognitive faculties. An event, a material substance, a man, a geometrical theorem, a mental process, the immortality of the soul, the existence and nature of God, may be so many objects of knowledge. Thus knowledge implies the antithesis of a knowing subject and a known object. It always possesses an objective character and any process that may be conceived as merely subjective is not a cognitive process. Any attempt to reduce the object to a purely subjective experience could result only in destroying the fact itself of knowledge, which implies the object, or not-self, as clearly as it does the subject, or self.

(2) Knowledge supposes a judgment, explicit or implicit. Apprehension, that is, the mental conception of a simple present object, is generally numbered among the cognitive processes, yet, of itself, it is not in the strict sense knowledge, but only its starting-point. Properly speaking, we know only when we compare, identify, discriminate, connect; and these processes, equivalent to judgments, are found implicitly even in ordinary sense-perception. A few judgments are reached immediately, but by far the greater number require patient investigation. The mind is not merely passive in knowing, not a mirror or sensitized plate, in which objects picture themselves; it is also active in looking for conditions and causes, and in building up science out of the materials which it receives from experience. Thus observation and thought are two essential factors in knowledge.

(3) Truth and certitude are conditions of knowledge. A man may mistake error for truth and give his unreserved assent to a false statement. He may then be under the irresistible illusion that he knows, and subjectively the process is the same as that of knowledge; but an essential condition is lacking, namely, conformity of thought with reality, so that there we have only the appearance of knowledge. On the other hand, as long as any serious doubt remains in his mind, a man cannot say that he knows. "I think so" is far from meaning "I know it is so"; knowledge is not mere opinion or probable assent. The distinction between knowledge and belief is more difficult to draw, owing chiefly to the vague meaning of the latter term. Sometimes belief refers to assent without certitude, and denotes the attitude of the mind especially in regard to matters that are not governed by strict and uniform laws like those of the physical

world, but depend on many complex factors and circumstances, as happens in human affairs. I know that water will freeze when it reaches a certain temperature; I believe that a man is fit for a certain office, or that the reforms endorsed by one political party will be more beneficial than those advocated by another. Sometimes, also, both belief and knowledge imply certitude, and denote states of mental assurance of the truth. But in belief the evidence is more obscure and indistinct than in knowledge, either because the grounds on which the assent rests are not so clear, or because the evidence is not personal, but based on the testimony of witnesses, or again because, in addition to the objective evidence which draws the assent, there are subjective conditions that predispose to it. Belief seems to depend on a great many influences, emotions, interests, surroundings, etc., besides the convincing reasons for which assent is given to truth. Faith is based on the testimony of someone else--God or man according as we speak of Divine or of human faith. If the authority on which it rests has all the required guarantees, faith gives the certitude of the fact, the knowledge that it is true; but, of itself, it does not give the intrinsic evidence why it is so.

II. KINDS OF KNOWLEDGE

(1) It is impossible that all the knowledge a man has acquired should be at once present in consciousness. The greater part, in fact all of it with the exception of the few thoughts actually present in the mind, is stored up in the form of latent dispositions which enable the mind to recall it when wanted. Hence we may distinguish actual from habitual knowledge. The latter extends to whatever is preserved in memory and is capable of being recalled at will. This capacity of being recalled may require several experiences; a science is not always known after it has been mastered once, for even then it may be forgotten. By habitual knowledge is meant knowledge in readiness to come back to consciousness, and it is clear that it may have different degrees of perfection.

(2) The distinction between knowledge as recognition and knowledge as understanding has already been noted. In the same connection may be mentioned the distinction between particular knowledge, or knowledge of facts and individuals, and general knowledge, or knowledge of laws and classes. The former deals with the concrete, the latter with the abstract.

(3) According to the process by which it is acquired, knowledge is intuitive and immediate or discursive and mediate. The former comes from the direct sense perception, or the direct mental intuition of the truth of a proposition, based as it were on its own merits. The latter consists in the recognition of the truth of a proposition by seeing its connection with another already known to be true. The self-evident proposition is of such a nature as to be immediately clear to the mind. No one who understands the terms can fail to know that two and two are four, or that the whole is greater than

any one of its parts. But most human knowledge is acquired progressively. Inductive knowledge starts from self-evident facts, and rises to laws and causes. Deductive knowledge proceeds from general self-evident propositions in order to discover their particular application. In both cases the process may be long, difficult, and complex. One may have to be satisfied with negative conception and analogical evidence, and, as a result, knowledge will be less clear, less certain, and more liable to error. (See DEDUCTION; INDUCTION.)

III. THE PROBLEM OF KNOWLEDGE.

The question of knowledge belongs to various sciences, each of which takes a different point of view. Psychology considers knowledge as a mental fact whose elements, conditions, laws, and growth are to be determined. It endeavours to discover the behaviour of the mind in knowing, and the development of the cognitive process out of its elements. It supplies the other sciences with the data on which they must work. Among these data are found certain laws of thought which the mind must observe in order to avoid contradiction and to reach consistent knowledge. Formal logic also takes the subjective point of view; it deals with these laws of thought, and neglecting the objective side of knowledge (that is, its materials), studies only the formal elements necessary to consistency and valid proof. At the other extreme, science, physical or metaphysical, postulating the validity of knowledge, or at least leaving this problem out of consideration, studies only the different objects of knowledge, their nature and properties. As to the crucial questions, the validity of knowledge, its limitations, and the relations between the knowing subject and the known object, these belong to the province of epistemology.

Knowledge is essentially objective. Such names as the "given" or the "content" of knowledge may be substituted for that of "object", but the plain fact remains that we know something external, which is not formed by, but offered to, the mind. This must not, however, cause us to overlook another fact equally evident. Different minds will frequently take different views of the same object. Moreover, even in the same mind, knowledge undergoes great changes in the course of time; judgments are constantly modified, enlarged or narrowed down, in accordance with newly discovered facts and ascertained truths. Sense-perception is influenced by past processes, associations, contrasts, etc. In rational knowledge a great diversity of assents is produced by personal dispositions, innate or acquired. In a word, knowledge clearly depends on the mind. Hence the assertion that it is made by the mind alone, that it is conditioned exclusively by the nature of the thinking subject, and that the object of knowledge is in no way outside of the knowing mind. To use Berkeley's words, to be is to be known (*esse est percipi*). The fact of the dependence of knowledge upon subjective conditions however, is far from sufficient to justify this conclusion. Men agree on many propositions, both

of the empirical and of the rational order; they differ not so much on objects of knowledge as on objects of opinion, not so much on what they really know as on what they think they know. For two men with normal eyes, the vision of an object, as far as we can ascertain, is sensibly the same. For two men with normal minds, the proposition that the sum of the angles in a triangle equals two right angles has the same meaning, and, both for several minds and for the same mind at different times, the knowledge of that proposition is identical. Owing to associations and differences in mental attitudes, the *fringe* of consciousness will vary and somewhat modify the total mental state, but the *focus* of consciousness, knowledge itself, will be essentially the same. St. Thomas will not be accused of idealism, and yet he makes the nature of the mind an essential factor in the act of knowledge:

Cognition is brought about by the presence of the known object in the knowing mind. But the object is in the knower after the fashion of the knower. Hence, for any knower, knowledge is after the fashion of his own nature (Summa theol., I, Q. xii, a. 4).

What is this presence of the object in the subject? Not a physical presence; not even in the form of a picture, a duplicate, or a copy. It cannot be defined by any comparison with the physical world; it is *sui generis*, a cognitive likeness, a *species intentionalis*.

When knowledge, either of concrete realities or of abstract propositions, is said to consist in the presence of an object in the mind, we cannot mean by this object something external in its absolute existence and isolated from the mind, for we cannot think outside of our own thought, and the mind cannot know what is not somehow present in the mind. But this is no sufficient ground for accepting extreme idealism and looking upon knowledge as purely subjective. If the object of an assent or experience cannot be absolute reality, it does not follow that to an assent or experience there is no corresponding reality; and the fact that an object is reached through the conception of it does not justify the conclusion that the mental conception is the whole of the object's reality. To say that knowledge is a conscious process is true, but it is only a part of the truth. And from this to infer, with Locke, that, since we can be conscious only of what takes place within ourselves, knowledge is only "conversant with ideas", is to take an exclusively psychological view of the fact which asserts itself primarily as establishing a relation between a mind and an external reality. Knowledge becomes conversant with ideas by a subsequent process, namely by the reflection of the mind upon its own activity. The subjectivist has his eyes wide open to the difficulty of explaining the transition from external reality to the mind, a difficulty which, after all, is but the mystery of consciousness itself. He keeps them obstinately closed to the utter impossibility of explaining the building up by the mind of an external reality out of

mere conscious processes. Notwithstanding all theorizing to the contrary, the facts impose themselves that in knowing the mind is not merely active, but also passive; that it must conform, not simply to its own laws, but to external reality as well; that it does not create facts and laws, but discovers them; and that the right of truth to recognition persists even when it is actually ignored or violated. The mind, it is true, contributes its share to the knowing process, but, to use the metaphor of St. Augustine, the generation of knowledge requires another cause: "Whatever object we know is a co-factor in the generation of the knowledge of it. For knowledge is begotten both by the knowing subject and the known object" (*De Trinitate*, IX, xii). Hence it may be maintained that there are realities distinct from ideas without falling into the absurdity of maintaining that they are known in their absolute existence, that is apart from their relations to the knowing mind. Knowledge is essentially the vital union of both.

It has been said above that knowledge requires experience and thought. The attempt to explain knowledge by experience alone proved a failure, and the favour which Associationism found at first was short-lived. Recent criticism of the sciences has accentuated the fact, which already occupied a central place in scholastic philosophy, that knowledge, even of the physical and mental worlds, implies factors transcending experience. Empiricism fails completely in its endeavour to explain and justify universal knowledge, the knowledge of uniform laws under which facts are brought to unity. Without rational additions, the perception of what is or has been can never give the knowledge of what will certainly and necessarily be. True as this is of the natural sciences, it is still more evident in abstract and rational sciences like mathematics. Hence we are led back to the old Aristotelean and Scholastic view, that all knowledge begins with concrete experience, but requires other factors, not given in experience, in order to reach its perfection. It needs reason interpreting the data of observation, abstracting the contents of experience from the conditions which individualize them in space and time, removing, as it were, the outer envelope of the concrete, and going to the core of reality. Thus knowledge is not, as in Kantian criticism, a synthesis of two elements, one external, the other depending only on the nature of the mind; not the filling up of empty shells--a priori mental forms or categories--with the unknown and unknowable reality. Even abstract knowledge reveals reality, although its object cannot exist outside of the mind without conditions of which the mind in the act of knowing divests it.

Knowledge is necessarily proportioned or relative to the capacity of the mind and the manifestations of the object. Not all men have the same keenness of vision or hearing, or the same intellectual aptitudes. Nor is the same reality equally bright from all angles from which it may be viewed. Moreover, better eyes than human might perceive rays beyond the red and the violet of the spectrum; higher intellects might

unravel many mysteries of nature, know more and better, with greater facility, certainty, and clearness. The fact that we do not know everything, and that all our knowledge is inadequate, does not invalidate the knowledge which we possess, any more than the horizon which bounds our view prevents us from perceiving more or less distinctly the various objects within its limits. Reality manifests itself to the mind in different ways and with varying degrees of clearness. Some objects are bright in themselves and are perceived immediately. Others are known indirectly by throwing on them light borrowed elsewhere, by showing by way of causality, similarity, analogy their connection with what we already know. This is essentially the condition of scientific progress, to find connections between various objects, to proceed from the known to the unknown. As we recede from the self-evident, the path may become more difficult, and the progress slower. But, with the Agnostic, to assign clearly defined boundaries to our cognitive powers is unjustifiable, for we pass gradually from one object to another without break, and there is no sharp limit between science and metaphysics. The same instruments, principles, and methods that are recognized in the various sciences will carry us higher and higher, even to the Absolute, the First Cause, the Source of all reality. Induction will lead us from the effect to the cause, from the imperfect to the perfect, from the contingent to the necessary, from the dependent to the self-existent, from the finite to the infinite.

And this same process by which we know God's existence cannot fail to manifest something--however little--of His nature and perfections. That we know Him imperfectly, by way chiefly of negation and analogy, does not deprive this knowledge of all value. We can know God only so far as He manifests Himself through His works which dimly mirror His perfections, and so far as our finite mind will allow. Such knowledge will necessarily remain infinitely far from being comprehension, but it is only by a misleading confusion of terms that Spencer identifies the unknowable with the incomprehensible, and denies the possibility of any knowledge of the Absolute because we can have no absolute-knowledge. Seeing "through a glass" and "in a dark manner" is far from the vision "face to face" of which our limited mind is incapable without a special light from God Himself. Yet it is knowledge of Him who is the source both of the world's intelligibility and truth, and of the mind's intelligence. (See also AGNOSTICISM, CERTITUDE, EPISTEMOLOGY, FAITH.)

C.A. DUBRAY

Knowledge of Jesus Christ

Knowledge of Jesus Christ

"Knowledge of Jesus Christ," as used in this article, does not mean a summary of what we know about Jesus Christ, but a survey of the intellectual endowment of Christ.

Jesus Christ possessing two natures, and therefore two intellects, the human and the Divine, the question as to the knowledge found in His Divine intellect is identical with the question concerning God's knowledge. The Arians, it is true, held that the Word Himself was ignorant of many things, for instance, of the day of judgment; in this they were consistent with their denial that the Word was consubstantial with the Omniscient God. The Agnoetae, too, attributed ignorance not merely to Christ's human soul, but to the Eternal Word. Suicer, s.v. *Agnoetai*, I, p. 65, says: "Hi docebant divinam Christi naturam . . . quaedam ignorasse, ut horam extremi iudicii". But then, the Agnoetae were a sect of the Monophysites, and imagined a confusion of natures in Christ, after the Eutychian pattern, so as to attribute ignorance to that Divine nature into which His human nature (as they held) was absorbed. An honest profession of the Divinity of Christ necessitates the admission of omniscience in His Divine intellect.

I. KINDS OF KNOWLEDGE IN CHRIST'S HUMAN INTELLECT

The Man-God possessed, not merely a Divine, but also a human nature, and therefore a human intellect, and with the knowledge possessed by this intellect we are here mainly concerned. The integrity of His human nature implies intellectual cognition by acts of its human intellect. Jesus Christ might be wise by the wisdom of God; yet the humanity of Christ knows by its own mental act. If we except Hugh of St. Victor, all theologians teach that the soul of Christ is elevated to participation in the Divine wisdom by an infusion of Divine light. For the soul of Christ enjoyed from the very beginning the beatific vision; it was endowed with infused knowledge; and it acquired in the course of time experimental knowledge.

(1) The Beatific Vision

Petavius (*De Incarnatione*, I, xii, c. 4) maintains that there is no controversy among theologians, or even among Christians, as to the fact that the soul of Jesus Christ was endowed with the beatific vision (see Heaven) from the beginning of its existence. He knew God immediately in His essence, or, in other words, beheld Him face to face as the blessed in heaven. The great theologians freely grant that this doctrine is not stated in so many words in the books of Sacred Scripture, nor even in the writing of the early Fathers; but recent masters in theology do not hesitate to consider the contrary opinion as rash, though it was upheld by the pretended Catholic school of Günther. The basis

for the privilege of the beatific vision enjoyed by the human soul of Christ is its Hypostatic Union with the Word. This union implies a plenitude of grace and of gifts in both intellect and will. Such a fullness does not exist without the beatific vision. Again, by virtue of the Hypostatic Union the human nature of Christ is assumed into a unity of Divine person; it does not appear how such a soul could at the same time remain, like ordinary human beings, destitute of the vision of God to which they hope to attain only after their stay on earth is over. Once more, by virtue of the Hypostatic Union, Jesus, even as man, was the natural son of God, not a merely adoptive child; now, it would not be right to debar a deserving son from seeing the face of his father, an incongruity that would have taken place in the case of Christ, if His soul had been bereft of the beatific vision. And all these reasons show that the human soul of Christ must have seen God face to face from the very first moment of its creation.

Though Scripture does not state in explicit terms that Jesus was favoured with the beatific vision, still it contains passages that imply this privilege: Jesus speaks as an eyewitness of things Divine (John, iii, 11, sqq.; I, 18; I, 31 sq.); any knowledge of God inferior to immediate vision is imperfect and unworthy of Christ (I Cor., xiii, 9-12); Jesus repeatedly asserts that He knows the Father and is known by Him, that He knows what the Father knows. There is a difficulty in reconciling Christ's sufferings and surpassing great sorrow with the beatitude implied in His beatific vision. But if the Word could be united with the human nature of Christ without allowing Its glory to overflow into His sacred body, the happiness of the beatific vision too might be in the human soul of our Lord without overflowing into and absorbing His lower faculties, so that He might feel the pangs of sorrow and suffering. The same faculty may be simultaneously affected by sorrow and joy, resulting from the perception of different objects (cf. St. Thom., III, Q. xiii, a. 5, ad 3; St. Bonav., in III, dist. xvi, a. 2, q. 2); the martyrs have often testified to the ecstatic happiness with which God filled their souls, at the very time that their bodies were suffering the extremity of torment.

(2) Christ's Infused Knowledge

The existence of an infused science in the human soul of Jesus Christ may perhaps be less certain, from a theological point of view, than His continual and original fruition of the vision of God; still, it is almost universally admitted that God infused into Christ's human intellect a knowledge similar in kind to that of the angels. This is knowledge which is not acquired gradually by experience, but is poured into the soul in one flood. This doctrine rests on theological grounds: the Man-God must have possessed all perfections except such as would be incompatible with His beatific vision, as faith or hope; or with His sinlessness, as penance; or again, with His office of Redeemer, which would be incompatible with the consummation of His glory. Now, infused knowledge is not incompatible with Christ's beatific vision, not with His sinlessness, not again

with His office of Redeemer. Besides, the soul of Christ is the first and most perfect of all created spirits, and cannot be deprived of a privilege granted to the angels. Moreover, a created intellect is simply perfect only when, besides the vision of things in God, it has a vision of things in themselves; God only sees all things comprehensively in Himself. The God-Man, besides seeing them in God, would also perceive and know them by His human intellect. Finally, Sacred Scripture favours the existence of such infused knowledge in the human intellect of Christ: St. Paul speaks of all the treasures of God's wisdom and science hidden in Christ (Col., ii, 3); Isaias speaks of the spirit of wisdom and counsel, of science and understanding, resting on Jesus (Is., xi, 2); St. John intimates that God has not given His Spirit by measure to His Divine envoy (John, iii, 34); St. Matthew represents Christ as our sovereign teacher (Matt., xxiii, 10). Beside the Divine and the angelic knowledge, most theologians admit in the human intellect of Jesus Christ a science infused *per accidens*, i.e., an extraordinary comprehension of things which might be learned in the ordinary way, similar to that granted to Adam and Eve (cf. St. Thom., III., Q. i, a. 2; QQ. viii-xii; Q. xv, a. 2).

(3) Christ's Acquired Knowledge

Jesus Christ had, no doubt, also an experimental knowledge acquired by the natural use of His faculties, through His senses and imagination, just as happens in the case of common human knowledge. To say that his human faculties were wholly inactive would resemble a profession of either Monothelitism or of Docetism. This knowledge naturally grew in Jesus in the process of time, according to the words of Luke, ii, 52: "And Jesus advanced in wisdom, and age, and grace with God and men". Understood in this way, the Evangelist speaks not merely of a successively greater manifestation of Christ's Divine and infused knowledge, nor merely of an increase in His knowledge as far as outward effects were concerned, but of a real advance in His acquired knowledge. Not that this kind of knowledge implies an enlarged object of His science; but it signified that He gradually came to know, after a merely human way, some of the things which he had known from the beginning by His Divine and infused knowledge.

II. EXTENT OF THE KNOWLEDGE OF JESUS CHRIST

It has already been stated that the knowledge in Christ's Divine nature is co-extensive with God's Omniscience. As to the experimental knowledge acquired by Christ, it must have been at least equal to the knowledge of the most gifted of men; it appears to us wholly unworthy of the dignity of Christ that His powers of observation and natural insight should have been less than those of other naturally perfect men. But the main difficulty arises from the question as to the extent of Christ's knowledge flowing from His beatific vision, and of His infused amount of knowledge.

(1) The Council of Basle (Sess. XXII) condemned the proposition of a certain Augustinus de Roma: "Anima Christi videt Deum tam clare. Et intense quam clare et intense Deus videt seipsum" (The soul of Christ sees God as clearly and intimately as God perceives Himself). It is quite clear that, however perfect the human soul of Christ is, it always remains finite and limited; hence its knowledge cannot be unlimited and infinite.

(2) Though the knowledge in the human soul of Christ was not infinite, it was most perfect and embraced the widest range, extending to the Divine ideas already realized, or still to be realized. Nescience of any of these matters would amount to positive ignorance in Christ, as the ignorance of law in a judge. For Christ is not merely our infallible teacher, but also the universal mediator, the supreme judge, the sovereign king of all creation.

(3) Two important texts are urged against this perfection of Christ's knowledge: Luke, ii, 52 demands an advancement in knowledge in the case of Christ; this text has already been considered in the last paragraph. The other text is Mark, xiii, 32: "Of that day or hour no man knoweth, neither the angels in heaven, nor the Son, but the Father." After all that has been written on this question in recent years, we see no need to add anything to the traditional explanations: the Son has no knowledge of the judgment day which He may communicate; or, the Son has no knowledge of this event, which spring from His human nature as such, or again, the Son has no knowledge of the day and the hour, that has not been communicated to Him by the Father. (See Manganot in Vigouroux, "Dict. de la Bible", II, Paris, 1899, 2268 sqq.)

Since the time of the Nestorian controversies, Catholic tradition has been practically unanimous as to the doctrine concerning the knowledge of Christ (cf. Leporius, "Libellus Emendationis", n. 40; Eulogius Alex., "in Phot.", cod. 230, n. 10; S. Gregorius Magnus, lib. X, ep. xxxv, xxxix; Sophron., "Ep. Syn. ad Sergium"; Damascenus, "De Haer.," n. 85; Nat. Alex., "Hist. Eccl. in saec. sext.," n. 85). As to the Fathers preceding the Nestorian controversy, Leontius Byzantinus simply surrenders their authority to the opponents of our doctrine concerning the knowledge of Christ; Petavius represents it as partly undecided; but the early Fathers may be excused from error, because they wrote mostly against the Arian heresy, so that they endeavoured to establish Christ's Divinity by removing all ignorance from His Divine nature, while they did not care to enter upon an *ex professo* investigation of the knowledge possessed by His human nature. At that time there was no call for any such study. After the patristic period, Fulgentius (Resp. ad quaest. tert. Ferrandi) and Hugh of St. Victor exaggerated the human knowledge of Christ, so that the early Scholastics asked the question, why God's Omniscience was incommunicable (Lomb., "Liber Sent.," III, d. 14). But even at this period, at least a modal difference was admitted to exist between the Omniscience of

God and the human knowledge of Christ (cf. Bonav. in III., dist. 13, a. 2). Soon, however, theologians began to limit the human knowledge of Christ to the range of the *scientia visionis* or of all that actually has been, is, or will be, while God's Omniscience embraces also the range of the possibilities.

PETER LOMBARD, Liber Sent., III, dist. 13-14, and ST. THOMAS, ST. BONAVENTURE, SCOTUS, DIONYSIUS THE CARTHUSIAN on this passage; Summa, III, QQ. viii-xii, and sv, a. 2, and VALENT., SUAREZ, SALMERON, on these chapters; MELCHIOR CANUS, De Locis, XII, xiii; PETAVIUS, I, i sqq.; THOMASSIN, VII; LEGRAND, De Incarn., dissert. ix, c. ii; MALDONATUS, A LAPIDE, KNABENBAUER, etc., on Luke, ii, 52, and Mark, xiii, 32; FRANZELIN, De Verb. Incarn., p. 426. A number of works have been quoted during the course of the article.

A.J. MAAS

Knownothingism

Knownothingism

This was a name applied to a movement in American politics which attracted a large share of public attention during the period from 1851 to 1858. It was the revival or re-appearance under a new name of the Native American movement which, during the preceding quarter of a century, had made various organized efforts to engraft its principles upon the legislation and policy of the American government. These principles briefly stated, were

- the proscription of those who professed the Roman Catholic faith and,
- the exclusion of foreign-born citizens from all offices of trust and emolument in the government, whether federal, state, or municipal.

It may be added that Roman Catholics of Irish origin, whether native or foreign-born, were at all times the special object of Native American hostility, and that the "foreigners", contemptuously so called, against whom the Knownothing denunciations were levelled, and who were to be excluded from the rights of citizenship, were for the most part Irish immigrants to the United States professing the Roman Catholic faith. This Native American spirit may be traced back to the very beginning of the National Government. In many of the colonies there were penal laws which forbade the practice of the Roman Catholic religion, and these laws remained on the Statute Books down to the time of the War of Independence.

With the organization of government and the adoption of a written Constitution, the question of religious toleration naturally arose, and the principle of freedom of

religion was incorporated in the Federal Constitution (Art. VI) which declared that "no religious test shall ever be required as a qualification to any office or public trust under the United States". This liberty of conscience was further assured by an amendment adopted in 1791, which declared that "Congress shall make no law respecting an establishment of religion or prohibiting the free exercise thereof." While the policy of the National Government was thus defined, and its law-making power was restrained from legislation hostile to the principle of freedom of religion, the individual states had reserved the right to regulate the question of religion and of a state Church within their respective jurisdictions, and the elimination from the Constitutions of the various states of the religious disqualifications which they contained affecting Roman Catholics was accomplished slowly and not without much resistance on the part of a considerable portion of the population. Thus, it was not until 1833 that the union between Church and State in the Commonwealth of Massachusetts was dissolved, and Catholics were relieved from having to pay taxes for the support of the state (Protestant) Church. New Jersey retained its anti-Catholic Constitution until 1844, and only in 1877 did New Hampshire expunge from its Constitution the provision disqualifying Catholics from holding office in that state. These, with instances from other states which might be added, show that the spirit of intolerance of the Roman Catholic religion still survived. Freedom of religion as asserted in the Federal Constitution was not by any means universally accepted in theory, still less in practice.

The Tory element in the population, composed almost wholly of adherents of the Church of England, was most prominent in its resistance to that principle. Many of these were secretly opposed to the total independence of the colonies. In New York, where they were most numerous, they had been the governing class; theirs was the state Church; their wealth and social standing gave them a large share in the direction of public affairs which they rightly judged would be lost to them by the establishment of the republic on the principles of freedom and equality declared by Thomas Jefferson, and, when their mother country was compelled to acknowledge the independence of the colonies, over 30,000 of these Tories voluntarily deported themselves, most of them to England and Canada. Those who remained became identified with the political party known as the Federalists. Successful for a time in retaining the control of the newly-organized government, the leaders of that party "strove to preserve the political ascendancy of Protestantism in the states both by Federal legislation affecting the naturalization of emigrants and by preventing legislation in their respective states for the relief of Catholics from their religious disabilities which was necessary to give effect to the liberal spirit and purpose of the Constitution" (see "U.S. Catholic Historical Records and Studies", Vol. III, p. 95).

Thus, John Jay, of New York, who afterwards became Chief Justice of the United States, succeeded in fastening upon the Constitution of his own state a provision which denied the privilege of citizenship to every foreign-born Catholic unless he would first abjure and renounce all allegiance to the pope in matters ecclesiastical. This provision remained in force until 1821, when the power and influence of the Federal party had well nigh disappeared. During the administration of the Federalist president, John Adams, 1798-1802, that same party forced the passage of the Alien Act, under which the president might expel from the country all aliens whom he might regard as disaffected towards the Government, as well as that other Act requiring a residence of fourteen years in the country before any foreign-born person could be admitted to citizenship. In brief, the Federalists were the Native Americans of their day, and Knownothingism, as the latest and, because of its excesses, the most odious manifestation of the Native American spirit, may be said to have had its genesis in the prejudices nursed by the Federalists against foreign-born citizens and in their intolerance of their fellow-citizens professing the Roman Catholic faith. These offensive, not to say unlawful, sentiments found numerous advocates, not only among political demagogues and aspirants for public office, but also in the pulpit and in the religious press of those days. The tide of immigration which had set in was largely Irish and soon became distinctively Catholic in character. One of the inducements to this immigration was the hope it held out of release from the civil disabilities and the religious proscription under which the immigrants had laboured in their native land. When, therefore, a powerful party was founded exerting itself to exclude these immigrants from the privilege of citizenship because of their race and creed, it was most natural that they and their co-religionists of whatever race should, as they did, ally themselves with the opposing political party which supported those principles of political equality and freedom of religion which had been proclaimed as distinctive principles of the American scheme of government. The growing immigration and the increase in the number of naturalized citizens strengthened the party with which these immigrants had become identified, and the extension of their political influence, as shown at the elections, was used by the advocates of proscription as a justification of their policy. Throughout the various Native American and Knownothing movements which America has witnessed, political hostility and religious prejudice, the one supplementing the other, appear as the motive and inspiration. Knownothingism was only the development and application of the principles of Native Americanism whose character and origin we have briefly sketched.

During the half-century preceding the Knownothing era, the questions involved in that movement had been frequently agitated. Catholics and foreigners were denounced, mainly from Protestant pulpits, as enemies of the Republic. Books and newspapers calculated to inflame the passions of the mob against their Irish and

Catholic neighbours were extensively circulated. Catholic bishops and priests were maligned, their religion misrepresented and ridiculed, and acts of violence were committed against Catholics and their property. The burning of the Convent of the Ursuline nuns at Charleston, Mass., in 1834, by a Native American mob, and their cruel treatment of the unoffending nuns and their pupils, were the most notable manifestations, up to that time, of the evil effect of religious hatred. In 1835 the first formal organization of the partisans of the Native American movement under that name, was effected at New York City. Various newspapers, such as "The Protestant", "The Protestant Vindicator", "The Downfall of Babylon", and the like, were established in New York and New England as aids to the movement. The "evils of Popery" and the danger to arise to the Republic from tolerating the practice of the Catholic religion were staple topics of discussion by no inconsiderable number of ministers of religion, and under the impulse of these incitements the spirit of religious prejudice was kept alive; there were new aggressions upon the rights of Catholic citizens, the peace and order of the community were occasionally disturbed by acts of violence, and another decade in the history of Native Americanism terminated in the bloody riots which occurred at Philadelphia, in 1844, when several Catholic churches were attacked by the Native American mob, and two of them, St. Michael's and St. Augustine's, were deliberately fired and reduced to ashes, and the safety of those that remained were so endangered by the hostile demonstrations of the mob that public worship was suspended by order of Bishop Kenrick, and on Sunday, 12 May, 1844, all Catholic churches in that city were closed. Many houses tenanted by Irish Catholics were likewise wantonly destroyed by fire, some of the inmates were shot down at their doorsteps, and a number of other unoffending citizens lost their lives.

The party whose members were soon to be described as "Knownothings" was formally organized in 1852 in the City of New York. Although begun as a local society, it was designed to become a national organization. Its leaders had planned to concentrate in a single party the membership of various Native American orders already in existence and the "American Republicans", the "Order of United Americans", "Sons of America", and "United American Mechanics of the United States" formed the nucleus of the new party. It adopted the title of "National Council of the United States of North America." Among the initiate it was called the "Supreme Order of the Star-spangled Banner" and was sometimes familiarly spoken of as "Sam". Its published ritual declared (Article II) the purpose of the organization to be "to protect every American citizen in the legal and proper exercise of all his civil and religious rights and privileges; to resist the insidious policy of the Church of Rome and all other foreign influence against our republican institutions in all lawful ways; to place in all offices of honour, trust or profit in the gift of the people or by appointment none but Native

American Protestant citizens" (see American Politics, Book I, pp. 57-9). Article III declared "that a member must be a native-born citizen, a Protestant either born of Protestant parents or reared under Protestant influence, and not united in marriage with a Roman Catholic. . .no member who has a Roman Catholic wife shall be eligible to office in this order", etc. There were several degrees of membership as there were also state, district, and territorial councils, all of them subordinate to the National Council. The organization had the usual equipment of secret signs, grips, passwords, and the like. Upon his admission the member was required to take the following oath:--

"In the presence of Almighty God and these witnesses, you do solemnly promise and swear that you will never betray any of the secrets of this society, nor communicate them even to proper candidates, except within a lawful council of the order; that you never will permit any of the secrets of this society to be written, or in any other manner made legible, except for the purpose of official instruction; that you will not vote, nor give your influence for any man for any office in the gift of the people, unless he be an American-born citizen, in favor of Americans ruling America, nor if he be a Roman Catholic; that you will in all political matters, so far as this order is concerned, comply with the will of the majority, though it may conflict with your personal preference, so long as it does not conflict with the Constitution of the United States of America or that of the State in which you reside; that you will not, under any circumstances whatever, knowingly recommend an unworthy person for initiation, nor suffer it to be done, if in your power to prevent it; that you will not, under any circumstances, expose the name of any member of this order nor reveal the existence of such an association; that you will answer an imperative notice issued by the proper authority; obey the command of the State council, president or his deputy, while assembled by such notice, and respond to the claim of a sign or cry of the order, unless it be physically impossible; . . ."

Although the existence of the new party was generally known, and its political activities soon became manifest, all inquiries by outsiders respecting its organization and purpose, and especially as to the names of members, were met by those identified with the movement with the answer: "I don't know". This was in conformity with that part of the oath which forbade the member "To expose the name of any member of their order nor reveal the existence of such an association", and from this answer so uniformly repeated the nickname "Knownothing" was invented and was applied to the party and its members, and thus the Native Americanism of that period has passed into history

under the name of Know-nothingism. Within three years state councils of the order were established in thirty-five states and territories, and its advocates claimed that it controlled one and a half million legal voters, or nearly one-half of the entire popular vote cast at the presidential election in 1852. For a time it confined its political activities to supporting candidates approved at the secret meetings of the councils who had been nominated by one or other of the older political parties, and the leaders of those parties were frequently surprised at the unexpected strength thus developed by the secretly favoured candidates; but by 1854 it directly nominated the candidates to be voted for. The party had been successful in the municipal elections in Philadelphia, Baltimore, San Francisco, New Orleans, and for a time in New York City. In 1854 the Know-nothings sent forty representatives to Congress, and elected their candidate, Gardiner, Governor of Massachusetts, with a legislature of the same type. In New York, in the same year, the party polled 122,000 votes and in the next year was successful in that state, polling 146,000 votes. In 1855 New Hampshire, Connecticut, and Rhode Island each elected a Know-nothing governor, and the party carried the elections in nine different states.

In the Thirty-fifth Congress, which assembled in December, 1855, there were seventy-five Know-nothing members elected as such. In 1856 Horace Greeley wrote: "The majority of the Banks men"--Banks being the candidate for Speaker of the House of Representatives--"are now members of Know-nothing councils and some twenty or thirty of them actually believe in that swindle. Half of the Massachusetts delegation, two-thirds of that of Ohio and nearly all of that of Pennsylvania are Know-nothings". In 1855 the Know-nothing party suffered a serious reverse in Virginia, when Henry A. Wise, the Democratic candidate, was elected governor of that state, chiefly on the issue of his antagonism to Native American principles and policies. In 1856, at Philadelphia, the delegates of the Know-nothing party held a convention at which they nominated Millard Fillmore as candidate for President. Opposed to them in that election were the Democratic party and the newly organized Republican party, both of whom had expressed their dissent from Native American principles. Speaking of this selection, Schouler says: "Their candidate Fillmore met with the most ignoble defeat, receiving only the eight electoral votes of Maryland, his adversary, James Buchanan, the nominee of the National Democratic party being triumphantly elected. For the Native Americans with their proscriptive tenets, the defeat was overwhelming. It was apparent that the American or Know-nothing party had now nearly evaporated" (History of the U.S., IV, p. 357).

The American people had weighed the claims of the Know-nothing party to be regarded as the saviours of the republic and had witnessed the criminal excesses to which that party had resorted in its efforts to secure political control, and the sober sense of

the great mass of the people had repudiated both. Moreover the great controversy over slavery coupled with the claim of the right of a state to secede from the Union was pressing upon the attention of the nation to the exclusion of nearly every other question, so that upon the election of President Lincoln (1860) Knownothingism as an organized party had ceased to exist, and only its disagreeable memory remained.

The history of Knownothingism would be very imperfectly told without some account of the wrongs inflicted upon Catholics and the criminal excesses committed by the partisans of that movement. The same bitter attacks against the Catholics and the same incitements to violence could not fail to produce results similar to those which had characterized the earlier Native American movements. In 1851 the large Knownothing element in Providence, R. I., was excited over the establishment there of a community of Sisters of Mercy under the direction of Mother Xavier Warde. The cottage occupied by the sisters was attacked at night, and all the windows broken. In daytime, as the sisters passed through the streets, they were hooted at and otherwise insulted, and were openly threatened with the destruction of their convent. So persistent were these threats that the Mayor requested the sisters to abandon their residence in Providence so as to avert the threatened disorder. Soon afterwards a mob of Knownothing partisans fully armed was assembled whose purpose of attacking the convent had been openly announced. The bishop's house and one or more of the churches were likewise marked for destruction. After fruitless appeals to the civil authorities for protection, the Irish Catholics of Providence, under the prudent and resolute lead of Bishop O'Reilly, prepared to resist the mob and to repel any violence that might be attempted. The mob marched to the convent, but, finding it guarded by a number of Catholic Irishmen, with Bishop O'Reilly present and declaring that the sisters and their convent should be protected at whatever cost, the Knownothing leaders decided not to molest the convent, and the mob dispersed.

In 1853, on the occasion of the visit to America of Archbishop Bedini, Apostolic Nuncio to the Court of Brazil, a great outcry was raised by the Knownothing element throughout the country, with whom were joined certain Italian refugees who had emigrated to escape the consequences of their criminal conduct at home. In all the cities visited by the archbishop hostile demonstrations were made against him. At Boston, Baltimore, Wheeling, St. Louis, and Cincinnati where the Nuncio took part in various solemn religious celebrations, there were scenes of disorder, and in some cases of bloodshed, provoked by the Knownothing speakers both lay and clerical, as well as by the anti-Catholic press. At Cincinnati, in December, 1853, a mob of 600 men armed with weapons of various sorts, and carrying lighted torches and ropes, marched to the cathedral intending to set it on fire and, as was believed, to hang the Nuncio. There was an encounter with the police, and the mob was dispersed, but not

until after shots had been fired and several persons wounded. During 1854 there were numerous assaults upon Catholic churches throughout the country by the Knownothing element. St. Mary's church at Newark, N. J., was invaded by a mob made up of Knownothings and Orangemen from New York City; the windows were broken, some of the statuary destroyed, and one unoffending bystander, an Irish Catholic, was shot and killed. In October of the same year, at Ellsworth, Maine, Father John Bapst, S.J., was dragged from the church, robbed of his watch and money, tarred and feathered, and ridden about the village on a rail.

On 4 July, at Manchester, N. H., St. Anne's church was attacked, its windows broken and furniture destroyed, the priest compelled to seek shelter away from his home, and the houses of Irish Catholics were likewise attacked, the inmates driven out, even the sick being dragged from their beds. At Bath, Me., the mob broke into the church and, after wrecking the altar and the pulpit, set fire to the building which was reduced to a heap of ashes. At Dorchester, Mass., a keg of gunpowder was placed under the floor of the little Catholic church, it was fired at three o'clock in the morning and resulted in almost the total destruction of the building. Another Catholic church, at Sidney, Ohio, was blown up with gunpowder. At Massillon, Ohio, another church was burned, and an attempt made to burn the Ursuline Convent at Galveston, Texas. At Lawrence and at Chelsea, Mass., the Catholic churches were attacked by the Knownothing mob, the windows smashed, and much other damage done. St. Mary's church at Norwalk, Conn., was set on fire and later its cross was sawed off the spire. A fire was started in the church of Sts. Peter and Paul in Brooklyn, and the building was saved only by the interference of the police aided by the militia, who drove off the mob. St. Mary's Church at Saugerties, N. Y., was set on fire and nearly destroyed by the fanatics, and an attempt made to burn the church at Palmyra, N. Y. The following year (1855), at Louisville, Ky., the elections were attended with such rioting and bloodshed, the result of Knownothing agitation, that the day (5 Aug.) acquired the name of "Bloody Monday". The cathedral was invaded by the mob and was saved from destruction only by the prudence of Bishop Spalding, who, in a letter to Bishop Kenrick summing up the results of the day's proceedings, said: "We have just passed through a reign of terror surpassed only by the Philadelphia riots. Nearly one hundred poor Irish have been butchered or burned and some twenty houses have been consumed in the flames. The City authorities, all Knownothings, looked calmly on and they are now endeavouring to lay the blame on the Catholics" (see "Life of Archbishop Spalding", by J.L. Spalding, p. 185).

While their ignorant followers were engaged in these lawless proceedings the leaders were exerting themselves in various directions to secure legislation hostile to Catholics, especially to Irish immigrants, then mostly of that faith. In the legislatures

of some of the states bills were proposed to authorize the visitation and inspection of convents and other religious institutions by state officials, and in Massachusetts, in 1854, such a law, known as the Nunneries Inspection Bill, was actually passed. Under this a legislative committee made a tour of inspection and in a very offensive manner visited several Catholic colleges and convents. In several states, notably in New York, church property bills were proposed which were designed to destroy the title to Catholic church property, which for the most part stood in the name of the bishop, there being then no law for the incorporation of Catholic churches by which such title might be securely held. In Congress efforts were made to restrict the benefits of the Homestead Laws to those who were actual citizens of the United States, and the old-time proposal to extend the period of residence to twenty-one years before a person could be admitted to citizenship was constantly agitated. Of lesser importance were the laws and ordinances passed in Massachusetts disbanding various volunteer militia companies bearing the name of some Irish patriot and composed for the most part of Catholic Irishmen.

These different measures were advocated in the newspaper organs, both secular and religious, of the Knownothing party. The New York Church Property Bill evoked the newspaper controversy between Archbishop Hughes and Senator Brooks which attracted attention all over the country. In addition, many books and pamphlets were put in circulation in support of the Knownothing claims. Much of this literature was grossly insulting to Catholics and especially to the Irish members of that Church, and the Catholic press of those days was busily engaged in meeting the charges made against the Church. Speaking of Knownothingism, the authors (Nicolay and Hay) of the "Life of Lincoln" (Vol. II, p. 357) say: "Essentially it was a revival of the extinct Native American faction based upon a jealousy of and discrimination against foreign born voters, desiring an extension of their period of naturalization and their exclusion from office; also based upon a certain hostility to the Roman Catholic religion."

Schouler, another non-Catholic historian, says (History of the United States, Vol. V, p. 305): "They [the Knownothings] revived the bitter spirit of intolerance against the Roman Catholic Church such as ten years before had been shown in the riots of Charlestown and Philadelphia, by representing it as foreign, the handmaid of popular ignorance and bent on chaining Americans to the throne of the Vatican. . . . Catholic churches were assaulted every now and then by some crowd of Bible bigots helped on by the brawny friends of free fight inflamed by street preachers and the revelations of 'converted Jesuits' and 'escaped nuns' etc." Speaking of the partisans of the movement, Bishop J. L. Spalding said (Life of Archbishop Spalding, p. 174) they were "the depraved portion of our native population". He added: "It was not the American people who were seeking to make war on the Church, but merely a party of religious fanatics and

unprincipled demagogues who as little represented the American people as did the mobs whom they incited to bloodshed and incendiarism. Their whole conduct was un-American and opposed to all the principles and traditions of our free institutions".

Brownson spoke of their prejudices as "contemptible"; "The Native-American Party", said he (*Essays and Reviews*, p. 428), "is not a party against admitting foreigners to the rights of citizenship, but simply against admitting a certain class of foreigners. It does not oppose Protestant Germans, Protestant Englishmen, Protestant Scotchmen, not even Protestant Irishmen. It is really opposed only to Catholic foreigners. The party is truly an anti-Catholic party, and is opposed chiefly to the Irish, because a majority of the emigrants to this country are probably from Ireland, and the greater part of these are Catholics."

PETER CONDON

John Knox

John Knox

Scotch Protestant leader, b. at Haddington, Scotland, between 1505 and 1515; d. at Edinburgh, 24 November, 1572. All the older biographies assign his birth to 1505, but recent authorities (Lang, Hay Fleming, etc.) give grounds for the latter date from contemporary evidence, and from certain facts in his career. Nothing authentic is known of his ancestry or kinsfolk, excepting that his mother was a Sinclair; his father

was probably a small farmer. Educated at the Haddington burgh school, he is not known to have graduated at any university, though both Glasgow and St. Andrews have claimed him. His own writings testify to his knowledge of Latin and French, and his acquaintance with the works of some of the Fathers, and he seems to have acquired a smattering of Greek and Hebrew in later life. His mastery of vernacular Scotch is shown in his "History", as well as the fact that he had studied law, for his citations from the Pandects are apt and not infrequent. We know from his own words that he was a priest -- "one of Baal's shaven sort", as he expresses it -- and practised as a notary by ecclesiastical authority. In a still extant document, he is styled "Johannis Knox, sacri altaris minister, sancte Andreae diocesis auctoritate apostolica notarius." Nothing whatever is known of his ecclesiastical career; and we can only surmise that he had already begun to doubt, if he had not actually repudiated, the Catholic tenets by 1540, when we first find him engaged as private tutor to certain "bairns", a profession in which he continued until 1547. The names of some of his pupils have come down to us, but we know nothing of the details of his life until 1545, when his own "History of the Reformation", written some eighteen years later and largely autobiographical in character, first brings him before us.

The most prominent exponent of the new doctrines in Scotland at this time was George Wishart, who had come home from his travels in Germany a confirmed Protestant, and was expounding his tenets in Haddington and other parts of the Scottish Lowlands. Bitterly hostile to Cardinal Beaton, the great champion of the Catholic cause, Wishart (whose most devoted adherent and disciple at this time was Knox) was deeply involved in the intrigues of the Protestant party with Henry VIII of England for the kidnapping or murder of the cardinal. Wishart was arrested in January, 1546, and burned at St. Andrews on 1 March; and on 29 May Beaton was murdered at the same place in revenge for Wishart's death. The assassination was approved and applauded by Knox, who describes the deed with a gleeful and mocking levity strangely unbecoming in a Christian preacher, though his panegyrists speak of it merely as his "vein of humour". Some months later we find him, with his pupils, shut up in the castle of St. Andrews, which Beaton's murderers and their friends held for some months against the regent Arran and the Government. On 31 July, 1547, the besiegers being reinforced by a large French fleet, the castle was surrendered, and Knox was imprisoned with some others for nineteen months on board the French galleys and at Rouen. His captivity, however, was not rigorous enough to prevent him from writing a theological treatise, and preaching to his fellow prisoners.

In 1549 Knox was free to return home; but he preferred to stay for a time in England, where, under Edward VI, he would feel himself secure, rather than to expose himself to fresh arrest in Scotland. He received a state license to preach at Berwick,

where he remained two years, and was then transferred to Newcastle, and at the same time appointed a royal chaplain. He preached at least twice before the young king, and in October, 1552, was nominated to the Bishopric of Rochester, which he refused, declining also a benefice in the city of London. His own alleged reason for declining these preferments was that he thought the Anglican Church too favourable to Roman doctrine, and that he could not bring himself to kneel at the communion service. When Edward VI was succeeded in July, 1553, by his Catholic sister Mary, Knox continued his preaching for a time, and, as long as he remained in England, took care not to attack the new sovereign, for whom indeed he published a devout prayer. But early in 1554 he thought it prudent to take refuge in Dieppe, having meanwhile gone through a form of marriage with Marjorie, fifth daughter of Mrs. Bowes, a Calvinistic lady of his own age living in Newcastle, who had taken him as her spiritual adviser. From Dieppe he went to Geneva, partly to consult Calvin and other divines as to the lawfulness and expediency of resisting the rule of Mary Tudor in England and Mary of Guise, just appointed Regent, in Scotland; but he got little satisfaction from his advisers. In September, 1554, he accepted the post of chaplain to the English Protestants at Frankfort; but his Puritanism revolted against the use of King Edward's prayer-book and of the Anglican ceremonial. Schism arose in the congregation: Knox's opponents accused him of comparing the Emperor Charles to Nero in a published tract; he was ordered by the authorities to leave Frankfort, and returning to Geneva he ministered for a time to the English congregation there. In August, 1555, however, an urgent summons from his mother-in-law, Mrs. Bowes, caused him (as he says, "most contrarious to mine own judgement") to set out for Scotland and join his wife at Berwick. The new doctrines had made headway during his absence, and he found himself able to preach both in public and in the country houses of his supporters among the nobles and gentry. At a historic supper, given by his friend Erskine of Dun, it was formally decided that no "believer in the Evangel" could attend Mass; and the external separation of the party from Catholic practice, as well as doctrine, thus became complete. Knox, whose religion had now become entirely of the Old-Testament type, boldly proclaimed that adherents to the old faith were as truly idolaters as the Jews who sacrificed their children to Moloch, and that the extermination of idolaters was the clear duty of Christian princes and magistrates, and, failing them, of all individual "believers". In the letter, however, which he addressed about this time, on the advice of two of his noble supporters, to the queen regent, he assumed a somewhat different tone, appearing to petition only for toleration for his co-religionists. The letter contained at the same time violent abuse of Catholics and their beliefs, and threatened the regent with "torment and pain everlasting", if she did not act on his counsel. Mary seems to have treated the effusion with silent contempt, which Knox resented bitterly; but it was no doubt

with the conviction that the time was not yet come for the triumph of his cause that he returned to his ministry, in Geneva (in the summer of 1556), sending his wife and her mother thither before him. Immediately on his departure he was cited to appear before the judges in Edinburgh, condemned and outlawed (in absence) as contumacious, and publicly burnt in effigy.

Until the end of 1558 Knox remained at his post in Geneva, imbibing from Calvin all those rigid and autocratic ideas of church discipline which he was subsequently to introduce into Scotland -- England would have none of them -- and which were to be followed by over a century of unrest, persecution, and civil war. His two sons, Nathaniel and Eleazar, were born to him at Geneva, and he was joined there by Mrs. Locke and other female admirers from England and Scotland. Glencairn and other friends tried to persuade him in 1557 to come back, on the ground that persecution was diminishing, and he actually got as far as Dieppe on his journey home. Here his courage seems to have evaporated; and after ministering for a time to the Dieppe Protestants he went back to Geneva. During 1558 his pen was constantly busy: he published his letter to the queen regent with comments, and his famous "First Blast of the Trumpet against the Monstrous Regiment of Women", directed against Mary Tudor, Mary of Guise, Catherine de' Medici, and the youthful Mary Stuart, who had just married the French Dauphin. In other writings he reiterated his views that every Christian man (i.e. Protestant) had a right to slaughter every idolater (i.e. Catholic), if he got an opportunity. In a "Brief Exhortation to England" he insisted on the expulsion of all "dregs of Popery" and the introduction of the full "Kirk discipline" of Calvin and Geneva; and in his "Treatise on Predestination" he answered the "blasphemous cavillations" of an Anabaptist. The last-named work was not published until 1560.

At length, in the first days of 1559 (Queen Mary of England having been succeeded by her sister Elizabeth a few weeks previously), Knox deemed it safe or opportune to leave Geneva for Scotland. He came to Dieppe, and, finding himself refused a safe-conduct through England, travelled by sea from Dieppe to Leith, arriving on 2 May. He had already heard by letter that the Scottish Protestants were no longer in any danger. The queen regent had indeed denounced and forbidden by proclamation attacks on priests, disturbance of Catholic services, invasion of churches by lay preachers, and religious tumults in general. But she was already in the grip of deadly illness, was meditating a retirement to France, and, notwithstanding certain advices from that country, had neither the power nor the intention of organizing movement to suppress the Protestant party in the realm, which was growing daily in power and influence. St. Giles's Church in Edinburgh had been the scene of a riot, followed by the flight of the Catholic clergy. The Lords of the Congregation were practically in arms against the regent; and Knox, who had never seemed to be the least anxious for lonely martyrdom,

showed himself full of fight and courage with a stout body-guard at his back. Repairing to Dundee, he found the Protestants masters of the situation there, and going thence to Perth he preached a series of inflammatory sermons which culminated on 25 May, when the mob of that city -- angered, according to Knox, by the regent's having broken her pledge of toleration of the preachers (see however as to this, Lange, "Knox and the Reformation", Appendix A) -- sacked and partly demolished the parish church and several of the monasteries. A private letter from Knox describes these deeds of violence and outrage as done by the "brethren"; but in his "History" -- written partly for the followers of Calvin, who rebuked and condemned such works of pillage -- he ascribes them to the "rascal multitude", with no reference to their having been inspired by his own harangues or encouragement.

The Protestants, entrenched in Perth (the only fortified town in Scotland), were now in open rebellion against the regent, who advanced with her troops from Stirling. A parley with the Congregation resulted in a treaty, by which the Protestants were to be allowed complete freedom of worship, and no French troops were to be quartered in the town. Knox meanwhile moved on with his friends to St. Andrews, and, in spite of Archbishop Hamilton's threat that if he dared to preach there he should be saluted with "a dozen of culverins, whereof the most part should light upon his nose", he did preach there, with the result that the St. Andrews mob repeated the work of sack and pillage which had followed his sermons at Perth. The wreck of other great abbeys, such as Scone and Lindores, followed; the Congregation seized Stirling and marched to Edinburgh, the regent meanwhile retreating to Dunbar. Knox accompanied them to the capital, where the same scenes of devastation of churches and monasteries were repeated, and on 7 July he was chosen minister of the Edinburgh Protestants. "We meane no tumult, no alteratioun of authoritie", he wrote to one of his female devotees in Geneva, "but onlie the reformation of religioun, and suppressing of idolatrie." Knox wrote these words while actually in full revolt against the "authoritie" of the regent of the realm, with the further professed desire to prevent the lawful queen, Mary Stuart, from enjoying her hereditary crown.

On 22 July the regent and her advisers suddenly determined to march upon Edinburgh, before the Congregation could concentrate its scattered forces, and the Protestants consequently decided to come to terms, one of the articles of the treaty being that the capital was to be free to choose its own religion. The choice of the majority would certainly not have been in favour of the new doctrines, and this and other points of the agreement were openly violated by the Congregation, who left preachers in possession of the churches, and retired to Stirling. Conscious at this juncture of the immense advantage of gaining the support of England, now a Protestant kingdom, they determined to appeal to Elizabeth, and to send Knox on a mission to her powerful minister

Cecil. Knox had already written to Cecil with a letter for the queen which was more or less an apology for his fiery pamphlet, the "Monstrous Blast". He sailed from Fife to Northumberland early in August, interviewed Croft, the governor of Berwick, and finally brought back to Stirling letters from Cecil more or less favourable to the demands of the Congregation for help, but indefinite in their terms. Further correspondence, however, elicited from Sadler, Elizabeth's agent, a gift of money, which encouraged the Scotch Protestants to believe that the Queen of England was on their side. Knox in a letter to Geneva, dated 2 September, describes his labours as envoy of the Congregation, and adds that ministers are now permanently appointed to eight of the chief towns in Scotland. A few weeks later, the regent being then at Leith, which she had strongly fortified and garrisoned with French troops, the Congregation took a bold step. Encouraged by English sympathy, and still more, perhaps, by the adhesion of the powerful Earl of Arran to their cause, they proceeded to depose -- or, as Knox thought it more prudent to describe the measure, to suspend from office -- the regent in the name of the young king and queen, whose great seal was counterfeited in order to give official weight to the proclamations announcing the step. Leith was vigorously besieged, but unsuccessfully, and Knox continued to appeal energetically to England for money, troops, and military commanders. The result was that Elizabeth sent a fleet to the Firth of Forth; the Congregation, thus reinforced, renewed the siege of Leith, and the regent took refuge in Edinburgh Castle, where she died on 10 June, 1560. Knox vilified this unfortunate princess to the end, but neither contemporary opinion nor the judgment of history has accepted his verdict, or his outrageous aspersions on her moral character. A month after her death the Treaty of Edinburgh was signed by representatives of England and France, providing for the withdrawal from Scotland of the French and English troops. The Congregation held a solemn thanksgiving service at St. Giles's Church, Knox of course taking the leading part, and profiting by the occasion to prescribe from the pulpit the course which the Protestant leaders were bound to follow to secure the triumph of their cause.

That triumph was indeed now imminent. Parliament met on 1 August, Knox preaching daily to crowded audiences "speciall and vehement" harangues on the need of rebuilding the temple, in other words establishing the Protestant religion. The spirit of the assembly -- at which, by the way, the sovereign was not represented, and which was consequently not really a parliament at all -- was never in doubt. The new Confession of Faith, drawn up by Knox and his friends, was adopted word for word; the authority of the pope was abolished; the celebration of Mass was forbidden -- "under certain penalties", as one of Knox's biographers mildly remarks, the penalty for the third offence being in fact death. The formality of praying the young king and queen to ratify these enactments was gone through; but Knox boldly says that such

ratification was unnecessary -- a mere "glorious vane ceremony". The Catholic Church of Scotland was extinct, as far as human power could extinguish it, and the Protestant religion officially established. Parliament rose on 25 August, having commissioned Knox and three other ministers to draw up the plan of church-government, known as the "First Book of Discipline", which was ready by the date (20 December, 1560) of the first meeting of the newly constituted "General Assembly" of the Kirk, of which Knox was of course the most prominent member. The "Book of Discipline" was founded on the code of various Protestant bodies, more especially on the *Ordonnances* of Geneva and on the formularies of the German Church founded in London in 1550, both very familiar to Knox and both thoroughly Calvinistic in spirit. The opening words are that all doctrine contrary to the new evangel must be suppressed as "damnable to man's salvation"; and it is ordained that every home of the "ancient superstition" must be cleared out of the land. The several districts of Scotland were to be under the spiritual charge of officials known as superintendents, until such time as ministers were forthcoming for each parish; and there was provision for a comprehensive scheme of national education, elementary, secondary, and university. This plan, for which it has been customary to give all the credit to Protestantism, was devised on lines already laid down by the ancient Church; but as a matter of fact it was never carried into effect. Nor were the provisions for the diversion of the wealth of the old Church to national purposes any more effectual. Many of the Protestant nobles signed the book, but they had no idea of giving up their own share of the ecclesiastical plunder. "Converted in matter of doctrine", says Lang, "in conduct they were the most avaricious, bloody, and treacherous of men." Such as they were, they were the pillars of the new Church and the new religion.

In December, 1560, died the young King Francis II of France, "husband to our Jezebel", as he is styled by Knox, who lost his own wife, Marjorie Bowes, about the same time. The whole situation in Scotland was now changed. The Catholic earls sent Bishop John Lesley to invite the widowed queen to land in the Catholic north; but she distrusted them, not without reason, and confided rather in her Protestant half-brother, Lord James Stewart, who promised that she should be allowed the private celebration of Mass in Scotland. Mary landed at Leith on 19 August, 1561, and on the following Sunday Mass was said in her chapel at Holyrood. This was followed by protests and riots; Knox publicly declared that "one mass was more fearful to him than 10,000 armed men", and in an interview with the queen inveighed against "that Roman antichrist", denounced the Catholic Church as a harlot, compared himself to Paul and Queen Mary to Nero, and indulged in much other abuse which he reports copiously in his "History" (suppressing most of Mary's replies) and calls "reasoning". The question of the queen's privilege to have her own Catholic services became a burning one: Lord

James (now created Earl of Moray), Morton, Marischal, and other leading Protestants were on her side, Knox and most of the preachers on the other. It was suggested to refer the question to Calvin; but the lords' view was meanwhile accepted, and Mary kept the Feast of All Saints with what Knox calls "mischievous solemnity". He continued his tirades against the queen both privately and from the pulpit, sometimes reducing her to tears by his violence. In the spring of 1562 he held a public controversy on the doctrine of the Mass with Abbot Quintin Kennedy, a Benedictine of Crossraguel; and he also had a controversial correspondence with an able Catholic apologist, Ninian Winzet of Linlithgow.

Some months later Knox found himself in trouble for having summoned the "brethren" from all parts of Scotland to Edinburgh to defend -- apparently by violence, if necessary -- one Cranstoun, who was to be tried for brawling in the chapel-royal. Knox's letter was interpreted by the council as treasonable, but when brought to trial he was judged to have done nothing more than his duty in summoning the brethren in time of danger. Soon after this -- in March, 1564 -- general surprise seems to have been caused by the second marriage of Knox, his bride being a girl of sixteen, Margaret Stewart, daughter of Lord Ochiltree. He makes no mention of the fact himself in his "History". The Lords of the Congregation, in the summer of this year, publicly censured Knox for his violence in speech and demeanour against the queen, but Knox retorted with his usual references to Ahab and Jezebel, and maintained that idolaters must "die the death", and that the executioners must be the "people of God". The Lords in vain cited the opinions of Luther, Calvin, Melancthon, and other Continental Protestants as entirely opposed to Knox's views, and requested him to write and ascertain their judgment on the questions at issue. Knox flatly refused to write to "Mr. Calvin and the learned of other Kirks", and, as he always produced Scriptural texts to back up his opinions, the Lords were silenced if not convinced. A year later he was again in conflict with the council in consequence of a vehement attack he had made from the pulpit on Mary and the young king-consort, Darnley, in their presence, about a month after their marriage. He was formally suspended from preaching, but he seems to have disregarded the prohibition, remarking that if the Church (not the council) commanded him to abstain he would obey "so far as the Word of God would permit"; in other words, he would obey even the Church only so far as he himself thought fit. This particular sermon, which he printed with a preface, is the only extant specimen of his public eloquence; it is extremely long and dull to read, whatever may have been its effect when delivered.

The situation in Scotland was now, from the point of view of Knox and his friends, a gloomy one. Moray and the other lords who had protested against Mary's marriage to Darnley were now in exile; all hope of the queen's conversion to Protestantism was

at an end; and her Catholic secretary Rizzio was high in her confidence, indeed her chief adviser. Whether Knox was actually privy to the foul murder of Rizzio before the queen's eyes on 9 March, 1566, is a matter of doubt; but his own statement that "the act was most just and worthy of all praise" shows that his subsequent approval was beyond any doubt whatever. He thought it well at this juncture to leave Edinburgh for a time, and retired to his friends in Ayrshire, where he busied himself with the writing of his "History". In December he received from the General Assembly leave of absence from Scotland for six months, so that he was not a witness of the events of the first half of 1567, which included the murder of Darnley, the abduction of Mary by Bothwell, and her marriage to him on 15 May, 1567. The queen was already, after the disaster of Carberry Hill, a prisoner at Lochleven, when Knox re-appeared at Edinburgh and at once resumed, in spite of the disuasion of Throgmorton, the English Ambassador, his pulpit invectives against the sovereign, and his denunciations of the national alliance with France. On 29 July Knox went to Stirling to preach at the coronation of the young king, James VI, when he protested against the rite of unction as a relic of popery. The appointment of Moray to the regency brought him again into close association with Knox, who, however, after the fall of the queen, his great antagonist, never seems to have regained his former prominence in the country. "I live as a man already dead from all civil affairs", he wrote a little later to Moray's agent in England. "Foolish Scotland", he said on another occasion, "hath disobeyed God by sparing the queen", and he seemed constantly harassed and haunted by a dread of her restoration. Her escape from Lochleven appeared to justify his worst fears, but a fortnight later she was hopelessly defeated at Langside, and was a fugitive to England. Henceforth Knox's declining forces were devoted to his ministerial work, which he seemst to have carried on with many intervals of weariness and depression. "With his one foot in the grave", as he describes himself, the assassination of Moray in January, 1569, was a great blow to him. He preached the Regent's funeral sermon in St. Giles's Church and, according to one of his admirers, "moved three thousand persons to shed tears for the loss of such a good and godlie governor". The shock of this event doubtless affected his health, and he was struck by apoplexy in the autumn, and never entirely recovered.

Knox continued to preach in his church in Edinburgh, but with the nobles, Protestant as well as Catholic, many of them his own former friends, in league for the queen's restoration, he was no longer at home or at ease in the capital; and in the spring of 1571 he retired to St. Andrews, where he remained for fifteen months, continuing to write, and preaching occasionally, notwithstanding his infirmities, with his old fire and vehemence. In August, 1572, Mary's adherents having left Edinburgh, Knox was persuaded to return thither. The news of the massacre of St. Bartholomew had just reached Scotland, and Knox thundered from his pulpit (to which he had almost to be

carried), in the presence of the French ambassador, denunciations of "that cruel murderer and false traitor, the King of France". On 9 November he took part in the induction-services of Mr. Lawson as minister of St. Giles's in his place; and fifteen days later, on 24 November, 1572, he died in his house at Edinburgh. Contemporary narratives of his last illness and death (by Richard Bannatyne and Thomas Smeton) are printed by Laing in his edition of Knox's "Works" (vol. VI). At his burial, two days later, the Regent Morton uttered the well-known words, "Here lieth a man who in his life never feared the face of man." The facts of his life perhaps hardly justify these laudatory words. "Knox", says his learned and sympathetic biographer and editor, Dr. Laing, "cannot be said to have possessed the impetuous and heroic boldness of a Luther.... On more than one occasion he displayed a timidity or shrinking from danger scarcely to have been expected from one who boasted of his willingness to suffer death in his master's cause." On his own showing he was courageous enough in his personal encounters with his unfortunate queen; but, according to another of his Protestant biographers, "he was most valiant when he had armed men at his back, and the popular idea of his personal courage, said to have been expressed by the Regent Morton, is entirely erroneous".

As to Knox's religion, it is sufficient to say, without questioning the sincerity of his convictions, that the reaction from the Catholicism of his youth seems to have landed him outside the pale of Christianity altogether. Permeated with the spirit of the Old Testament and with the gloomy austerity of the ancient prophets, he displays neither in his voluminous writings nor in the record of his public acts the slightest recognition of the teachings of the Gospel, or of the gentle, mild, and forgiving character of the Christian dispensation. Genial, amiable, and kind-hearted he may have been in private life, though it is difficult to see from what premises his panegyrists deduce his possession of those qualities; but the ferocity and unrestrained violence of his public utterances stand out, even in the rude and lawless age in which he lived, as surpassing almost everything recorded of his contemporaries, even those most closely in sympathy with his political and ecclesiastical views. It is to his credit that he died, as he had lived, a poor man, and that he never enriched himself with the spoils of the Church which he had abandoned -- a trait in which he contrasts singularly with the Protestant lords and lairds who were his friends and adherents. Of his ability and his power of influencing those among whom he lived and laboured, there is no room to doubt. His gifts as a speaker and a preacher we have to take on the evidence of his contemporaries, whose testimony there is no need to question; of his command of his native tongue we have abundant proof in his writings, in particular in his "History", by far the most remarkable specimen of the vernacular Scots of the sixteenth century

which has come down to us. The best edition of it is in his collected "Works", edited by David Laing in six volumes.

The best-known likeness of Knox (of whom no contemporary portrait exists) is the woodcut of him in Beza's "Icones", published at Geneva in 1580, and often since reproduced. Lord Torphichen possesses a portrait of him painted a century later, probably from Beza's. The so-called Somerville portrait, maintained by Carlyle to be the only authentic likeness of Knox, apparently represents a divine of the seventeenth century. Knox was survived by his widow, who married again, and by two sons of his first marriage (who both died childless) and three daughters of his second. Descendants of his youngest daughter still exist.

D.O. Hunter-Blair

Franz Quirin von Kober

Franz Quirin von Kober

German canonist and pedagogist, b. of simple countryfolk on 6 March, 1821, at Warthausen, Biberach, Würtemberg; d. at Tübingen, 25 January, 1897. He first attended the Latin school in the neighbouring town of Biberach, and subsequently, in accordance with the course prescribed for Catholic theologians of the Diocese of Rottenburg, entered the preparatory seminary at Ethigen on the Danube. From 1840 to 1844 he pursued his studies in the seminary (Wilhelmsstift) of Tübingen, and on 4 September, 1845, was ordained priest in Rottenberg. After only half a year's activity in the cure of souls at Ulm, Franz Kober became a tutor in seminary at Tübingen, and lectured on philology and the Pautine Epistles. From 1848 he taught canon law, to counteract the evil influence of the Josephinist professor Warnkonig, of the faculty of law, on which Catholic theological students even in Würtemberg had depended for the training in canon law according to a custom existing in Austria since Joseph II. On 28 January, 1851, Kober became professor extraordinary in the faculty of Catholic theology,

teaching pedagogy, didactics, and the Pauline Epistles. He was appointed professor ordinary of canon law and pedagogy on 8 September, 1857, having been professor extraordinary since 19 April, 1853. As such he wrote with good historico-legal method some excellent works: "Der Kirchenbann" (1857); "Die Suspension der Kirchendiener" (1862); "Die Deposition und Degradation" (1867). He also treated various ecclesiastico-criminal subjects ("Das Interdikt"; "Die körperliche Züchtigung als kirchliches Strafmittel gegen Kleriker und Mönche", "Die Gefängnisstrafe gegen Kleriker und Mönche"; "Die Geldstrafen im Kirchenrecht") in a series of essays, the majority being lengthy treatises, published in the "Archiv für katholisches Kirchenrecht" and especially in the "Theologische Quartalschrift" of Tübingen. In the last-named periodical appeared other essays on canon law ("Der Ursprung und die rechtliche Stellung der Generalkvikare"; "Der Einfluss der Kirche und ihrer Gesetzgebung auf Gesittung, Humanität und Zivilisation", "Medizin und Kirchenrecht"; "Die Residenz-pflicht der Kirchendiener bei feindlichen Verfolgungen und ansteckenden Krankheiten") and many book-reviews. Kober was also a frequent contributor to the first and second edition of the Freiburg "Kirchenlexikon".

JOHANNES BAPTIST SÄGMÜLLER

Anthony Koberger

Anthony Koberger

(KOBURGER, COBERGER).

German printer, publisher, and bookseller, b. about 1445; d. at Nuremberg, 3 October, 1513. He was descended from an old family of skilful artisans who had belonged to the town council as early as 1350, and was a goldsmith before he became a printer. After the completion of the first dated volume (Alcinous, 24 Nov., 1472), Koberger's printing-house quickly developed an activity reaching out in all directions, and about 200 works appeared before the year 1500, mostly in folio form and some in bindings. In 1480 it had already outstripped Schöffer of Mainz, and, until practically the end of the fifteenth century, was the most important printing-house in the world. From a chance statement we learn that Koberger used twenty-four presses a day for his printing and employed over a hundred workmen. His publications demonstrate the generous plan on which his work was done. The paper will still outlast centuries. The type is almost entirely cut in Gothic form, is strong and carefully designed, and, in spite of its narrowness, gives a good, readable round script, which was later very widely used. An *Antiqua* type, resembling the Venetian, first appeared in 1492. The graceful Bible type of 1483, which is a facsimile of the writing used in fifteenth-century docu-

ments, deserves special mentions. The beauty of the letterpress is greatly enhanced by tasteful arrangement of the sentences, often a difficult matter (for example in "Canon Law", 1489-83; "Boethius", 1486). Koberger took no less pains to have his print clear and black, using a newly-cast fount, as well as to have the books lucidly subdivided and decorated by the rubricator and illuminator. The employment of woodcuts in the Bible of 1483, which was embellished with 109 vignettes, marks a new epoch in the history of printing, and opened the way for such works as Schedel's "Weltchronik" (1493), a book which, with its 2000 woodcuts from the drawings of the artists Wolgemut and Pleldenwurf, was almost too profusely decorated. This latter, the greatest illustrated work of the century, greatly influenced the development of the woodcut, and especially the work of Dürer, who was drawn towards Koberger, not only as the godfather of the latter, but also by bonds of personal friendship. Towards the end of the century, the business of the printing-house greatly diminished, the last proof appearing in 1504. Publication by contract occupied a prominent place in Koberger's enterprises; this, together with the war, pestilence, and other disturbances, was doubtlessly the chief cause of the dissolution of the printing-house. For some years previously he had had printing done for him at Basle and Strasburg, and from 1510 to 1525 the presses of Nuremberg, Hagenau, Strasburg, Basle, Paris and Lyons were busily engaged with his work.

After Anthony Koberger's death (1513), his cousin Hans Koberger, some ten years his junior took charge of the business as trustee for Anthony's children. He, too, was a business man of great ability and under Anthony's supervision had from the year 1480 displayed great business activity, especially in foreign countries. He took charge of the business trader the most difficult of partnership relations until the children were of age. The eldest son Anthony, a way-ward youth, died in 1532; the second, Hans the younger, was actively engaged in the business of the house until his death in 1552. The publishing-house and the retail book trade were gradually given up before 1532, but the hereditary occupation of goldsmith and jeweller, which Anthony had never abandoned still for a long period engaged the attentions of the family. Thus, when the family became extinct in 1629, it still possessed extensive landed property. As a printer, Koberger had built up a wholesale trade such as was seldom commanded before the discovery of the steam press. Yet he is more renowned as the founder of a wholesale publishing-house, handling all the scientific literature of his time, and dominating the book trade of the world. On the same large scale this "king of booksellers" had developed into a valuable asset of his house an honourable hawking trade. The scholarly Latin literature of the Middle Ages of all tendencies formed the main basis of his world-wide commerce. Of great merit are his special editions of the classical literature of the Fathers of the Church. His editions of the Bible are also very important; before the

year 1500 fifteen different editions appeared, while the whole output of the house exceeded thirty folio editions, including some in binding. The Kobergers participated for a short time the sale of the Reformation literature, and had some dealings with Luther in 1525. But further than this they took no part in the popular agitation. They remained true to the old principles of their world-renowned house, and devoted themselves to the sale of scientific works.

HASE, *Die Koberger* (2nd ed., Leipzig, 1885).

HEINRICH WILHELM WALLAU

Andreas Kobler

Andreas Kobler

An historian, b. at Muhldorf in Bavaria, 22 June, 1816; d. at Klagenfurt, 15 November, 1892. He made his preliminary studies at Landshut, and studied theology at Munich, where Mohler and Gorres appear to have awakened in the young theologian his preference for the study of history. After his ordination (1840) he was a curate on the mission for four years, after which he entered the novitiate of the Society of Jesus at Graz. Later he was sent to America on account of the disturbances of 1848 in his own country, and was attached to the New York mission for five years, being occupied mostly as professor of mathematics. Returning to Europe, he taught at Presburg until 1857, where he was sent to Innsbruck as professor of church history. He held this chair for fourteen years, and was rector of the college of Innsbruck from 1861 to 1866. In 1871 he became once more professor of mathematics at Linz, and for two years rector of the college there. Returning then to Innsbruck, he dedicated nine years to literary work, was appointed superior (1887) of the seminary at Klagenfurt, where he was still vigorous and active in the pulpit when death overtook him in his seventy-sixth year. His literary works are for the most part on historical subjects. Besides contributions to periodicals, Kobler published: "Florian Bauke, ein Jesuit in Paraguay" (1870); "Die Aufhebung der Gesellschaft Jesu" (1873); "Eine innere Klosterschule im IX. Jahrhundert" (1876); "Die Märtyrer und Bekenner der Gesellschaft Jesu in England während der Jahre 1550-1681" (1886); "De Maistre, fünf Briefe über den öffentlichen Unterricht in Russland" (from the French); "Studien über die Klöster des Mittelalters" (from the English, 1867); "Katholisches Leben im Mittelalter" (from Kenelm Digby's "Mores Catholici", 1887-9).

BULOW, *100 Lebensbilder aus der osterr.-ungar. Provinz der Gesellschaft Jesu* (Vienna, 1902); HOFMANN, *Das Nikolaiheus in Innsbruck einst und jetzt* (Innsbruck, 1908).

N. SCHEID

Jan Kochanowski

Jan Kochanowski

Born at Sycyna, 1530, died at Lublin, 22 August, 1584. He was inscribed in 1544 as a student in Crakow University but left on account of the plague. We find him studying at Padua in 1552 under the best instructors. There he wrote many of his Latin elegies in imitation of Tibullus and Propertius, these early works have little value. Thence he travelled to France, where he lived till his mother's death in 1557, writing more and better Latin poetry. On his return to Poland he received his inheritance of Czarnolas, and was for some time a courtier, first of some great lords, then at the Royal Court. During this period he produced, together with his best Latin elegies, his Polish songs and *Fraszki* (trifles). The former are the first really inspired poetry that appeared in Poland. The *Fraszki*, comical and witty but sometimes coarse, are very instructive, showing what social life was at that time. His "Zgoda" (Concord) and the "Satyr" are political in subject. Weary at last of court life, he retired to his estate. There he wrote "Proporzec" (The Standard) and "Wrozhi" (Omens — in prose). This latter was a pamphlet warning Poles against future dangers and dissensions. He began his metrical translation of the Psalms, wrote more lyrics in Polish and Latin, and the poems "Dziewoslab" and "Sobotka" (description of certain old Polish customs). He is believed to have married about 1574. After Henry of Valois's flight from Poland, Kochanowski wrote two short Latin poems: the ode, "In Conventu Stesicensi", and "Gallo Crocitanti", the latter being a reply to an attack on Poland by the French poet, Philip Desportes. King Bathori was Kochanowski's hero, and most of his verses henceforth are full of political allusions to his reign. His "Odprawaposlow" (The Envoys Dismissed), dramatic in form, urged the nobles to fight Russia. In 1579 his "Psalter" was complete, written in a most beautiful style, and in 1580 appeared his last and best work, the "Treny" (Lamentations), after his little daughter's death. Kochanowski is the first true poet of his nation in point of time, and first, too in excellence until Mickiewicz. The representative of the Polish chivalry and civilization of his period for his fellow-countrymen he is truly great, having created poetry and made it a gift to his nation — which none but the greatest could do. In religion though influenced by Protestantism and the humanistic trend, he never ceased to be a Catholic, even when attacking the morals of priests and popes. He distinctly declares that disunion in religion would imperil the country, and bade innovators "go to Trent".

GACKI, O Rodzinie Jan Kochanowski (of the family of J.K.) (Warsaw, 1869); PEZYBOROWSKI, Zycie J.K. (life of J.K.) (Warsaw, 1857); MEHRING, Zyciorys J.K. (sketch of J.K.'s life) (Warsaw, 1900); PLEENKIEWICZ, Life of J.K. in complete edition

S. TARNOWSKI

Vespasian Kochowski

Vespasian Kochowski

Born at Sandomir?, 1633; died at Krakow, 1699. He received his education at the Jesuit College, Sandomir, served in the army, and then spent the rest of his life on his estate. Sobieski valued him so highly as an historian that he took him on his famous expedition to Vienna, the literary result of which was the "Commentarius de bello adversus Turcas". This and his other Latin chronicles are the best of his time and country. The collection of his short poems, entitled "Busy Idleness", contains many beautiful verses, and many more that are curious: the subjects range from religion to very coarse fun. There are also love poems, pleasing in their simplicity and nobility of sentiment; there are beautiful lamentations on his brother's death; and there are satirical poems full of wit and humour. Of all later poets he reminds us most of Kochanowski, though the resemblance is but distant. But he is far more than Kochanowski a writer of what may be called historical poetry, and his pieces in this style are perhaps the finest he has written. From the death of Wladislaw IV till the election of Sobieski, every event of note is celebrated by a separate poem. What strikes one most is the religiously patriotic tone of his poetry. His "Psalmody", a work of great and genial originality, is distinguished by this tone. Some psalms are merely pious; but in others his prayer falls into a description of the war with the Turks, and mingles therewith such outbursts of gratitude to God for victory, that one comes to feel personally more attached to this poet than to others more famous than he was. The Biblical form adapted to secular things constitutes a point of resemblance between Kochowski's poetry and the creations of several modern poets (Mickiewicz's "Book of the Pilgrimage"; Slowacki's "Anhelli"). "Vienna saved by the Act of God" has fine passages and even a certain epic talent, but is marred by want of artistic finish, proportion, and harmony. The same may be said of "The Stone of Testimony", a poem written to defend Lubomirski. His purely religious poems, "Christ Suffering" and the "Virgin's Garden" are distinctly inferior.

CZUBEK, *Life of Vesp. Z. Kochowa Kochowski* in *Transactions of the Krakow Acad. Of Sciences, philolog. dept.*, XXXII; TARNOWSKI, *V. Kochowski na tle wspolczesnem* (Kochowski from a contemporary standpoint) (Lemberg, 1908).

S. TARNOWSKI

Ignaz Kogler

Ignaz Kögler

(Called LAI in Chinese).

Along with Father Adam Schall (q.v.) the most important of the fifty German Jesuits who between 1650 and 1750 worked in the old Chinese missions. Born 11 May, 1680, at Landsberg in Bavaria; died at Peking, 30 March, 1746. He entered the Society of Jesus on 4 Oct., 1696, and taught mathematics and Hebrew from 1712 to 1714 in the University of Ingolstadt [cf. Mederer, "Annal. acad. Ingolstadt.", III, 130 sq.; Romstöck, "Die Jesuitennullen Prantl's" (Eichstätt, 1898), 178-84], and went to China in 1715. On account of his extraordinary and wide learning he enjoyed great consideration at the imperial court, and held the office of president of the mathematical astronomical tribunal for thirty years. He was a mandarin of the second class, and was even from 1731 a member of the supreme court of equity (*Li-pu*), a position which had never before been held by a foreigner ("Welt-Bott", No. 676). In accepting these positions, however, he refused the stipends attached to them. Father August von Hallerstein, his co-operator and successor, considers him "one of the most cultivated minds that ever came into these countries" (ibid., No. 587). Kögler carried on a brisk scientific correspondence with a number of European scholars, such as Eusebius Amort and T. S. Bayer, the Orientalist, sending to the lastnamed many valuable contributions for his "Museum Sinicum" (St. Petersburg, 1730) (cf. "Miscellanea Berolinensia", 1737, pp. 185, 189 sqq.; Gottfr. von Murr, "Journal", VII, 240 sqq.; IX, 81 sq.; "Neues Journal", I, 147 sqq.; II, 303, sqq.). He was twice visitor of the mission, and provincial of the Chinese and Japanese province, and, during the persecution which began under Emperor Yung Cheng, he was the main support of the suffering mission, which, through his influence at court, he so cleverly and bravely protected, and which so deeply deplored his death.

Manuscript Letters in the Vienna State Archives, Geistl. Angelegenheiten No. 419 IV; Correspondence with Amort and numerous other letters, part in Munich State Library, MSS lat., t. I, p. 1 no. 1396-1407; part in Reichs-Archiv, Jesuitica in genere, NN. 278-81. Printed letters in Welt-Bott, nn. 157, 162, 190, 196, 198, 202, 228, 575, 578, 669; LIPOWSKY, Geschichte der Jesuiten in Bayern (Munich, 1816), App. nn. 3 and 4; VON LAIMBECKHOVEN, Reise-Beschreibung (Vienna, 1740), 47. The catalogue of Kögler's astronomical, mathematical, and historical writings is given in SOMMERVOGEL, Bibl. des crivains de 1a c. de J. For biographical information consult PLATZWEG, Lebensbilder der deutschen Jesuiten (Paderborn, 1882), 272; VON

RICHTHOFEN, China, I (Berlin, 1877), 688; Welt-Bott passim; HUONDER Deutsche Jesuitenmission re des 17. u. 18. Jahrh. (Freiburg im Br., 1899), 189.

A. HUONDER

Antony Kohlmann

Antony Kohlmann

Educator and missionary, b. 13 July, 1771, at Kaiserberg, Alsace; d. at Rome, 11 April, 1836. He is to be ranked among the lights of the restored Society of Jesus, and among its most distinguished members in America, where he spent nearly a quarter of a century of his laborious life. At an early age he was compelled by the troubles of the French Revolution to go to live in Switzerland, where at the college of Fribourg he completed his theological studies and was ordained priest. Soon after, in 1796, he joined the Congregation of the Fathers of the Sacred Heart. With them he laboured zealously for two years in Austria and Italy as a military chaplain. From Italy he was sent to Dillingen in Bavaria,, as director of an ecclesiastical seminary, then to Berlin, and next to Amsterdam to direct a college established by the Fathers of the Faith of Jesus, with whom the Congregation of the Sacred Heart had united (11 April, 1799). The Society of Jesus in Russia having been recognized (1801) by Pope Pius VII, Father Kohlmann joined it and entered the novitiate at Dunébourg on 21 June, 1803. A year later, in response to a call for additional workers in the United States, he was sent to Georgetown, D.C., where he was made assistant to the master of novices, and went on missionary tours to the several German congregations in Pennsylvania and Maryland.

Affairs in the Church in New York having gone badly, Bishop Carroll picked him out as the person best qualified to introduce the needed reforms and to restore order, and with his fellow Jesuits, Benedict Fenwick and four scholastics, James Wallace, Michael White, James Redmond, and Adam Marshall, he took charge there in October, 1808. It was a time of great commercial depression in the city owing to the results of the Embargo Act of 22 December, 1807. The Catholic population, he states in a letter written on 8 November, 1808, consisted "of Irish, some hundreds of French and as many Germans; in all according to the common estimation of 14,000 souls". Such progress was made under his direction that the cornerstone of a new church, old St. Patrick's Cathedral, the second church erected in New York City, was laid on 8 June, 1809. He started a classical school called the New York Literary Institution, which he carried on successfully for several years in what was then a suburban village but is now the site of St. Patrick's Cathedral on Fifth Avenue. In April, 1812, he also started a school for girls in the same neighbourhood, in charge of Ursuline nuns who came at his instance for that purpose from their convent at Cork, Ireland.

About the same time Father Kohlmann became the central figure in a lawsuit that excited national interest. He had been instrumental in having stolen goods restored to a man, who demanded in court that the priest should reveal from whom he had received them. Father Kohlmann refused to do this, on the ground that his information had been received under the seal of confession. The case was taken before the Court of General Sessions, where after a trial the decision rendered by De Witt Clinton was given in his favour. Its principle was later embodied in the State law passed on 10 December, 1828, which enacted that "No minister of the Gospel or priest of any denomination whatsoever shall be allowed to disclose any confession made to him in his professional character in the course of discipline enjoined by the rules or practices of such denomination." To a report of the case when published Father Kohlmann added an exposition of the teachings of the Church on the Sacrament of Penance. (Sampson, "The Catholic Question in America", appendix, New York, 1813.) The book excited a long and vigorous controversy with a number of Protestant ministers, and was followed in 1821 by another learned work, "Unitarianism, Theologically and Philosophically considered", in which Father Kohlmann replied to the assertions of Dr. Jared Sparks and other Unitarian leaders.

New York had no bishop as yet, the first appointed having died in Italy before he reached his see, and Father Kohlmann governed as administrator for several years. In 1815, expecting the early arrival of the second bishop (Connolly), he returned to the college of his order at Georgetown, D. C., as master of novices, and in 1817 became superior. In 1824, when Leo XII restored the Gregorian University to the direction of the Society of Jesus, Father Kohlmann was summoned to Rome to take the chair of theology, which he filled for five years. One of his pupils then was the subsequent Pope Leo XIII; another became later Archbishop of Dublin, and the first Irish cardinal (Paul Cullen). Leo XII and Gregory XVI both held Father Kohlmann in the highest esteem, and had him attached as consultor to the staffs of the College of Cardinals and several of the important Congregations, including that of Extraordinary Ecclesiastical Affairs, of Bishops and Regulars, and of the Inquisition. The last part of his life he spent as a confessor in the church of the Gesù, where during the Lenten season of 1836 he overtaxed himself and brought on an attack of pneumonia that ended his career.

THOMAS F. MEEHAN

Marian Wolfgang Koller

Marian Wolfgang Koller

Scientist and educator, b. at Feistritz in Carniola, Austria, 31 October, 1792; d. of cholera at Vienna, 19 September, 1866. His education was very thorough; after studying the rudiments at Feistritz he went to Laibach, where he spent nine years (1802-11) in classical, philosophical, and scientific studies, and completed his school life by a course in higher mathematics at Vienna. From 1814 to 1816 he acted as private tutor in a family at Steinbach, and whilst here he was so attracted by the life and work of the Benedictines of Kremsmünster that he finally entered their novitiate on 5 October, 1816, taking the name Marian in place of his baptismal name of Wolfgang. He was ordained priest on 18 August, 1821, and after three years of very successful work in the parish of Sippachzell he was recalled to Kremsmünster to teach natural history and physics. In 1830 he was relieved of the professorship of natural history and appointed director of the astronomical observatory, and during the next seventeen years by his indefatigable labours not only preserved but increased the high repute of the observatory throughout Austria. He continued also to teach physics until 1839, when he was given general charge of the student body. His administrative abilities were so great as to attract the attention of the authorities at Vienna whither he was called in 1847. From this time on he was employed in high offices either in the University of Vienna or in the Department of Education, which was at that time undergoing a process of reconstruction. All matters pertaining to the *Realschulen*, and to the polytechnic, nautical, and astronomical institutions, were placed under his immediate care, and, as a mark of appreciation for his share in the thorough organization of the *Realschulen*, the emperor bestowed on him the Cross of the Order of Leopold on 27 May, 1859. In 1848 he was elected member of the Imperial Academy of Sciences, and always took a very active part in its proceedings. He was also an active writer, and contributed to various scientific periodicals many articles on astronomy, physics and meteorology. To his high intellectual abilities was added the charm of a genial character, and he thus won not only the esteem but also the affection of those with whom he came into personal contact. His principal work is the "Berechnung der periodischen Naturerscheinungen", published in the "Wiener Denkschrift" (1850).

EDWARD C. PHILLIPS

Stanislaus Konarski

Stanislaus Konarski

Born in 1700; died in 1773. This great reformer of Polish schools was a Piarist who, during a visit to Rome after his ordination, received there the first idea of his life's mission. Returning to Poland through France and Germany (whose systems of education he studied on his way), and at first unsuccessful in his plans, he set to compiling the "Volumina Legum", the first volume appearing in 1732. About the end of Augustus II's reign, and during the interregnum which followed, he wrote much in favour of Stanislaus Leszczyński, and, subsequently travelling in the Netherlands and in France, stayed for a time at the exiled king's court. Here he became convinced that reform in politics must be preceded by reform in education, and, returning home in 1738, he attempted to change the subject-matter and methods of education in Poland. Good school-books and teachers were necessary; the latter he tried to train himself as "Magister novitiorum" at Rzeszów college, and then sent them either to be tutors of young noblemen or to study abroad at his own cost. In 1740 he opened a *collegium nobilium* at Warsaw, a most important experiment. In the first year he had but one pupil, in the second there were more than ten, while in the third he had not room for all who came. The teachers he had instructed now began to help him in writing school-books, etc. In 1754 he built a college and obtained from Benedict XIV a change in the rule of the order: henceforth every Piarist was to be a teacher. There were soon as many schools as Piarist convents, and education was no longer a privilege of the nobility alone. The classics, history and geography, natural science, philosophy, Roman and Polish law, were taught, together with the modern languages; and for the first time the Polish tongue was taught as a separate subject. Mental, rather than purely mnemonic, work was encouraged; moral education was insisted upon; emulation succeeded to fear; self-sacrifice, honour, patriotism were inculcated as the duties of a citizen. Konarski had found theatricals in use; he maintained the custom, thinking these performances might become very instructive, had Racine and Corneille performed, and himself wrote a tragedy, "Epaminondas". He also introduced discussions and debating societies for advanced pupils. Together with this, he laboured to reform style in Poland, wrote "De emendandis eloquenti vitiis", and attacked the bad taste prevalent at the time. The Piarist schools succeeded so well that all others were obliged to follow his reform. Konarski was subjected to envious attacks, and the Papal nuncio, Durini, suspected his orthodoxy. He cleared himself by his book, "De religione honestorum hominum".

Having effected a complete reformation in education, he returned to politics. From 1760 to 1763 appeared his "Effective Way of Deliberating", which proved that the right

of one member to veto the proceedings of the whole Diet had never been a law, but an evil custom, and showed from the procedure of other parliaments that a working majority was sufficient. The impression made by this work was immense, and even the most bigoted partisans of the veto were convinced. Thenceforward this custom was doomed-in itself a great step forward and a preliminary to the constitution of the Third of May. But the book contains many other valuable ideas. His style is clear, calm, eloquent, rarely passionate. He did much for the Piarist publications (v.g. the "Diplomatic Codex"), and the "Volumina Legum" is his work. A great admirer of French civilization and taste -- which, however, were not without danger in their tendencies, as was subsequently seen -- he was also the last Latin writer in Poland; his "Opera Lyrica" (1767) are perfect in style and diction. King Stanislaus Augustus caused a medal to be struck in his honour, with the well-merited inscription, "Sapere auso".

S. TARNOWSKI

Joseph König

Joseph König

Theologian and exegete, born at Hausen on the Aach, District of Hegau, Grand Duchy of Baden, 7 Sept., 1819; died at Freiburg im Breisgau, 22 June, 1900. He was ordained to the priesthood in 1845. In 1847 König was *privatdozent*, in 1854 extraordinary, and from 1857 to 1894 ordinary, professor of Old Testament literature and exegesis at the University of Freiburg. On the expiration of this term he resigned his professorship. König's exegetical writings include: "Die Unsterblichkeitsidee im Buche Job" (1855); "Die Theologie der Psalmen" (1857), regarded by many as his ablest work; "Das alttest. Königtum" (programme, 1863); "Alter u. Entstehung des Pentateuchs" (pro-rectoral discourse, 1884). The editorship of the "Freiburger Diözesan-Archiv" was entrusted to König, and his period of office witnessed many notable contributions to the history of the great abbeys and civilization centres of Reichenau, St. Gall, and Fulda, several of which were from his own pen. He was highly commended for research work in diocesan history, but it is chiefly in connection with the University of Freiburg, to the history of which institution König contributed many notable studies (see e.g. "Freiburger Diözesan-Archiv", XXI and XXII), that he is remembered. During the years 1885 to 1889 König's activity was centred mainly on the "Necrologium Frib.", a record of the period 1827-87.

LAUCHERT in BUCHBERGER Kirchliches Handlex., s.v.; HERDER, Konversations-Lexikon, s.v. König (10); Freiburger Diözesan-Archiv, XXVIII (Freiburg im Br., 1900), v-xvi.

P.J. MACAULEY

Diocese of Koniggratz

Diocese of Königgrätz

(REGINAE HRADECENSIS).

This Bohemian see owes its origin to Emperor Ferdinand III, who, soon after the creation of the Diocese of Leitmeritz (q.v.), decided to establish another to replace that of Leitomischl, which had been founded in 1344 but had disappeared during the Hussite wars. Through the mediation of Cardinal Ernst von Harrach, Archbishop of Prague, he obtained from Countess Anna Eusebia von Harrach the domain of Chrast and the manor of Auretitz in the district of Chrudim, and gave them to the new diocese. Alexander VII's Bull of erection is dated 10 November, 1664; Matth us Ferdinand Zoubek von Bilenberg, abbot of the Benedictine monastery of St. Nikolaus at Prague, was appointed first bishop. The new diocese embraced at first only the old district (*Kreis*) of Königgrätz, which, however, included the subsequently formed district of Bydzow with the exception of two parishes. In 1784, during the reign of Joseph II, the diocese received its present boundaries by the addition of the two districts of Chrudim and Czaslau, separated for this purpose from the Archdiocese of Prague. Among the bishops of Königgrätz worthy of special mention are: Johannes Adamus, Count Wratislaw von Mitrovic (1710-21), later Archbishop of Prague; Joseph Adam von Arco (1776-80); Aloys Joseph, Count Krakovsk von Kolowrat (1812-30), d. 1833 as Archbishop of Prague; Karl Borrom us Hanly von Kirchtreu (1831-74). Joseph Johannes Hais (1875-92), and Eduard Johannes Nepomuk Brynych (1892-1902) performed valuable services by their devotion to the training of the clergy, the development of pious associations, and the erection of churches. The present bishop is Josephus Doubrava (b. 29 February, 1852; consecrated 29 June, 1903).

Statistics

The diocese is divided into 32 vicariates, and includes 1 *curatia canonicalis* (cure of souls combined with jurisdiction), 2 provostships, 3 archdeaneries, 38 deaneries, 404 parishes served by secular priests, 16 parishes served by members of orders, 10 other benefices, 11 chaplaincies in noble families, 18 chaplaincies attached to foundations. At the close of 1909 the secular priests numbered 998, the regular 83. The diocese contains 1,476,942 Catholics, 50,037 non-Catholic Christians, and 11,372 Jews. The great majority of the inhabitants are Czechs. Of the vicariates 16 are entirely Czech, 3 entirely German, while in 13 the population is partly German and partly Czech. Three-quarters of the parishes are wholly Czech, over one-fifth wholly German, the rest include both German and Czech Catholics. The great majority of the secular clergy are Czechs, who minister even in parishes that are purely German, owing to the notable

lack of German priests. This latter phenomenon is to be explained partly by the fact that the Liberal tendencies long prevalent in Bohemia have influenced German students against the priestly life; partly by the material conditions of the German parishes, which, being mainly in the mountains and far apart, repel German candidates for the priesthood. The cathedral chapter consists of the dean, who is also vicar-general, 7 regular and 6 honorary canons; the episcopal consistory is composed of the dean and 9 councillors. The ecclesiastical educational institutions in the diocese are: a seminary for priests, founded in 1802 and connected with the theological institute (1909): 6 professors, 3 tutors, 75 students; a seminary for boys, opened in 1860, with at present 142 pupils; the gymnasium of the Benedictine Abbey of Braunau. The religious orders conduct 10 institutions for the education and training of girls; 7 boarding-schools for girls; two training colleges for female teachers, and 25 day nurseries and kindergartens.

At the close of 1909, the religious orders and congregations for men in the diocese were: Premonstratensians at Seelau, 18 priests and 6 clerics; Benedictines at Braunau, 40 priests; Jesuits, 3 fathers and 1 brother; Redemptorists, 8 priests and 7 brothers; Augustinians, 2 priests; Franciscans, 3 priests and 2 brothers; Capuchins, 2 monasteries with 5 priests and 4 brothers; Brothers of Mercy, 2 houses with 3 priests and 11 brothers; Piarists, 1 priest. At the same date the religious orders and congregations for women were: Ursulines, 3 convents with 98 sisters; Redemptorist Nuns, 3 sisters; Sisters of St. Francis, 13 convents with 187 sisters; Sisters of Notre-Dame, 26 houses with 143 sisters; Sisters of Mercy of St. Charles Borromeo, 7 convents with 40 sisters; Sisters of Mercy of the Holy Cross, 3 convents with 16 sisters; Sisters of the Most Holy Sacrament, 2 convents with 13 sisters; Sisters of St. Hedwig, 4 houses with 20 sisters. The diocese has many institutions for alleviating distress and suffering, also many well-endowed charitable foundations. Special mention should be made of the diocesan Institute for the Deaf and Dumb (the *Rudolphinum*) at Königgrätz; the Asylum for the Poor at Kukus (founded in 1711); 60 hospitals and homes for the poor, and 10 orphan asylums, all of which are conducted as religious institutions. Religious orders care for the sick in 12 hospitals. The Society of St. Vincent de Paul has eight conferences in the diocese; the Catholic Workingmen's Union and Journeymen's Union have each a large membership. Widely extended also through the diocese are the Association of St. Joseph, Catholic parish and public libraries (about 110), etc. The most important ecclesiastical buildings in the diocese are the cathedral, a Gothic structure of the early part of the fourteenth century, restored in 1864; the Gothic church of St. Barbara at Kuttenberg, begun at the beginning of the fourteenth century and finished in 1451; the abbey church of Braunau, and the pilgrimage church of the Piarists on the Muttergottesberg near Grulich.

JOSEPH LINS

Jacob Königshofen

Jacob Königshofen

More properly JACOB TWINGER VON KÖNIGSHOFEN.

Chronicler, b. in 1346 at Königshofen, a village near Strasburg, in Alsace; d. at Strasburg, 27 December, 1420. Of his life we have only a few meagre details, as for instance that he became a priest in 1382, that for a time he held the parish of Drusenheim, and that in 1394 he became notary Apostolic and in 1395 a canon of St. Thomas at Strasburg, where he was placed in charge of the archives and kept the stock-books and registers. Very early in life he had devoted himself with special zeal to historical studies, and a Latin "Chronicle" is extant, written by him before he came a priest (edited by Duchesne in "Mitteilungen der Gesellschaft für die Erhaltung der geschichtlichen Denkmäler im Elsass", second series, IV). This work, it is true, only contains extracts from different authors, and is in consequence a mere collection of historical matter, but it was undoubtedly an excellent preparation for his principal work, the "Chronik". The latter he began in 1382; he twice revised it, and brought it down to the year 1415. One of the first universal histories in German prose, it includes also a territorial history of Alsace and a local history of Strasburg. Recognizing the needs of his time, he wrote it for the *Klugen*, that is, cultivated, lay men, "who read such things as eagerly as learned parsons". His narrative is therefore popular, and frequently enlivened by legends, jokes, and interesting details concerning the lives of the people. He possessed a good knowledge and availed himself very freely of the sources of medieval prose and poetry (particularly Ekkehard, but also Eusebius, Bede, Hermannus Contractus, Martinus Polonus, and others). On the other hand, those sections which treat of contemporary history are very valuable. In politics he was an adherent of King Louis the Bavarian, and to his imperialistic sentiments united a very strongly marked feeling for German nationality. Greatly influenced by the Alsatian chronicler Closener, he has himself been in many cases the authority for later historians. The last chapter of the "Chronik" contains an alphabetical list of historical events with dates, forms thus a kind of compendium of history, and was often copied separately. The "Chronik" was printed as early as 1474, and later at Strasburg in 1698. The best edition is that of Hegel in "Chroniken der deutschen Städte", VIII-IX (Leipzig, 1870-1). In addition we possess

a Latin-German glossary by Königshofen, which may, however, in its essential details be traced to Closener.

OBERLIN, De Jacobo Twingero Regiovillano (Strasburg, 1789); SCHNEEGANS, Notice sur Closener et Königshofen (Strasburg, 1842); POTTHAST, Bibliotheca, II, 1076-88. Concerning Königshofen as choralist see MATHIAS, Phototypische Wiedergabe des Königshofenschen Tonarius (Graz, 1903).

PATRICIUS SCHLAGER

Anthony Konings

Anthony Konings

Born at Helmond, Diocese of Bois-le-Duc, Holland, 24 August, 1821; died 30 June, 1884. After a brilliant course in humanities he entered the diocesan seminary, where he soon became conspicuous for his great piety and his eager thirst for learning. Feeling a call to the monastic life, after mature deliberation he entered in 1842 the Redemptorist novitiate at St. Trond, Belgium, and was permitted to make his religious profession on 6 November, 1845. His superiors, recognizing the ability of the young cleric, sent him at once to the house of higher studies to afford him time to prepare for the work of teaching. He was ordained priest at Wittem, on 21 December, 1884. After being engaged for some time as teacher of humanities in the preparatory college of the congregation, he was called to fill the chair of moral theology and later that of canon law. Whilst holding these posts, he was appointed prefect of students, a most important office in the congregation.

For some time he was also master of novices, and accompanied the provincial, Very Rev. F. Dechamps (afterwards Archbishop of Mechlin and cardinal), to Rome. Later he visited Rome a second time to take part in the general chapter of 1855, which united all the different provinces and decided upon Rome as the residence of the superior general of the order. Father Konings was appointed rector of Amsterdam, and in 1860 of the house of studies at Wittem, which post he continued to occupy until 1865, when he was appointed Provincial of Holland. In 1870 he was sent to the province of Baltimore to take up the work of teaching moral theology and canon law to the young clerics of the Redemptorist house of studies at Ilchester, Maryland. Thenceforth all his zeal and learning, his piety and his experience were employed in training the clerics of the congregation for the arduous work of the ministry. As professor of moral theology he soon felt the need of a suitable textbook, less voluminous than the old manuals and one more adapted to the peculiar conditions existing in North America. Father Konings thereupon undertook the task of writing such a handbook, which he subsequently published in two volumes (Boston, 1874).

This work, based on the moral theology of Gury, was greeted with hearty approval on its appearance, not only on account of the simplicity of its language, but also by reason of the succinct form into which he cast the teachings of the great theologian, St. Alphonsus. He was the first to give a methodical exposition of the views of the saint regarding the vexed question of equiprobabilism. His thorough acquaintance with American law also greatly enhanced the value of his work. A devoted son of the great doctor, he knew how to recognize the merits of other theologians. Later, at the suggestion of the Rt. Rev. T. Mullen, Bishop of Erie, Pa., he published a commentary on episcopal faculties (intended for the United States), a work which was afterwards revised and enlarged by Rev. Jos. Putzer, C.S.S.R. It has since gone through four more editions. In addition to these works he published several smaller books on various theological subjects. He rendered a great service to the cause of the parochial schools by his little work, "De Absolutione Parentibus, etc.", a pamphlet which despite strong opposition, was taken by the Holy Office as the basis of an Instruction to the bishops of the United States. As a matter of fact the very words of Konings were employed in the Instruction sent by the Holy Father and incorporated in the "Acts et Decreta Concilii Plenarii Baltimorensis tertii", p. 279 sq. Since that time this Instruction has been the norm in the difficult matter of absolving parents that send their children to the public schools. The gist of his pamphlet is found in his "Moral Theology".

Konings, on account of his great learning, was consulted by prelates and priests from the entire United States; he was invited to examine candidates for degrees in theology and canon law, and was summoned as an expert in trials touching ecclesiastical questions, especially in the celebrated trial resulting from the financial difficulties of the late Archbishop of Cincinnati, J. B. Purcell. His last charge was that of prefect of the second novitiate, in which the Redemptorist priests immediately after ordination are trained for the Apostolic work of the missions. Whilst occupying this post, he fell seriously ill, but nothing could daunt his zeal. From his sick-bed he continued his work of instructing and directing with his experience the young priests committed to his care. In the midst of these labours he passed away to his eternal reward. To quote the words of the Freeman's Journal (12 July 1884), "those who studied him found him a profound theologian, and a true exponent of St. Alphonsus. The beacon light of theologians in America has gone down, but his fame will linger in the heart of the Catholic Church in America. As a scholar he was known to the world."

Konings's writings include the following: "Theologia Moralis", two editions by Konings and two by H. Kuper, C.S.S.R.; "Commentarium in Facultates Apostolicas" (New York, 1884); "De Absolutione Parentibus qui prolem scholis publicis seu promiscuis instituendam tradunt neganda necne" (Boston, 1874); "Bulla Jubilæi 1875 cum notis practicis" (New York, 1875); "SS. D. N. Leonis XIII Litteræ Apostolicæ

quibus extraordinarium Jubilæum indicitur in usum cleri notis practicis illustratæ" (2 editions, New York, 1881); "General Confession Made Easy" (New York, 1879), and in German "Die Generalbeichte erleichtert"; "Theologia Moralis Fundamentalis seu Tractatus de Actibus Humanis" (New York, 1882); "Verordningen voor de Missien en andere apostolische Werkzaamheden". He left in manuscript: "Introductio in Jus Canonicum"; "Compendium Juris Canonici"; "De Jure Regularium"; and a complete set of cases in moral theology (Latin) for American students, some of which were published over the initial "R" in "The Pastor", edited by the late W.J. Wiseman.

Provincial and Domestic Chronicles C.S.S.R.; Katholische Volkszeitung, XXV (Baltimore), n. xiv, p. 111; New York Freeman's Journal, XLV, nn. xix, xx; Catholic Home Almanac (New York, 1885), 61-2; Evidence of Father Anthony Konings, C.S.S.R., in Court of Common Pleas, Hamilton County, Ohio, No. 61, 172, J. JOHN A. HANDLEY

Konrad (Der Pfaffe)

Konrad

Surnamed DER PFAFFE ("The Priest").

A German epic poet of the twelfth century, author of the "Rolandslied", a version of the famous "Chanson de Roland". We know almost nothing concerning his life. In the epilogue of the Heidelberg manuscript the poet calls himself "der Pfaffe Kuonrat", and informs us that he translated from the French, first into Latin, and then into German, without adding or omitting. We learn further that the French original was procured for him by Duke Henry, at whose request he composed his lay. Formerly it was supposed that this duke was Henry the Lion (1156-80), and that the poem was composed between 1173 and 1177. But it is now agreed that the duke in question was Henry the Proud, who ruled Bavaria from 1126 to 1139; the date of the composition of the poem would then be about 1131, in which year Henry is known to have made a journey to Paris, where he presumably procured the French manuscript. The lay itself was written in Bavaria, probably at Ratisbon, as is indicated also by the frequent mention of Bavarian names and places. That a translation was first made into Latin is shown by the numerous Latin endings that remain. The German version, however, is not slavishly literal. A comparison with the French original, as we know it, reveals quite a number of additions, especially in the way of passages in praise of the Bavarian prince and people. The crusading spirit, already noticeable in the "Chanson", is still more marked in the German poem. The fervour of the crusader has displaced the

patriotic enthusiasm of the French epic, and gives the "Rolandslied" a pronounced religious tone. Charlemagne is depicted as the model Christian prince, while Roland is the peerless Christian knight who loses his life in battle for his Faith. Yet the influence of the folk-epic is quite evident, as, for instance, in the passage where the emperor's dazzling eyes are described. Altogether, there are 9094 verses. The form is the short rhymed couplet, the rhyme being often mere assonance. To Konrad has also been ascribed the authorship of the "Kaiserchronik", but not on convincing evidence. We possess no complete manuscript of the poem. The oldest and most important manuscript, that of Strasburg, was burned during the siege of 1870. A portion of it had appeared in print in Schilter's "Thesaurus" as early as 1727. Next in importance is the Heidelberg manuscript, adorned with thirty-nine miniatures. The other extant manuscripts are mere fragments. Editions by Grimm, "Ruolandes liet" (Göttingen, 1838), based on the Heidelberg manuscript; and by Bartsch (Leipzig, 1874), based on the Strasburg manuscript. Selections by Piper, "Die Spielmannsdichtung", II, 14-91 (in Kürschner, "Deutsche National Litteratur", II).

GOLTHER, Rolandslied des Pfaffen Konrad (Munich, 1887): BAUMGARTEN, Stilistische Untersuchungen zum deutschen Rolandsliede (Halle, 1899); cf. introduction in Piper's edition.

ARTHUR F.J. REMY

Konrad of Lichtenau

Konrad of Lichtenau

A medieval German chronicler, d. at Ursperg, in the year 1240. He descended from a noble Swabian family, and resided for some time at the imperial court, Having become a monk, probably during a temporary residence in Rome at the court of Pope Innocent III, he entered the Premonstratensian Order, and in 1226 became Abbot of the monastery of Ursperg in Bavaria, where he died. For a long time he was reputed the sole author of the so-called "Chronicon Urspergense", which narrates the history of the world from King Ninus to A.D. 1229. But critical investigation has shown that the work consists of several parts, of different authorship. The first part to 1125, was written, in part at least, by Ekkehard of Aura (q.v.); a continuation, from 1126 to 1225, was added by Abbot Burchard (d. 1230), Konrad's predecessor as Abbot of Ursperg. Then Konrad continued the work to 1229 and made the final redaction. Later continuators like Kaspar Hedio brought the chronicle down to 1537. The first edition was brought out by Miller and Foeniseca at Augsburg (1515) from a copy in the possession of Konrad Peutinger. Another edition by Melanchthon and Mylius appeared at Basle (1569). It was this edition that erroneously attributed the sole authorship of the

chronicle to Konrad. The last edition was printed at Strasburg in 1609. The "Chronicon" was edited by Abel and Weiland in the "Mon.Germ. Hist. Script.", XXIII, 333-83; separate edition at Hanover, 1874.

GRONAU, Die Urspergerchronik und ihr Verfasser (Berlin, 1890). For critical discussion and bibliography see WATTENBACH, Deutschlands Geschichtsquellen im Mittelalter, II (6th ed., Berlin, 1893), 450; POTTHAST, Bibliotheca Historica Medii vi (Berlin, 1896), s. vv. Burchardus (p. 178), Chronicon Urspergense (p. 296), and Ekkehardus Uraugiensis (p. 400).

ARTHUR F.J. REMY

Konrad of Megenberg

Konrad of Megenberg

(KUNRAT).

Scholar and writer, b. probably at Mainberg, near Schweinfurt, Bavaria, 2 February, 1309; d. at Ratisbon, 11 April, 1374. The dates of birth and death are not absolutely certain, and Konrad himself calls his native place Megenberg. He studied at Erfurt and Paris; at the latter university he obtained the degree of Master of Arts, and he taught philosophy and theology there for several years. In 1337 he was named head of St. Stephen's school at Vienna. From 1342 he lived at Ratisbon, where he was first a parish priest, proving himself to be an able preacher. Later he became a cathedral canon, and member of the town council. In 1357 he made a journey to the Curia at Avignon. Konrad is one of the most prolific German writers of the fourteenth century. His best-known and most widely read work is his "Buch der Natur", which is still of importance for the history of culture. According to his own statement he was engaged in writing it in 1349. A Latin work, "de naturis rerum", of the Dominican Thomas of Cantimpré (d. 1263), served as model. Konrad, however, prepared his book with considerable freedom; much of the original was omitted, his own observations were introduced, corrections were made, and so on. His work gives a survey of all that was known of natural history at that time and is, besides, the first natural history in the German language. It was widely read up to the sixteenth century, and numerous manuscript copies of it are still extant, eighteen being at Munich. The first printed edition with a date is of 1475, and was issued at Augsburg from the shop of Hans B smmler, under the title of "Puch der Natur". It was printed at least six times before 1500; some of the editions were illustrated, all are now rare incunabula. A new edition of the original text was issued by Franz Pfeiffer (Stuttgart, 1861), with an introduction; an edition in modern German was edited by H. Schulz (Greifswald, 1897). Of Konrad's numerous other writings there should be mentioned: the "Sph ere", a small compendium in

German of astronomy and physics, prepared from the Latin work of Joannes ^ Sacrobosco; the poem "Planctus ecclesiae in Germania" (1337); a hymn in praise of the Virgin, and other poems; a work on morals, "Speculum felicitatis humanae" (1348); "De erroribus Begeharden et Beguinarum"; "De translatione imperii" (1355); the large work "Oeconomica", written between 1353 and 1363; "Tractatus contra mendicantes ad Papam Urbanum V"; several biographies of saints, and some historical treatises, chiefly dealing with the local history of Ratisbon. In his writings Konrad shows himself to be a strong adherent of the pope, an opponent of the philosophy of Occam, and a stern critic of the moral failings of his age and of the clergy.

PFEIFFER and SCHULZ, see above; BRAUNM†LLER in Kirchenlex., s. v. Konrad von Megenberg; Allgemeine-Deutsche Biographie, XVI (Leipzig, 1882); CHEVALIER, Bio-bibl., gives the date of death incorrectly as 1398; LORENZ, Deutschlands Geschichtsquellen im Mittelalter, I (3rd ed., 1886).

JOSEPH ROMPEL

Konrad of Wurzburg

Konrad of Würzburg

A Middle High German poet, b. about 1230; d. at Basle, 1287. He was the most important of the romancers that followed the three great masters of the Middle High German epic. His especial model was Gottfried von Strassburg. He lived mostly at Strasburg and Basle. Like Gottfried he was of burgher rank and hence is called *Meister*, not *Her*. His poems consist of metrical romances, minnesongs, and *Sprÿche* or sayings. Among his epics his "Schwanritter" is a version of the well-known Lohengrin legend. It is preserved only in fragmentary form and is based indirectly on the French poem "Chevalier au Cygne". In this version the Grail does not figure at all. Other short narrative poems are "Otto mit dem Barte" (Otto with the Beard), the story of the knight Heinrich von Kempten, and the famous "HerzemŠre" (Tale of a Heart), a fantastic tale of knightly loyalty and love. A more ambitious effort is "Engelhart", one of those extravagant stories of friendship so popular in the Middle Ages. For his lengthy epics Konrad used French sources. The "Partonopier", written probably about 1277, is based on the French romance of Denis Pyramus, and has for its subject the loves of the knight Partonopeus and the fairy Meliur. The bulky epic on the Trojan War is based on Benoit de St. More's "Roman de Troie", with additions from Ovid. It contains upwards of 50,000 verses, but not all of them are Konrad's own. The costumes and atmosphere are not at all antique but thoroughly medieval. Besides these epics Konrad wrote also poems of allegorical or legendary content. "Der Werlte Lšn" (The World's Reward) is an allegory showing the vanity of things worldly. From Latin sources Konrad composed

epics on the legends of St. Alexis, Pantaleon, and Pope Sylvester, also stories of asceticism and martyrdom. His most important religious poem is in honour of the Blessed Virgin, entitled "Die goldene Schmiede" (The Golden Forge). The poet conceives himself as a smith who is working a precious ornament for the Virgin out of epithets and attributes. Another allegorical poem in strophes, called "Klage der Kunst" (Complaint of Art), laments the decay of taste for poetry. There is little originality in Konrad's work; its chief merit lies in its technical perfection. The "Partonopier", together with songs and sayings, was edited by Bartsch (Vienna, 1874); the "Schwanritter" by Roth (Frankfort, 1861); "Kaiser Otto" and "Herzemšre" by Lambel in his "Erzšhlungen und Schwšnke" (2nd ed., Leipzig, 1883); "Der Werlte Lšn", by Roth (Frankfort, 1843); "Engelhart" by Haupt (Leipzig, 1844); "Die goldene Schmiede" by W. Grimm (Berlin, 1840); "Silvester" by the same (Gšttingen, 1841); the "Trojanischer Krieg" by A. von Keller (Stuttgart, 1858).

See the introduction to GRIMM'S edition of Die goldene Schmiede; also VOGT, Geschichte der mittelhochdeutschen Literatur, in PAUL, Grundriss der germanischen Philologie (2nd ed., Strasburg, 1906), 219-23; PIPER, Hšfische Epik, pt. III, in Deutsche National-litteratur, ed. KŸRSCHNER, IV, 165-344.

ARTHUR F.J. REMY

Ferdinand Konsag

Ferdinand Konsag

A German missionary of the eighteenth century, b. 2 December, 1703, at Warasdin, Croatia; d. 10 September, 1758. Having joined the Society of Jesus in 1719, Konsag -- the name is variously written Kenschak and (in its Spanish form) Consag or Gonsago -- went to Mexico in 1730, and after 1732 worked principally on the mission of Lower California, of which he was one of the most prominent apostles. He was at first superior of San Ignacio, and later visitor of the whole mission. "It is hardly possible", writes Clavigero (op. cit. *infra*), "to tell that this zealous man accomplished notwithstanding his delicate health." In him the courage of the explorer and the learning of the cartographer were combined with the missionary's ardent zeal for souls, and his exploration of the maritime country as far as the Rio Colorado entitles him to an important place in the history of the exploration of America.

Father Konsag's literary works include the following: (1) in manuscript: "Historia de las Misiones de la California", used by Venegas in his "Noticia de la California" (Madrid, 1757); "Carta del P.F.C. de la Comp. de Jesés, Visitador de la Mis. de Calif.", with forty-three pages of explanation (1 Oct., 1748); "Descripción compendiosa de lo descubierto de la Calif. por el P.F. Gonzago de la Comp de Jesús, 1746", the British

Museum; various documents in Simancas, Spain, Est. leg, 5040, 118; 5042, 19; (2) printed: a letter of date 1731 in the "N. Welt-Bott", no. 743; "Diario de California" (Paris, 1767); account of the exploration of the Rio Colorado in Burriel, "Noticias de la California", III (Madrid, 1757), 140; a map of California copied by J. Baegert in his "Nachrichten von Californien" (Mannheim, 1770). cf. also Murr, "Journal", XII, 234.

CLAVIGERO, Storia della California, II (Venice, 1787) 119 sqq., 132, and passim; ALEGRE, Historia de la comp. de J. en Nueva Espana, III (Mexico 1841-2), 286 sqq; ZEVALLOS, Carta sobre la Apostolica Vida y Virtudes del P. Ferd. Konsag, Insigne Misionero de la California (Mexico 1764); VILLA-SENOR, Teatro Americano, III, xxxix.

A. HUONDER

Koran

Koran

The sacred book of the Muslims, by whom it is regarded as the revelation of God. Supplemented by the so-called *Hadith*, or traditions, it is the foundation of Islam and the final authority in dogma and belief, in jurisprudence, worship, ethics, and in social, family, and individual conduct.

The name *Koran*, or better *Qur'an*, from the Arabic stem *Qara'a*, "to read", "to recite", means the "Reading", the "Recitation", i.e. the "Book", *par excellence*. It is also called -- to select a few of many titles -- "Alkitab" (The Book), "Furquan" ("liberation", "deliverance", of the revelation), "Kitab-ul-lah" (Book of God), "Al-tanzil" (The Revelation). It consists of one hundred and fourteen suras or chapters, some being almost as long as the Book of Genesis, others consisting of but two or three sentences. It is smaller than the New Testament, and in its present form has no chronological order or logical sequence.

CONTENTS AND ANALYSIS

The Koran contains dogma, legends, history, fiction, religion and superstition, social and family laws, prayers, threats, liturgy, fanciful descriptions of heaven, hell, the judgment day, resurrection, etc. -- a combination of fact and fancy often devoid of force and originality. The most creditable portions are those in which Jewish and Christian influences are clearly discernible. The following analysis is based on Sir William Muir's chronological arrangement (op. cit. *infra*).

First Period

Suras 103, 91, 106, 101, 95, 102,104, 82, 92, 105, rhapsodies, which may have been composed before Mohammed conceived the idea of a Divine mission, or of a revelation direct from Heaven.

Second Period (the opening of Mohammed's ministry)

Sura 96, the command to "recite in the name of the Lord"; sura 113, on the unity and eternity of the Deity; sura 74, the command to preach, the denunciation of one of the chiefs of Mecca who scoffed at the resurrection, unbelievers threatened with hell; sura 111, Abu Lahab (the Prophet's uncle) and his wife are cursed.

Third Period (from the beginning of Mohammed's public ministry to the Abyssinian emigration)

Suras 87, 97, 88, 80, 81, 84, 86, 90, 85, 83, 78, 77, 76, 75, 70, 109, 107, 55, 56, descriptions of the resurrection, paradise, and hell, with references to the growing opposition of the Koreish tribe.

Fourth Period (from the sixth to the tenth year of Mohammed's ministry)

Suras 67, 53, 32, 39, 73, 79, 54, 34, 31, 69, 68, 41, 71, 52, 50, 45, 44, 37, 30, 26, 15, 51, narratives from the Jewish Scriptures and from rabbinical and Arab legends; the temporary compromise with idolatry is connected with sura 53.

Fifth Period (from the tenth year of Mohammed's ministry to the Flight from Mecca)

Suras 46, 72, 35, 36, 19, 18, 27, 42, 40, 38, 25, 20, 43, 12, 11,10,14, 6, 64, 28, 22, 21,17,16, 13, 29, 7, 113, 114. The suras of this period contain some narratives from the Gospel, enjoin the rites of pilgrimage, refute the cavillings of the Koreish, and contain vivid descriptions of the resurrection, judgment, heaven, and hell, with proofs of God's unity, power, and providence. Gradually the suras become longer, some of them filling many pages. In the later suras of the fifth period Medina passages are often interpolated.

Last Period (suras revealed at Medina)

This period includes the following suras:

- Sura 98: on good and bad Jews and Christians.
- Sura 2, the longest in the Koran, is called the "Sura of the Cow" from the red heifer described in verse 67 as having been sacrificed by the Israelites at the direction of Moses. It is a collection of passages on various subjects, delivered during the first two or three years after the Flight. The greater portion relates to the Jews, who are sometimes exhorted and sometimes reprobated. Biblical and rabbinical stories abound. This sura contains the order to change the Qibla (or direction at prayer) a denunciation of the disaffected, citizens of Medina, injunctions to fight, permission to bear arms in the sacred months and much matter of a legislative character promulgated on first reaching Medina, with passages of a later date interpolated.

- Sura 3 belongs partly to the time immediately after the Battle of Behr. The Jews are referred to in terms of hostility. The interview with Christian deputation from Najran (verses 57-63) is of a later date. Passages pertaining to the farewell pilgrimage are introduced with other (probably) earlier texts on the rites of pilgrimage.
- Sura 8 contains instructions on the division of spoil at Bedr. Some parts are in the old Meccan style and the Koreish are frequently referred to. In sura 47 war and slaughter are enjoined, and idolaters of Mecca threatened. In sura 62 the Jews are denounced for their ignorance; the Friday service is to take precedence of secular engagements. In sura 5 the Jews are reviled; the doctrines of the Christians are controverted; it contains also civil ordinances and miscellaneous instructions.
- Sura 59, on the siege and expulsion of the Banu Nadhir.
- Sura 4 entitled "women", from the large portion devoted to the treatment of wives and relation of sexes. There are also ordinances on the law of inheritance and general precepts, social and political. Idolatrous Meccans are to be shunned, and there are animadversions against the Jews. The "disaffected" are blamed for taking the part of the Jews.
- Sura 65: on divorce and kindred subjects, with some religious observations.
- Sura 63: menaces against 'Abdallah ibn Obey for his treasonable language on the expedition against the Banu Mustalick.
- Sura 24: vindication of 'Ayisha, with the law of evidence for conjugal unfaithfulness, and miscellaneous precepts.
- Sura 33, composed of portions covering the year A. H. 5. The marriage of the Prophet with Zeinab, wife of his adopted son, is sanctioned. There are various passages on the conjugal relations of Mohammed, the siege of Medina, and the fall of the Banu Qoreitza.
- Sura 57: injunctions to fight and contribute towards the expenses of war. The disaffected are warned. Christians are mentioned in kindly terms.
- Sura 61: on war; speedy victory is promised. -- The remaining auras belong exclusively to the last five years of the Prophet's life.
- Sura 48 refers to the truce of Hodeibia, and the prospect of victory and spoil to be obtained elsewhere.

- Sura 60: on the treatment of the women who, after the truce, came over from Mecca; idolaters of Mecca to be shunned.
- Sura 66: on the affair of Mohammed and the Coptic maid.
- Sura 49: blaming the profession of the Bedouin Arabs as insincere, chiding the deputation which called out rudely at Mohammed's door, and exhorting believers against distrust and uncharitableness among themselves.
- Sura 9 treats of the campaign to Tebuk (A. H.. 9). It opens with the "release" promulgated at the pilgrimage of the same year and declares the antagonism of Islam to all other religions. All but Muslims are excluded from Mecca and the rites of pilgrimage. Idolaters are threatened with slaughter and slavery. War is declared against Jews and Christians until they are humbled and pay tribute. This sura is called "the crusade chapter", and in the early campaigns was often read on the field before battle.

DOCTRINE

The doctrine of the Koran will be fully discussed in the article on the religion of Islam. It is sufficient to note here that the doctrine may be classified under four categories:

- faith, or what to believe;
- practice or worship;
- ethics, or what to do and what to avoid;
- moral, historical, and legendary lessons taken from the canonical, but mostly apocryphal, Christian and Jewish Scriptures, and from contemporary and ancient Arabian heathenism.

CHRONOLOGICAL ORDER AND DISTINCTIVE FEATURES OF THE SURAS

Various efforts have been made by Muslim writers and European scholars to arrange the suras chronologically, but Noldeke's arrangement is generally considered the most plausible. He divides the suras into Meccan and Medinian, namely those delivered at Mecca before the Flight or Hegira, and those delivered at Medina after the Flight. The Meccan suras are divided into three periods. To the first (from the first to the fifth year of Mohammed's mission) belong the following suras - 96, 74, 111, 106, 108, 104, 107, 102, 105, 92, 90, 94, 93, 97, 86, 91, 80, 68, 87, 95, 103, 85, '73, 101, 99, 82, 81, 53, 84, 100, 79, 77, 78, 88, 89, 75, 83, 69, 51, 52, 56, 55, 112, 109, 113, 114, and 1.

To the second period (the fifth and sixth year of his mission) are assigned suras 54, 37, 71, 76, 44, 50, 20, 26, 15, 19, 38, 36, 43, 72, 67, 23, 21, 25, 17, 27, and 18. To the third period (from the seventh year to the Flight) belong the following suras: 32, 41, 45, 16, 30, 11, 14, 12, 40, 28, 39, 29, 31, 42, 10, 34, 35, 7, 46, 6, and 13. The Medina suras are those which remain, in the following order: 2, 98, 64, 62, 8, 47, 3, 61, 57, 4, 65, 59, 33, 63, 24, 58, 22, 48, 66, 60, 110, 9, and 5.

The characteristic features of the various suras and of the periods in which they were delivered is described by Mr. Palmer as follows:

In the Meccan Suras Mohammed's one and steady purpose is to bring his hearers to a belief in the one only God; this he does by powerful rhetorical displays rather than logical arguments, by appealing to their feelings rather than their reason; by setting forth the manifestation of God in His works; by calling nature to witness to His presence; and by proclaiming His vengeance against those who associate other gods with Him, or attribute offsprings to Him. The appeal was strengthened by glowing pictures of the happiness in store for those who should believe, and by frightful descriptions of the everlasting torments prepared for the unbelievers. In the earlier chapters, too, the prophetic inspiration the earnest conviction of the truth of his mission, and the violent emotion which his sense of responsibility caused him are plainly shown. The style is curt, grand, and often almost sublime; the expressions are full of poetical feeling, and the thoughts are earnest and passionate, though sometimes dim and confused, indicating the mental excitement and doubt through which they struggled to light.

In the second period of the Meccan Suras, Mohammed appears to have conceived the idea of still further severing himself from the idolatry of his compatriots, and of giving to the supreme deity Allah another title, Ar-Rahman, "the merciful one". The Meccans, however, seem to have taken these for the names of separate deities, and the name is abandoned in the later chapters.

In the Suras of the second Meccan period we first find the long stories of the prophets of olden times, especial stress being laid upon the punishment which fell upon their contemporaries for disbelief, the moral is always the same, namely, that Mohammed came under precisely similar circumstances, and that a denial of the truth of his mission would bring on his fellow-citizens the self-same retribution. They also show the transition stage between the intense and poetical enthusiasm of the early Meccan chapters and the calm teaching of the later Medinah ones. This change is gradual, and even in the later and most prosaic we find occasionally passages in which the old prophetic fire flashes out once more. The three periods are again marked by the oaths which occur throughout the Koran. In the first period they are all frequent and often long, the whole powers of nature being invoked to bear witness to the unity of God and the mission of His Apostle; in the second period they are shorter and of rarer occurrence; in the last period they are absent altogether.

To understand the Medinah Suras we must bear in mind Mohammed's position with respect to the various parties in that city. In Mecca he had been a prophet with little honour in his own country, looked on by some as a madman, and by others as an impostor, both equally grievous to him, while his following consisted of the poorest and meanest of his fellowtownsmen. His own clansmen, for the reason that they were his clansmen and for no other, resented the affronts against him. In Medinah he appears as a military leader and a prince, though as yet possessing far from absolute authority. Around in the city were, first, the true believers who had fled with him El Muhagerin; next, the inhabitants of Yathrib, who had joined him and who were called El Ansar, "the helpers"; and lastly, a large class who are spoken of by the uncomplimentary name of Munafiqun or "hypocrites", consisting of those who went over to his side from fear or compulsion, and lastly those "in whose heart is sickness", who, though believing in him, were prevented by tribal or family ties from going over to him openly. Abdallah ibn Ubai was a chief whose influence operated strongly against Mohammed, and the latter was obliged to treat him for a long time almost as an equal, even after he had lost his political power. The other party at Medinah was composed of the Jewish tribes settled in and around the city of Yathrib. The Jews were at first looked to as the most natural and likely supporters of the new religion, which was to confirm their own. These various parties together with the pagan Arabs of Mecca and the Christians are the persons with whom the Medinah Suras chiefly deal. The style of the Medinah Suras resembles that of the third period of the Meccan revelations, the more matter-of-fact nature of the incidents related or the precepts given amounting in a great measure for the more prosaic language in which they are expressed. The other party at Medinah was composed of the Jewish tribes settled in and around the city of Yathrib. The Jews were at first looked to as the most natural and likely supporters of the new religion, which was to confirm their own. These various parties together with the pagan Arabs of Mecca and the Christians are the persons with whom the Medinah Suras chiefly deal. The style of the Medinah Suras resembles that of the third period of the Meccan revelations, the more matter-of-fact nature of the incidents related or the precepts given amounting in a great measure for the more prosaic language in which they are expressed. In the Medinah Suras the prophet is no longer trying to convert his hearers by examples,

promises, and warnings; he addresses them as their prince in general, praising them or blaming them for their conduct, and giving them laws and precepts as occasion required. (The Qur'an in "Sacred Books of the East", I, Oxford, 1880, pp. LXI, LXII, and LXIII).

SOURCES

The sources of the Koran be reduced to six:

- The Old Testament (canonical and apocryphal) and the hybrid Judaism of the late rabbinical schools. During Mohammed's time the Jews were numerous in many parts of Arabia, especially around Medina. Familiarity's with them is undoubtedly responsible for many Old Testament stories alluded to in Koran. Later Judaism and Rabbinism are equally well represented (Geiger, "Was hat Mohammed aus dem Judenthum aufgenommen?", Wiesbaden, 1833; tr. Judaism and islam", Madras, 1898).
- The New Testament (canonical and apocryphal) and various heretical doctrines. On his journeys between Syria, Hijaz, and Yemen, Mohammed had every opportunity to come in close touch with Yemenite, Abyssinian, Ghassanite, and Syrian Christians, especially heretic. Hence, while the influence of orthodox Christianity upon the Koran has been slight, apocryphal and heretical Christian legends, on the other hand, are one of the original sources of Koranic faith. (See Muir, op. cit. infra, 66-239; Tisdall, "The Original Sources of the Qur'an", London, 1905, 55-211.)
- Sabaism, a combination of Judaism, Manicheism, and old disfigured Babylonian heathenism.
- Zoroastrianism. On account of Persia's political influence in the north-eastern part of Arabia, it is natural to find Zoroastrian elements in the Koran.
- Hanifism, the adherents of which, called Hanifs, must have been considerable in number and influence, as it is known from contemporary Arabian sources that twelve of Mohammed's followers were members of this sect.
- Native ancient and contemporary Arabian heathen beliefs and practices. Wellhausen has collected in his "Reste des arabischen Heidentums" (Berlin, 1897) all that is known of pre-Islamic Arabian heathen belief, traditions, customs, and superstitions, many of which are either alluded to or accepted and incorporated in the Koran. From the various sects and creeds, and Abul-Fida, the well-known historian and geographer of the twelfth century, it is clear that religious beliefs and practices of the Arabs of Mohammed's day form one of the many sources of Islam. From this

heathen source Islam derived the practices of polygamy and slavery, which Mohammed sanctioned by adopting them.

AUTHORSHIP, COMPILATION

It is generally admitted that the Koran is substantially the work of Mohammed. According to the traditionalists, it contains the pure revelation he could neither read nor write, but that immediately afterwards he could do both; others believe that even before the revelation he could read and write; while others, again, deny that he could ever do so. Thus it is uncertain whether any of the suras were written down by the Prophet himself or all delivered by him orally and afterwards written down by others from memory.

The Koran is written in Arabic, in rhymed prose, the style differing considerably in the various suras, according to the various periods of the Prophet's life. The language is universally acknowledged to be the most perfect form of Arab speech, and soon became the standard by which other Arabic literary compositions had to be judged, grammarians, lexicographers, and rhetoricians presuming that the Koran, being the word of God, could not be wrong or imperfect.

Mohammed's hearers began by trusting their memories to retain the words of the revelation they had received from him. Later, those who could write traced them in ancient characters on palm leaves, tanned hides, or dry bones. After the Prophet's death all these fragments were collected. Zaid ibn Thabit, Mohammed's disciple, was charged by Abu Bekr, the caliph, to collect all that could be discovered of the sacred text in one volume. The chapters were then arranged according to their length and without regard to historical sequence. The revision made twenty years later affected details of language of the text.

The best and most accessible edition of the Koran is that of Flugel, "Al-Qoran: Corani textus Arabicus" (Leipzig, 1834 and since). Maracci's famous Latin translation of the Koran, with a refutation and commentary, is still unique and useful: "Alcorani textus universus" (Padua, 1698). The standard English versions are those of Sale (London, 1734) with a still useful introductory essay; Rodwel (London, 1861), arranged in chronological order; and Palmer in "Sacred Books of the East" (Oxford, 1880).

GABRIEL OUSSANI

Tadeusz Kosciuszko

Tadeusz Kosciuszko

Polish patriot and soldier, b. near Novogrudok, Lithuania, Poland, 12 February, 1752; d. at Solothurn, Switzerland, 15 October, 1817. He was educated at the military

schools of Warsaw and Versailles, and attained the rank of captain in the Polish army. When the American Revolution broke out he embarked for the scene of conflict and, joining Washington's army, received a commission as officer of engineers, 18 October, 1776. He served with distinction through the war, was made a brigadier general, and was voted the thanks of Congress. He then returned to Poland and lived for several years in retirement. In 1789, when the Polish army was reorganized, he was appointed a major-general and fought gallantly under Prince Poniatowski against the Russians. At the second partition of Poland, he resigned his commission and went to live in Leipzig. He headed the abortive revolution of Poland in 1794, and was wounded and captured by the Russians at the battle of Maciejowice, 10 October. Imprisoned for two years, he was liberated by Emperor Paul on parole and with many marks of esteem. Thereafter his life was passed in retirement. In 1797 he revisited the United States, receiving everywhere great honor and distinction. Congress voted him a grant of land and an addition to his pension. On his return to Europe he took up his residence near Paris, spending his time in agricultural pursuits. In 1806 Napoleon wished him to join in the invasion of Poland, but he felt bound by his parole to Russia and refused. He went to live in Switzerland in 1816, making his home at Solothurn, where he was killed by a fall from a horse. His remains, by direction of the Emperor Alexander, were taken to Krakow, where they were interred with solemn pomp in the cathedral near the tombs of Poniatowski and Sobieski. A mound 150 feet high, made of earth taken from every battle-field in Poland, was piled up in his honor in the outskirts of the city.

HASSARD, *Hist. of U. S.* (New York), GRIFFIN in *Am. Cath. Hist. Researches* (Philadelphia, April, 1910); MICHELET, *Pologne et Russie, legende de Kosciuszko* (Paris, 1851); IDEM, *La Pologne martyre* (1863); FALKENSTEIN, *Kosciuszko* (Leipzig, 1827); RYCHLICKI, *Kosciuszko and the Partition of Poland* (Krakow, 1872); CHODZKO, *Histoire militaire, politique et privee de Kosciuszko* (Paris, 1837).

THOMAS F. MEEHAN

Stanislaus and John Kozmian

Stanislaus and John Kozmian

Two brothers who took part in the Polish insurrection of 1831, and subsequently fled the country. Stanislaus settled in England, studied its institutions, and strove to make both nations, England and Poland, acquainted with each other. John lived in France, was zealous in spreading Catholic ideas, and, when his wife died, became a priest. Later he went to Posen, and, as editor of the "Posen Review", became the centre of religious and political life there; Stanislaus aided him in his work and, returning to

Posen, became president of the Society of Friends of Science. Both were ardent Catholics, able reformers, courageous politicians, and had minds of exceptional power.

Stanislaus Kozmian

(b. in 1811; d. in 1885)

When a student at Warsaw, had written some poetry, very romantic but only of average worth; later, in England, he set to translating Shakespeare, a work which occupied him for thirty years, and was not complete at his death; he also translated poems by Byron, Moore, Southey, Shelley, Cowper, and especially the splendid passages of Campbell on Poland. He was secretary to the Society of Friends of Poland, and in close relation with Lord Dudley Stuart. His translations of Shakespeare, though naturally not perfect, are as good as those in any other language. Of his original work, the poem best known in his days was entitled "To the Masters of the Word", addressed to Mickiewicz, Krasinski, and Zaleski in 1846. He especially worshipped and loved Krasinski, two of whose books ("The Day of To-Day" and "The Last One") first appeared as Koxmian's, as the author would not otherwise have published them. Their success put Kolmian in a very false and painful position, which he described in one of his poems—an imitation of Dante's "Inferno". Several other poems of a patriotic and religious tendency are also deserving of notice. His prose consists mainly of essays, many of which were published together in two volumes under the title "England and Poland". The first volume contains important information for the writer on that period of Polish history: what the English thought, what they knew of Poland, how far their friendly feeling went, why the majority of the nation were indifferent to what might befall Poland, and so on. The second was interesting for the contemporary Polish reader, giving particulars of English institutions, life, politics, and literature—in the last respect nothing so good has since appeared in Polish. But it is impossible to notice separately all the multitudinous short articles that he wrote, those which deal with literary criticism are especially admirable. He was a practical man of action, a born journalist unpopular indeed, because, being a fervent Catholic, he condemned conspiracies and did not confound revolution with a war for independence. He lived and died comparatively unknown.

John Kozmian

Born in 1812, died in 1877. As priest and author he wrote for upwards of twenty years in the "Posen Review"; his articles have been collected in three volumes (1881). Specially noteworthy are the programme of the Review, "That she may fulfil her mission, Poland *must* be united to the Church"; "The Two Idolatries", i.e., Revolutionism and Panslavism, and his last essay, "Duties are permanent." He also wrote a great deal about Italian affairs and in favor of the Temporal Power. We may also mention a controversial essay with the Jesuit F. Gagarin (a Russian convert), who maintained that the great

obstacle to the conversion of the Russians is that they identify Catholicism and Poland. His literary articles are not numerous. He also wrote funeral orations. He and his brother were the first secular workers for the revival of Catholic convictions in Poland.

S. TARNOWSKI

Adam Krafft

Adam Krafft

Sculptor, b. about 1440 at Nuremberg; d. Jan., 1509 at Schwabach. He carved at Nuremberg the last famous Gothic monuments in stone. The earliest of his extant works are the so-called "Seven Falls of Christ", that is to say Stations of the Cross representing Christ tottering and falling under the weight of His Cross, as well as the descent from the Cross. They were completed about 1490, and are now in the Germanic Museum at Nuremberg. The memorial bronze monument over the Schreyer and Landauer tomb in the church of St. Sebaldus was completed in 1492; three of its reliefs, highly coloured, represent Christ carrying the Cross, His burial and resurrection, with a landscape for background. Later, Krafft undertook, at the request of Imhoff, the famous marble tabernacle in the church of St. Laurence. Decorated with tall slender turrets, a canopy, carved figures, and finely chiselled ornaments, it tapers gradually to its summit. Four bases and three carved figures, of the master and his two apprentices, support the pedestal, above which rises the rectangular tabernacle, richly decorated with delicate reliefs and with the figures of angels and saints in the numerous surrounding niches. It is universally admired as one of the most beautiful creations of Gothic art, and legend relates that the stone softened at the touch of Krafft's chisel, to harden again in the new form which he imparted to it. Among the master's works are also three handsome sepulchral monuments with statues of the Madonna, besides an "Entombment of Christ" and "Christ on Mount Olivet". Krafft's technical skill is amazing. His scenes from the Passion show deep feeling, his portrayal of saints is noble and full of expression, though his executioners are vulgar and repulsive. Gothic idealism seems to merge into a native realism, not Italian beauty of form, but native German strength, simplicity, and piety give value to his art.

WAGNER, *Nurnberger Bildhauerwerke des Mittelalters*, I: *Nurnbergische Kunstler nach ihrem Leben und ihrem Wirhen*, pt. XI; particularly DAUN, Adam Krafft (Berlin, 1897); IDEM, Peter Vischer und Adam Krafft (Bielefeld, 1905).

G. GIETMANN

Krain

Krain

(Or CARNIOLA; Slov. KRANJSKO)

A duchy and crownland in the Austrian Empire, bounded on the north by Karinthia, on the north-east by Styria, on the south-east and south by Croatia, and on the west by Trieste, Goritza, and Istria; area, 3857 sq. miles; population, 510,000. The Julian and Karavanken Alps traverse the country. The highest mountain peaks are Nanos, 4200 feet; Vremscica, 3360 feet; Sneznik, 5900 feet; Triglav, 9300 feet, on the top of which Jacob Aljaz, priest and tourist, erected a cylindrical hut of steel, capable of accommodating 4 or 5 persons. The principal rivers are the Save, the Trzaska Bistrica, the Kokra, the Kamniska Bistrica, the Sora, the Ljubljana, the Mirna, the Krka, and the Kupa which serves as a boundary with Croatia. The principal lakes are Crno, spreading into seven lakes, of which the highest is over 6000 feet above sea-level; Bohinjsko; Blesko, in the middle of which on an island is built a church to the Blessed Virgin, amidst most picturesque scenery; Cerknisko, 1700 feet above sea-level, varies annually in extent from over ten to about five sq. miles. It was known to the Romans as *Lugea palus*, and is a natural curiosity. Dante Alighieri mentions it in his "Divina Commedia" (Inferno, xxxii). The Ljubljana fens cover an area of 76 sq. miles. Hot and mineral springs are to be found at Susica, Smarjetske, and Medijske. There is an interesting cave at Postojna. Of the inhabitants 95 per cent are Slovenes, kinsmen to the Croats; the remainder are Germans, 700 Croats, and Italians. In the districts of Gotschee and Crnomelj dwell the White Krainers, the connecting link between the Croats and Slovenes. One-half of the Germans live in Gotschee, 5000 in Ljubljana, 3500 at Novo Mesto, and 1000 at Radovljice. The Germans at Gotschee were settled there by Otho, Count of Ortenburg, in the fourteenth century, and they preserve their Tyrolean German dialect. Over 99 per cent of the people are Catholics, the remainder includes 319 Schismatics, 509 Protestants, 24 Armenians, 96 Jews, 7 infidels. Ninety-six per cent of the soil is productive.

Agriculture thrives better in Upper than in Lower Krain. The valley of Vipava is especially famous for its wine and vegetables, and for its mild climate. The principal exports are all kinds of vegetables, clover-seed, lumber, carvings, cattle, and honey. In the mineral kingdom the principal products are iron, coal, quicksilver, manganese, lead, and zinc. Upper Krain has the most industries, among the products being lumber, linen, woollen stuffs, and laces (in Idria), bells, straw hats, wicker-work, and tobacco. The railroads are the Juzna, the Prince Rudolf, the Bohinjaska, the Kamniska, the Doljenjska, and the Vrhniska. The capital is Ljubljana, see of the prince-bishop, population,

40,000; it was known to the Romans as Aemona, and was destroyed by Obri in the sixth century. Krain is divided into Upper Krain or Gorenjsko, Lower Krain or Dolnjsko, and Central Krain or Notranjsko. The principal cities and towns are: Kamnik, Kranj, Trzic, Vrhnika, Vipava, Idria (which has the richest quicksilver mine in the world), Turjak, Ribnica, Metlika, Novo Mesto, Vace (famous for its prehistoric graveyard). The mean average temperature in spring is 56 deg.; in summer, 77 deg.; in autumn, 59 deg. and in winter, 26 deg. Politically the country is divided into 11 districts consisting of 359 communes; the state capital is the residence of the imperial governor. The districts are: Kamnik, Kranj, Radovljica, the neighbourhood of Ljubljana, Logatec, Postojna, Litija, Krsko, Novo Mesto, Crnomelj, and Gotschee or Kocevje. There are 31 judicial circuits. The duchy was constituted by rescript of 20 December, 1860, and by imperial patent of 26 February, 1861, modified by legislation of 21 December, 1867, granting power to the home parliament to enact all laws not reserved to the imperial diet, at which it is represented by eleven delegates, of whom two are elected by the landowners, three by the cities, towns, commercial and industrial boards, five by the village communes, and one by a fifth curia. The ballot is secret, every duly registered male twenty-four years of age has the right to vote. The home legislature consists of a single chamber of thirty-seven members, among whom the prince-bishop sits *ex-officio*. The emperor convenes the legislature, and it is presided over by the governor. The landed interests elect ten members, the cities and towns eight, the commercial and industrial boards two, the village communes sixteen. The business of the chamber is restricted to legislating on agriculture, public and charitable institutions, administration of communes, church and school affairs, the transportation and housing of soldiers in war and during manoeuvres, and other local matters. The land budget of 1901 amounted to 3,573,280 crowns (\$714,656).

Ecclesiastical History

In early Christian times the duchy was under the jurisdiction of the metropolitans of Aquileia, Syrmium, and Salona; but in consequence of the immigration of the pagan Slovenes, this arrangement was not a lasting one. After they had embraced Christianity in the seventh and eighth centuries Charlemagne conferred the major part of Krain on the Patriarchate of Aquileia, and the remainder on the Diocese of Trieste. In 1100 that patriarchate was divided into five archdeaconries, of which Krain was one. Emperor Frederick III, 6 December, 1461, established the Diocese, of Ljubljana or Laibach, subject directly to the pope, and this was confirmed by a Bull of Pope Pius II, 10 September, 1462. The new diocese consisted of part of Upper Krain, two parishes in Lower Krain, and a portion of Lower Styria and Karinthia; the remaining portion of Krain was attached to Aquileia, later on to Goritza and Trieste. At the redistribution of dioceses (1787 to 1791) not all the parishes in Krain were included in the Diocese

of Ljubljana, but this was accomplished in 1833, by taking two deaneries from the Diocese of Trieste, one from Goritza, and one parish from the Diocese of Lavant, so as to include all the territory within the political boundaries of the crownland. The diocese is divided into 5 archdeaconries, comprising 22 deaneries, two chapters with 17 canons, 296 parishes, 1336 churches, 204 chapels, 722 priests, 572,613 Catholics of the Latin Rite, and 360 of the Oriental Rite. The following congregations of men have houses in Krain: Cistercian Franciscans 4, Capuchins 2, Brothers of Charity 1, Jesuits 1, Congregation of Missions 1, priests of the German Order 1, Salesians 2. Congregations of Women: Ursulines 3 convents, Carmelites 1, Sisters of Charity 12 houses, including two schools. Krain has a diocesan seminary and one resident college for boys. The patron of the duchy is St. Joseph, and the patrons of the diocese, St. Hermagora and St. Fortunatus, Martyrs.

Education

The school system was founded by state law of 14 May, 1869, and of 2 May, 1883. There are 386 schools, of which 327 are public. Attendance is compulsory, from the age of seven to fourteen. There are two training schools for teachers: one for males, one for females, connected with the school of agriculture. There are 7 colleges, in which both Slovenian and German are taught. The first college was founded in 1418 by a parish priest. There is a high school for girls. The industrial schools have commercial courses, besides teaching wood carving, trades, domestic economy, horse-shoeing; instruction is also given in singing and on the pipe organ. The Museum Rudolfinum has a famous library. The inspection of the schools is under a school-board. The parish priests have the right of visiting the schools or of appointing substitutes. The schools are supported from national, regional, and local taxes. The provincial school-board is the highest school authority for all the schools, except those subject directly to the minister of instruction and worship. It consists of twelve members, of whom two are priests. There is a literary society, the "Matica Slovenska," one Catholic daily paper, and a few monthly magazines.

Slovenes in the United States

There are in the United States about 100,000 Slovenes organized into two great benevolent associations on religious principles. They possess the following churches: St. Joseph's, Joliet, Ill.; St. Stephen's, Chicago, Ill.; St. Mary's, West Allis, Wisconsin; St. Joseph's, Calumet, Michigan; St. Joseph's, Leadville, Col.; St. Mary's, Pueblo, Col.; St. Lawrence's, St. Vitus's, St. Mary's, Cleveland, Ohio; St. Mary's, Steelton, Pa.; St. Mary's, Pittsburgh, Pa.; St. Joseph's, Forest City, Pa.; Holy Family, Kansas City, Kansas. Joliet has one parish school, and one Catholic weekly paper. The saintly bishop, Frederic Baraga, author of the first grammar of the Indian language, Bishops Ignatius

Mrak, and John Vertin, Slovenes, were pioneers in apostolic work in upper Michigan, as well as Bishops James Trobec and John Stariha, who are still living.

Civil History

Before the coming of the Romans (c. 200 B.C.) the Taurisci dwelt in the north of Krain, the Pannonians in the south-east, the Iapodes or Carni, a Celtic tribe, in the south-west. Under Roman rule, the northern part was joined to Noricum, the south-western and south-eastern parts and the city of Aemona to Venice and Istria. In the time of Augustus all the region from Aemona to Culpa belonged to the province of Savia. After the fall of the Western Roman Empire (476), Krain was incorporated into the Kingdom of Italy, and (493) under Theodoric it formed part of the Ostrogothic kingdom. Between the upper Save and the Sotcha lived the Carni, and towards the end of the sixth century the Slovenes peopled that region called by Latin writers Carnia, or Carniola, i.e. part of greater Carnia. Later on with the coming of the Slovenian language, the name was changed to "Krajino" or in German "Chrainmarcha," Chreine, "the boundary." The new inhabitants were subjected to the Avars, but threw off their yoke, and joined the great Slavic state of Samo. Krain was governed by the Franks about the year 788. When Charlemagne established the province of Friuli he added to it a part of Krain. After the division of Friuli, it became an independent province, having its own Slovenian margrave residing at Kranj, subject to the governor of Bavaria at first, and after 876 to the Dukes of Karinthia. Henry IV gave it to the Patriarch of Aquileia (1071).

In the Middle Ages the Church held much property in Krain, thus in Upper and Lower Krain the Bishop of Friesing became (974) a feudal lord of the city of Skofja Loka, the Bishop of Brixen held Bled and possessions in the valley of Bohinj, and the Bishop of Lavant got Mokronog. Among secular potentates the Dukes of Meran, Goritzza, Babenberg, and Zilli held possessions given to them in fief by the patriarchs of Aquileia. The dukes governed the province nearly half a century, and finally Krain was given in fief with the consent of the patriarch to Frederick II, of Austria, who obtained the title of duke, 1245. Frederick was succeeded by Ulrich III, Duke of Karinthia, who married a relative of the patriarch, and endowed the churches and monasteries, established the government mint at the city of Kostanjevica, and finally (1268) willed to Otokar II, King of Bohemia, all his possessions and the government of Karinthia and Carniola. Otokar was defeated by Rudolf II of Hapsburg, and at the meeting at Augsburg, 1282, he gave in fief to his sons Albrecht and Rudolf the province of Krain, but it was leased to Count Majnhardt. Duke Henry of Karinthia claimed Krain; and the Dukes of Austria asserted their claim as successors to the Bohemian kingdom. Henry died 1335, Jan, King of Bohemia, renounced his claims, and Albrecht, Duke of Austria, got Krain; it was proclaimed a duchy by Rudolf IV, in 1364. Frederick IV

united Upper, Lower, and Central Krain as Metlika and Pivka into one duchy. The union of the dismembered parts was completed by 1607. The French occupied Krain in 1797, and from 1805 to 1806. After the Treaty of Vienna, 1809, Napoleon erected Illyria, with Ljubljana as its capital, and Krain formed a part of the new territory from 1809 to 1813. The defeat of Napoleon restored Krain to Francis I, with larger boundaries, but at the extinction of the Illyrian Kingdom. Krain was confined to the limits outlined at the Congress of Vienna, 1815.

O'GORMAN, Church History (New York, 1900); Oesterreichischungarische Monarchie in Wort and Bild, Koernten und Krain (Vienna, 1891); VALVASOR, Die Ehre des Herzogthums Krain (Ljubljana, 1689); ERBEN, Vojvodstvo Kranjsko (Ljubljana, 1866); GRUDEN, Cerkevne razmere u XV. stoleju (Ljubljana, 1908); RUTAR, Beneska Slovenija (Ljubljana, 1899); OROZEN, Vojvodina Kranjska (Ljubljana, 1907); POLJANEC, Kratka zgodovina slovenskega naroda (Ljubljana, 1908).

M.D. KRMPOTIC

John Kramer

John Krämer

(Also called INSTITOR, the Latin form of his name).

Born about the end of the fourteenth century, he must have died between 1437 and 1440, as a manuscript of the Carthusian monastery of Memmingen speaks of the gift made to it by Krämer in 1437, and the general chapter of the Carthusian Order held in 1440 mentions his death.

Having entered the charterhouse of Buxheim, in the Diocese of Ausburg, Bavaria (whence he is sometimes called John of Buxheim), he there led the life of a pious and obedient religious. There, also, he wrote sundry works, including two treatises published by D. Pez in his "Bibliotheca ascetica". The first of these entitled "Breviloquium anirni cujuslibet religiosi reformativum"; it consists of two parts. In the first part the author teaches a good religious divers means and practices which he should observe in order to remain a faithful child of the Church, to acquire, on earth, the grace of perfection and, in heaven, ever-lasting happiness. In the second part, by a quaint allegory, he puts the religious on his guard against the faults of monastic life which are represented by twenty birds of prey, the eagle, the vulture, the hawk, the owl, etc., whose characteristics and manners he describes. Though written in a rude, uncultured style, the book was much read in the monasteries of the Middle Ages. The subject of Krämer's second book is sufficiently indicated by its title, "Tractatus exhortativus ad evitandam malam iram". In these two books we find the spirituality peculiar to the Carthusians of the fifteenth century: a rigorous asceticism, relieved somewhat (under the influence of

Denis the Carthusian) by a few touches of mystical tenderness. An unpublished treatise, "De Objectionibus bibliae", has also been sometimes attributed to Krämer, but without sufficient warrant.

PEZ, *Bibliotheca ascetica, antiquo-nova VII* (Ratisbon, 1723—), 119-388; PETREIUS, *Bibliotheca Carthusiana* (Cologne, 1609); FABRICIUS, *Bibliotheca latina mediae aetatis* (Florence, 1898 —) III; PUYOL, *L'Auteur du livre de imitatione Christi* (Paris, 1899).

ANTOINE DEGERT

Ignatius Krasicki

Ignatius Krasicki

Born in 1735; died at Berlin, 1801. He took orders in early youth, and soon after became a canon, travelled abroad, preached the coronation sermon for King Stanislaus Poniatowski, by whose favour he shortly got a bishopric in what was soon to become Prussian Poland. Frederick II then made his acquaintance, and it was to amuse this king, they say, that Krasicki wrote his "Monachomachia". In 1775, there appeared a heroicomic poem, "Myszeis" (The Mousiad), a purposely entangled allegory on the state of Poland. "Monachomachia" is clear enough, but a bishop ought rather to have made an effort to reform the monks than to have laughed at them, and to have written it for a Protestant king's amusement was a greater blunder if the charges were true: as a Catholic, as well as a Pole, he could not be the friend of the Prussian king. Krasicki felt this, and wrote his "Anti-Monachomachia" to destroy the bad impression made. In 1770 he published "Doswiadczynski" a novel written under the influence of contemporary English fiction — partly a clever satirical and lifelike sketch of character, partly describing an ideal community, and imitating Johnson's "Rasselas". The latter part is so much feebler in its description of an impossible Utopia that it mars the other.

The best part of Krasicki's poetry is his "Satires" (1778) and his "Fables". The former, witty, soberly ironical, without gall, exaggeration, or malice, and perfect in form, remind us of Horace: they are historically important as pictures of the state of Poland and are very patriotic in tendency. The national faults and aberrations are pointed out wittily always and sometimes with sorrowful eloquence. "Pan Podstoli", though in form a prose novel, has a like aim. The tale diverts us, but its moral is the essential thing and both are excellent. From the highest duties to the meanest particulars of religious, family, and social life, all is pointed out in the best and noblest way. Surely, if a book could have regenerated Poland, "Podstoli" would have done so.

The "Fables" (1779) are, like all others at that time in Europe, imitations of Lafontaine, but none were so like their model as Krasicki's. Like Lafontaine's, Krasicki's are

amongst the best ever written, while in colour they are distinctly original, because Polish. Though clear and artistic the "War of Chocim" (1780), an heroic poem written in order to give an *epos* to Polish literature, is a failure, though far superior to Voltaire's famous "Henriade".

But it is impossible even to name all his works — "Epistles" in verse, comedies some not without merit, lives of great men, novels, and notes. Let us mention his "Poetic Art", "Gardens", and his "Translation of Ossian". He died in 1801 at Berlin, seven years after his elevation to the Archbishopric of Gnesen, a man much like Horace, witty, sensible, kind, lacking in passion and creative power, but not in good will. As the regenerator of Polish poetry, he has forever deserved his countrymen's gratitude.

S. TARNOWSKI

Sigismund Krasinski

Sigismund Krasinski

Count, son of a Polish general, b. at Paris, 19 Feb., 1812; d. there, 23 Feb., 1859. He lost his mother (Mary, née Princess Radziwill) in early childhood. From boyhood he loved study, and, as a student in Warsaw, distinguished himself as a sympathizer with the Romantic literary movement. But, when — against his will and purely to obey his father — he refrained from political manifestations at Warsaw in 1829, he became so unpopular amongst his fellow-students that his father sent him to Geneva. Being intensely patriotic, he suffered moral agonies during the insurrection of 1831, as his letters show, and, when he was forced to return and present himself at Tsar Nicholas's Court, his health gave way. Permitted to withdraw to Vienna, he brought out his first great work, those which he had written previously being far inferior. "Nieboska Komedyja" (The Infernal Comedy, 1833) is the struggle between the old order and the new: each has its champion, both are self-seeking, faithless, and end in despair. This work was paraphrased and expanded by Edward Robert, Lord Lytton, as "Orval, the Fool of Time" (1869). In 1836 "Irydion" appeared. It is distinctly patriotic in tone: a young Greek dreams of delivering his country from the Roman yoke, attempts under Heliogabalus to do so, and, in order to have the Christians on his side, becomes one of them. His vengeance fails, and at the end Christ, his judge, condemns not his patriotism but his evil deeds and want of trust in Providence. After "Irydion" until the appearance of "Przedswit" (Before Dawn) Krasinski passed through a period of little literary activity but much philosophical thought, during which his works were few and of little importance.

"Before Dawn" is a most beautiful poem, and was intended by Krasinski to be his last. The poet sailing in a boat with Beatrice, his loved one and the source of his inspir-

ation has a vision showing him some of the heroes of old Poland, which makes him happy, for Czarniecki reveals to him the destiny of Poland, the only nation which preserved the spirit of Christianity: thence its present sufferings and its future greatness. Shortly after the publication of "Before Dawn" Krasinski married Elizabeth Branicka. In 1845 he began to write his "Psalms of the Future" poems inspired by the desire to prevent his country from rushing into an abyss for he had been informed that an armed rising was close at hand. The "Psalms of Faith, Hope, and Love" appeared together, followed (in 1848) by the "Psalms of Sorrow and of Good-will". The last marks what is perhaps the very highest summit of Krasinski's inspiration. Here, as an "Before Dawn", he makes Poland the "Chosen Nation of the Lord". His other works are: "The Day of To-Day", and "The Last One", both published in 1848, but written long before; "Resurrecturis", a "Gloss of St Theresa", and his last work which has no name but "The Unfinished Poem", and which as a whole, though he had been working at it before 1840, is much inferior to his best production. After 1848 Krasinski's health, which had been feeble, gave way completely. He spent some time in Baden and Heidelberg and travelled to France in search of a congenial climate; but his last years, saddened by family losses, were spent in a state of great physical suffering.

Krasinski's poetry, possibly the noblest of all contemporary efforts to base politics on the principles of Christianity, has for key-note his exclusive interest in all such political questions as touch upon a happier future for the world. The "Infernal Comedy" deals with all Europe as a whole and in general; "Irydion" enquires how any particular nation is to be regenerated; "Before Dawn" gives the answer, as also do the "Psalms of the Future", though more distinctly and with less of enshrouding mysticism. As a thinker, Krasinski is greater than as a poet. Though at times too obscure, too allegorical, and too prone to set forth his message at the expense of artistic form, yet his creations show wonderful talent, rich imagination, and complete originality. He owes nothing either to antiquity or to contemporaries, whether English, Polish, or German. His defects (redundancy of ornament, exaggeration in thought, turgidity of style), conspicuous only in his feebler works, pass unnoticed in his greatest creations, of which they cannot impair the grandeur. No Polish author writes with greater splendour and majesty. He is representative of the noblest trends of the thought of his time, and eloquently expressive of his nation's sufferings, whilst he warns her not to go astray and points out the way to salvation. He is indeed one of the mightiest minds that Poland ever brought forth.

S. TARNOWSKI

Franz Xaver Kraus

Franz Xaver Kraus

An ecclesiastical and art historian, b. at Trier, 18 September, 1840; d. at San Remo, 28 December, 1901. He completed his studies in the Trier gymnasium, began his theology in 1858-60 in the seminary there, and finished it in 1862-64, having passed in France the time from the autumn of 1860 to the spring of 1862 as tutor in distinguished French families. He was ordained a priest by the suffragan bishop Eberhard of Trier, 23 March, 1864. Even after he became a priest, he continued his studies in theology and philology at the universities of Tubingen, Freiburg — where he had received the degree of Doctor of Philosophy in 1862, and received that of Doctor of Divinity in 1865 — and Bonn. In the autumn of 1865 he became beneficiary of Pfalzel near Trier, where he developed a zealous literary activity, interrupted by several journeys of the purpose of study to Paris Belgium, and to Rome in January, 1870. In the spring of 1872 he was attached to the faculty of philosophy at the university of Strasburg as professor extraordinary of the history of Christian art, and in the autumn of 1878 he succeeded Johann Alzog as Professor ordinary of Church history at Freiburg. In 1890 he was made grand-ducal privy councillor, and held the office of pro-rector of the university for the period 1890-1. He was also curator of religious antiquities in the Grand Duchy of Baden, and from 1883 a member of the Badern Historical Commission.

Kraus was a man of brilliant and versatile talents, a scholar of great learning, a clever and elegant writer, and, in spite of ill-health and the acute bodily sufferings of his closing years, an author of wonderful productivity, who delighted in his work. Although, from an ecclesiastical standpoint, much of his literary work is greatly to be deplored and rejected and though his political activity — to which we shall refer later — did not always influence favourably his intellectual labours, his achievements of positive and permanent value form a sufficiently imposing array to entitle Kraus to a place among the ablest scholars of the nineteenth century. After a few translations from the French (van Hemen, de Ravignan, and Lacordaire) he began his independent literary career with small works on the history of early Christian literature in the first centuries and the Middle Ages, among them: "Ægidius von Rom" (in "Oesterreichische Vierteljahresschrift für kath. Theologie", I, 1862) "Observationes criticae in Synesii Cyrenaei epistulas" (Sulzbach, 1863);

"Studien über Synesios von Kyrene" (in "Theologische Quartalschrift, XLVII, 1865; "Der Briefwechsel Pauli mit Seneca" "Theologische Quartalschrift", XLIX, 1867), and later "Ueber das Martyrium des h. Ignatius von Antiochien" ("Theol. Quartalschrift", LV, 1873). Of the edition of the "Opera omnia" of Thomas à Kempis, undertaken by

Kraus, only the first volume appeared ("Opuscula", Trier, 1868). Another series of writings, published in the "Bonner Jahrbucher des Vereins von Alterthumsfreunden" and in the "Serapeum", deals with particular features of the history and archology of Trier. In this manner Kraus was led on to the study of Christian archaeology in general, and then to Christian art in all its aspects, thus reaching the field of research for which he seemed particularly qualified, and in which he was to accomplish his best work. Among other larger or smaller publications we may mention: "Beitrage zur Trierischen Archaologie und Gesehichte. I, Der heilige Nagel in der Domkirche zu Trier" (Trier, 1868); "Die Kunst bei den alten Christen" (Frankfort-on-the-Main, 1868); "Die christliche Kunst in ihren fruhesten Anfängen. Mit besonderer Berucksichtigung der neuesten Resultate der Katakomben-Forsehung popular dargestellt" (Leipzig, 1872); "Ueber den gegenwartigen Stand der Frage nach dern Inhalte und der sedeutung der romischen Blutampullen" (Freiburg, 1872); "Das Spotterucifix vom Palatin" (Freiburg, 1872); "Roma sotterranea: Die romischen Katakomben. Eine Darstellung der neuesten Forschungen, mit Zugrundelegung des Werkes von J. Spencer Northeote und W. R. Brownlow" (Freiburg, 1873; 2nd ed., 1879); "Ueber das Studium der Kunstwissenschaft an den deutschen Hochschulen" (Strasburg, 1874); "Ueber Begriff, Umfang, Geschichte der christlichen Archaologie und die Bedeutung der monumentalen Studien far die historische Theologie. Akademische Antrittsrede" (Freiburg, 1879); "Synchronistische Tabellen zur christlichen Kunstgeschichte" (Freiburg, 1880).

These were followed by the great works which constitute Kraus's chief claim to an enduring fame: "Kunst und Alterthum in Elsass-Lothringen. Beschreibende Statistik im Auftrage des kaiserlichen Oberprasidiums von Elsass-Lothringen herausgegeben" (4 vols, Strasburg, 1876- 92); "Beal-Encyklopadie der christlichen Alterthümer" (2 vols., Freiburg, 1882-6); "Die Kunstdenkmäler des Grossherzogthurns Baden" (vols. I — VI, 1, Freiburg, 1887-1904 — is being continued by other authors); "Die christlichen Inschriften der Rheinlande" (2 vols, Freiburg, 1890-4); and lastly his masterpiece: "Geschichte der christlichen Kunst" (vol. I and the first half of volume II (Freiburg, 1896-1900). The second half of volume two, which brings the description of the Italian Renaissance to a close, was published by Joseph Sauer in 1908. This work combined the results of all Kraus's labours in the field of art. Its chief merit lies in the description of the connection of art with the general and religious culture of the different periods. Other important publications belong to the special history of art: "Die Wandgemälde der St. Georgskirche zu Oberzell auf der Reichenau" (Freiburg, 1884); "Die Miniaturen des Codex Egberti in der Stadtbibliothek zu Trier" (Freiburg, 1884); "Die Miniaturen der Manesseschen Liederhandschrift" (Strasburg, 1887); "Die mittelalterlichen Wandgemälde im Grossherzogthum Baden" (with H. von Oechelhäuser, vol. I, Darmstadt, 1893); "Die Wandgemälde der Sylvesterkapelle zu Goldbach am Bodense"

(Munich, 1902). Kraus's literary leanings were directed especially towards Italy. After a close study of Dante, covering years of labour, he published the work, which must be ranked among his greatest: "Dante. Sein Leben und sein Werk. Sein Verhältniss zur Kunst und Politik" (Berlin, 1897). Though his opinions may not be in all cases incontestable, this work will always claim a prominent place in Dante literature. Somewhat earlier he had published "Luca Signorelli's Illustrationen zu Dante's Divina Commedia" (Freiburg, 1892).

His collected "Essays" also belong to Kraus's most brilliant literary efforts (vols. I and II, Berlin, 1896 and 1901); they are of a literary, historical, and political character, and the majority appeared originally in the "Deutsche Rundschau"; particularly noteworthy are the essays "Antonio Rosmini" — for whom Kraus had a particular veneration — and "Francesco Petrarca in seinem Briefwechsel". Compared with the more congenial occupation of literature and art, Kraus's work on church history takes second place. His "Lehrbuch der Kirchengeschichte für Studierende" (1st ed. in 3 parts, Trier, 1872-5; 4th ed., 1896, French translation: "Histoire de l'Eglise par F. X. Kraus traduite par P. Godet et C. Verschaffel" (4 vols. Paris, 1891-2) contains much that is excellent, but has also serious defects. It is distinguished by clear and perspicuous arrangement, based more or less on that of the well-known manual of the Protestant historian Kurtz, and by its elegant and interesting narrative, but its statement of fact is frequently neither sufficiently accurate nor reliable. One misses the calm objectivity of the historian, the author showing in many instances the inordinate influence which his liberalizing views exerted over his judgment. This bias naturally aroused enmity, and as it was still more emphatic in the second edition of 1882, Kraus was compelled by the pope to withdraw this edition and revise it. The revised edition appeared in 1887 with the ecclesiastical imprimatur. The first edition of the church history was followed by the "Synchronistische Tabellen zur Kirchengeschichte" (Trier, 1876) and "Charakterbilder aus der christlichen Kirchengeschichte" (5 parts, Trier, 1877), which were designated the fourth and fifth divisions of the ecclesiastical history, but had really the character of separate works. Among his less important ecclesiastico-historical works are "Briefe Benedicts XIV. an den Canonicus Francesco Peggi in Bologna 1727-1758" (Freiburg and Tübingen, 1884; 2nd ed., 1888); "Medicean Rome" in "The Cambridge Modern History", II (Cambridge, 1903), 1-35. Mention should also be made of his preparation of the tenth edition of Alzog's "Handbuch der allgemeinen Kirchengeschichte" (2 vols., Mainz, 1882), and his "Gedachtnissrede auf Johannes Alzog, Professor der Theologie an der Universität Freiburg" (Freiburg, 1879). His political rather than his ecclesiastical views are reflected in "Die Erhebung Italiens im 19 Jahrhundert: Cavour" (Mainz, 1902 — "Weltgeschichte in Charakterbildern", vol. V).

As a politician Kraus displayed an extensive journalistic activity, which, from the Catholic standpoint, is greatly to be regretted. Personally, he was a man of deep religious feeling and Catholic faith, but, from association with the Liberal Catholics in France, Italy, and Germany, he soon became imbued with their views on ecclesiastical polity. At the time of the Vatican Council, he entered into close connections with the opposition party, and kept up these relations for some time. He remained in the Church, but the strife had engendered in his mind a certain bitterness. In many anonymous or pseudonymous articles written for the Liberal press, he gave vent to his dissatisfaction with certain ecclesiastical conditions — often with excessive severity and bitterness. The "Kirchenpolitische Briefe" in the "Beilage zur Allgemeinen Zeitung" (1895-9), written under the pseudonym of "Spectator", created a great sensation. It is to him that we owe the distinction between "religious and political Catholicism", a formula in which he imagined he had found the solution of many difficulties. The permanent services of Kraus as a scholar are, however, sufficiently great to permit us to draw a veil of oblivion over his political errors and his secret activity on behalf of Liberalism.

FRIEDRICH LAUCHERT

Karl Kreil

Karl Kreil

Austrian meteorologist and astronomer, b. at Ried, Upper Austria, 4 Nov., 1798; d. at Vienna, 21 Dec., 1862. He received his early education at the Benedictine Abbey of Kremsmünster, under the noted astronomer P. Boniface Schwarzenbrunner. There he joined in the work at the observatory. He studied law for financial reasons, but, in 1823, decided to give it up and to devote himself exclusively to the mathematical and physical sciences. In 1827 he became assistant at the observatory of the Vienna University, then, 1831, adjunct at the observatory de La Brera of Milan. In 1838 he was transferred to the Prague Observatory, of which he became director in 1845. He found this observatory in a very poor condition and was therefore obliged to confine his

work more and more to terrestrial observations. He introduced into Austria the study of a new science, that of terrestrial physics. The necessary instruments he obtained by personal privations and persistent efforts. He organized a rational system of magnetic and meteorological observations, which soon placed Prague in the same class with such observatories as that of Göttingen, which was richly endowed and which was directed by the great Gauss.

The emperor conferred upon him the cross of Knight of the Order of Francis Joseph. A member of the Imperial Academy of Vienna since its foundation in 1847, he submitted to it his plans for the establishment of a central station for magnetic and meteorological observations in Austria. This was realized at Vienna in 1851. He was made the first director and at the same time became professor of physics at the University of Vienna. His systematic observations, begun at Milan and Prague, soon extended first over Bohemia and later over the entire empire to the shores of the Adriatic, as well as to Turkey and the Black sea. His religious convictions were very pronounced, and, far from clashing with his scientific occupations, they added a new force to them. He contributed a number of papers and reports to the Academy, improved magnetic apparatus, and constructed some self-registering meteorological instruments. The work at Prague was published in eleven volumes, 1839-1850, under the title of "Magnet. und Meteorol. Beob. zu Prag."

Other publications are: "Cenni storici e teoretici sulle comete" (Milan, 1832); "Beob. über den grossen Kometen von 1843" (Prague, 1843); "Natur und Bewegung der Kometen" (Prague, 1843); "Magn. und geogr. Ortsbestimmungen in Oesterr. Kaiserthum" (5 vols., Vienna, 1846-1851); "Anleitung zu magn. Beobachtungen" (2nd ed., Vienna, 1858); "Horizontale Komponente der magnetischen Erdkraft" (Vienna, 1853). He edited "Astronomisch-meteorologisches Jahrbuch für Prag" (Prague, 1842-1845) and also "Jahrbücher der Zentral-anstalt für Meteorologie und Erdmagnetismus" (1849-1862).

WILLIAM FOX

William Kreiten

William Kreiten

Literary critic and poet, b. 21 June, 1847, at Gangelt near Aschen; d. 6 June, 1902, at Kerkrade (Kirchrath) in Dutch Limburg. At the age of sixteen he entered the Jesuit novitiate of Friedrichsburg at Münster. After receiving his classical education at Münster and Amiens, he began his philosophical and theological studies at Maria

Laach in 1868, but was compelled to interrupt them the following year on account of ill-health. From 1869 to 1871 he pursued literary studies at Münster. When the Jesuits were expelled from Germany, in 1872, Kreiten was sent to Aix in Provence, where he completed his theological studies and was ordained priest on 8 June, 1873. From 1870 to 1878 he was on the editorial staff of "Stimmen aus Maria Laach" at Tervueren near Brussels. In 1878 ill-health compelled him to retire to Kerkrade, where he spent the remaining twenty-three years of his life in literary pursuits. Though continually suffering, he was one of the chief workers on "Stimmen aus Maria Laach", to which he contributed numerous essays on literary subjects and most of the reviews of current Catholic literature from 1874 to 1902. His larger works in the field of literary history and criticism are "Voltaire, Ein Beitrag zur Entstehungsgeschichte des Liberalismus" (Freiburg, im Br., 1878, 2nd ed., 1884); "Molieres Leben und Werke" (Freiburg im Br., 1887; 2nd ed, 1897); "Lebrecht Dreves. Ein Lebensbild" (Freiburg im Br, 1897); a critical edition of the poems of Annette von Droste-Hulshoff with an exhaustive biography of the great Westphalian poetess (Monster, 1884-6; 2nd ed., 1900 —); a series of twenty-one articles in "Stimmen aus Maria Laach" on Blaise Pascal and his works. His poetical works are "Heimatweisen aus der Fremde (Aachen, 1882), the second edition of which has many additional poems and is entitled "Den weg entlang" (Paderborn, 1889; 10th ed, 1904); translations of selections from the modern Provencal Christmas hymns of Louis Simon Lambert, entitled "Bethlehem" (Freiburg im Br, 1882; 2nd ed., 1895). Furthermore, Kreiten completed and published a biography of Klemens Brentano which had been begun by the friend of his youth, J. B. Diel, S. J., 2 vols., (Freiburg im Br., 1877); edited the other posthumous works of Diel, 2 vols. (Freiburg im Br., 1877); and Brentano's "Die Chronik des fahrenden Schulers" (Munich, 1883; 2nd ed., 1888). His last work was a collection of eight hundred aphorisms entitled "Allerlei Weisheit" (Paderborn, 1901).

Stimmen aus Maria Laach, LXIII (Freiburg, im Br. 1902), 1-11; Deutecher Hausschatz, XXVIII (Ratisbon, 1901-2), supplement, 113; GULDNER in The Messenger, XXXVIII (New York, 1902), 471-3.

MICHAEL OTT

Kremsmunster

Kremsmünster

A Benedictine abbey in Austria, on the little river Krems, about twenty miles south of Linz, founded A.D. 777 by Tassilo II Duke of Bavaria, who richly endowed it, as did subsequently Charlemagne and his successors. The first colony of monks came from Lower Bavaria, and Fatericus was the first abbot. The position and reputation of the

monastery soon became such that its abbots, in the absence of the bishop of the diocese (Passau), exercised the episcopal jurisdiction. In the tenth century the abbey was destroyed in an incursion of the Hungarians, and its possessions divided among the Duke of Bavaria and other nobles and the bishops; but it was restored, and recovered its property, under the emperor Henry II, when the holy and zealous Gothard became abbot. In the following century Kremsmünster shared the general decadence of religious houses, and fell into decay, which was fortunately arrested by the action of the excellent Bishop Altmann of Passau, who brought a community from Gottesau, and introduced the reformed observance of Cluny into the abbey. After this it became known as one of the most flourishing houses in Germany, "excelling all other abbeys" says an anonymous chronicler, "in observance and piety, also in respect to its lands, buildings, books, paintings, and other possessions, and in the number of its members prominent in learning and in art". The monastic library was famous, and drew eminent scholars to study at Kremsmünster, where several important historical works were written, including histories of the bishops of Passau and of the dukes of Bavaria, and the chronicles of the abbey itself. Schrodler (Kirchenlex., VII, 1053) gives a list of writers connected with Kremsmünster from the eleventh to the sixteenth centuries, and of their literary labours. One of the most distinguished abbots was Ulrich Schoppenzaun (1454-1484), and it was owing to his attainments and zeal, and those of his disciple and successor Johann Schreiner (1505-1524), that at the critical time when the Reformation errors were beginning to spread in Germany, Kremsmünster held firmly to the old faith and doctrines.

From the Reformation period onwards nearly every abbot who ruled the monastery proved himself pious and learned, zealous and patriots ready to make all needful sacrifices for his country and his emperor. Abbot Lechner, towards the middle of the sixteenth century, constituted the hitherto private monastic school into a public school, and did much to preserve Catholicism in the district, where the Protestant doctrines had become widely prevalent. Abbot Weiner (1558-1565) unfortunately favoured the new teaching, thus introducing into the abbey dissension which nearly developed into disruption. This was, however, prevented by the zeal of succeeding abbots; and Abbot Wolfradt especially (1613-1639) brought the monastery into so highly flourishing a condition that he was known as its third founder; while its reputation as a house of studies and learning was even increased under his successor, Placid Buchauer (1644-1669). Among the abbots of the eighteenth century the most prominent and distinguished was Alexander Fixlmillner (1731-1759), who built the great observatory, constructed many roads on the monastic estate, and was a man of most edifying life and unbounded charity to the poor. Towards the end of this century the drastic and innovating policy of the Emperor Joseph II, especially with regard to the religious

houses of his dominions, brought Kremsmünster, like other great foundations, to the verge of suppression; but it happily escaped this fate. The house suffered much during the long Napoleonic wars, and was slow in recovering its position. It was not until the abbacy of Thomas Mitterndorfer (1840-1860) that, with its material position reinforced, and learning and discipline again flourishing within its walls, it regained all its former prestige. One of the most illustrious abbots in recent times was Dom Celestine Ganglbauer, who celebrated in 1877 the eleven-hundredth anniversary of the foundation, became Archbishop of Vienna in 1881 and was raised to the cardinalate in 1884 (d. 1889). The present abbot is Dom Leander Czerny, who succeeded Abbot Achleutner in 1905.

The community of Kremsmünster Abbey numbers about a hundred members. The abbey has the cure of souls of twenty six parishes (population over 42,000) and within the precincts are a Gymnasium, or boys school (300 pupils), of high reputation, and a school of philosophy. The imposing pile of buildings, as they now stand, are mostly of the eighteenth century. The valuable library contains some 70,000 volumes, 1700 manuscripts, and nearly 2000 incunabula. There is an interesting collection of objects of natural history in the lower part of the observatory, which is eight stories high; and a curious feature is the series of fish-tanks decorated with statues and a Colonnade.

Cremifanensis* (Salzburg, 1677); PEZ, *Script. ver. Austriae* (Leipzig, 1725), II, 57.

D.O. HUNTER-BLAIR

Martin Kromer

Martin Kromer

A distinguished Polish bishop and historian; b. at Biecz in Galicia in 1512; d. at Heilsberg, Ermland (now East Prussia), on 23 March, 1589. He was the son of a substantial citizen who, desirous of a public career for his son, sent him to the University of Cracow where he obtained his degree in philosophy. Afterwards he studied theology at Bologna and at Rome. When he returned to Poland he was appointed secretary to Gamrat, Bishop of Cracow, and shortly afterwards he was made secretary to Prince Sigismund August. The latter was so pleased with him that, when he afterwards ascen-

ded the Polish throne, he entrusted Kromer with many high official duties, and in order to enable him to receive promotion to even higher dignities the king elevated him in 1552 to the rank of a nobleman. Kromer was charged with diplomatic missions to Vienna, Rome, and to the Council of Trent. In Poland he had complete charge of the national archives, arranged the various documents and materials in systematic form, and in doing so devoted himself especially to the history of his country. At the suggestion of the king he utilized the studies made in arranging these archives by writing his great historical work, "De origine et rebus gestis Polonorum" in thirty books, which was published at Basle in 1555, and treated of the history of Poland from the earliest times down to the year 1506. It was translated into German by Heinrich Pantaleon and also published at Basle in 1562, and was likewise translated on two different occasions into Polish and published at Cologne in 1589 and at Cracow in 1611. In this history Kromer showed himself a keen critic, with a graceful style and polished Latinity, and he was particularly successful in setting forth clearly and lucidly the intricate political relations of Poland with the neighbouring states. It is to be regretted, however, that his history ended without describing the events of the very epoch which he knew so well from his own participation therein. Following this, he published at Cologne in 1577 his great geographical and descriptive work, "Polonia, sive de situ, populis, moribus, magistratibus et republica regni Polonici," in two books, which still remains an important source of information about contemporary Poland. It was translated into Polish by Kondratowicz and published at Wilna in 1853. He had even turned his attention to music, for in 1534 he had published a volume at Cracow entitled "De musica figurata." He took a very active part in opposing the spread of Protestantism in Poland. His various polemical writings, his sermons, and his catechism were all written in Polish and in a simple style devoted to the enlightenment of the people; they formed an energetic protest against the introduction of the new Lutheran and Calvinistic doctrines. In 1570 he was appointed by Cardinal (then Bishop) Stanislaus Hosius as coadjutor in the Diocese of Ermland, where together with the latter he wrote popular works in explanation and defence of the Catholic Faith. After the death of Hosius in 1579 Kromer was made Bishop of Ermland, and held that see until he died in 1589.

ANDREW J. SHIPMAN

Andrew Krzycki

Andrew Krzycki

Date of birth uncertain; d. in 1535. — A typical humanistic poet, a most supple courtier for whom poetry was to be a source of renown and profit, Krzycki was well-read in Latin poetry and knew the language to perfection. He wrote numerous epigrams, pointed and spirited in style and diction. His individuality was conspicuous; his talent, though not creative, and confined to imitations of the ancients, was by no means insignificant; his wit, mordant and at times coarse. His verses, whether laudatory or satirical, were mostly written to commemorate notable occasions. In 1512, for instance, he celebrated in verse the marriage of King Sigismund I with Barbara Zapolya; Krzycki subsequently became chancellor to the youthful queen. When the king won the victory of Orsza, he again wrote a poem, and sent verses purporting to be from the queen to her absent husband after the model of Ovid's "Epistolae Heroidum"; these, in a letter to Krzycki, Erasmus praised enthusiastically. After Barbara's death he continued to be chancellor in the household of Bona Sforza, Sigismund's second wife. He took orders and managed to obtain rich benefices, and even a bishopric; a flatterer in his verse when he hoped to get anything, he was malicious and biting when his suit was refused, and amongst his verses indecent and even obscene passages are to be found. Krzycki was plainly uneasy at times in the anticipation of impending danger. The Reformation, then rapidly spreading, filled him with dismay, and was the occasion of the most serious, and perhaps the best, work that he produced, "Religions et Reipublicae quaerimonia" (1522). When the Grand Master of the Teutonic Knights became a Lutheran, and Sigismund I (very wrongly) recognized him as his vassal and Duke of East Prussia, this act astonished the whole Catholic world, especially at Rome and in the Court of the emperor. Krzycki in a letter written to Baron Pulleon, very cleverly tried to explain and justify this action of his sovereign. He finally rose to the very highest dignity in his country, that of Primate Archbishop of Gnesen. His great talent and sense distinguished him amongst the Polish-Latin poets; he possessed all the characteristics of a humanist and a worldly-minded priest of his epoch. It is true that Krzycki loved his country and that he feared for its future. He readily patronized youthful talent, as in the case of Janicki. His last work, "De Asiana Dieta," was a criticism of those turbulent and fruitless Polish diets common in his time.

S. TARNOWSKI

Johannes von Kuhn

Johannes von Kuhn

Theologian, b. at Waeschenbeuren in Wuerttemberg, 19 Feb., 1806; d. at Tübingen, 8 May, 1887. He pursued his classical studies at Gmuend, Ellwangen, and Rottweil, and courses in philosophy and theology from 1825 to 1830 at Tübingen; entered the seminary at Rottenburg in the autumn of 1830, and was there ordained on 14 Sept., 1831. In the autumn of 1832, he became professor of New Testament exegesis in the Catholic theological faculty then attached to the University of Giessen. At Easter, 1837, he was called in the same capacity to the University of Tübingen, where, in 1839, he was appointed to the chair of dogmatic theology. He retired in 1882. Kuhn was a clear thinker, with remarkable gifts for philosophical and theological speculation. With Staudenmaier he occupies the foremost rank among the speculative dogmatists of the Catholic school at Tübingen. His first important work was the result of his deep research into the new philosophy "Jacobi und die Philosophie seiner Zeit. Ein Versuch das wissenschaftliche Fundament der Philosophie historisch zu erörtern" (Mainz, 1834). During the years he taught at Giessen, his literary activity in the domain of New Testament studies resulted in a series of articles which he published in the "Jahrbücher für Theologie und christliche Philosophie" (Frankfurt, 1834-6), edited by him and by his colleagues, Locherer, Lüft, and Staudenmaier. His work in this field closed with the important, though unfinished work, "Das Leben Jesu wissenschaftlich bearbeitet" (Mainz, 1838), in which he opposed the destructive tendencies of Strauss. After he had taken the chair of dogmatic theology at Tübingen, he made the study of speculative dogma his life work. His most important work is the "Katholische Dogmatik," an undertaking of wide scope which unfortunately was never completed. The following parts appeared: Vol. I, part I: "Einleitung in die katholische Dogmatik" (Tübingen, 1846, 2nd ed., 1859); Vol. I, part II: "Die dogmatische Lehre von der Erkenntnis, den Eigenschaften und der Einheit Gottes" (1849; 2nd ed., 1862); Vol. II: "Die christliche Lehre von der göttlichen Dreieinigkeit" (1857). Kuhn had already outlined his work in the paper "Über Princip und methode der speculativen Theologie" (University programme, Tübingen, 1840). Among his other works which were issued in part independently, and in part in the Tübingen "Theologische Quartalschrift," many bear a polemical character. His treatment of the fundamental questions on the relation of faith and knowledge, of philosophy and theology, brought about a controversy first with the Hermesians, and in later years with the advocates of the neo-Scholastic philosophy (Clemens, Schätzler). To the analysis of Hermesanism the work: "Über Glauben und Wissen, mit Rücksicht auf extreme Ansichten und Richtungen der Geg-

enwart" (Tübingen, 1839), is partly devoted. The "Philosophie und Theologie" (Tübingen, 1860) was directed against the philosopher Franz Jacob Clemens of Bonn, as was also the essay, "Das Verhältniss der Philosophie zur Theologie nach modern-scholastischer Lehre" (Theologische Quartalschrift," 1862, pp. 541-602; 1863, pp. 3-83).

In 1863 and the subsequent years, Kuhn was engaged in a controversy with Constantine von Schüzler, first in regard to a free Catholic University and later on the dogmatic question of the relation of nature and grace, of the natural and the supernatural. On the former question he wrote "Die Historisch-politischen Blätter über eine freie katholische Universität Deutschlands und die Freiheit der Wissenschaft" (Tübingen, 1863); on the latter he wrote "Das Natürliche und das Übernatürliche" (Tübingen, 1864). Schüzler then published his important work, "Natur und übernatur. Das Dogma von der Gnade und die theologische Frage der Gegenwart. Eine Kritik der Kuhn'schen Theologie" (Mainz, 1865), and later "Neue Untersuchungen über das Dogma von der Gnade" (Mainz, 1867). It was especially against these two works that Kuhn directed his last important book, "Die christliche Lehre von der goettlichen Gnade. Erster und allgemeiner Theil: Die urspruengliche Gnade und die damit zusammenhaengenden Untersuchungen über den Begriff und das Wesen der Gnade überhaupt, mit besonderer Beziehung auf die Scholastik und deren neueste Umdeutung" (Tübingen, 1868). A prospective second volume, in which the grace of Redemption was to be set forth from a positive and theoretical standpoint, never appeared. Of Kuhn's earlier works we may mention a few others, which are particularly serviceable against the Pantheistic, anti-Christian theories of contemporary philosophy: "Die moderne Speculation auf dem Gebiet der christlichen Glaubenslehre" ("Theologische Quartalschrift," 1842, pp. 171-225; 1843, pp. 3-75; 179-226; 405-67); "Die Schelling'sche Philosophie und ihr Verhältniss zum Christenthum" ("Theologische Quartalschrift," 1844, pp. 57-88; 179-221; 1845, pp. 3-39). Kuhn also opposed Hegel's philosophy of religion in the above-mentioned "Über Glauben und Wissen" (1839).

SCHANZ, Zur Erinnerung an Johannes Evangelist von Kuhn in Theol. Quartalschrift (1887), pp. 531-98; IDEM, Gedächtnissrede auf Joh. Ev. v. Kuhn (Rottenburg, 1887); IDEM in Kirchenlex. (2nd ed., 1891), s.v.; LAUCHERT in Allg. Deutsche Biographie, LI, pp. 418-20. Regarding Kuhn's philosophy, see also SCHMID, Wissenschaftliche Richtungen auf dem Gebiete des Katholicismus in neuester u. in gegenwaertiger Zeit (Munich, 1862); WERNER, Gesch. d. kathol. Theologie (Munich, 1866), pp. 499 sqq., 637 sqq.; GODET, Kuhn et l'ecole catholique de Tubingue in Annales de philosophie chretienne, LXXVIII (1907), pp. 26 sqq., 163 sqq.

FRIEDRICH LAUCHERT

Kulturkampf

Kulturkampf

The name given to the political struggle for the rights and self-government of the Catholic Church, carried out chiefly in Prussia and afterwards in Baden, Hesse, and Bavaria. The contest was waged with great vigour from 1871 to 1877; from 1878 to 1891 it gradually calmed down. On one side stood the government, the Liberals, and the majority of the Conservatives; on the other, the bishops, the priests, and the bulk of the Catholic people. Prussia was the chief centre of the conflict. The Prussian government and Prince Bismarck were the leaders in this memorable struggle.

I. CAUSES OF THE KULTURKAMPF

They are to be sought: (1) in the political party-life of Germany; (2) in the trend of ideas among the German people towards the middle of the nineteenth century; (3) in the general European policy of Bismarck after 1870.

(1) Moritz von Blankenburg was the leader of the Prussian Conservatives. From the first he declared himself openly and clearly in Parliament for an anti-Roman policy. The Conservatives represented the orthodox Protestants of Prussia, themselves threatened by the Liberal movement at that time opposed to all positive Christianity. Nevertheless the attitude of Blankenburg was no personal caprice. The Conservatives yet held in principle to the Protestant character of the State of Prussia as formerly constituted (i.e., up to the German Revolution of 1848). After the Constitution of 1848, it is true, this exclusively Protestant character of the State was no longer recognized by law. But the Conservatives jealously saw to it that as a matter of fact no change took place in Prussia. It could not be pleasing to them that the Catholics of the Rhineland and Westphalia should gradually rise to power through the new parliamentary institutions. When the German Empire was formed in 1870, and South Germany, in great majority Catholic, was thereby joined with Prussia, they conceived the gravest fears for the supremacy of Protestantism in Prussia.

However, the real instigators of the onslaught on German Catholicism were the German Liberals. Their attitude is thus explained: previous to 1860 the Liberal party had long been composed almost entirely of men belonging to narrow professional circles—professors, lawyers, etc., also prominent business men. They united in opposition to political absolutism, and were eager for a larger constitutional life in Germany. But they had also an intellectual bond. Whether as anti-clerical disciples of French Deism or Austrian Josephinism, or as enthusiastic admirers of German poetry and philosophy (and therefore advocates of an undogmatic and unecclesiastical Christian-

ity), they were all inimically disposed towards the Catholic Church and all positive belief. With the help of legislation and state schools they hoped to secure for "free and independent science" (die freie Wissenschaft) an absolute control over the intellectual life of the whole German nation. Indeed, the original pioneers of the Liberal party were as unanimous in their philosophical views of the world and life as they were in their views of the State. In the beginning, therefore, they were inclined in their public utterances to promote equally both policies. Until 1860, however, they considered themselves too weak to undertake vigorous action in behalf of their *Kultur* aims, i.e., their intellectual and political ideals as described above. Isolated failures of an earlier date (the *Kölner-Wirren*, or ecclesiastico-political troubles of 1837, and the *Deutsch-katholischen* movement of Ronge in Baden, 1844-46) still served as warnings. In both cases vast masses of the people had been deeply troubled. Even the middle-class citizens, usually rather indifferent in matters of faith, were not yet ready to participate in religious conflicts of this nature. Their chief aims at that time were politico-economical; a little later, after 1850, the passion of national unity stirred deeply the entire *Bürgerthum* of Germany. But when the Liberal influence increased after 1860 in the Prussian Parliament (Landtag) and in the various German states, the party leaders began to change their tactics. The Grand Duke of Baden confided to them the organization of the *Ministerium*, i.e., the civil administration of the State. Forthwith the Archbishop of Freiburg and the clergy of Baden were subjected to the strictest civil supervision. The Church was deprived of all free control of its property and revenues, with which, till then, the Government had not interfered. All ecclesiastical influence was expelled from the schools, and an effort made to introduce the spirit of "free science" even into the education of the clergy. In the summer of 1860 Bavaria offered the Liberals a pretext for the introduction of their *Kultur* programme. Of course, in so Catholic a people and state, no permanent results were attainable apart from a thorough transformation of popular life and thought. This was to be done by means of new educational laws and by the so-called Bavarian "social legislation". The latter, in particular, was meant to clear the way for a complete renovation of the economic and social conditions of the Bavarian people. For the present, however, only preliminary steps were taken. Education was naturally the foremost question. Meantime the parliamentary supremacy of the Prussian Liberals, so recently and laboriously acquired and so essential for their success, was seriously challenged. In Otto von Bismarck, since the end of 1862 chief of the Prussian Ministry, they found a superior opponent. This led (1866-67) to the formation of a Prussian National Liberal Party committed to a reconciliation of the hitherto dominant Liberals with the now all-powerful minister. In this way it was hoped to secure again for the party its waning influence in Prussia. In public opinion the Liberals had been for three decades the chief representatives of the idea of national

unity under Prussian leadership. Bismarck had now realized that ideal, and in this fact was found the common ground between the National Liberals and the new master of German politics. Bismarck then abandoned his anti-Liberal attitude and for the most part of the next decade received the parliamentary support of the Liberals; towards the year 1870 the more important offices, both Prussian and German, were held by the Liberals. Soon the party began, in Prussia, as previously in Bavaria, to attack the Catholic ecclesiastical influence in the schools; politico-economical and social questions were also brought to the front apropos of the new and systematic legislation proposed. The National Liberals at this time reached the acme of popularity, owing to the universal enthusiasm over the defeat of France, also through the general satisfaction with the economic legislation of the party that left free scope to the growth of material interests.

(2) The *Kultur* policy which the Liberal party then sought to impose on the newly-established empire and on its chief constituent states need not have produced the intense excitement that followed. It would have been possible, through the public press and assemblies, to keep up in the Parliament an appearance of peaceful legislative work and to influence in a moderate way the public opinion of the nation, somewhat, if we may so put it, as is now done in France. Instead of this, legislative action degenerated into a savage party struggle that aroused in the public mind all manner of violent emotions. The Liberal efforts to influence public opinion became so many fanatical assaults on the hereditary devotion to their Church of the orthodox Catholic masses. It is to be noted, however, that for this violence of temper there were certain reasons.

The great events of the years 1866-1871 had agitated deeply the now united German nation. It was not unnatural, therefore, that its people should consider all political problems in the light of their extremest consequences, from the view-point of principles, and of the great ideas that were then appealing to the popular masses. In the average German mind at this period two great thoughts were dominant—the new-born German nationality and a new philosophy of man and life. Most German Catholics were very apprehensive for the future welfare of their religion in the ancient fatherland; as a matter of fact it was Protestant Prussia, the birthplace of Kant and the source of Hegelianism, that had accomplished the unity of Germany. Most Liberals, on the other hand, while they rejoiced over the settlement of the "German question" by Prussia, continued to hold the national unity as incomplete so long as the Germans were divided in religion and in the aforesaid fundamental philosophic views. They maintained that a permanent political unity of Germany depended absolutely on unity of religion, language, and education. On this ground they proclaimed the Catholic minority a foreign element in the new empire; it must be either assimilated or exterminated. The deep-rooted religious differences of Germany, thus brought again to the front in connection with the nation's future, were freshly aroused, though such new

occasion was scarcely necessary. Even while the Liberals yet hesitated to evoke them, they had, of themselves as it were, and by their own nature, taken on a new life.

As early as 1848, an important "Catholic Movement" sprang up in Germany. During the eighteenth century the German Catholics had been quite outmaneuvered by the Protestants, and in the early decades of the nineteenth century found themselves politically powerless. Economically they had fallen into the background, nor could they exercise socially an equal influence. In general education they were also backward, in comparison with their rivals. Their Catholic consciousness was therefore much weakened; no longer proud of their religion, they ceased to profess it openly and freely. But about the middle of the nineteenth century a change came over the Catholics of Germany, and they awoke to a fresh sense of the power and beauty of their religion. Simultaneously Catholic life took on a new development throughout the entire West, especially during the pontificate of Pius IX. This pope had a wonderful influence over the Catholic masses, whom he filled with a remarkable confidence and zeal, especially as to their public life. In the Syllabus of 1867 he condemned with great earnestness that Liberalism which was then everywhere proclaimed as the heir expectant of Catholicism. Thereupon, he convened an ecumenical council, the first in 300 years. At this turning-point the German Catholics, so long eliminated from the political, economic and educational life of their nation, rallied to the defence of their faith against Liberalism. Under papal leadership they devoted themselves to the defence of Christian teaching and life, violently attacked by a multitude of infidel writers, and undertook to withstand the combined hosts of Protestantism and Liberalism. The Liberals, on the other hand, resented bitterly both Syllabus and Papal Infallibility; in some places (Mannheim, Berlin) Catholics suffered from the violence of mobs. At the very time when the dogma of Papal Infallibility was being proclaimed, Germany was winning her great victories over France; to the Liberals (some of whom were thus minded in the Prussian war of 1866 against Austria) it seemed as if the time had come for the final conflict between the empire and papacy, the last decisive battle of the Reformation against enslavement of religious thought and subjection to ecclesiastical authority. Gradually and almost unconsciously, under the influence of the aforesaid political and ecclesiastical events, a situation that in the Liberal mind originally contemplated only a more or less comprehensive legislation, both as to the schools and the relations of Church and State, developed into one of the most passionate conflicts of principles ever fought out within the limits of a great nationality. This was the state of affairs when, in the fall of 1870, the Prussian Catholics, not satisfied with their widespread system of popular associations, (*Vereinswesen*) undertook the creation of a new political party, the Centre (*Zentrum*); on the other hand, in the Reichstag elections of the Spring of 1871 the Liberals overthrew the Conservatives and took up the reins of power.

In April, 1871, the mutterings of the tempest were already heard in the opening debates of the Reichstag, especially in the debate on the Address to the Throne, when the Liberals insisted very pointedly on a flat and final rejection of any proposition looking towards the restoration of the Temporal Power, characterizing any such steps as an interference with the domestic affairs of a foreign people. As yet, however, no one had the courage to let loose the turbulent passions that filled men's breasts, nor as late as the end of 1871 (Memoirs of Prince Hohenlohe) were the Liberal leaders ready to open the campaign. The Centre remained on the defensive, occupied chiefly in outlining its parliamentary status. At this juncture Bismarck appeared on the scene.

(3) He was then under strong nervous tension, owing to the extraordinary exertions and emotions of the "high stakes" policy of his previous eight years. He was dominated by the fear that new and more exhaustive wars would soon be necessary in order to defend the unity of Germany then barely won. In this temper he was deeply concerned lest within the empire itself the foreign enemy should find aid and succour from particularist or anti-Prussian elements, whose importance he easily over-estimated. At this stage of his diplomacy he was bent on preventing the recurrence of any situation similar to that of 1863-66, when he found himself helpless in the presence of a powerful parliamentary opposition. He was at all times naturally inclined to resent as unnecessary, and therefore unjustifiable, any kind of parliamentary opposition. Quite indifferent to theories of home government and the division of political authority within the State, he was equally eager for a solid centralization and thorough reinforcement of all national resources, in view always of the foreign enemy. In this spirit he had once fought the Liberals, and compelled his former opponents to become the ardent supporters of his foreign policy. Now, on his return from France, he found before him a party, on the one hand more powerful in a parliamentary sense than the Liberal opposition of the sixties, while on the other it seemed to him gravely perilous in case of a foreign war. He was suspicious of one deputy, Ludwig Windthorst, in whom he at once recognized the real leader of the Centre.

While Bismarck was fully aware of the high abilities of Windthorst, he knew also that he was a former subject of the House of Hanover and was still in close touch with that dynasty, that he had never approved the exclusion of Austria from the German unity as accomplished by Bismarck, and that he vigorously disapproved the excessive favour shown by Bismarck to the Liberals, both in Prussian and in imperial affairs. He had already suffered a notable defeat at Windthorst's hands in the Tariff Parliament of 1868, on which occasion Bismarck tried in vain to obtain from the assembly anything more than the politico-economical services for which it had been called (i.e. he failed then to secure the peaceful union of the South German States with the North German Confederation). Windthorst at that time had no strong parliamentary following, yet

his political strategy had proved successful. But now a strong party was at his back, and, as its acknowledged leader, he lost no occasion to increase its influence. On the one hand he appealed to certain Conservatives, superior to Protestant prejudices, and unalterably opposed to the National Liberals as enemies of Christianity and the traditional German views of the State; on the other he was always ready to combine with those Liberals who had not gone over unconditionally to Bismarck. This welcoming of recalcitrant Liberals was always Bismarck's chief cause of complaint. He had also persuaded himself from the beginning that the Centre entertained foreign relations inimical to the new German Empire. After the Franco-Prussian War the chancellor seems to have feared a conflict with Russia as champion of the new Panslavism. He had in large measure the habitual distrust of Prussia for its Polish subjects, and was persuaded that in case of war they would be on the side of Panslavism—that, whether in war or diplomacy, they would always prove a thorn in the side of Germany. He had watched them closely for several years and noted with deep suspicion the alliance of their deputies with the German Catholics. He laid great stress on this fact; as is well known, the Polish question is one of those which cause most uneasiness to Prussian statesmen. It offended him, moreover, that Catholic members of the Centre frequented the Radziwill salons in Berlin, and were thereby willing to appear friendly to Polish demands and aspirations.

His suspicions were still further aroused by the undeniably lively zeal which the Catholic clergy at large exhibited for the growth of the Centre, while, under Windthorst's direction, the party was standing out not only for the rights of the Catholic Church, but also for a definite political programme. This zeal of the German clergy was at this juncture especially odious to Bismarck; despite his clear-headed political realism, his imagination was deeply affected by the idea that Protestant Prussia had restored to Germany its former imperial grandeur precisely when Papal Infallibility was being proclaimed at Rome. In his eyes the empire once more stood over against the papacy; only there was now added another antithesis, that of Protestant individual freedom against submission to ecclesiastical authority. He persuaded himself that Rome was less friendly to the new empire than any other European power, and that it meant to unite against the new Protestant Empire all the Catholic nations of Europe and its own priesthood everywhere. To obtain definite information as to the relations of Rome and the Centre he demanded, in the spring of 1871, through the Bavarian ambassador at the Vatican, that Rome should censure the Centre party for its antagonistic attitude in the Parliament. A friendly answer was made by the Holy See, but on the representation of prominent members of the Centre, notably of Bishop Ketteler, Rome refused to further influence the Catholic party, whereat the indignation of the chancellor was boundless. In the meantime the South German Liberals, foremost

among them Prince Hohenlohe, stirred up unceasingly his original mistrust of the Centre, the Catholic clergy, and Rome.

Though for a while slow to act, he became daily more convinced that a grave peril for the empire existed in the activity of a powerful parliamentary party of German Catholics under the leadership of a man like Windthorst, to which must be added the influence of the Vatican over this party. In his eyes the Centre was an outcome of the German Catholic Movement (*die katholische Bewegung*); deprived of the support of the latter, it would collapse. Now the Catholic Movement, as he knew it since 1850, was for Bismarck something entirely hostile; it had been friendly to Austria, and its adherents were numerous in Southern Germany and Westphalia. Moreover, its enthusiasm for Rome and for the independence of the Catholic Church was odious to him. As a Prussian official he believed in a State Church; the Church should not only be under the supervision of the State, but should positively serve the purposes of the State. It seemed, therefore, that the psychological moment had come for the arrest of this Catholic Movement. All Germany was enthusiastic over the new-born imperial unity. To judge by various occurrences within the ranks of German Catholicism, it seemed as if Rome had gone too far in its claims on the obedience of German Catholics in matters of faith. The Old-Catholic organization then taking shape seemed a likely nucleus for a German National Church, a State Church for Catholics; it would welcome all seceders from Rome and guarantee them a new ecclesiastical life. Old-Catholicism, he argued, must be supported; the Roman Catholic clergy forced to submit; the masses behind the Catholic Movement must be intimidated, the immediate pressure of Roman authority removed from them, and the Centre stigmatized before its constituents as an enemy of the German Empire.

II. COURSE OF THE CONFLICT

It may be divided roughly into three periods: 1871-72; 1872-78; 1878-91.

A. 1871-72

The afore-mentioned views of Bismarck concerning the Centre and the Catholic Movement were by no means so clearly worked out in the summer of 1871 that he was then ready to begin a systematic onslaught on German Catholicism. For a year and a half his policy was manifested only in individual cases, though in all such cases a unity of attitude was clearly exhibited. As early as 8 July, 1871, he abolished the Catholic Section of the Prussian Ministry of Worship and gave over henceforth to officials in great majority Protestant the conduct of all government matters pertaining to Catholic churches and schools. His excuse was that the members of the aforesaid Catholic Section of the Department of Worship were guilty of too close relations with the Poles. Towards the end of 1871 he proceeded, on similar grounds, against the Catholic clergy of the eastern provinces of Prussia; he introduced at that time in the

Reichstag a law concerning the supervision of instruction and education. This act contemplated the extension of the civil school-supervision to religious instruction and simultaneously the abolition of all ecclesiastical supervision of the entire primary-school system hitherto exercised conjointly with the civil authorities. Henceforth, whenever the schools of a district were entrusted to ecclesiastical superintendents, their authority was to be derived solely from the State; in large measure, moreover, the Catholic clergy were excluded from any supervision of the schools. During the discussion of this School Supervision Law, Bismarck made an extremely violent attack (2 Feb., 1872) on Windthorst's leadership of the Centre, held out to the latter the olive branch of peace on condition of abandoning Windthorst, but threatened, in case of refusal, to pillory the party before all Germany as an enemy of the Empire. Shortly afterwards he caused the house of a Polish canon in Posen to be searched by the police, in the hope of finding there correspondence that would enable him to convict Windthorst of an alliance with the Poles. In this he was unsuccessful. On 4 July, 1872, the Reichstag passed the law against the Jesuits (*Jesuitengesetz*), on the plea that they were the emissaries of Rome in Germany (pretending at the same time to free the bishops from the Jesuit yoke); moreover, in defiance of all legality (both from a Conservative and a Liberal standpoint) the Jesuits were handed over to the arbitrary supervision of the police authorities and could at any moment be expelled from the Empire. In addition, the Bundesrath (Imperial Supreme Council) interpreted the law to mean complete exclusion from all ministry either in church or school. Thereupon the Jesuits left Germany. The next year the law was extended to the Redemptorists, Lazarists, Fathers of the Holy Ghost, and the Ladies of the Sacred Heart, as being closely related to the Jesuits, whereupon these orders also left Germany. In the same month the Government again manifested its ecclesiastico-political views by the measures which it sanctioned against the Prussian bishops, in the interest of the Old Catholics. Still earlier (1 Dec., 1871) the so-called *Kanzelparagraf*, or pulpit-law, was, for a similar purpose, incorporated in the Criminal Code. The Bishop of Ermland had forbidden the Old Catholic teacher of religion (*Religionslehrer*) in Braunsburg Gymnasium any longer to exercise his office. The Government then interfered and compelled the parents to send their children to the lessons of this instructor. Later, after a unanimous protest from the bishops of Prussia, the Government abandoned its position in this case, but demanded from the Bishop of Ermland a declaration to the effect that "in the future he would obey in their entirety the laws of the State." He refused to make the declaration, whereupon his salary was withheld. A similar treatment befell the Catholic Head Chaplain (*Feldpropst*) of the Prussian Army, to whom pertained the administration of public worship for the Catholic soldiers. At Cologne the church of the Catholic military chaplain had been turned over by the Government to the Old Catholics,

whereupon the Head-Chaplain of the troops forbade his subordinate to hold there the usual Catholic services. The Cologne chaplain was then brought before the Minister of War and suspended as guilty of "resisting the administrative ordinances of his superiors."

The close relation of Bismarck's anti-Catholic attitude in Germany with his foreign policy was soon shown in his famous papal election dispatch (14 May, 1872), in which he invited the European governments to agree on the conditions under which they would recognize the next papal election. The dispatch was ineffective, equally so Bismarck's attempt to compel the pope to accept, as the German Empire's first ambassador to the Vatican, Cardinal Hohenlohe, brother of the above-mentioned Prince Chlodwig Hohenlohe whose close relations to both National Liberals and Old Catholics were well-known. On this occasion Bismarck uttered the celebrated words: "Nach Canossa gehen wir nicht" (We shall not go to Canossa), i.e., he foretold the real issue of the conflict before it had yet fairly begun. Nevertheless he was now fully determined to carry it on to the end. He found a ready instrument in the person of Herr Falk, appointed Minister of Worship in January, 1872, a clever and personally well-meaning man, but a jurist of a very formalist type and an extreme partisan. The chancellor had already, 7 Feb., 1872, urged the Minister of the Interior to undertake the solution of the Polish question "on a basis of principle, actively, and aggressively"; he now engaged Falk to walk in the same course. He was "to make known with all due clearness and in every sense the relations of the State to the various religious societies". On the side of the Church her defenders began now to seek the open. The Prussian hierarchy, assembled at Fulda for its annual meeting, issued (20 Sept., 1872) a memorial to all the German States in which the recent anti-ecclesiastical measures were treated in their entirety, exhibited for the judgment of public opinion, and proof supplied that rights of the Church hitherto acknowledged both by international and national law had been seriously violated. Pius IX, moreover, lifted his voice twice in protest. On the first occasion (24 June, 1872) he said to the German Catholics in Rome that Bismarck had placed himself at the head of the persecutors of the Church. "Who knows, however, but that soon the little stone will fall from the mountain and strike the feet of the colossus and shatter it?" Another time (Christmas Consistory, 1872) he spoke reprovably of "men who not only do not belong to our holy religion, but do not even know it, yet arrogate to themselves authority to decide concerning the doctrines and the rights of the Catholic Church." The popular agitation grew from day to day. The Association of German Catholics (*Mainzer Verein*), founded under the presidency of Baron Felix von Loe, soon counted 200,000 members, and took a much bolder attitude than the Centre, whose leader, Windthorst, observed at all times much moderation.

In the meantime Falk aimed to make the Catholic bishops independent of Rome, the clergy independent of the bishops, and both dependent on the State. The following means were in his mind destined to accomplish these aims. The education of the clergy was to depend entirely, or nearly so, on the State, and to be carried out in the spirit of the average German Liberalistic education. Next, all ecclesiastical offices were to be filled only after approval by the highest civil authority in each province. In the future all ecclesiastical courts outside Germany should no longer exercise any disciplinary power over the Prussian clergy. From all German ecclesiastical courts there was to lie, in the future, an appeal not only on the part of the accused, but also of the Chief President (on grounds of public interest), to a court composed of civil officials and to be known as the "Royal Court of Justice for Ecclesiastical Affairs". Falk sought also to restrict considerably the exercise of the Church's punitive and disciplinary authority, in other words to facilitate apostasy so that priests and laymen who chose to side with State might suffer no inconvenience. It was evident from these measures that Falk had no idea of the close and indivisible solidarity of German Catholicism whereby bishop and clergy on one side, and the bishop and Rome on the other, were intimately bound to one another. He erred most grievously, however, when he made it a criminal offence for any priest to exercise his ministry without due authorization from the civil power, and "silenced" every bishop who refused to comply with the new legislation. In case the German clergy remained loyal to the Church these measures meant the withdrawal of the sacraments from the Catholic people, i.e., the most grievous spiritual suffering. The plans of Falk were formulated in four bills. The first was laid before the Landtag in November, 1872, the other three in January, 1873, though the royal consent was obtained with difficulty and only after insistence on the severity of the aforesaid papal allocution at Christmas of 1872. It was during the discussion of these Falk Bills that the word *Kulturkampf* was first used. The Landtag (Prussian Assembly) Commission to which the Falk Bills were referred expressed grave doubts as to their constitutionality, seeing that the Prussian Constitution guaranteed to the Catholic Church an independent administration of its own affairs. The Commission did not, therefore, advise the rejection of the Falk Bills, but rather proposed an amendment to the Constitution to the effect that in all her administration the Church was subject to the laws of the State and the juridically authorized supervision of the same.

B. 1872-78

This amendment and the four bills were adopted in May, 1873, hence the term May Laws (*Maigesetze*). To hasten their execution the Prussian Ministry at once enabled the Old Catholics to establish themselves as a Church, and contributed large sums for that purpose. It also encouraged the public adhesion of so-called State Catholics, i.e., Roman Catholics who protested formally their willingness to obey the new laws.

Nevertheless, both Old Catholics and State Catholics remained few in number. On the other hand the unexpected happened in the shape of a remarkable development of ecclesiastical loyalty on the part of the Catholics. The bishops of Prussia had protested beforehand (30 January, 1873) against the forthcoming legislation. On 2 May they issued a common pastoral letter in which they made known to the faithful the reasons why all must offer to these laws a passive but unanimous resistance. On 26 May they declared to the Prussian Ministry that they would not co-operate for the execution of the Falk Laws. Almost without exception the clergy obeyed the mandate of the bishops. Thereupon the punishments prescribed by the laws for their violation were at once applicable; in hundreds of cases fines were soon imposed on the clergy for the execution of their ecclesiastical ministry. As none of the condemned ecclesiastics would voluntarily pay the imposed fines, these were forcibly collected, to the great irritation and embitterment of the Catholic parishioners. Soon the prisons began to open, and Falk declared (24 Oct., 1873) that still greater severity would be used. The Minister of War declared Catholic theological students subject to military service; the Marian congregations were forbidden to exist; the Catholic popular associations and the political activity of the Centre (public meetings, Catholic press) was subjected to close and inimical supervision, in every way hindered, and the Catholic population persecuted for their fidelity to the party. In December, 1873, changes were made in the oath of loyalty taken by the bishops to the king, every reference to their oath to the pope was stricken out, and an unconditional observance of the laws of the State prescribed. These measures, however, did not produce the desired results. In the November elections (1873) the Centre returned to the Landtag 90 members instead of its former 50, and to the Reichstag 91 instead of its former 63. The number of its votes was doubled, and reached about 1,500,000. The number of Catholic papers increased in 1873 to about 120.

Falk sought to overcome all this Catholic opposition by fresh ravages on the pastoral ministry. New laws of the Landtag (May, 1874) supplemented his authority and put at his disposal new means of compulsion. It was provided that when a bishop was deposed a representative agreeable to the Government should be appointed; if none such were to be had, appointments to vacant parishes should lie in the hands of the "patrons" in each parish, or should take place by free election of the parishioners. The Reichstag aided by passing a Priests-Expulsion Law (*Priester-ausweisungsgesetz*) by which all priests deprived of their offices for violation of the May Laws were turned over to the discretion of the police authorities. During the debates on this law the Archbishops of Posen and Cologne and the Bishop of Trier were condemned to imprisonment; later, the Archbishop of Posen (Count Ledochowski) was deposed. Shortly after the promulgation of the new May Laws the Ministry saw to it that all the Prussian

sees were vacated. A very great number of parishes were also deprived of their pastors. The ecclesiastical educational institutions were closed. These renewed efforts were no more successful than the former measures. No cathedral chapter chose an administrator, and no parish elected a parish priest. The exiled bishops governed their sees from abroad through secretly delegated priests. The faithful everywhere made it possible to hold Divine Service. The pope declared, 5 Feb., 1875, the May Laws invalid (*irritas*). On all sides exasperation was well-nigh boundless.

Under these circumstances Bismarck himself took charge of the situation. His main hope still lay in proving that the Centre party was the enemy of the empire, and this stigma he endeavoured by all possible means to fasten upon it; could he do so, the party would be isolated in the Reichstag, and soon helpless. At Kissingen, 13 July, 1874, the Catholic cooper's apprentice, Kullmann, attempted to assassinate him. Though the chancellor had no evidence to justify his assertion, he declared in a public session of the Reichstag that the murderer "held to the coat-tails of the Centre", and refused to consider any denial of the charge by that party. Bismarck now called to his aid two allies which in the past he had always found serviceable in face of great popular opposition, i.e. hunger and penury. The methods of Bismarck differed considerably from those of Falk. The latter saw in the religious life of the Catholic people their chief fortress, and so attacked it with all earnestness, hoping to meet with victory in the tumultuary reaction likely to follow any interference with the spiritual needs of an entire people. In this there was for Bismarck too much idealism; he chose rather to appeal to the material needs of his opponents. On 22 April, 1875, he obtained from the Landtag the so-called *Sperrgesetz*, by which all state payments to the Catholic bishops were withheld until they or their representatives complied with the new laws. Another law of the Landtag (31 May, 1875) closed all monasteries in Prussia, and expelled from Prussian territory all members of religious orders, with the exception of those who cared for the sick—and they were variously restricted. Finally (20 June, 1875), he dealt the Catholic Church what seemed to him a crushing blow; on that date was passed in the Landtag a law which confiscated all the property of the Church, and turned over to its administration to lay trustees to be elected by the members of each parish. To accomplish this he had previously to commit another act of supreme violence, i.e. the abolition of those paragraphs of the Prussian Constitution which concerned the Church. The aforesaid *Kanzelparagraf*, or "pulpit-law", was now amended by the Reichstag (26 Feb., 1876) so as to enable the Government to prosecute before the criminal courts any priest who should criticise in the pulpit the laws or the administration of the Prussian State. In the following years sixteen million marks (\$3,250,000) were withheld by the Government from the Church, by virtue of the *Sperrgesetz*; two hundred and ninety-six monastic institutions were closed. By the end of 1880, 1125 parish priests

and 645 assistants had fallen victims to the new laws (out of 4627 and 3812, respectively). Within the circle of their operation 646,000 souls were entirely deprived of spiritual assistance. We must add to this the Falk Ordinance of 18 Feb., 1876, issued with Bismarck's consent, by which in the future religious instruction in the primary schools was to be given only by teachers appointed or accepted by the State, i.e., all Catholic ecclesiastical control was suppressed.

The debates on all these measures were the most violent ever heard in the German Parliament; it was apparent that on both sides the leadership would soon fall to the extremists. On the Catholic side, therefore, evidences of moderation were soon forthcoming, and tended to prevent further extreme measures on the part of the Government. The bishops felt that the gravest perils had been successfully met and averted. The earliest relief was the result of legislation originally intended to do great damage to the Catholic cause. The Prussian Civil Marriage Law of March, 1874 (extended to the German Empire, 6 Feb., 1875), withdrew from the clergy their former right of keeping the civil registers, and made civil marriage obligatory. It was hoped that in this way the laity at least would be freed from ecclesiastical control, since neither bishops nor clergy were willing to separate from Rome. Under the circumstances, however, the law turned to the advantage of the sorely persecuted Church. Had marriages remained possible only in the presence of civilly recognized priests, the Catholic population, in the end, given the absolute necessity of marriages, would have had to accept one of two issues: either they would tolerate the state clergy, or they would bring pressure to bear on the Catholic clergy in the sense of obedience to the new laws. On the other hand the bishops met successfully Bismarck's secularization of the Church property. They declared that in this respect it was material interests which were chiefly at stake, and in such cases the Church was always inclined to the most conciliatory measures; confiding, therefore, in the ecclesiastical loyalty of the faithful they directed them to obey these laws. In the mean-time by the laws of 7 June, 1876, and 13 Feb., 1878, Bismarck undertook to sequester all Church property; he had already failed, however, in his original purpose. Windthorst, on the other hand, strove earnestly to check all extremist tendencies among the Catholics and to incline them to peace with the Government as soon as the ecclesiastical situation would permit. In this temper a reconciliation was evidently no longer remote, much less impossible. It was now clear to Bismarck that the popular agitation had reached a height that no material force could overcome, and that the civil authority itself was endangered. The chief motive that had originally led him to enter on this grave conflict with German Catholicism had long since disappeared; since 1875 he no longer feared an anti-German coalition of Catholic powers or a war with Russia. In the meantime those closer relations with Austria had begun which in 1879 terminated in the actual Triple Alliance. His new

foreign policy brought with it a frequent *rapprochement* with the Catholics. In the German Paliament he could no longer act quite independently of them, and this was another factor in the future reconciliation. The National Liberals in the Reichstag had ceased to be his unconditional supporters in the grave questions of internal reform (politico-economical, social, and financial) that now claimed all his attention. The continued opposition of so large a party as the Centre was henceforth an element of grave danger for all his plans. Conservative Protestants, meanwhile, rebelled against the Liberalism of Falk, which under the circumstances was far more offensive to them than to Catholics. Moreover, Emperor Wilhelm inclined daily more in their direction. Indeed, the position of Falk had become practically untenable.

C. 1878-91

The death of Pius IX and the election of Leo XIII (Feb., 1878) made possible the restoration of peace in the much troubled Fatherland. At once, and again during that year, Leo XIII wrote in a conciliating way to Kaiser Wilhelm urging the abolition of the May Laws. His request was refused; at the same time Berlin expressed a desire for reconciliation. In July, 1878, Bismarck had a personal interview with the papal nuncio, Masella, at Kissingen (in Bavaria). However, a full decade was to intervene before the May Laws quite disappeared. The proposed basis of negotiations was not calculated at this juncture to bring about the much desired peace. Bismarck insisted that the May Laws should not be abolished by any formal act; he was willing, however, to modify their application, obtain gradually from the Landtag temporary discretionary authority in regard to the laws, remove certain odious points, etc., all this on condition of a yielding attitude on the side of the Catholics. The latter, indeed, were in this respect praise-worthy. Bismarck further desired that in all measures of relief the Government should appear to take the initiative—of course after proper diplomatic negotiations with Rome. In return he demanded from the Curia an assurance that the Centre party would support the policies of the Government; otherwise the latter could have no interest in a reconciliation.

As a proof of goodwill he dismissed Herr Falk in 1879 and replaced the author of the odious May Laws by Herr Puttkamer, whose ecclesiastico-political attitude was more conciliatory than that of his predecessor. Under him the Church began to regain its former influence over the schools. He obtained from the Landtag on three occasions (1880-83) discretionary authority to modify the May Laws; thereby he provided for a restoration of orderly diocesan administration, and the filling of the vacant sees. The vacant parishes, it is true, remained yet without pastors; it was allowed, however, to administer them from neighbouring parishes. After 1883 the *Sperrgesetz*, or suspension of ecclesiastical salaries, was not enforced. In 1882 Prussia established an embassy at the Vatican. Bismarck in the meantime held firmly to one point: the obligation of the

bishop to make known to the Government all ecclesiastical appointments, and the Government's right to veto. This much Rome was not disinclined to allow, but demanded a previous formal abolition of at least certain portions of the May Laws. Leo XIII was very anxious to re-establish peace and harmony with Germany, and for that reason chose for his secretary of state, in 1881, Lodovico Jacobini, who had been nuncio at Vienna since 1879, and had conducted the preliminary negotiations. During the negotiations that followed, the principal defect of the papal diplomacy consisted in the excessive stress it laid on the purely politico-ecclesiastical elements of the problem (those which affected the general European situation of the Church), not sufficiently taking into account the fundamental source of the conflict, i.e., the violation of the constitutional law of Prussia. From this point of view it did not seek to co-operate with the tactics of the Centre in that party's dealings with Bismarck; it rather complied in several ways with the wishes of the latter, and sought to influence the Centre (in substantially political matters) in favour of the Government. On the other hand, while Windthorst did not perhaps give quite sufficient consideration to the general European situation, he was all the more earnest in his resolution to give permanency to the exertions of his party, to again anchor the rights of the Church in the Prussian Constitution, and to make the latter document guarantee once again the independence of the Church. During these years of more or less fruitful negotiations between Rome and Berlin, the political power of the Centre in the Reichstag grew notably; the Government was no longer able to count on a majority against it. By this time the Conservatives had again obtained the upper hand in the Landtag, and soon made evident their intention to abolish completely the Falk system of interference with the disciplinary and pastoral life of the Catholic Church (Conservative Resolution, 25 April, 1882). When Bismarck saw that it was impossible to make the Centre a Government party (spring of 1884), the negotiations on his side were temporarily dropped. To the Conservatives, now urgent, he replied that he was ready to proceed to a revision of the May Laws as soon as he knew that Rome would accept the *Anzeigepflicht*, or obligation of making known to the Government all ecclesiastical appointments, with the corresponding civil right of veto. He believed, apparently, that the *Kulturkampf* agitation would gradually die out, and the Catholic people grow weary of their struggle for "a constitutional and legal independence of the Church", now that the most burdensome of the May Laws had been withdrawn and a somewhat orderly ecclesiastical life was again possible.

In the meantime the Centre party and its press kept alive a strong Catholic feeling. On the other hand, the foreign situation soon brought up the question of the final abolition of the May Laws. Bismarck was again anxious in regard to Russia, and this time feared an alliance of that nation with France; the recent awakening of Pan Slavism added to his solicitude on this point. He was concerned lest the Vatican should favour

the Franco-Russian alliance. On the other hand he now sought to rally all forces at the disposal of the Government for the suppression of the Polish movement that had by this time taken on large proportions; owing to his *Kulturkampf* policy, all classes of the Polish people had been deeply stirred during the previous decade, and their attitude now caused the chancellor great anxiety. He hoped, also, that a decisive ending of the ecclesiastical conflict would seriously affect the hitherto intact solidarity of the Centre and weaken notably the popular attachment to the party, whereby its influence, even yet the source of his gravest political difficulties, would finally diminish. Leo XIII saw clearly that Bismarck was now earnestly desirous of peace; Rome, therefore, it seemed, need no longer be over-timid in the matter of concessions based on suitable guarantees. The pope also hoped that Bismarck would in turn be helpful to him in respect of the German imperial policy towards Italy. It was of considerable importance that at this juncture the most statesmanlike member of the Prussian hierarchy, Bishop Kopp of Hildesheim (now Cardinal, and Prince-Bishop of Breslau), was made a member of the Prussian House of Lords (*Herrenhaus*). Bismarck still held with tenacity to the former government claims. In the matter of the *Anzeigepflicht*, the nominations of parish priests at least should not take place without the Government's approval. Nor would he listen to the restoration of the former recognition of the Church by the Prussian Constitution. Finally, he held in its entirety to the state control of the schools. In reality he was able to maintain these three points; on the other hand he yielded to the Church, practically, the control of ecclesiastical education, permitted the re-assertion of the papal disciplinary authority over the clergy, allowed the restoration of public worship and the administration of the sacraments, the application of ecclesiastical disciplinary measures (censures, etc.), and held out to the religious orders the hope of returning. This is substantially the content of the two comprehensive laws (21 May, 1886, and 29 April, 1887), that modified the May Laws in an acceptable way and thereby ended formally the long conflict since known as the *Kulturkampf*. During the negotiations for the first law the pope had allowed the bishops (25 April, 1886) to lay before the Government for approval the appointments of parish priests. While the second law was under discussion the pope declared that it showed the way to peace, while Bismarck termed it the restoration of a *modus vivendi* between State and Church. The Centre was deeply suspicious of both laws because the pope did not insist on constitutional guarantees. In the interval between these laws, and in view of them, the chancellor made a last attempt to obtain through Rome the support of the Centre for his military policy and the foreign aims it implied. He wished the Centre to vote in the Reichstag for the so-called Septennate. A correspondence ensued between Cardinal Jacobini and the President of the Centre Party; Windthorst was not to be moved from his position. It may be said that the hopes of Leo XIII in Bismarck's help respecting Italy were de-

ceived. In the following years the last remnants of the May Laws disappeared. The law prescribing the expulsion of all priests (*Priesterausweisungsgesetz*) was withdrawn in 1890, and in 1891 the *Sperrgelder* (i.e. the ecclesiastical salaries, etc., withheld since April, 1875) were distributed to the various German dioceses. For a while it seemed as if another grave conflict would follow, this time apropos of the schools. However, since the early nineties there has prevailed the present quiescent attitude in all matters ecclesiastical and educational. It may be added that the anti-Jesuit legislation was so modified in 1905 as to offer no longer its former exceptional character; the Redemptorists had been previously allowed to return. One important consequence of the *Kulturkampf* was the earnest endeavour of the Catholics to obtain a greater influence in national and municipal affairs; how weak they formerly were in both respects was clear to them only after the great conflict had begun. These efforts took the name of the *Paritätsbewegung*, i.e., a struggle for equality of civil recognition. In turn the discussions awakened and fed by this movement soon led to a vigorous self-questioning among the Catholic masses as to the fact of, and the reasons for, their backwardness in academic, literary, and artistic life, also in the large field of economic activities (industry, commerce, etc.). On the other hand, the reconciliation between Church and State made it possible for the Catholics of Germany to participate more earnestly than hitherto in the public life of the Fatherland, in illustration of which we may point to the notable contributions of the Centre Party (1896-1904) to the solution of the great imperial problems of that period. At present (1908) a reaction seems imminent. In closing it may be said that the *Kulturkampf* rightly appears as only the first phase of the vast movement of antagonism in which Catholicism stands over against Protestantism and Liberalism, on the broad field of Prussia, henceforth one of the great powers of Europe, and within the German nation now coalescent in the political unit of the Empire.

Diocese of Kumbakonam

Diocese of Kumbakonam

(KUMBAKONENSIS).

Kumbakonam, signifying in English the "Jug's Corner," is a town of 60,000 inhabitants, and is situated in the fertile plain of the Tanjore District about half-way on the railroad which connects Madras with Tuticorin. Although of no great importance to the British *Râj* (dominion), still, as a religious centre, it enjoys a wide popularity among the Hindus as the seat of one of their holiest shrines in the south of the peninsula.

Nothing positive is known of the origin of this shrine, but a mythological legend says that, some time before the Deluge, the mighty god Siva, desiring to provide against the consequences of the coming cataclysm, directed Brahma to get ready an earthen pitcher wherein he could place in safety on a layer of ambrosia, the spark of creative power, the Vedas, and a supply of corn-seed. Brahma having done this, Siva closed the jug and set it on Mount Meru. When the waters prevailed upon the earth, the precious vessel was lifted up by the flood and tossed about upon the waves, until, at last, it rested on the very spot where is now the "sacred" tank of Kumbakonam, called the Maghàmaghan.

From time immemorial a solemn festival has been celebrated once in every twelve years to commemorate this event. It begins on the day of February when Jupiter is in conjunction with the full moon in the lunar constellation called Magham. The Hindus believe that, on this occasion, the waters of the "sacred" tank are fecundated by those of the "divine" Ganges, and that whoever bathes in them not only receives the pardon of his sins, but also opens the gates of salvation to every one of his ancestors up to the one hundred and eightieth generation. This duodennial solemnity took place recently (1909). It began at the temple of Kumbesshur, the "Lord of the Jug", and lasted ten days, during which time about 800,000 pilgrims made their ablutions in the Maghàmaghan.

Kumbakonam, seen through European glasses, is a rather dirty and dusty town with vulgar, tortuous streets, where, with the exception of several pagodas, very few buildings are worthy of attention. However, one of these temples possesses several ancient sculptures and a very valuable library of Sanskrit books.

Though not properly speaking an industrial or commercial town, its silk-dyeing, silk-weaving, chintz-stamping, and especially metal industries have won a good repute

for its artisans in the South of India. The glory of Kumbakonam is found in the number of learned people who live in it, and in the comparatively high percentage of the young who receive a liberal education in its schools. The college, conducted on distinctly English lines, is under the management of a European gentleman, who is seconded by an efficient staff of native teachers. The city has also good educational institutions for girls. The "big school" which numbers about 280 students, is placed under the tuition of native Catholic nuns, paid by the municipality.

The diocese, which was created in 1899, is entirely on British territory, although it is suffragan to Pondicherry (the capital of French India). It is bounded on the north by River Vellar, on the west and south by the Cauvery (which divides it from the Dioceses of Madura and Coimbatore), on the east by the Bay of Bengal and the French territory of Karikal. It includes part of the British civil districts of Tanjore, Trichinopoly, South Arcot, and Sale. The first and present occupant (1909) is Dr. H.M. Bottero of the Society of Foreign Missions (Paris), author of the first Catholic version of the Bible in Tamil, and editor of several classical and devotional books in both this and the Bengali languages.

The diocese numbers 88,000 native Catholics (out of population of about 3,000,000), evangelized by 50 priests (35 European, 15 native). In the mission there are 67 schools, with 3400 children in attendance, 5 orphanages, 4 dispensaries and a hospital under care of the French nuns. A native Catholic gentleman has built at Perumpanniyur a church at a cost of about 133,000 dollars (four lacs of rupees), and has also richly endowed it.

H.M. BOTTERO

Kutenai Indians

Kutenai Indians

An important tribe of south-eastern British Columbia and the adjacent portions of Montana and Idaho, occupying chiefly the present Kootenai County, B.C., between the main Rockies and the Selkirk Range, from about 52° southwards, including the basins of the Koutenay and Lower Columbia Rivers, and extending to Lake Pend d'Oreille in Idaho. They constitute a distinct linguistic stock, designated as the Kitunahan, from the proper name, Kitanáqa. The meaning of this name is unknown, but it occurs in the form of Cattannahowes in the Mackenzie map of 1801. To their Shalishan neighbours they are known as Skalzi, "lake, or water, people", and to the French as Arez-à-plats, Anglicized Flatbows. They have a distinct tradition of having formerly lived in the plains east of the Rockies, whence they were probably driven by the Blackfeet, their hereditary enemies. Up to a recent period, they were in the habit of

making annual descents to the Plains, in company with the Flatheads, Kalispel, and Nez Percés, for the purpose of hunting buffalo. They are commonly differentiated as Upper and Lower (or Flatbow proper), approximately in British Columbia and the United States respectively, with several minor subdivisions and two main dialects.

Physically the Kutenai rank as the tallest and best built Indians of British Columbia, being also almost entirely free of blood taint and other consequences of dissipation so prevalent among other tribes of the region. Intellectually they are more stable and capable of mental exertion, while concurrent testimony of traders, travellers and missionaries places them in the first rank for morality, honesty, reliability, and manly qualities. In their primitive condition the Kutenai lived in small skin or mat-covered tipis, of which the universal sweat lodge (see Indians) was always an important adjunct. They subsisted by hunting, fishing, and gathering of wild berries and roots, particularly camas (*Camassia*; see Kalispel). The Lower Kutenai dried immense quantities of fish for winter. They made no pottery, but were expert basket-weavers, boiling their food in water-tight baskets by means of heated stones. They dressed in buckskin, painted their faces in bright colours, and wore their hair full length, either braided or flowing. Their social organization was extremely simple, with no trace of the clan system or the secret societies common to most other tribes of the region. Each band had its own chief, hereditary in a certain family, who was assisted by a council. Both slavery and polygamy existed, the slaves being captives taken in war. Erring wives were punished by cutting off one of their hair braids, instead of by death or mutilation as in other tribes. Orphan children were adopted by their relatives, while near relatives were not allowed to marry. Murder was compounded by a fine, or punished with death by the family of the victim. The dead were buried in the ground with all their finery, and the debts of the deceased were paid by the surviving relatives. The religion was the usual Indian Animism, with the Sun, personified as a woman, as the highest and most beneficent deity, to whose home the spirits of the dead journeyed, to rejoin their friends later in this world at a place of sacred pilgrimage, on the shore of Lake Pend d'Oreille. Tabus, fasting, and sacrifice were part of the system, and the shaman doctors exercised great influence. Among their great ceremonies were the fish festival, described by De Smet as witnessed by him in 1845. The Lower Kutenai, who retained more of their primitive custom, are still more addicted to gambling games.

Although known to the Hudson Bay traders and other adventurers as early, perhaps, as 1780, the Kutenai remained practically unchanged until the advent of the Jesuits under Father Peter De Smet, about 1840. In the next two years he preached to visiting bands of the tribe at the Flathead mission, and, on the establishment of St. Ignatius mission among the Kalispel by Fathers Adrian Hoecken and Antonio Rivalli, the southern bands were brought regularly under mission influence. In August, 1845, at

a large camp on the Kutenai River, U.S., De Smet himself celebrated "the first Mass ever offered in their land", and set up the cross of a mission which he named in honour of the day "The Assumption." The Mission of the Sacred Heart of Mary was founded on the Tobacco Plains, B.C., within the next year. The whole tribe, with the exception of a portion of the Lower Kutenai, accepted almost at once the new faith, in which they have remained steadfast and exemplary ever since. Those within the United States are chiefly gathered upon the Flathead Reservation, Montana, by treaty of 1855, where they are still under Jesuit teaching, while some few in Idaho probably retain their old beliefs. Those in British Columbia are under the ministry of the Oblate Fathers, who, assisted by the Sisters of Charity, conduct a successful mission school at Saint-Eugène, near Fort Steele. The school was established in 1854 by Father Léon Fouquet, the first of the Oblates to enter the Kutenai field. The great majority have long since adopted the ways of civilization, and subsist by farming, stock-raising, and labouring in the lumber camps and for the white ranchers. The official Canadian report (1908) describes the various bands as "industrious, steady, and law-abiding", "temperate and moral", and "progressing" while the mission work "deserves the greatest praise". In spite of several great epidemic visitations in years past, notably smallpox, the Kutenai have held their own well, thanks to their innate manliness and to the strict observance of the precepts inculcated by their religious teachers. They probably number now nearly as many as at any period in their history and even seem to have largely increased in the past twenty years. Official reports for 1908 give them about 1120 souls, viz: British Columbia, Kootenay Agency, 513; Montana Agency, 606.

Our principal authorities on the Kutenai are: Chamberlain, De Smet, and the official reports. Consult: Chamberlain, Kootenay Indians in Rept. Brit. Am. Advancement Society (London, 1892); Idem, Kootenay Indians in Ontario Archaeological Report (Toronto, 1905); Idem, Some Kutenai Linguistic Material in Am. Kwango

Kwango

(Prefecture Apostolic)

Kwango is the name of a river which flows into the Kassai, which itself is a tributary of the River Congo. This mission (*missio Kwangensis*) formed a part of the Vicariate Apostolic of Belgian Congo till April, 1892, when a decree was issued, entrusting this new mission to the Jesuit Fathers of the Belgian province. The late Father Emil von Henexthoven (1852-1906) was its first superior. He left Belgium on 6 March, 1893 with two fathers, one scholastic, and two lay brothers, and reached the mission towards the end of May. Unfortunately, owing to the hardships of the voyage, one of the fathers died on the way. By decree of 30 January, 1903, the Kwango mission was made a prefecture Apostolic (*Præfectura Apostolica Kwangensis*), the first prefect Apostolic being Father Julian Banckaert, S. J., whose residence is in Kinsantu, the chief mission station. The prefecture comprises the civil districts of Eastern Kwango and that of Stanley Pool as far to the north as the River Kassai. It is located between 4° to 8° S. latitude and 15° to 20° E. longitude. Its boundaries are to the north the river Kassai, to the east the range of hills between the River Loange and Jjuma; to the south Portuguese territory; to the west the River Inkisi and the railway to Leopoldville. The sisters of Notre Dame de Namur have two important institutions at Kinsantu and Nlemfu, where they provide for more than one thousand native girls. Julian Banckaert, S. J., was born at Bruges in 1847, entered the diocesan seminary, and was ordained in 1871. He joined the Society of Jesus in 1875 and was sent to Bengal in 1878. There he was successively a missionary, superior of the mission, and military chaplain until, in 1901, he was sent to the Kwango mission.

Missiones Catholicæ (Rome, 1907).

J. BANCKAERT

Kwangi-Si

Kwang-si

(Prefecture Apostolic)

The mission of Kwang-si comprises the entire province of that name. As a country, it is very mountainous and extremely poor. The province has a population of about ten million souls divided among several distinct races, the most remarkable of whom are the settlers from the Canton, the Hakkas, and the wild Yao-tse and Miao-tse. The first missionary to Kwang-si was the Jesuit Father Ruggieri who in 1583 endeavoured without success to establish himself at the capital, Kwei-lin. Fifty years later the Franciscan, Francesco d'Escalone, arrived at Wu-chou. About the middle of the seventeenth century, Father Koffler built a church at Kwei-lin and baptized at Nan-ning, under the name of Constantine, a son of the Emperor Yung-li, a pretender to the Ming dynasty, who still combatted in the southern part of the empire the advancing Manchu

conquerors. Father Boym laboured in company with Father Koffler. In 1692 Father Jacques Duval laboured to give further impulse to the work of his predecessors, and then came Fathers Chamaya and Lopez. At the same time the Spanish Augustinians established themselves at Kwei-lin and Wu-chu, and the Franciscans at Ping-lo-fu. All were expelled in 1724 by Emperor Yung Chen and Kwang-si thenceforth remained without missionaries for a hundred and thirty years. In 1848 Kwang-si, united to the mission of Kwang-tung, was confided to the Paris Society of Foreign Missions. In 1854 Blessed Auguste Chapdelaine first entered the province from Kwei-chou, but was arrested and thrown into the prison of Si-lin-hien ten days after his arrival. Liberated after sixteen or eighteen days of captivity, he ministered until 1856. Up until this date he had baptized several hundred catechumens, but he was again arrested, taken to Si-lin, sentenced to death, and executed on 29 February of the same year, with Blessed Laurence Pe-mu and Agnes Tsau-kong. In 1866, several missionaries again penetrated Kwang-si, but were unable to stay long. In 1868, Father Mihière was appointed superior to the mission of Kwang-si, but died in 1871. Under his direction several missionaries were able to enter the province. Among them was Father Foucard, who evangelized Shang-sze, while labouring in the disguise of a wood-cutter to avoid arousing the suspicions of the mandarins.

On 6 August, 1875, Pius IX made Kwang-si a prefecture Apostolic, and placed it under the authority of Father Jolly, previously missionary in Kwang-tung. At this same period were founded the districts of Kwei-hien and of the "hundred thousand mountains" among the wild Yao-tse. Father Jolly died in 1878 and Mgr Foucard was made titular Bishop of Zela and Prefect Apostolic of Kwang-si. The Chinese authorities placed many obstacles in the way of the free spread of the Gospel. Mgr Foucard was obliged to proceed personally to Peking and demand justice, but he obtained no satisfaction. The Franco-Chinese War of 1884 served to increase the difficulties of this mission. Fathers Lavest and Pernet were subjected to cruel treatment and several Christian communities were uprooted. Only the communities established among the savages and at Si-lin experienced relative tranquility. Mgr Foucard died in 1878 and was succeeded by Mgr Chouzy. Under the direction of the new prefect, other communities were established, and finally a certain measure of liberty was accorded to the missionaries. Often, however, sudden revolts seriously interfered with their labours. Two missionaries, Fathers Mazel and Bertholet, were massacred in different districts. In 1899, Mgr Chouzey died, and in the following year Mgr Lavest undertook the mission. During the Boxer troubles but three missions and a few other houses belonging to the Christians were pillaged. Mgr Lavest subsequently moved his residence from Kwei-hien to Nan-ning, intending to erect a cathedral at the latter place. Two French schools have been established, one at Nan-ning, and one at Kwei-lin, by the Little

Brothers of Mary. Nuns of St. Paul of Chartres have established themselves at Nan-ning and Long-chau. During 1908 they have relieved 4300 sufferers at their dispensary in Nan-ning and 4000 at that of Long-chau.

The following figures give the condition of the mission at the various periods named: In 1889, 1 bishop, 11 missionaries, 1 seminary, 21 schools with 211 pupils, 16 churches and chapels, 1249 Catholics. In 1900, 1 bishop, 17 missionaries, 1 seminary with 16 students, 24 schools with 310 scholars, 32 churches and chapels, 110 baptisms of native adults and 61 baptisms of native children, 1536 Catholics. In 1908, 1 bishop, 27 missionaries, 4 native priests, 2 seminaries with 16 students, 34 schools with 379 pupils, 311 baptisms of adults, and 113 baptisms of native children, 4214 Catholics.

Launay, Atlas de la Société des Missions Etrangères de Paris (Paris, 1890).

V.H. MONTANAR

Kwang-Tung

Kwang-tung

(Prefecture Apostolic)

This prefecture comprises the whole province of that name except the civil prefecture of Shin-hing, the three districts of Heung-shan, Yan-ping, and Yeung-tsun, which belong to the Diocese of Macao, and the three districts of San-on, Kwei-shin, and Hoi-fung, which belong to the Vicariate Apostolic of Hong-Kong.

St. Francis Xavier was the first missionary who attempted to penetrate the province of Kwang-tung (1552), but he died in the Island of Shang-sch'wan (St. John's Island), south-west of Macao, before he was able to preach Christianity there. In 1556 Father Melchior Barreto penetrated as far as Canton, where he discussed science and moral theology with the mandarins; other Jesuits followed, and in 1581 Father Ruggieri secured authorization to open a chapel. In 1582, the real founder of Christianity in China, Father Matteo Ricci, arrived at Canton. From Canton Father Ricci went to Shin-hing, then the capital of the province, and afterwards to Shin-chou, where he met for the first time the celebrated Sin, a native of Kiang-nan. He then travelled to towards Kiang-si and Nan-king, establishing on the way Christian settlements, which have persevered to the present time. Until 1658 Kwang-tung was dependent on the Diocese of Macao. In that year it was confided to Mgr de la Motte Lambert. The priests of the Missions Etrangères then preached there together with the Jesuits, the Franciscans, and the Dominicans. From 1682 to 1710, Mgr de Guéméner and Fathers de Cecè and Ducarpon established themselves at Canton and Shin-chou. The tomb of Mgr de Guéméner (d. 1704) is at Shin-chou as is also that of Père Lirot (d. 1720). When the persecution of

Emperor Yong-chin broke out in 1742 there were 30,000 Christians in the province of Kwang-tung, but all the missionaries were then expelled.

From that time until 1844, when Mgr. de Lagrenée obtained the proclamation of religious liberty, the missionaries did not enter Kwang-tung except in disguise. The bishops of Macao had meanwhile regained jurisdiction over the province, but the number of Christians tended by native priests had fallen to 7000 or 8000. On 30 September, 1848, the Congregation of the Propaganda confided this mission to the Société des Missions Etrangères de Paris without removing all jurisdiction from the Bishop of Macao. Father Libois, procurator of the Société at Hong-Kong, was named prefect Apostolic, and Father Guillemin was the first missionary sent to the province. The progress was slow at first: there were 115 baptisms of adults in 1851, 214 in 1854. In 1853 Father Guillemin was named prefect Apostolic instead of Father Libois. A persecution broke out, and seven missionaries were arrested and thrown in prison. Difficulties having arisen with Macao, Rome put an end to them on 8 Aug., 1856, by nominating Father Guillemin Bishop of Cybistra in partibus infidelium, by giving him on 17 September, 1858, complete jurisdiction over Kwang-tung, Kwang-si, and Hainan. In 1856, Blessed Auguste Chapdelaine was martyred in Kwang-si with two companions, Blessed Laurence Pe-mu and Blessed Agnes Chow-kong.

As the result of the Anglo-French expedition, which ended in the taking of Peking, a treaty was signed on 25 October, 1860. This was a signal for wider liberty for the missionaries. In compensation for the churches which had been destroyed and the property which had been taken from the mission, the bishop obtained the site of the ancient palace of the viceroy, on which were built the seminary and the orphanages. With the assistance of Napoleon III and the Catholics of France was also built the fine cathedral of Canton, one of the most beautiful religious monuments of the Far East. A chapel in honour of St. Francis Xavier was built at Shang-ch'wan, and this island became a place of pilgrimage for the people of Hong-Kong, Macao, and Canton. Baptisms became more numerous, amounting to 740 in 1862 and to 922 in 1867. There were some troubles in 1868 and 1869. In 1875 the Province of Kwang-si was separated from the Mission of Kwang-tung, while the island of Hai-nan and the district of Heung-shan was ceded to the Diocese of Macao. These districts were given to the priests of the Missions Etrangères de Milan, who were established at Hong-Kong. The mission then ministered to 15,000 Catholics; in 1880 it had 23,730 under its care. In 1881, Mgr Guillemin, worn out with labour, left Mgr Chausse, titular Bishop of Capsa, in charge of the mission. In 1884, at the time of the war of Tongking, the missionaries were ordered to discontinue the mission, and had to stay at Hong-Kong for nearly a year. The Christian establishments of Canton were destroyed. The districts of Shun-tak, Sha-tan, Shin-hing, Tong-kun, were laid waste, but it is worthy to remark that the

districts nearest Tongking suffered the least. In some of these the missionaries were able to remain throughout the hostilities. On the restoration of peace the missionaries and the Christians who had followed them returned to the country. No indemnity was granted either to the missionaries or the Christians, on the pretext that the French would not restore the vessels sunk at Fu-chau.

The report of 1889 gives 1 bishop, 43 missionaries, 7 native priests, 150 churches or chapels, 1 seminary with 30 students, 135 schools or orphanages with 2067 pupils, 28,852 Catholics. In 1894 and 1895, during the war between China and Japan, there were some disorders. A missionary was besieged for nine days in a Christian village by soldiers returning from Formosa, and the mandarin of the place had to pay several thousand dollars to induce the soldiers to raise the siege. After the war, there was a great conversion movement which lasted several years, especially at Kit-yueng and Tong-kun. In 1898, Father Chanès was slain with eight Christians in his district of Pok-lo. In 1900, during the Boxer uprisings, several missionaries were ordered by the viceroy, then the famous Li Hung Chang, to leave the province, but they all remained at their post. However, in September, when the troops of the allies had been in Peking a month, the chief Christian settlements of Shun-tak, Sha-tan, and Tong-kun were destroyed and the chapels burned by the populace. Mgr Chausse, who was ill, could not survive these disasters, and died a few days later. However, the arrival at Canton of European and American warships soon brought the pillagers to reason. In 1901 Mgr Mésel was named Bishop of Orcisto and Prefect Apostolic of Kwang-tung. In January, 1902, Father Julien was assassinated with his two servants at Ma-tez-han, a district of Chi-hing on the frontiers of Kiang-si. In 1905 five American Presbyterian missionaries were massacred at Lin-chou, on the borders of Hu-nan, by an infuriated populace. Since then peace has lasted. The inhabitants of Kwang-tung seem to have a decided leaning towards the things of Europe and America. Numerous students go to be educated in Japan, the United States and Europe. Mgr Mérel has founded the College of the Sacred Heart, to teach English and French to the Chinese without distinction of religion. The number of students exceeds 250.

In 1908 the mission of Kwang-tung ceded to the Diocese of Macao the civil prefecture of Shin-hing and the two districts of Yang-ping and Yeung-tsum, belonging to Shin-hing at the time of the fulmination of the decree of the Holy See, instead of which the Island of Hai-nan was given to the Prefecture Apostolic of Kwang-tung. But as Shin-hing contains more than 2500 Catholics, while the Island of Hai-nan has only 300 or 400, it will be readily understood why the reports of the mission of Kwang-tung number less Catholics in 1908 than in 1907. The statistics for the two years are as follows: 1907, 65 missionaries, 20 native priests, 66 seminarians, 455 churches and chapels, 210 schools, 2050 pupils, 2037 baptisms of adults, 7000 baptisms of pagan children,

60,000 Catholics; 1908, 73 missionaries, 24 native priests, 70 seminarians, 484 churches and chapels, 250 schools, 3500 pupils, 2214 baptisms of adults, 9586 baptisms of children of pagans, 58,917 Catholics to about 30,000,000 pagans.

Kwei-Chou

Kwei-chou

(Vicariate Apostolic)

The mission of Kwei-chou embraces the entire province of that name. The country is very mountainous and it is principally inhabited by Chinese from other provinces and the race of aborigines known under the generic term of Miao-tze, who are subdivided into numerous tribes. The Faith was carried for the first time into Kwei-chou by a Portuguese Jesuit towards the end of the sixteenth century. The first vicar Apostolic of the Paris Society of Foreign Missions, Mgr Pallu, was created administrator of Kwei-chou in 1658. In 1708 Father Claude Visdelou was made vicar Apostolic of this province by Cardinal de Tournon, but never entered upon his mission. The Holy See finally joined the mission of Kwei-chou to that of Sze-ch'wan under the direction of the Paris Society of Foreign missions. From 1769 onwards, Mgr Potier, Vicar Apostolic of Sze-ch'wan, Yun-nan, and Kwei-chou, made a practice of sending a native priest every two years to visit the few Christian communities established in Kwei-chou by Christian families migrated thither from Sze-ch'wan. The Venerable Moye visited these settlements in 1774. He was arrested, imprisoned, and eventually expelled from Kwei-chou. In 1815 Blessed Joseph Chang Ta-pong was beheaded at Tsi-i. In 1839 there were other martyrdoms, among them that of Joachim Ho. In 1846 Kwei-chou was detached from Sze-ch'wan and made an independent Vicariate Apostolic. Father Stephen Albrand, missionary in Siam, was placed in charge. He found twelve hundred of the faithful in the entire province. He established himself at the capital, Kwei-yang. In 1849 he was created vicar Apostolic and consecrated Bishop of Sura. On 28 January, 1858, the blessed martyrs, Jerome Lu Pin-mei, Laurent Wang, and Agatha Ling were decapitated at Mau-keou. In 1860 Mgr Faurie succeeded Mgr Albrand. This same year, because of the victories of the British and French, the Treaty of Peking guaranteeing religious liberty was signed.

The province was, however, ravaged for several years afterwards owing to feuds between the Chinese and Mohammedans. During this period Christians were im-

prisoned, their parishes pillaged, and their missionaries massacred. On 29 July, 1861, four native Christians were beheaded at Tsin-gai. These were Blessed Joseph Chang, Paul Chen, J. B. Lo, and Martha Wang. In 1862 Blessed John Peter Neel, a French missionary, Martin Wu, John Chang, John Chen, and Lucy I were beheaded at Kai-chou. In 1865 Father Muller was massacred with several native Christians. Notwithstanding the persecution, it was possible in 1866 to record 408 baptisms of adults, and 13,178 infant baptisms among the natives. In 1867 the number baptized included 601 adults and 11,023 infant baptisms; in 1868, 92 adults and 9322 infant baptisms. Mgr Faurie died in 1872 on his return from Rome, where he had taken part in the Vatican Council. He was succeeded by Mgr Lions who was consecrated titular Bishop of Basilita in 1872. Peace reigned during several years, and the missionaries were able to greatly augment the number of Christian communities, but in 1884, during the Franco-Chinese War, the persecutions were renewed. They were particularly violent in Kwei-chou. The Christians of the capital alone escaped. Hardly had this initial persecution terminated than a second, which was still more terrible, broke out, beginning with the destruction of the Catholic establishments at Chun-king (Sze-ch'wan). The Chinese priest, Father Lin, was massacred, together with his catechist and a neophyte. Many Christians were thrown into prison, and the missionaries were only able to obtain justice by application to Peking. In 1884 Mgr Guichard had been made coadjutor to Mgr Lions. Upon the death of the latter in 1893, Mgr Guichard took the entire management of the mission in hand. During the following period peace was secure in the Kwei-chou mission, and the missionaries were able to augment rapidly the number of their converts. In 1900 Kwei-chou again escaped the troubles which overwhelmed many of the other Catholic missions in China. In 1907 Mgr Seguin was made coadjutor to Mgr Guichard, and consecrated titular Bishop of Pinara.

In 1899 the Catholic community numbered 2 bishops, 29 missionaries, 6 native priests, 66 churches and chapels, 1 seminary with 18 students, 120 schools and orphan asylums ministering to 2031 pupils, 18,000 Catholics. In 1900: 1 bishops, 38 missionaries, 8 native priests, 86 churches and chapels, 2 seminary with 36 students, 150 schools and asylums with 2844 scholars, 998 native adult and 4634 native infant baptisms, 19,128 Catholics. In 1908: 2 bishops, 51 missionaries, 17 native priests, 3 seminaries with 62 students, 196 schools and asylums with 2388 pupils, 13 orphan asylums with 855 children, 1472 native adult and 4713 native infant baptisms, 25,728 Catholics.

Kyrie Eleison

Kyrie Eleison

Kyrie Eleison (Greek for "Lord have mercy"; the Latin transliteration supposes a pronunciation as in Modern Greek) is a very old, even pre-Christian, expression used constantly in all Christian liturgies. Arrian quotes it in the second century: "Invoking God we say *Kyrie Eleison*" (Diatribæ Epicteti, II, 7). A more obvious precedent for Christian use was the occurrence of the same formula in the Old Testament ([Psalm 4:2](#), [6:3](#), [9:14](#), [25:11](#), [121:3](#); [Isaias 33:2](#); [Tobit 8:10](#); etc., in the Septuagint). In these places it seems already to be a quasi-liturgical exclamation. So also in the New Testament the form occurs repeatedly ([Matthew 9:27](#), [20:30](#), [15:22](#); [Mark 10:47](#); [Luke 16:24](#), [17:13](#)). The only difference is that all these cases have an accusative after the verb: *Kyrie eleison me*, or *eleison hemas*. The liturgical formula is shortened from this.

HISTORY

It is not mentioned by the Apostolic Fathers or the Apologists. The first certain example of its use in the liturgy is in that of the eighth book of the "Apostolic Constitutions". Here it is the answer of the people to the various Synaptai (Litanies) chanted by the deacon (Brightman, "Eastern Liturgies", pp. 4 and 5; cf. "Ap. Const.", VIII, vi, 4). That is still its normal use in the Eastern rites. The deacon sings various clauses of a litany, to each of which the people answer, *Kyrie Eleison*. Of the Greek Fathers of the fourth century, Eusebius, Athanasius, Basil, Cyril of Jerusalem, and the two Gregories [of Nazianzus and Nyssa] do not mention it. But it occurs often in St. John Chrysostom. Its introduction into the Roman Mass has been much discussed. It is certain that the liturgy at Rome was at one time said in Greek (to the end of the second century apparently). It is tempting to look upon our *Kyrie Eleison* as a surviving fragment from that time. Such, however, does not seem to be the case. Rather the form was borrowed from the East and introduced into the Latin Mass later. The older Latin Fathers, Tertullian, Cyprian, etc., do not mention it. Etheria (Silvia) heard it sung at Jerusalem in the fourth century. It is evidently a strange form to her, and she translates it: "As the deacon says the names of various people (the Intercession) a number of boys stand and answer always, *Kyrie Eleison*, as we should say, *Miserere Domine*" (ed. Heræus, Heidelberg, 1908, XXIV, 5, p. 29). The first evidence of its use in the West is in the third canon of the Second Council of Vaison (Vasio in the province of Arles), in 529. From this canon it appears that the form was recently introduced at Rome and in Italy (Milan?): "Since both in the Apostolic See as also in all the provinces of the East and in Italy a sweet and most pious custom has been introduced that *Kyrie Eleison*

be said with great insistence and compunction, it seems good to us too that this holy custom be introduced at Matins and Mass and Vespers" (cf. Hefele-Leclercq, "Histoires des Conciles", Paris, 1908, pp. 1113-1114; Duchesne, "Origines", p. 183). The council says nothing of Africa or Spain, though it mentions Africa in other canons about liturgical practices (Can. v). It appears to mean that Kyrie Eleison should be sung by the people *cum grandi affectu*. E. Bishop (in the "Downside Review", 1889) notes that this council represents a Romanizing movement in Gaul.

The next famous witness to its use in the West is St. Gregory I (590-604). He writes to John of Syracuse to defend the Roman Church from imitating Constantinople by the use of this form, and is at pains to point out the difference between its use at Rome and in the East: "We neither said nor say *Kyrie Eleison* as it is said by the Greeks. Among the Greeks all say it together, with us it is said by the clerks and answered by the people, and we say *Christe Eleison* as many times, which is not the case with the Greeks. Moreover in daily Masses some things usually said are left out by us; we say on *Kyrie Eleison* and *Christe Eleison*, that we may dwell longer on these words of prayer" (Ep. ix in P.L., LXXVII, 956). The last words appear to mean that sometimes other prayers are left out that there may be more time for singing the Kyrie Eleison. We also see from this passage that in St. Gregory's time the special Roman use of the alternative form *Christe Eleison* (unknown in the Gallican and Eastern rites) existed. It seems inevitable to connect the Kyrie Eleison in the Roman Mass with an original litany. Its place corresponds exactly to where it occurs as part of a litany in the Syrian-Byzantine Liturgy; it is still always sung at the beginning of litanies in the Roman Rite too, and St. Gregory refers to "some things usually said" in connection with it. What can these things be but clauses of a litany, sung, as in the East, by a deacon? Moreover there are still certain cases in the Roman Rite, obviously of an archaic nature, where a litany occurs at the place of the Kyrie. Thus the last clause (*Kyrie Eleison*, repeated three times; *Christe Eleison*, repeated three times; *Kyrie Eleison*, repeated three times) is sung as the celebrant says the first prayers of the Mass, and correspond in every way to our usual Kyrie. So also at ordinations the Litany is sung towards the beginning of the Mass. In this connection it may be noted that down to the late Middle Ages the Kyrie of the Mass was left out when it had just been sung in a Litany before Mass, as on Rogation days (e.g., *Ordo Rom.*, XI, lxii). We may suppose, then, that at one time the Roman Mass began (after the Introit) with a litany of general petitions very much of the nature of the third part of our Litany of the Saints. This would correspond exactly to our great Synapte in the Syrian Rite. Only, from what has been said, we conclude that the answer of the people was in Latin -- the "Miserere Domine" of Etheria, or "te rogamus, audi nos", or some such form. About the fifth century the Greek Kyrie Eleison was adopted by the West, and at Rome with the alternative form *Christe*

Eleison. This was then sung, not as in the East only by the people, but alternately by cantors and people. It displaced the older Latin exclamations at this place and eventually remained alone as the only remnant of the old litany.

The first Roman Ordo (sixth-seventh cent.) describes a not yet fixed number of Kyries sung at what is still their place in the Mass: "The school [*schola*, choir] having finished the Antiphon [the Introit] begins Kyrie Eleison. But the leader of the school watches the Pontiff that he should give him a sign if he wants to change the number of the litany" ("Ordo Rom. primus", ed. Atchley, London, 1905, p. 130). In the "Ordo of Saint Amand", written in the eighth century and published by Duchesne in his "Origines du culte" (p. 442), we have already our number of invocations: "When the school has finished the Antiphon the Pontiff makes a sign that Kyrie Eleison should be said. And the school says it [*dicit* always covers singing in liturgical Latin; cf. the rubrics of the present Missal: "dicit cantando vel legendo" before the Pater Noster], and the Regionarii who stand below the ambo repeat it. When they have repeated it the third time the Pontiff signs again that Christæ [*sic*] Eleison be said. This having been said the third time he signs again that Kyrie Eleison be said. And when they have completed it nine times he signs that they should stop." So we have, at least from the eighth century, our present practice of singing immediately after the Introit three times Kyrie Eleison, three times Christe Eleison, three times Kyrie Eleison, making nine invocations altogether. Obviously the first group is addressed to God the Father, the second to God the Son, the third to God the Holy Ghost. The medieval commentators are fond of connecting the nine-fold invocation with the nine choirs of angels (Durandus, "Rationale", IV, xii). From a very early time the solemnity of the Kyrie was marked by a long and ornate chant. In the Eastern rites, too, it is always sung to long neums. It is still the most elaborate of all our plainsong melodies. In the Middle Ages the Kyrie was constantly farced with other words to fill up the long neums. The names of the various Kyries in the Vatican Gradual (for instance, *Kyrie Cunctipotens genitor Deus* of the tenth century, *Kyrie magnæ Deus potentiæ* of the thirteenth century, etc.) are still traces of this. As an example of these innumerable and often very long farcings, this comparatively short one from the Sarum Missal may serve:

Kyrie, rex genitor ingenite, vera essentia, eleyson.
 Kyrie, luminis fons rerumque conditor, eleyson.
 Kyrie, qui nos tuæ imaginis signasti specie, eleyson.
 Christe, Dei forma humana particeps, eleyson.
 Christe, lux oriens per quem sunt omnia, eleyson.
 Christe, qui perfecta es sapientia, eleyson.
 Kyrie, spiritus vivifice, vitæ vis, eleyson.
 Kyrie, utriusque vapor in quo cuncta, eleyson.

Kyrie, expurgator scelerum et largitor gratitæ; quæsumus propter nostrasoffensas noli nos relinquere, O consolator dolentis animæ, eleyson (ed. Burntisland, 929).

[Lord, King and Father unbegotten, True Essence of the Godhead, have mercy on us.

Lord, Fount of light and Creator of all things, have mercy on us.

Lord, Thou who hast signed us with the seal of Thine image, have mercy on us.

Christ, True God and True Man, have mercy on us.

Christ, Rising Sun, through whom are all things, have mercy on us.

Christ, Perfection of Wisdom, have mercy on us.

Lord, vivifying Spirit and power of life, have mercy on us.

Lord, Breath of the Father and the Son, in Whom are all things, have mercy on us.

Lord, Purger of sin and Almoner of grace, we beseech Thee abandon us not because of our Sins, O Consoler of the sorrowing soul, have mercy on us.]

Notice the greater length of the last farcing to fit the neums of the last Kyrie, which are always longer. Sometimes the essential words are mixed up with the farcing in a very curious mixture of Latin and Greek: "Conditor *Kyrie* onmium *ymas* creaturarum *eleyson*" (Ib., 932*). The reformed Missal of Pius V happily abolished these and all other farcings of the liturgical text.

IN THE ROMAN RITE

In the Mass, the three groups of invocations are sung by the choir immediately after the Introit. They form the beginnings of the choir's part of the Ordinary. A number of plainsong Masses are provided in the Gradual, each characterized and named after the Kyrie that begins it. Although each Mass is appointed for a certain occasion (e.g., for solemn feasts, doubles, Masses of the B.V.M., etc.) there is no law against using them without regard to this arrangement. Moreover, except on ferias, which keep their very simple chants, the various parts (Kyrie, Gloria, etc.) of different Masses may be combined (see rubric after the fourth Creed in the Vatican "Gradual"). The new Vatican edition also provides a series of other chants, including eleven Kyries, *ad libitum*. The Kyrie Eleison (as all the Ordinary and proper of the choir) may also be sung to figured music that does not offend against the rules of Pius X's "Motu proprio" on church music (22 Nov., 1903). Meanwhile the celebrant, having incensed

the altar and read the Introit at the Epistle side, says the Kyrie there with joined hands alternately with the deacon, sub-deacon, and surrounding servers. At low Mass the celebrant after the Introit comes to the middle of the altar and there says the Kyrie alternately with the server ("Ritus celebr." in the Missal, iv, 2, 7). The Kyrie is said in this way at every Mass with the exception of Holy Saturday and also of the Mass on Whitsun Eve at which the prophecies and litany are chanted. On these occasions the cantors finish the litany by singing the nine invocations of the Kyrie. After the prayers at the foot of the altar the celebrant goes up, incenses the altar, and then at once intones the Gloria. But he should say the Kyrie in a low voice himself first. Besides in the Mass, the Kyrie occurs repeatedly in other offices of the Roman Rite, always in the form *Kyrie Eleison, Christe Eleison, Kyrie Eleison* (each invocation once only). It begins the *preces feriales* at Lauds, Terce, Sext, None, Vespers; it begins the *preces* at Prime and Compline. It is sung after the *Responsorium* at funerals, said at marriages and on many other occasions for blessings and consecrations. In these cases it generally precedes the Pater Noster. It also begins and ends the Litany of the Saints. As an imitation of this, it is always placed at the beginning of the various other private litanies which are imitations of the official one.

IN OTHER RITES

In the first place, the invocation *Christe Eleison* is purely Roman. With one exception, obviously a Roman interpolation in the Mozarabic Rite, it does not occur in any other use. Local medieval uses had it, of course; but they are only slight local modifications of the Roman Rite, not really different rites at all. In the Gallican Mass, as described by Germanus of Paris, three boys sing *Kyrie Eleison* three times after the Trisagion which follows the Antiphon at the entrance, then follows the Benedictus. These chants represent the beginning of the Mass (Duchesne, "Origines du Culte", pp. 182, 183). After the Gospel and Homily comes a litany sung by the deacon like the Syrian and Byzantine synaptai. The people answer in Latin: *Precamur te Domine, miserere*; but at the end come three *Kyrie Eleisons*. The Milanese rite shows its Gallican origin by its use of the *Kyrie*. Here, too, the form is always *Kyrie Eleison* three times (never *Christe Eleison*). It occurs after the Gloria, which has replaced the older Trisagion, after the Gospel, where the Gallican litany was, and after the Post-communion, always said by the celebrant alone. It also occurs throughout the Milanese offices, more or less as at Rome, but always in the form of *Kyrie Eleison* three times. The Mozarabic Liturgy does not know the form at all, except in one isolated case. In the Mass for the Dead, after the singing of the chant called *Sacrificium* (corresponding to the Roman Offertory) the celebrant says *Kyrie Eleison*, and the choir answers *Christe Eleison, Kyrie Eleison* ("Missale mixtum" in P.L., LXXXV, 1014, 1018, 1021, 1024, etc. -- the various Masses for the Dead). This is obviously a Roman interpolation.

All the Eastern rites use the form *Kyrie Eleison* constantly. It is the usual answer of the people of choir to each clause of the various litanies sung by the deacon throughout the service (varied, however, by *paraschou Kyrie* and one or two other similar ejaculations). It also occurs many other times, for instance in the Antiochene Rite it is sung twelve times, at Alexandria three times just before Communion. In the Byzantine Rite it comes over and over again, nearly always in a triple form, among the Troparia and other prayers said by various people throughout the Office as well as in the Liturgy. A conspicuous place in this rite is at the dismissal (Brightman, 397). In general it may be said to occur most frequently in the Syrian-Byzantine family of Liturgies. In the Syriac liturgies it is said in Greek, spelled in Syriac letters *Kurillison*, so also in the Coptic liturgies (in Greek letters, of course -- nearly all the Coptic alphabet is Greek); and in the Abyssinian Rite it is spelled out: *Kiralayeson*. The Nestorians translate it in Syriac and the Armenians into Armenian. All the versions of the Byzantine Rite used by the various Orthodox and Eastern Catholic Churches (Old Slavonic, Arabic, Rumanian, etc.) also translate *Kyrie eleison*.

ADRIAN FORTESCUE

Labadists

Labadists

A pietist sect of the seventeenth and eighteenth centuries founded by Jean de Labadie, who was born at Bourg, near Bordeaux, 13 February, 1610, and died at Altonia, 13 February, 1674. He was educated by the Jesuits at Bordeaux, joined their order in 1625, and was ordained ten years later. Having left the Society of Jesus in 1639 he preached successfully at Bordeaux, Paris, and Amiens, where in 1640 he was appointed canon and professor of theology. He exercised his priestly functions at Abbeville also, and in 1649 withdrew to the Carmelite monastery of Gravelle, near Havre, to avoid a conflict with the ecclesiastical and civil authorities. In 1650 he joined the Reformed Church of Montauban, where he was appointed professor of theology. In 1657 he took up pastoral work at Orange on the Rhône, because extraordinary preacher at Geneva in 1659, and seven years later accepted a call to the French-speaking congregation at Middelburg, Holland, where he refused to subscribe to the Belgian Confession or to recognize the authority of the Reformed Church and founded a separate sect, whereupon he was expelled from the city. He then endeavoured to organize a community first in the neighbouring town of Veere, then at Amsterdam, where he permanently won over to his cause the learned Anna Maria van Schurman. On the invitation of the princess-abbess, Elizabeth, he removed in 1670 with some fifty-five followers to Herford in Westphalia. Having been banished also from this place in 1672, the congregation settled at Altona where De Labadie died. Shortly after his death, his followers, to the number of one hundred and sixty-two finally migrated from Altona to Wiewert in West Friesland. Here they reached the highest point of their prosperity, but even then did not number more than about four hundred. In 1680 they accepted an invitation from the governor of the Dutch colony of Surinam to establish a missionary settlement in his dominions. But the colony of "Providence" which they founded disappeared in 1688. A similar attempt at New Bohemia on the Hudson in the State of New York also ended in failure. The congregation of Wiewert itself dispersed in 1732. In their doctrinal teaching, the Labadists laid great stress on the necessity of interior illumination by the Holy Ghost for the understanding of the Bible. The Church for them was a community of holy persons who have been born again from sin. These alone are entitled to the reception of the sacraments. Hence they frowned upon infant baptism, seldom celebrated the Lord's Supper, and declared that marriage with an unregenerate person is not binding. They held property in common, after the example of the primitive Church, supported themselves by manual labour and held very lax views regarding the observance of Sunday.

Laban

Laban

Son of Bathuel, the Syrian (Gen. xxviii, 5; cf. xxv, 20); grandson of Nachor, Abraham's brother (xxii, 20, 23); cf. xxiv, 5, where he is called "son of Nachor"; brother of Rebecca (xxiv, 29, 55; xxv, 20; xxvii, 43; xxviii, 5); uncle of Jacob (xxviii, 2; xxix, 10) and also his father-in-law (xxix, 25; xxx, 25; xxxi, 20; cf. xxix, 12, 15; xiii, 8, where he is called his "brother"); the father of Lia and Rachel (xxix, 16) and of several sons (xxx, 35; xxxi, 1). Laban's home was in Haran (xxvii, 43; xxix, 4), the city of Nachor (xxiv, 10), in Mesopotamia of Syria (xxviii, 2, 5) where Nachor, his grandfather, remained when Abraham and Lot migrated to Chanaan (xi, 31; xii, 4). Hence Laban is also called "the Syrian" or "Aramæan" (xxv, 20; xxvi, 20, 24; Heb.). It was here in Mesopotamia that Laban met Abraham's servant and consented to Rebecca's departure to become the wife of Isaac (xxiv, 29, sqq.) (see **Abraham**). The subsequent history of Laban is intimately connected with that of Jacob, his sister's son (Gen., xxix, 10-xxx, 55) (see **Jacob**). The latter having arrived in Haran was met by Rachel who notified her father Laban of his brother's (*sic*) arrival. Laban goes forth to meet Jacob and offers him the hospitality of his home (xxix, 10-14). After a month's time Laban invites his nephew to remain permanently with him, even allowing him to fix his own wages. Jacob agrees to work seven years for his uncle, and his wages were to be the hand of Rachel, Laban's younger daughter (xxix, 14-18). These terms appeared satisfactory to Laban, who, at the end of seven years, prepared the marriage feast, but, instead of giving his younger daughter Rachel to Jacob, he gave him his elder daughter Lia whom Jacob, however, failed to recognize until after the marriage (xxix, 18-24). When Jacob remonstrated with his uncle, Laban agreed to give him his younger daughter on the sole condition that Jacob serve him seven more years. Jacob agreed to this, and at the end of seven years Laban gives his younger daughter Rachel to Jacob (xxix, 24-29).

Having received the wife whom he sought, Jacob resolved to return to his own home, but Laban, wishing to retain the profitable services of his nephew, once more prevailed upon Jacob to remain with him (xxx, 25-28). The terms stipulated by Jacob this time appeared most advantageous to Laban, but he and his sons soon discovered that Jacob had outwitted them in this last agreement, which procured for Jacob a large increase of flocks (xxx, 29-43). Laban and his sons then began to despise Jacob, who, noticing their change of attitude towards him, and dissatisfied with the treatment accorded him by his uncle, who had changed his wages ten times, secretly departed together with his wives and possessions (xxx, 1-20). Three days later, Laban, apprised

of Jacob's flight, and having remarked the loss of his idols, which Rachel had taken with her, goes in pursuit of the fugitives. After seven days Laban overtakes Jacob near the mount of Galaad, but during the night he is warned in a dream not to inflict any harm on Jacob (xxxix, 21-25). The next day Laban meets Jacob and remonstrates with him on his ungrateful and foolish action, accusing him at the same time of taking his idols (xxxix, 25-31). Laban is then invited by Jacob to search for his idols, and when he fails to find them, thanks to Rachel's shrewdness, he is vigorously upbraided by Jacob (xxxix, 31-42). Laban and Jacob then enter into an agreement whereby Jacob is not to harm Laban's daughters, and neither party is to pass with hostile intent the limits set by a heap of stones called "the witness heap". Laban then takes leave of his sons and daughters and returns home, never to be heard of again in history (xxxix, 42-55).

Labarum (Chi-Rho)

Labarum (Chi-Rho)

Labarum is the name by which the military standard adopted by Constantine the Great after his celebrated vision (Lactantius, "De mortibus persecutorum", 44), was known in antiquity. The original labarum, designed under the emperor's direction on the day subsequent to the appearance of the "cross of light", is described by Eusebius (Vita Constant., I:26) as "a long spear, overlaid with gold", which with a transverse bar formed the figure of a cross. "On the top of the whole was fixed a wreath of gold and precious stones, and within this the symbol of the Saviour's name, two letters indicating the name of Christ by means of the initial letters, the letter X intersection P at the centre." These two letters formed what is known as the monogram of Constantine, so called -- not because it was the invention of this emperor, for it had been a familiar Christian symbol prior to his conversion -- but because of the great popularity it enjoyed from the date of its appearance on the imperial standards. From the cross-bar of the spear, was suspended a purple banner with the Greek inscription *TOUTO NIKA* -- i. e. conquer by this (sign), usually rendered in Latin "In hoc signo vinces" (in this sign thou shalt conquer). This banner, square in form, covered with a rich embroidery of precious stones, and "being also richly interlaced with gold, presented an indescribable degree of beauty to the beholder". The part of the staff immediately above the embroidered banner was adorned with medallions of the emperor and his children. Fifty soldiers of the imperial guard, distinguished for bravery and piety, were entrusted with the care and defense of the new sacred standard (Vita Constant., II:8). Standards, similar to the original labarum in its essential features were supplied to all the legions, and the monogram was also engraved on the soldiers' shields. An idea of some of the

deviations in form of the standards furnished to different divisions of the army may be obtained from several coins of Constantine's reign still preserved. On one coin, for instance, the portrait of the emperor and his sons are represented on the banner instead of on the staff; on a second the banner is inscribed with the monogram and surmounted by the equal-armed cross, while the royal portraits, though on the shaft, are below instead of above the banner. In form, the labarum of Constantine was an adaptation of the already existing cavalry standard of the Roman army; the pagan emblems were merely replaced by Christian symbols. The term *labarum*, which is of uncertain derivation, was probably familiar in the Roman army from the reign of Hadrian.

MAURICE M. HASSETT

Jean-Baptiste Labat

Jean-Baptiste Labat

Dominican missionary, born at Paris, 1664; died there, 1738. He entered the Order of Preachers in his native city at the age of twenty years and was professed on 11 April 1685. After the completion of his philosophical and theological studies he was ordained and for several years taught philosophy publicly to the secular students of Nancy. Abandoning this work he devoted himself to missionary activity and for many years preached in the various churches of France. The missionary fields of America were proving a strong attraction to the zealous clergy of his day, and Labat became filled with a burning desire to assist in the evangelization of the Indians. Accordingly, in 1693, he obtained permission from the general of the order to depart for those colonies of the West Indies which were then under French domination, and laboured among the Indians for thirteen years, until 1706, when he sailed for Italy in the interests of his mission. After attending a meeting of the order at Bologna, and presenting to the general a report of his work, he prepared to return to America, but was denied permission and detained in Rome for several years. During this period he commenced a long contemplated history of the West Indies. The work was finally published in six volumes at Paris, in 1722, with copious illustrations made by himself ("*Nouveau Voyage aux isles Françaises de l'Amérique*", Paris, 1722). Labat had a wide reputation as a mathematician and won recognition both as a naturalist and as a scientist. He embodied in the history his scientific observations and treated comprehensively and accurately of the soil, trees, plants, fruits, and herbs of the islands. He also explained the manufactures then in existence and pointed out means for the development of commercial relations. He published similar works on other countries, drawing information from the notes of other missionaries. His two works on Africa have become well known: "*Nouvelle relation de l'Afrique occidentale*", Paris, 1728 and "*Relation historique*

de l'Ethiopie occidentale" (Congo, Angola, Matamba, after the Italian of Father Cavazzi, Cap. (Paris, 1732). The latter treatise is supplemented with notes and statistics drawn from Portuguese sources.

IGNATIUS SMITH

Phillipe L'Abbe

Philippe Labbe

Born at Borges, 10 July, 1607; died at Paris, at the College of Clermont, 17 (16) March, 1667; a distinguished Jesuit writer on historical, geographical, and philological questions. He entered the Society of Jesus, 28 Sept., 1623. After literary, philosophical, and theological studies, he successively taught classes of rhetoric and philosophy; then he held for five years the chair of theology. His memory was quick and retentive, his erudition most extensive and accurate; every year witnessed the production of one or more of his works, so that in the field of history Labbe and Petavius have been considered the most remarkable of all French Jesuits. After his death it was found that his notes and annotations on all kinds of authors were so numerous and extensive as to exceed in bulk what an ordinary savant reads in his lifetime. A great deal of time was taken up answering the doubts or questions of others; he was constantly consulted on points of history, on questions of literature, on difficulties in moral and scholastic theology. However, he found time to express his devotion to Christ and His Blessed Mother in elegant Latin verse. His biographers emphasize his tender devotion to the Holy Eucharist and the Blessed Mother.

Sommervogel enumerates more than eighty works left by Labbe, but we have to be satisfied with the titles of only the most important ones. (1) Among the works on philological subjects we may mention: *Trirocinium Linguæ Græcæ etc.*, Paris, 1648. The work went through some thirteen or fourteen editions. Labbe had the annoying habit of modifying the titles of his works in their various editions, so that a list of their complete titles is quite impossible here. (2) "*La Géographie royale*" appeared in first Paris in Paris, 1646. (3) "*De Byzantinæ historiæ scriptoribus, etc.*" (Paris, 1648), was valued as a most useful work at the time of its publication. (4) *Concordia sacræ et profanæ chronologiæ annorum 5691 ab orbe condito ad hunc Christi annum 1638*" (Paris, 1638); the author published several other harmonies of historical dates, which contained a number of dissertations on special questions. (5) "*Bibliotheca antijanseniana*" (Paris, 1654) is a catalogue of all writings directed against the Jansenists, and gives a brief history of the origin of Jansenism. (6) "*Bibliotheca bibliothecarum*" (Paris, 1664), a bibliography for the handy use of librarians. The second edition of this work contains an additional paper entitled "*Bibliotheca nummaria*", and describes old medals, coins,

weights, measures, and other antiquarian objects. (7) "Sancrosancti Oecumenici Tridentini Concilii . . . canones et decreta", (Paris, 1667), is a work containing a great number of documents referring to secular princes and their representatives in the council, and giving some of the conciliar transactions. (8) But the chief work is a collection of councils entitled "Sacrosancta concilia ad regiam editionem exacta", published by the joint labour of Labbe and Cossart, and printed in Paris at the expense of the Typographical Society for Ecclesiastical Books. When Labbe died, the volumes I-IX and XII-XV had been printed; vols. IX and X were in press; Cossart finished these two volumes and also volume XI. In the sixteen volume (or the seventeenth, for XI is a double volume) the "apparatus" of the collection has been added by Cossart. A second "apparatus" has been added in vol. XVIII, which contains the treatise "De consiliis" by Jacobatius; but this volume is extremely rare and expensive, the price being as high as that of the rest of the collection.

Hurter, Nomenclator; Sommervogel, Bibl. de la C. de J., IV (Paris, 1803); Cossart, Sacrosancta Consilia, XVIII, Præfat (Paris, 1863); Hardouin, Præf. in Concil. Collect. regia maxima, p. vi sq.

A.J. MAAS

Labour and Labour Legislation

Labour and Labour Legislation

Labour is work done by mind or body either partly or wholly for the purpose of producing utilities. This definition is broad enough to include the work of the actor, the physician, the lawyer, the clergyman, and the domestic servant, as well that of the business man, the mechanic, the factory operative, and the farmer. When used without qualification to-day, the word *labour*, commonly designates hired labor, and frequently hired manual labour. This is particularly true when the term is used to describe the persons who labour rather than the work or effort. The explanation of this narrower usage is that in most occupations hired labourers are more numerous than self-employed workers, and that among wage-earners manual labourers exceed in numbers those whose activity is predominantly mental. In this article *labour* always means the laboring classes. When used of the ages preceding the industrial revolution, it includes not merely hired workers, but all who get their living mainly through their own labour, and only in a slight degree by employing others. Hence it takes in the master artisans of the Middle Ages, and the agricultural tenants who worked partly on their own account and partly for the feudal lord; for the former did work that is now performed by hired labour, and the latter possessed even less economic independence than do

the wage-workers of to-day. Moreover, usage justifies this extension of the terms, *labour* and *labouring class*.

Passing over the nomadic and pastoral stages of economic life, because there was then no distinct laboring class, we shall touch briefly upon the condition of labour among some of the great nations of antiquity that were engaged in agriculture, commerce, or industry. A few years ago the majority of scholars held that the earliest form of land-tenure everywhere was joint ownership and joint cultivation of land by all members of the community. According to the weight of present opinion, if such a condition existed, it has not been proved by positive and convincing evidence. Perhaps the nearest approach to this arrangement in historical times is the clan system, by which the clan, or tribe, or sept, owned the land in common, but allotted definite portions of it for individual cultivation by each member. So far as we know, this system has not played a great part in agrarian history. In ancient Egypt the Pharaoh owned the greater part of the land, and the tenant cultivators, though not in the strict sense slaves, were compelled to live and labour in conditions that differed but little from the most oppressive slavery. Their labour it was that built the Pyramids, the public works at Lake Moeris, and the Labyrinth; there, too, they were exploited to the limit of physical endurance, just as were the Hebrews by the Egyptian taskmasters of a later period. There were some large private estates which were cultivated by a servile population. Indeed, the history of labour down to a little more than one thousand years ago, is for the most part the history of slavery. Judea had few manufactures, and very little commerce; but its working class consisted to a great extent of slaves and compulsory labourers. On the whole, these seem to have been better treated than workers of the same condition in Gentile countries. However, the division of Solomon's empire into two kingdoms was caused in large part by the contributions of labour and produce which the monarch exacted from his own people. In later times a large proportion of the independent Hebrew cultivators were deprived of their lands by rich capitalists, and compelled to become slaves or forced labourers. Some of the strongest denunciations of the Prophets were uttered against this form of exploitation. The great trading and manufacturing nation of antiquity was the Phoenicians, and most of their activities and achievements in this field seem to have based upon the labour of slaves.

The industrial and commercial supremacy of the world passed, in the fifth and fourth centuries before Christ to the Greeks, but slave labour continued to be its main support. Although a considerable proportion of the tillers of the soil seem to have been freeholders at the beginning of Greek history, the majority were slaves in classical and post-classical times. During the latter period the slaves considerably outnumbered the free population as a whole; consequently, they must have formed a large majority of the labouring class. Their condition, however, especially at Athens, was not nearly so

wretched as that of the Roman slaves during the classical period of that country. They had some protection from the law against injuries, and considerable opportunities of emancipation. In fact, labour seems to have been less disdained in Greece in the fifth and fourth centuries than in any other country at that time, except Judea, and it was certainly held in higher respect than in Rome. A great deal is said concerning the organizations that existed among the Greek artisans, but they do not appear to have exercised much influence over the conditions of employment. Many of these associations which are reckoned as labour unions were chiefly religious and convivial. While the labourers of Athens who were citizens participated to some extent in the affairs of government, they do not seem to have obtained any legislation for the benefit of labour.

In the early centuries of the Roman Republic its commerce and industry were of very little importance. Agriculture was almost the only occupation, and perhaps the majority of the cultivators were freeholders, or at least free tenants. By the beginning of the fourth century, however, there were so many large estates tilled by slave labour that the Licinian law forbade any citizen to hold more than 500 *jugera* of land, or to employ slaves out of due proportion to the number of his free workers. The tendency to large estates, cultivation by slaves, and the impoverishment of the freemen continued, however, until the period of the *latifundia*, when, as Pliny informs us, all the land of Italy was in the hands of a few persons, and the free tillers of the soil had almost entirely disappeared. Most of the latter had gone into the city to swell the number of idlers who were supported at the public expense. Soon after the Roman wars of conquest the commerce of the country assumed large proportions, but the greater part of the labour was performed by slaves. In the last days of the republic there were more slaves than freemen in most of the towns of Italy. Concerning their treatment at the hands of their masters, Mommsen declares: "It is very possible that, compared with the sufferings of the Roman slaves, the sum of all Negro sufferings is but a drop" (*History of Rome*, III, 308). From the earliest historical period of Rome there existed, indeed, several associations of free craftsmen, called *collegia*, which later on were extended to most of the countries that were under the Roman dominion. A few years before the birth of Christ, these organizations became recognized and regulated by the law of the empire. Nevertheless, they comprised but an insignificant proportion of the working population. And their economic condition was probably not much superior to that of the enslaved labourers. It could not be otherwise, since they were everywhere in competition with the latter, whose labour under a policy of reckless and inhuman exploitation was evidently cheaper than that of freemen. Such, in fact, was the lot of the free labourers in every country where slave labour predominated. As to labour legislation, there is no evidence that any measure for the benefit of the working classes was ever enacted in ancient Rome, except the Licinian law mentioned above. The proposition

is generally true that the man who got his living by the sweat of his brow was held in more or less contempt by the nations of antiquity, and that legislation on their behalf was rarely if ever thought of by the ruling classes. The one conspicuous exception is furnished by the Hebrews.

As soon as the Christian teaching on the essential dignity and equality of men, and the nobility and obligation of labour began to take hold of the Roman mind, the condition of the toiler began to change for the better. The number of the slaves decreased both absolutely and relatively to the number of freemen. In the second and third centuries the slaves obtained certain legal rights, such as a partial recognition of their marriages and domestic relations, and redress in the courts for injuries suffered from the master. A considerable proportion of them were gradually transformed into serfs, that is, instead of being obliged to expend all their labour for the benefit of the master, they were enabled to work a part of the time on their own account on land which they rented from him. Instead of being subject to sale, they were merely bound to the soil. In a sense, they could indeed be sold with the land upon which they worked. From the time of Alexander Severus freemen and freedmen seem to have predominated in urban industry, although they were not free in the modern sense of that term. They were members of associations which they were forbidden by law to abandon, and they were not allowed to leave their occupations. The State took this measure on the theory that these labourers were engaged in an industrial function which was necessary for the welfare of society. It was, therefore, the duty of the law to provide that this function should be properly discharged. Although this particular restriction of the freedom of labour seems very unreasonable to the modern mind, the fact is that some form of minute regulation of industry has been the rule rather than the exception in Christian times. In the latter days of the empire the slave labourers were chiefly domestic servants, the employees of the large landholders, and the workers in the imperial mines and manufactures. At the beginning of the fourth century the emperor Diocletian issued an edict fixing the wages of artisans. According to the computations of Levasseur, the rates of remuneration prescribed in this edict were about the same as those that prevailed in France at the end of the eighteenth century, and a little more than half as high as the wages in that country at the end of the nineteenth century. It was not, however, the purpose of this rescript to benefit the labourer. The rates of wages laid down were maximum rates, and the object was to prevent the price of labour as well as of goods from rising above the point which the emperor regarded as sufficient.

Despite the teaching and influence of Christianity, the laws and institutions, the ruling classes and public opinion, the intellectual classes, and, indeed, the bulk of the people were still pagan. A few years later, Constantine made Christianity the official religion of the empire, but he did not thereby make the people Christian. The majority

were still dominated by selfishness, dislike and contempt for labour, and by the desire to exploit their fellows, especially through usurious practices. The language employed by Ambrose, Augustine, Basil, Chrysostom, and Jerome against the rich of their time, is at once a proof that the powerful classes were not imbued with the Christian spirit, that the labouring classes were suffering great hardships, and that the Christian teachers were the truest friends of the poor and the toilers. The doctrine laid down by these Fathers, sometimes in very radical terms, that the earth was intended by God for all the children of men, and that the surplus goods of the rich belonged of right to the needy has been the most fruitful principle of human rights, and the most effective protection for labour that ever fell from the lips of men. It is, in fact, although not always so recognized, the historical and ethical basis of the now universally accepted conviction among Christian peoples that the labourer has a right to a living wage, and that the owner of property may not do all that he likes with his own. During this brief period (the fourth century), likewise, large numbers of men and women who found it impossible to live a life of Christian perfection in the still semi-pagan society of the time, founded monasteries and convents, and there gave to the world its first effective lesson in the dignity and necessity of work. These foundations gradually became centres of industry and peace, and later on developed into those medieval towns in which labour became for the first time fully self-respecting and free.

By the time of the barbarian invasions in the sixth century, the majority of rural slaves had become either free tenants or serfs. The latter were soon reduced to their former condition, and all the legislation and customs which, under the influence of Christianity, had been introduced for the protection of the slave were ruthlessly set aside by the new masters of the Roman Empire. With the exception of the Visigoths and Burgundians, the barbarian tribes generally restored to the landlord the power of removing the serf from the land, and to the master the power of life and death over his slave. Speaking generally, this continued to be the situation down to the time of Charlemagne. From the beginning of his reign the lot of the slaves rapidly improved and their numbers rapidly decreased, so that by the middle of the tenth century they had almost been transformed into serfs throughout the Holy Roman Empire. One hundred years later, about seven per cent of the inhabitants of England were slaves, but the institution had practically disappeared in that country by the middle of the twelfth century. In the year 1170 the last remnant of it in Ireland was abolished by St. Lawrence O'Toole.

At the end of Charlemagne's reign practically all the land within his dominions was held by the great warriors, the clergy, and the monasteries. The majority of the workers on these great estates were serfs, while the proprietors were feudal lords. Politically, the latter were not only the military defenders of their territory, but to a

great extent legislators, administrators, and judges; economically, they had the right to receive from the cultivators of the soil a rent, either in services, produce, or money. Serfdom differed very much in its degrees at different times and in different places, but it always assumed that the serf, while not owned like a slave, belonged in a general sense to the lord, was obliged to expend a certain portion of his labour for the benefit of the latter, and was bound to the soil. Very often he was compelled to make other contributions to the lord, such as a fine on the occasion of his own or his son's marriage. In the course of time the serf was relieved of these less regular burdens, his labour services were definitely fixed by custom, and his tenure of the land that he cultivated on his own account was made secure by custom, if not by law. Between the eighth and the twelfth century serfdom was the condition of the majority of the labouring class, not only throughout the Holy Roman Empire, but, with the exception of Ireland, all over Europe. Ireland had the clan system. During the period now under discussion town life was generally less important than it had been before the downfall of the old empire. Most of the towns were merely integral elements of the feudal estates. Since there was very little commerce between one country and another or between different portions of the same country, the town handicrafts supplied as a rule only those comparatively few local needs that could not be met by labour within each household. The condition of the labouring class seems to have been on the whole better than at any previous time. The fact that the great majority of the workers were no longer slaves, and that they were enabled to till on their own account land of which their possession was fairly secure, represented a large measure of progress. With the exception of ordinances mitigating and abolishing slavery, there was no important labour legislation during this period.

Between the twelfth and the end of the fifteenth century, the great majority of the serfs of England became free tenants, that is, they were gradually relieved from the fines and petty exactions imposed upon them by the lord, and from other disabilities, economic and civil; they were permitted to pay their rent in money instead of in labour or produce; they were no longer bound to the soil, and their possession of their holdings was secured by law, or by custom which had the force of law. In France emancipation was not quite so rapid, nor was it so thorough in the individual case; still it had been extended to a great majority of the serfs by the time of the Reformation. It was effected much more slowly in Germany. At the beginning of the Reformation the condition of the majority of the tenants there was that of serfdom, and a particularly oppressive form of serfdom in the case of a considerable number. As a consequence of their revolt and its bloody suppression, their emancipation was set back for at least a century. The majority of the German peasants were still serfs at the end of the eighteenth century. Serfdom lasted in Russia until 1861.

The emancipation of the serfs during the later Middle Ages was due in great measure to the growth of towns and town industries. Attention has already been called to the fact that many of the towns owed their origin to the settlements made and the industries built up by the monks. The latter not only exercised handicrafts themselves, but taught their neighbors to do likewise. In the course of time groups consisting of several hundred, and sometimes of several thousand, persons were centered about the monastery, many of whom were artisans more or less independent of any lord, and having a fairly good realization of their freedom and their importance. Not all, indeed, but very many of the medieval towns arose in this manner. In the twelfth century the towns in England began to purchase charters from the king, the lord, or the monastery, according as each happened to control the land upon which the town was situated. In this way they obtained a considerable measure of self-government. About the same time the merchants and the artisans began to combine in associations called, respectively, merchant guilds and craft guilds (see GUILDS). The latter, which were much the more important, comprised master-workmen, journeymen, and apprentices. They had, generally speaking, a monopoly of their respective trades or crafts, and regulated not only the general conditions in which work was performed, but even the wages of the journeymen and the prices of the product. Their ordinances had for a long time a semi-legal character and all the practical force of a civil law. Thus the towns became the abode of populations that were not subject to the lord, and that were a standing check upon his power, not only because they were free themselves, but owing to the contagion of their example. Moreover, the serf who escaped from a lord and maintained a residence in the town for a year and a day, was thereby made a freeman. The development of the towns and guilds in England was typical, with some differences, of time and detail, of Europe generally. In most places the guilds reached their highest degree of efficiency in the fourteenth and fifteenth centuries.

The condition of the labouring classes both in town and country during these two centuries was much better than it had ever been before. In the first place, the worker enjoyed considerable security of position, either on the land that he tilled or in the craft that he pursued. According to the theories of the time, the members of every class performed a social function which gave them a social claim to a livelihood in conformity with their needs and customs. Hence the feudal lord and the monastery were charged with the care of all the inhabitants of their estates, while the guilds were required to find work or relief for their members. Although the workers enjoyed as a whole less individual freedom than they do to-day, their economic position was more secure, and their future less uncertain. There was no proletariat in the modern sense, that is, no considerable number of persons for whose welfare no person or agency was held socially responsible. As to the content of the livelihood obtained by the average labourer

of that period, any attempt at a precise statement would be misleading. Nor is it possible to institute any general comparison that would be of value between the welfare of the labourer then and now. This much, however, may be asserted with confidence: the poorest one-tenth of the labouring population were probably better fed and better clothed, if not better housed, than is the poorest one-tenth to-day; for the grinding and hopeless poverty, just above the verge of actual starvation, so often prevalent in the present time, did not belong to medieval life (Gibbins, *Industry in England*, 177); the labouring class (meaning all persons who got their living as wage-earners or through self-employment, and not by employing others) received a larger share per capita of the wealth then created than our wage-earners obtain from the wealth produced in our time; and, finally, the guild system which governed town industry did for a time, and in large measure, succeed in reconciling the interests of consumers and producers (Ashley, *English Economic History*, II, 168).

Legislation pertaining to labour during the three centuries immediately preceding the Reformation was mostly enacted by the towns, the feudal lords, and the guilds. Its main results were the emancipation of the serfs and the privileges by which the guilds were enabled to become the real, if not the nominal, lawmakers in all things affecting the economic welfare of their members. The towns frequently, and the national governments occasionally, regulated the prices of bread and other articles of food. For the industrial principle of the time was regulation, not competition. In 1349 the English Parliament enacted the first of the many statutes of labourers that have been passed in that country. It prohibited higher wages than those that had prevailed in 1347, the year before the Black Death. A similar law was enacted at the same time in France. Both ordinances aimed at keeping down the remuneration of the labourer, but neither was very successful.

From the Reformation until the industrial revolution at the end of the eighteenth century, the history of labour for the most part records a decline from the conditions of the fourteenth and fifteenth centuries. The confiscation of the monastic and guild lands in England under Henry VIII and Edward VI, the eviction of large numbers of the tenants from their holdings, the enclosures of these lands and a large part of the common lands into great estates, and the substitution of competitive for customary rents, caused immense hardships to the agricultural population. In Germany much the same process of spoliation and impoverishment occurred, although it had begun in that country before the time of Luther. Owing to the Hundred Years' War and other causes, the rural population of France underwent many vicissitudes of fortune, the net result of which seems to have been unfavourable. As a result of the great increase of capital, and the immense expansion of commerce and industry during this period, the labouring population in the towns and cities increased greatly in numbers and

importance. Their condition was as a whole less happy than in the fourteenth and fifteenth centuries. This is particularly true of England, where, in the first half of the sixteenth century, the guild lands were confiscated, and the guilds themselves all but disappeared. Although they continued in France until the Revolution, and in Germany somewhat later, their control over industry in these countries was not as thorough as it had been before the Reformation. It must be remembered, however, that the power of the guilds would have been checked even if there had been no Reformation; for they were becoming too exclusive and too indifferent to the welfare of the consumer. In fact, these tendencies had already caused a great decline in the English guilds before the end of the fifteenth century. Nevertheless, it remains true that both in England and Germany the Reformation inflicted great injury on the guilds, and through them upon the whole labouring class. There was no legislation during this period that was of any marked benefit to the labourer. In France and Germany laws were passed restricting the activities of the guilds. In England the Statute of Labourers, which had been re-enacted and amended at least ten times in the course of two centuries, was supplanted in 1563 by the famous statute of Elizabeth. It embraced all the most stringent provisions of the preceding laws, with some clauses that were intended for the protection of the worker. But its principal fault lay in the stipulation that wages should be fixed and the law administered by the justices of the peace. The latter generally were keenly interested in keeping wages down, and in exploiting the labourer. So thoroughly did they enforce the law for their own benefit that by the beginning of the eighteenth century they had made low wages, famine wages; traditional, and these wages insufficient by themselves, were supplemented from the poor rate (Rogers, *The Economic Interpretation of History*, 43). This reference to the poor rate calls to mind the Elizabethan Poor Law, which had been rendered necessary through the confiscation of the guild and monastic lands, and the destruction of the monastic system of poor relief.

The modern industrial era, the factory system, the age of machine production, began, properly speaking, with the industrial revolution. The latter phrase describes that series of changes which was effected by several notable inventions, chiefly the steam-engine, spinning machinery, and the power-loom, during the last quarter of the eighteenth century. Among their most important immediate results were: the grouping of workingmen into factories where they tended machines instead of working in their homes with the old and simple tools; the ownership of the factories and machinery by capitalist employers, instead of by the labourers themselves; a great increase in the dependence of the labourer upon the employer; and congestion of the working population in the cities which grew up close to the factories and commercial establishments. Hereafter, *labour* in this article is to be understood of wage-earners only. Simultaneously with the revolution in industrial processes and relations, there occurred

a revolution, as thorough if not as sudden, in economic theory and legislation. The teaching of the physiocrats and the eighteenth-century political writers in France, the economico-political theories of Smith and Ricardo in England, and the self-interest of the English capitalists, all combined to inaugurate a regime of complete freedom of contract, complete freedom of competition, and almost complete non-intervention of Government in industry. The old legislation fixing wages, and requiring a seven-year's period of apprenticeship, was abolished in 1813 and 1814, and nothing was substituted for the protection of the labourer. While every law that in any way restricted the freedom of the employer or regulated the conditions of employment was abolished, the old Combination Acts, which made labour organizations criminal, were re-enacted in 1799. This act prohibited even the contribution of money in furtherance of a strike. In fact, the prevailing theory of industrial liberty seemed to require that the individual employer should always deal with the individual worker, and to assume that this would be for the best interests of all. Undoubtedly, many of the old regulations, such as the law of apprenticeship, had outlived their usefulness and ought to have been repealed, but some of them were still valuable or could have been made so by amendment. What was needed was new and appropriate regulation, not the absence of all regulation. As a result of the policy of non-intervention, the working classes of England experienced during the first half of the nineteenth century a depth of misery and degradation which has obtained the name of "English wage slavery".

Long before these conditions had reached their lowest level, however, some steps had been taken to protect the labouring class by legislation. In 1802 a law was passed which aimed at giving some relief to the pauper children in the cotton factories, and in 1824 the prohibition of labour combinations was repealed. Between 1833 and 1878, the famous English Factory Acts were enacted, amended, and re-enacted, until they provided for safety and sanitation in all workshops, and regulated the hours of labour of women and children, and the age at which the latter were permitted to work. In the other countries of Europe the change from the system of handwork to the factory system came somewhat later and somewhat more slowly than in England, and consequently caused less hardship to the weaker members of the labouring class. Moreover, the theory of legislative non-intervention was not so fully carried out, except in France and Belgium, where the political philosophy of the Revolution had obtained a strong foothold. The guilds were abolished in France in 1789, and labour unions, strikes, and lock-outs were prohibited during substantially the whole period between that date and the year 1884. The first effective factory legislation was enacted in 1841, but it was not seriously enforced for thirty years. In Belgium the guilds were abolished in 1795, and there was no very important labour legislation until 1886. Most of the laws for the protection of labour in Switzerland came into existence during the last quarter of the

nineteenth century. Effective labour laws were not enforced in Italy until 1886. In Prussia the complete abolition of the monopolistic privileges in certain trades enjoyed by certain towns, classes, and organizations took place in 1845, while a general code providing for industrial freedom was adopted in 1869 by the North German States, and afterwards extended to the whole of the present German Empire. In 1881, however, a law was passed which gave to the volunteer guilds a certain privileged position, and the tendency since then has been to confirm that position. Austria likewise retained the guilds and the old industrial regulations longer than England or France, and enacted new legislation during the first half of the nineteenth century. At no time did Austria attempt to carry out the disastrous policy of "complete industrial freedom".

At the present time laws regulating the hours of labour exist in all the countries of Europe. Except in Great Britain and Belgium, the State asserts the right to apply such legislation to the labour of all adult males, as well as to that of women and children. As yet, however, this regulation has not applied to adult males generally, but only to those in certain arduous and dangerous occupations. The hours for women and children in mines, factories, and workshops, and frequently in some other occupations, are restricted by most European states to ten per day, while the age at which children may be employed varies from eleven to thirteen in most employments. Regulations providing, with varied degrees of efficacy and comprehensiveness, for safety and sanitation in factories, workshops, and mercantile establishments are practically universal. Many of the countries have compulsory state insurance against sickness and accidents; Germany and Italy have in addition a system of old-age insurance. England requires employers to compensate their employees for industrial accidents, and has a system of old-age pensions. Switzerland and Belgium insure against unemployment. In most of the European countries there are laws providing for the arbitration of industrial disputes, but in one of them is the arbitration compulsory. All the countries permit, and some of them give special privileges to, labour unions or guilds. In German and Austria membership in a guild is indispensable for certain trades. Generally speaking, peaceful strikes and boycotts are everywhere lawful. Boycotting was made legal in Great Britain in 1906.

The theory of non-intervention has exercised a stronger influence in the United States than even in England, owing to the fact that it was incorporated into the National Constitution, and in the Constitutions of most of the states. The constitutional prohibitions of class legislation and of interference with freedom of contract have caused American labour laws to be for the most part, "a collection of exceptions to these general provisions" (Adams, *Labor Problems*, 464). Between 1840 and 1850, laws were passed in some of the states limiting the hours of labour for women and children, and in 1877 Massachusetts enacted a code of factory legislation. Since then more than half

the states have followed the example set by Massachusetts, and the general tendency points constantly toward more and better regulations for the protection of labour. In no state, however, is there a general law limiting the hours of labour for adult males. Such legislation would undoubtedly be construed as contrary to the constitutional guarantee of freedom of contract. The few states that have enacted provisions of this sort have limited their application to occupations involving special danger to health, safety, or the public welfare. In many of the states the working day of women is restricted, usually to ten hours, on the theory that this is a legitimate exercise of the police power in the interest of public or private health, or on behalf of a peculiarly weak section of the population. The hours of labour of children have been limited in all the states, in the majority of cases to ten per day, but in a few instances to eight, nine, eleven, or twelve. Almost all the states set a minimum age at which children may be employed, at least in certain places, such as factories and stores. In the majority of cases the limit is fourteen years, although it is sometimes one or two years less, and sometimes one or two years higher for certain employments. Laws governing the safety and sanitation of factories exist in more than half the states. As yet, there is no legislation providing for insurance against disabilities of any sort nor for old-age pensions. The only legal regulations of this nature are based on the common law concerning the employer's liability for accidents occurring to his employees while at work. In many of the states tribunals have been created for the voluntary arbitration of industrial disputes, but none of these boards has been of much service. The national Arbitration Law, which applies only to railroads, has been more successful. Labour unions are given no special privileges, except that in some states they are encouraged to incorporate. Strikes are not prohibited, but occasionally the sympathetic strike and frequently the boycott have been forbidden by the courts through the process of injunction.

This brief review of the history of labour seems to make a few conclusions tolerably safe. If the labouring class of to-day be taken in the wider sense which we have given it in discussing the ages before the industrial revolution, it is undoubtedly better off than it has ever been since the world began. If we use the phrase in the narrower sense of wage-earners, we can still say that the majority of these are now in a better position materially, socially, and politically, than the labouring class, whether widely or narrowly interpreted, has ever been before. While it is very probably true that the poorest section of the manual workers of the later Middle Ages was in a happier condition materially than the poorest workers of to-day, it is also true that the latter have the advantage socially and politically. And when we recall the sufferings that the toilers have endured through the contumely of the socially powerful classes, and through the injustice of legislation, we will not be inclined to make light of the better and more hopeful social and political position that belongs even to the lowliest among us to-day. When we re-

member that about one thousand years ago the majority of the workers were either slaves or serfs, we realize that, in spite of set-backs, there has been great and encouraging progress. When we compare the condition and status of the labouring class during the best days of Greece and Rome with its condition and status to-day, we cannot doubt that the improvement is mostly due to Christianity, and that continued progress will be in proportion to the influence of Christian ideals in the social order. Some of these ideals are stronger to-day than ever before. The medieval doctrine that the price of goods ought to be sufficient to afford the producers a decent living has emerged from the obscurity of three centuries, and is once more accepted by the majority of persons in every Christian country. Finally, when we recall that the condition of the toilers has improved notably and steadily for the last seventy-five years, and that, while some of the economic forces to which that improvement is due are not so strong as they once were, other beneficent forces, moral and political, have grown stronger, we cannot deny that the outlook for the future is one of sane, if moderate, optimism.

JOHN A. RYAN

Labour Unions (Moral Aspects)

Labour Unions (Moral Aspects)

Since a labour union is a society, its moral aspects are determined by its constitution, its end, its results, and the means employed in pursuit of the end. If its constitution, that is, the conditions upon which its members become associated, be immoral, the society will be morally unlawful. For example, if the members were required to promise blind obedience to the leaders, if the rules called for an unlawful degree of secrecy in its affairs, or if one of the conditions of membership were the promise to

support some illicit action or project, the society would be bad in its constitution. It would be under moral condemnation, regardless of its aims, practices, or results. As there is no evidence to show that the labour union of to-day is immoral in its constitution, we may dismiss this particular moral aspect and turn to the consideration of the other three.

I. THE AIMS AND RESULTS OF THE LABOUR UNION

The two general aims, ends, or objects of the union are mutual insurance and better conditions of employment. In the opinion and procedure of the unionists, the second is much the more important. Conditions of employment include wages, hours, sanitation, and safety, and several other circumstances that affect the welfare of the workers. Better conditions mean, in the consciousness of the unionist, not only better conditions than those now enjoyed, but better than he would have if the union did not exist. In other words, the union aims at safeguarding and increasing present benefits. Inasmuch as these benefits rarely exceed, and probably in the majority of instances still fall below, the amount to which labour is entitled in justice, this, the chief aim of the union, is morally justified. The morality of the insurance feature is obvious.

So much for the union in general with regard to its general aims. In any specific instance a union is justified in seeking advantages, whether of wages, hours, or other conditions, only when these are in accord with the law of right. If its members are already receiving all that they are morally entitled to, they of course do wrong when they use the power of their organization to extort more. For, contrary to the prevailing conceptions and the too frequent practice of the last century, there is an element of justice in the labour contract, and when either party deliberately ignores this factor, its aim is to that extent immoral. This is as true of an organization as of an individual. Though good in its constitution and end, the union might possibly be immoral on account of the disproportionate amount of evil to which it leads. It is doubtful whether any intelligent and unbiased observer would contend that this hypothesis is verified to-day. Although the evil effects of the union are frequent, and sometimes very serious, they seem to be, on the whole, morally outweighed by its good effects. "An overwhelming preponderance of testimony before the Industrial Commission indicates that the organization of labour has resulted in a marked improvement in the economic condition of the workers" (Final Report of the Industrial Commission, p. 802). And the good results obtained by organization are considerably enhanced by the fact that they could not have been secured in any other way. As Walker, a very conservative writer, puts it, "Nothing, economically speaking, can save economic society from progressive degradation except the spirit and power of the working classes to resist being crowded down" (Elementary Course in Political Economy, 266). A careful survey of the history of labour during the last one hundred years will show with

abundant clearness that no entire grade or class of labourers has secured any important economic advantage except by its own organized resistance and aggressiveness. And practically every union has at some time protected the working conditions of its members against deterioration. These facts are merely a result of the system of unlimited competition, not a condemnation of the employing class. If anyone doubt that the evils resulting from the unions are less important morally, economically, and politically, than the benefits that they have produced, let him calmly survey the conditions that would exist in England to-day if the unions were still prohibited by law, as they were during the period of English "wage slavery", in the early decades of the nineteenth century. It is quite possible that individual unions are sometimes immoral, and as such forbidden to conscientious working-men, because the organization does more harm than good. This was probably true of the Western Federation of Miners in Colorado a few years ago.

The moral judgment to be passed upon unionism from the side of its results applies for the most part to the past. It cannot with certainty be applied to the future in order to determine whether a union or all unions are worthy of condemnation or of approval, except in so far as the past conduct of an organization may create a presumption for the time to come. If the judgment expressed in the last paragraph is sound, the presumption, therefore, is that the labour union in general will in the future be justified from the view-point of its results, and that it may claim the allegiance of conscientious men. And we have already seen that it is lawful in its general constitution and general aims.

II. THE METHODS OF THE LABOUR UNION

While the union itself may be morally lawful in the sense just explained, many of its actions may be unlawful. This statement is obviously true of many social institutions. In the case of the labour union, the greater part of the moral condemnation that is pronounced has reference neither to its constitution, its general aims, nor its net results, but to its actions. Since these have practical importance only in so far as they are characteristic and habitual, they will be most profitably discussed under the head of methods or practices.

A. The Strike

This is probably the most important of the methods, from the side of morals. It can not be condemned absolutely, but it is an extreme method and ought not to be employed unless certain grave conditions are verified. Whether they are all present in a given case, is rarely easy, and sometimes impossible, to determine with certainty. At any rate, the following seem to be the general conditions that ought to be fulfilled before a strike can be justified objectively: The advantage which is sought by the workers must be one to which they have a lawful or equitable claim; a peaceful solution of the

difficulty must have been tried and found ineffective; the grievance must outweigh the evil results that are likely to follow from the strike; and there must be good grounds for hoping that the strike will be successful. One of the good effects of well-established unions has been to lessen the number of strikes, and to moderate their excesses and abuses. Violence and the sympathetic strike are less frequent than formerly in connexion with the strike proper, but they are still so prominent as to deserve discussion. In so far as any attempt is made to justify the former, it is usually based on the claim that the labourer has a right to his job, or that he has at least the right to decent conditions of employment, and consequently that he may use force to protect this right against the unjust aggression of the man who has usurped it. From the nature of the case this so-called right to a job cannot be a right in the same sense as the right to a horse or a hat; for it lacks all the customary titles to physical property, and its object or content may be destroyed by a private individual even in the absence of extreme necessity of any sort. For example, the employer may go out of business, and thus abolish the job, without doing the labourer any injustice. At most, the right to a job is merely the right to continue economic relations with a particular employer. It is, consequently akin to the right of a merchant to the patronage of his customers, or the right of any man to pursue a lawful good by lawful means. Hence it is a right to a social relation, which leads to a material good, rather than a right to the material good itself. In a general way it is a right to liberty rather than to property; a right to pursue rather than a right to possess. Consequently, it may be violated as truly as the right to patronage is violated by an unjust boycott; as truly as the right to obtain a promised gift is violated through slander which prevents the would-be giver from carrying out his intention. The nature of the right to patronage will be discussed presently in connexion with the boycott.

Now it would seem that a right to his job in this sense of the phrase does inhere in the labourer who would suffer grave inconvenience if compelled to seek some other occupation; for example, a man with a family who owns a home where he works, and who would be unable to get employment at his trade from another employer in the same city, There is good reason to maintain that the employer who should discharge such an employee without grave reason would sin against not merely charity but justice. Conversely, cases can occur in which the labourers who quit their employer without a sufficiently grave reason will be guilty of injustice toward the latter. If these propositions are not sound, no boycott, however unreasonable, will be unjust merely because of the damage inflicted through the withdrawal of patronage. The labourers that take the places of the striking workers, who are assumed to have this right to their jobs, will likewise violate justice unless they have a sufficiently grave reason for the act. The right of the strikers to their jobs is not valid against other workers who are in grave need. For example, if the latter can not without great difficulty find employment else where,

they will offend neither against charity nor justice when they take the places of the former; for they, no less than the strikers, have a right to seek and obtain a livelihood on reasonable terms. Both classes of workers are contending for advantages that both have a right to pursue, and their respective rights must be interpreted and determined by reference to their respective conditions and needs. Hence it may happen that the prior right of the old employees to their jobs will give way before the sufficiently grave needs of the new-comers. Thus far we have assumed that the employer is attempting to compel his old employees to accept unjust conditions, but that he accords full justice to the new ones. If, however, he is willing to treat the former justly they do wrong to strike, and their right to their jobs would seem, generally speaking, to be forfeited by such conduct. On the other hand, if the new men submit to unjust conditions, at least if they consent to work for less than living wages, they commit an illicit action, and consequently use immoral means to prevent the old employees from obtaining an advantage that the latter have a right to seek. And yet, the needs of the new men may be sufficiently grave to justify them in submitting to these harsh terms for themselves, and in depriving the older men of their jobs. Suppose, however, that the action of the new-comers finally results in the old employees, or some of them, returning to work on the old, unjust conditions. This is what usually happens when a strike is lost through the employment of new men. In this case the new men undoubtedly co-operate in producing an unjust effect, that is, in causing injustice to the old employees. The latter are unjustly treated, yet the instrumental agents of such injustice, namely, the new men, will be justified if their needs are such as to compel them to work under unsatisfactory terms. They sometimes lack such justification, particularly when they are professional "strike breakers", and when they would better their condition by holding off, and assisting the striking workers to obtain the just terms that are sought.

In view of the foregoing outline of the equities of the situation, the question concerning the morality of violent methods of supporting a strike may be answered somewhat as follows: As against the employer, the strikers have no right to destroy his property; for this is lawful only as one of the extreme measures of war, and a strike, no matter how just, has not the moral standing of a just war. As against the men who take the places of the strikers, no violence is lawful when the action of the former is justified by their own needs. Will it be lawful when there is no such justification? May not the strikers forcefully repel unjust assaults upon their rights to decent conditions of employment, just as a man may use force to withstand the attack of a burglar? Pottier hesitates about giving a categorical answer, contenting himself with the statement that force will certainly not be justifiable when less objectionable means would be effective, or when the good effects to be expected are not great and certain in proportion to the evil effects (*De Jure et Justitia*, pp. 228, 229). Now, it is certain that the good ef-

fects to be obtained through the use of violence are practically never sufficient to outweigh the evil effects; for the benefits that labour would thus secure are in significant compared with the social disorder and anarchy through which they would be obtained; The interests and rights of a class must yield before the interest and rights of the community.

The sympathetic strike occurs when labourers who have no personal grievance quit work in order to aid their fellows. It can be directed either against the employer of the latter, or against some other employer who is not concerned in the original dispute. We have an example of the first kind when the brakemen on a railway strike out of sympathy with the trackmen who have left work because they have been refused an increase in wages. If the cause of the trackmen is just, the brakemen will not be wrong in thus acting; for the employer's right to the continued services of the brakemen is valid only so long as he treats them reasonably, and does not use the advantages which he derives from their services for unreasonable ends. On the other hand, their obligation to continue at work ceases when a reasonable cause arises. Such a reasonable cause may well be at hand when their continuation at work becomes a means of assisting the employer in his unjust course towards the trackmen, while their withdrawal from his service will be effective in compelling him to do justice. Their obligation towards their employer gives way before their right morally to coerce him to grant justice to their fellows. If, indeed, they should quit work with out any reasonable cause whatever, they would be guilty of unreasonable interference with the employer's right to pursue the advantages to be derived from the railroad industry, but the cause of the unjustly treated trackmen may be sufficient to render the interference reasonable. It is on this principle that a strong nation or a strong man is justified in coming to the assistance of a weak nation or a weak man who is oppressed by a nation or man with whom the assisting power or person is at peace. When, however, the sympathetic strike is against another employer than the one concerned in the original dispute, when, for example, brickmakers quit work because their employer continues to furnish material to a builder whose employees are on a strike, it will ordinarily be contrary to both charity and justice. To be sure, there are extreme cases in which the unconcerned employer would be under an obligation of charity to assist the labourers who are involved in the first strike, by ceasing to have business intercourse with the off ending employer, but such cases would be of rare occurrence. Much rarer would be the situation in which a sympathetic strike against employers generally would be morally permissible. For the great body of employers and the general public are not reasonably treated when they are compelled to suffer so great in convenience in order that an offending employer may be coerced into reasonable treatment of a small section of the community. While

we cannot be certain that a general strike is never justified, we can safely say that there is against it an overwhelming presumption.

B. The Boycott

In general the boycott is a concerted refusal to engage or continue in business or social intercourse with a person or corporation. Like the sympathetic strike, it is of two kinds, primary and secondary, or simple and compound.

The *primary* boycott is carried on against a person with whom the boycotters have had a dispute; the secondary against some person who refuses to join in the primary boycott. The morality of the primary boycott depends upon the grievance that the boycotters have against the boycotted, and the extent to which, and the means by which it is prosecuted. If the labourers have not been unfairly treated by the person with whom they are at variance, they commit injustice when they organize and carry on a boycott against him. It is true, indeed, that the employer or business man has no absolute right, nor any property right, to the patronage of his employees. The same principle applies to the merchant and his customers. Nevertheless both have a right that is valid as long as it is not forfeited by unreasonable conduct. The basis of this right is the same far-reaching principle that we noticed in connexion with the right of a man to his job, and of an unconcerned employer to the services of his employees who threaten to make him the victim of a secondary sympathetic strike. It is the principle that every man has the right to seek and material goods and opportunities on reasonable terms, and without unreasonable interference. Indeed, this is the real basis of even property rights, and the sole final justification of all the recognized property titles. Hence it is a violation of justice to deprive a man of the benefits of social or business intercourse without some sufficient reason. But there can be a sufficient reason. It will be present when the injustice inflicted by the employer is grave, and when no milder method will be effective. To deny this would be to maintain that the employer has a right to pursue his advantage in an unreasonable way, and immune from reasonable interference. The labourers are endowed with the same right of seeking material benefits on reasonable conditions and by reasonable methods; in this case the boycott is a reasonable method. After all, the boycott does not differ essentially from the strike, which is also a concerted refusal of intercourse. But the boycott must be kept within the limits of justice and charity in its process and extent. It must be free from violence and other immoral circumstances, and it must not be carried so far as to deny to its object the necessities of life, or any of those acts of social intercourse which are demanded by the fundamental human relations -- what the theologians call the "*communia signa charitatis*". For the sake of clearness and simplicity, the foregoing observations refer only to cases in which a boycotted *employer* is treating his employees unfairly; but it is obvious that lawful boycotts have a much wider application. When

the cause and the need are sufficiently grave, the boycott may be employed with due moderation against any unreasonable conduct that inflicts harm, material, moral, or religious, upon a section of the community. Witness the boycotting of perverse newspapers and theatres.

The *secondary* boycott is directed, as already noted, against "innocent third persons", that is, those persons who refuse to assist in the primary boycott. For example, the labourers refuse to buy from a merchant who will not discontinue his patronage of a manufacturer against whom they have a grievance. In principle it is the same as the secondary sympathetic strike, and in practice it is likewise immoral except in extreme cases. It is ordinarily immoral because it is an unreasonable interference with the right of the unconcerned person to pursue and possess the advantages of social or business intercourse with his fellows, that is, with the person who is originally boycotted and the boycotters themselves. It is an unreasonable interference because it subjects him to what is in most cases an unreasonable inconvenience, that is, the deprivation of intercourse with either the boycotted or the boycotters. This inconvenience is unreasonable because it is excessive as compared with the moral claims of the boycotters to the co-operation of the man who is compelled to suffer the inconvenience. That the former have a right to bestow their patronage where they please, is true as a general proposition, but the proposition is too general to reflect adequately the equities of the situation. Undoubtedly the labourers, or any other class of persons, are within their rights and exempt from moral censure when they transfer their patronage to some person whom they wish to favour; in the secondary boycott, however -- and in the primary as well -- the desire to help a friend is only incidental, while the intention to injure the boycotted person is direct and primary. This is not morally lawful unless the thing that they seek to compel him to do can be reasonably required of him. For example, when labourers withdraw their trade from a merchant because he refuses to refrain, at great financial loss, from patronizing a manufacturer who, we will suppose, is justly boycotted by the labourers and their friends, he is compelled to undergo a loss that is out of proportion to his duty of assisting the latter. His right to business intercourse on reasonable terms is violated.

On the other hand, cases do occur in which an unconcerned person may reasonably be required to give up the advantages of business relations with the man against whom the primary boycott is directed, if he refuses, he may rightfully be made the object of a secondary boycott until he is ready to act reasonably. A clothing merchant who obstinately continues to buy his supplies from a boycotted manufacturer of "sweat shop" goods would seem to be a case in point. For the merchant can with no great inconvenience purchase his goods elsewhere, the manufacturer, it is assumed, rightly deserves to be boycotted, and the secondary boycott will not only tend to induce the merchant

to assist the original boycott, but will directly and in itself increase the scope of the latter. Consequently the secondary boycott is not essentially and always wrong. Lawyers, and occasionally judges, condemn it on the ground that it involves threats, or that it causes injury to a man's business, or that it implies a conspiracy, but every one of these features is contained in a strike. Whatever may be the legal aspect of the matter, a threat is not morally wrong per se. Its morality depends upon what is threatened, and how, and why. Injuries *indirectly* caused, which is the case in strikes and boycotts, are justified whenever all the conditions are present which render morally lawful the performance of an action not bad in itself, but which produces both good and bad effects. The morality of a conspiracy is determined on the same principle. Although the Anthracite Coal Strike Commission denounced the secondary boycott unreservedly, the particularly immoral and cruel instances cited show that the commission had in mind the abuses of the practice rather than the practice itself. Nevertheless, the abuses seem to be so frequent in actual life that we cannot wonder at the attitude of those who wish to have the practice forbidden by positive law.

C. The Closed Shop, or the Union Shop

These phrases point to that method or policy of the unions by which their members refuse to work with non-unionists in the same establishment or employment. Now, if, as sometimes happens, the unions refuse to admit non-unionists to membership on reasonable terms, in order to monopolize the trade or employment, their action will, generally speaking, be uncharitable, if not unjust. But if the union is willing to admit all capable workers, and if it has a sufficient reason for pursuing the closed-shop policy, the latter will be neither unjust nor uncharitable. Among the considerations advanced in justification of the policy are the following: The non-unionist ought to help to defray the expenses of organization, from which he derives so much benefit; the presence of non-unionists in an establishment often prevents that peace and discipline which is one of the aims and results of an agreement between the union and the employer, and provokes constant bickering between the two classes of workers, and, most important of all, the average employer strives to supplant gradually the unionist employees or to reduce their wages to the lower level accepted by the non-unionists. In a word, the general defence of the closed-shop policy is that it is indispensable to effective organization. The employment inevitably tends to become all union, or all non-union. This defence may not be fully justified by the vital facts, but if it does give a true account of the situation, the closed-shop policy is justifiable; for, as a general rule, organization is necessary to obtain just conditions for labour. Of course there are exceptions to this rule. We speak here only of what generally happens, with out inquiring into the frequency of the exceptions. In so far as the closed shop is necessary as a means to reasonable conditions of employment, it will not be immoral,

as against either the non-unionist or the employer. Neither is deprived of his right to enter economic relations and pursue his livelihood on reasonable conditions. It is reasonable that the non-unionist should comply with that condition which alone makes justice possible for the mass of his fellow-workers, and it is unreasonable that he should desire to work as a non-unionist when such action tends to produce unjust circumstances for all. There are, indeed, cases in which the inconvenience of joining the union is great, as compared with the harm that would be done to the class through the opposite course. Membership in the union would then be an unreasonable prerequisite to employment.

The closed-shop policy is often objected to, on the ground that it deprives the non-unionist of his natural right to work. In this assertion the right to work, which no one denies, and which cannot possibly be violated except by physical restraint, is confounded with the right to work in certain conditions and relations. The specific demand of the non-unionist is that he shall be permitted to work beside members of the union. If this were an unconditional right it would contradict and annul a similar right of the unionist, namely, the right *not* to work beside the former. One of these rights is no better than the other. In point of fact neither is genuine, for there can be no such prerogative as an unconditional right to a social relation. The right of a non-unionist to work in the same shop with a unionist is no more unconditional than the right to strike, to boycott, or to enter any social relation which requires the consent of the other party. It is conditioned by the circumstances, and it is valid only when these are reasonable. In the hypothesis that we are considering, membership in the union is such a reasonable condition, while refusal to enter is unreasonable. Hence, if the closed-shop policy is necessary in order to obtain proper conditions of employment for the body of the labourers, it will not violate the right of the non-unionist, even if it prevents him from obtaining any employment; for the right in question is dependent upon the contingency that it be exercised within reasonable limits. To deny this is implicitly to assert that the unionists are obliged to work in conditions that are unreasonable. Finally, the policy under discussion may properly be opposed by an employer who otherwise treats his employees fairly. Contrary to the impression that seems to be prevalent, the closed shop is not an innovation. It was enforced for centuries by the guilds, and for a long time in many places it was sanctioned and prescribed by civil legislation (Cf. Ashley, "English Economic History", I, 82). Practically speaking, the law forbade a man to work at his trade unless he belonged to the guild. What the civil law could then command, individuals can now with reason seek to obtain by persuasion, bargaining, and contract.

The methods and policies discussed in the foregoing pages exhibit all the more important moral aspects of the labour union. All these practices involve economic re-

lations which are a means of obtaining material goods. If the relations were not necessary to this end, they could not become the basis of rights. Since they are necessary, they give rise to a right, which, like all other rights, is limited by the end to which it is a means, and is sufficiently realized when it can be exercised on reasonable terms. On this principle, and on this principle only, we justify every kind of right, whether to life, property, or liberty. And all that has been said in connexion with the strike, the boycott, and the closed shop, was merely an attempt to apply this general and far-reaching principle. To forestall misunderstanding, it may be well to note that every violation of justice through labour-union methods is also a violation of charity, and that charity may sometimes be offended without any breach of strict justice.

D. Limitation of Output and of Apprentices

The practice of restricting the amount of work to be performed, or the quantity of product to be turned out by its members seems to be more frequent than the union is generally willing to admit. But it is probably less frequent than the opponents of the union assert. In itself this method is not wrong, and it may even be laudable. Competent authorities maintain that the exceptional workman is often constituted the pacemaker for all the others, and that the intensity of exertion demanded by many forms of high-speeded machinery has considerably reduced the working-life of the labourer (see Brooks, "The Social Unrest", 191; and "Final Report of the Industrial Commission", p. 733). In such cases the union does well to endeavour to keep the output of the average man down to an average reasonable limit. When the restriction goes beyond this, and is motivated by indolence or by the desire of making a job last longer, it is clearly unjustifiable and dishonest. To the complaint of the employer that in many of the skilled trades the union will not permit the training of a sufficient number of apprentices, the unionist replies with a simple denial. The explanation of the difference between them is largely in their different standards of sufficiency. Both recognize that a scarcity of apprentices tends to make wages high, but they do not agree as to the point at which wages are sufficiently high. Since the employer is generally able to pass the extra cost of labour on to the consumer, he is not seriously injured, at least financially, by the practice. But the consumer suffers unjustly, if the supply of skilled workers is kept so low that their wages are unreasonably high. The workers who are able and willing to qualify for the trade are also injured, inasmuch as they are compelled to enter a lower and less remunerative occupation. At what precise point in the wage scale a real injustice is done the consumer, it is practically impossible to say; but, since such a point can be reached, since the men in those trades where limitation of apprentices is enforced are, as a rule, sufficiently organized to defend their just interests, and since a considerable injury is done to those who are excluded from the trade, the practice would seem to be of doubtful moral correctness. After all, a labour union can become a real monopoly,

capable of practising extortion upon the community as truly, though not as extensively, as a monopoly of products.

While the unions are a necessity of our present industrial system, they are nevertheless, both in spirit and in many of their methods, a necessary evil. They are too often established and maintained on the theory or conviction that the competition between employer and employee is a veritable warfare, in which each is at liberty to strive for all that he can possibly secure, and in which the victory is always to the stronger force. If competition were restrained by law or by some other species of social control within the limits of reason and morality, if the taking of exorbitant profits and the reduction of wages below the level of decent living were alike rendered impossible, the union would still be desirable, indeed, just as organization is desirable for every class of men whose interests are common; but a far greater proportion of its activities could be devoted to mutual help, especially in the form of insurance, and a much smaller proportion to the struggle against the imposition of unfair terms, and to economic warfare generally. In that better, though still remote, day, most of the extreme methods of the union, such as the strike, the boycott, and the closed shop, could be discarded in favour of milder practices, such as collective bargaining, insurance, and education.

JOHN A. RYAN

Jean de la Bruyere

Jean de La Bruyère

Born at Paris in 1645; died at Chantilly in 1696. He was the son of a comptroller general of municipal revenue. An advocate in the Parlement of Paris, he soon gave up the bar and purchased a post from the Treasurer of Finances at Caen (1673), continuing to reside at Paris. He was leading a studious life there "in the solitude of his study" according to his own expression, when Bossuet's friendship secured his admission into the house of Condé to teach history to the Duc de Bourbon, grandson of the victor of Rocroi. This boy was then six years old, and for two years received lessons from his new tutor. The latter only half succeeded in his task, but he secured the friendship of the great Condé, and remained at Chantilly attached to the duke's person, with a pension of 3000 livres, until he died of an attack of apoplexy in 1696, having been for three years a member of the French Academy. Favourably placed for seeing the world, and led to judge it without indulgence, both because of the rebuffs which he must have experienced in his subordinate position and because of his upright but proud and morose nature, he published anonymously in 1688 "Les Caractères de Théophraste, traduits du Grec, avec les caractères et les mœurs de ce siècle." The book met with great success. Though his means were modest, the author freely gave his manuscript

to the bookseller Michallet as a contribution towards the dowry of his daughter, and it is claimed that it brought in nearly 300,000 francs. The first part of the book was a not very remarkable translation of a faulty text. The second part assumed larger proportions, especially as regards the "portraits." La Bruyère continued to add to it from the first edition (1689) to the ninth (1696). The first fifteen chapters, he said with some complacency in his rather loosely-drawn plan, "are preparations for the sixteenth and last, 'Des esprits forts,' in which Atheism is attacked and perhaps overthrown."

La Bruyère must not be regarded as a profound and powerful moralist like Pascal. He is a keen, honest, Christian observer and, above all, an admirable writer. But the stylist and the artist are too much in evidence; he lacks the large simplicity of the authors of the preceding generation. His art is, however, inimitable. Particularly striking is the variety, the finish of detail, the profusion of wit, the skill in securing an effect, the inexhaustible resources of his diction; his works are an inventory of the powers of the French language. By his ideas as well as his life he belongs to the seventeenth century, but his brief and sententious phrases foreshadow the eighteenth.

FOURNIER, *La comédie de La Bruyère* (1867); ALLAIRE, *La Bruyère dans la maison de Condé* (1886).

GEORGES BERTRIN

Labyrinth

Labyrinth

A complicated arrangement of paths and passages; or a place, usually subterranean, full of windings, corridors, rooms, etc., so intricately arranged as to render the getting out of it a very difficult matter.

The labyrinth as an architectural term derives its name from the famous ancient or mythical labyrinths of Crete and Egypt. Geometrical figures composed of various pieces of coloured marbles and so disposed as to form labyrinths were frequently found in the pavements of French cathedrals and so-called *labyrinthes de pavé*. The finest remaining example is in the centre of the nave of Notre Dame, Chartres, and a person following the various windings and turns of the figure would walk nearly 800 feet before he arrived at the centre, although the circumference does not exceed thirteen yards. Similar labyrinths formerly existed at Notre Dame, Paris, at the cathedral of Reims, and at Amiens. This latter was only taken up in the latter part of the last century, and the centre stone (which is octangular and was formerly inlaid with brass imagery) is still preserved in the museum of that city. These labyrinths were supposed to have originated in a symbolical allusion to the Holy City, and certain prayers and devotions doubtless accompanied the perambulation of their intricate mazes.

In modern times, generally a fantastic arrangement of lofty and thick hedges in a garden as at Hampton Court, where it is difficult to find one's way to the centre.

THOMAS H. POOLE

Stanislaus du Lac

Stanislas Du Lac

Jesuit educationist and social work, b. at Paris, 21 November, 1835; d. there, 30 August, 1909. His father, Louis Paul Albert du Lac de Fugères, was descended from a noble family, noted in history as early as 1206, and his mother was Camille de Rouvroy de Lamairie. Entering into the novitiate of the Society of Jesus at Issenheim, in Alsace, October 28, 1853, he studied theology at Laval till 1869, when he was ordained priest by Mgr. Wicart, 19 September. The following summer (1870) he was made rector of the new College of Sainte-Croix, at Mans, where, during the Franco-Prussian war, he organized an efficient hospital service. During the ten months of his rectorship at Mans, twenty-two thousand soldiers sojourned successively in his college. In October, 1871, he succeeded the martyred Father Léon Ducoudray as Rector of the Ecole Sainte-Geneviève, generally called "La Rue des Postes", an institution which prepared candidates for the great military and scientific schools of France. During his rectorship, from 1872 to 1881, 213 of his pupils were admitted to the Ecole Centrale, 328 to the Ecole Polytechnique, and 830 to Saint-Cyr. With a rare combination of firmness and gentleness he trained his students to be such fearless Catholics that they gradually infused a Catholic spirit into the military school of Saint-Cyr. This, together with their unparalleled success at the entrance examinations, was the real cause of the closing of the Jesuit colleges in 1880 and of the subsequent persecution of the Church in France. In 1880 he founded a new French college, St. Mary's, at Canterbury, England, where he remained as rector nine years, venerated and loved by all who met him, Protestants as well as Catholics. The last twenty years of his life were spent in Paris and Versailles, as preacher, director of souls, and founder of the "Syndicat de l'Aiguille", a collection of loan and benefit societies for needlewomen, dressmakers, seamstresses, especially those young sewing girls who are called *midinettes*. As early as 1901 this syndicate, which has spread all over France, counted more than two thousand members and two hundred lady patronesses in Paris alone, where its two restaurants, reserved exclusively for members, had served more than a million meals, and where its preventive zeal had saved and consoled thousands of young women. Father du Lac had been for many years, in the eyes of the ignorant anti-Catholic multitude, the personification of the scheming Jesuit, while the Catholics who knew him best thought him only too frank, too apt to waste his kindness on men whose hatred of the Church was implacable. He

wrote two books: "France" (Paris, 1888), which vividly portrays the affectionate relations between the Rector of St. Mary's, Canterbury, and his French boys; and "Jésuites" (Paris, 1901), a defence of the Society of Jesus, containing many autobiographical reminiscences. In the last long months of illness God took him away from the strife of tongues into the solitude of a religious house which was not his own, a hospital where he died in poverty and perfect trust.

LEWIS DRUMMOND

Lace

Lace

(Lat. *laqueus*; It. *laccio*, *trine*, *merletto*; Sp. *lazo*, *encaje*, *pasamano*; Fr. *lacis*, *dentelle*; Ger. *Spitze*).

I. HAND-MADE LACE

(1) Classification

(a) Needle-made lace, or needlepoint (*trine ad ago*), which has three divisions:—(i) *Lacis*, lace made by working various needlepoint stitches on a specially prepared knotted netting (*modano*) or twisted netting (*buratto*). (ii) Lace made by the needle on a foundation of woven linen—the pattern sometimes made by drawing threads together by the needle, sometimes by cutting portions of the linen away and sewing over the remaining threads. This linen lace is called drawn-work (*tela tirata*) and *reticello* or cut-work (*tela tagliata*). A Venetian chalice-cover of the seventeenth century has a background of cut-work, the figures being worked in *punto in aria*. (iii) Needle lace made without any foundation at all, and hence called *punto in aria*. This includes every variety of needle-made or point lace made entirely without foundation, such as Venice and Spanish flat point and raised point, point de France, Alençon point, point de gaze, etc. However widely dissimilar these laces may be in their designs and styles of execution, they all come under the head of needlepoint lace.

(b) Bobbin-point lace, which is made with bobbins on a pillow (*trine a fuselli*) or by crochet, tatting or simply twisting and knotting threads by hand into fringe as in macramé (Sp. *moresco*). There are three chief ways of making bobbin-lace. (i) Early or peasant lace.—A tape, sometimes plain, sometimes ornamented, is made on the pillow, and joined up as required, but is not cut or finished off until the pattern is completed. (ii) Genoese, Milanese lace, etc.—Complete sprays or patterns are made and finished on the pillow and afterwards placed as required and joined by brides or by a *réseau*. (iii) Mechlin, *binche*, *valenciennes*, etc.—The same bobbins which were

first filled and placed on the pillow continue throughout the process, and complete both pattern and ground of the lace.

(2) History

Among the Egyptian antiquities discovered in 1909 by Professor F. Petrie, at Qurneh, it is interesting to recognize the square knotted mesh netting, similar to the laces called *modano*. This netting covers the vases found at the side of the coffin of a remarkable burial of the seventeenth dynasty (1600 B.C.). Other specimens of lace made with bobbins and of lace stitches worked on linen have been found in Egyptian tombs of the first to the third century, and fine specimens of these are in the Victoria and Albert Museum, London, and in the Cluny Museum, Paris. For many subsequent centuries we possess no actual specimens of lace fabrics, but records, illuminated manuscripts, sculpture, and paintings give us evidence that hand-work in lace and on linen was continuously and gradually developed into the beautiful products of the fifteenth, sixteenth and seventeenth centuries. It will be worth while to quote some ancient references. The "Ancren Riwle" of the thirteenth century cautions nuns against devoting too much time to lace and ornamental work, to the detriment of work for the poor. The record of a visitation at St. Paul's, London, in 1295, mentions laces under the name of *album filum nodatum* (knotted white thread). A roll of the possessions of the Knights Templars after their suppression in 1312 includes an inventory of the Temple Church, London. An item in this is "one net which is called Espinum to cover the Lectern".

On the question of design, as indicating the date of lacework, the early geometric character of design inspired by the East was modified as early as the eighth century, as we see, by realistic ornamentation, such as the flowing scrolls and vine leaves introduced into the initial letters of manuscripts of that date. These paintings were chiefly the work of monks of the Benedictine Order, and the lace at that time was undoubtedly the work of nuns and intended for church purposes. Therefore we may conclude that mutual assistance in design was given, as both were working for the same object, the ornamentation and glory of the Sacred Scriptures and the services of the Church.

The two earliest known specimens of lace-worked linen albs are that of St. Francis, preserved at St. Clare's convent, Assisi, and the alb of Pope Boniface VIII, now in the treasury of the Sistine Chapel. The Assisi alb is said to have been worked by St. Clare of Assisi and her nuns, and to have been worn by St. Francis himself (d. 1226). This alb is of hand-woven linen, very fine in texture, and the *tela tirata* work introduces no less than twenty varieties of polygonal design. Many of these are formed of the Coptic gammadion or symbol of the cross. Symbolic animals and chimeras are also introduced, and the Eastern character of the design is obvious. The other ancient alb is also of linen lace and is said to have been worn by Pope Boniface in 1298. As to its possible history, it is known that St. Nilus and his monks were driven from the East by the Saracens in

the tenth century and were welcomed in Italy by Pope Gregory V. He established them near Rome, where their successors still worship with the Eastern Rite. The famous alb may have been brought by these monks or by those who followed them from the East. The design is worked in *punto tirato* and is evidently of Eastern origin; the flounce of pillow lace was added at a later date.

Dr. Daniel Rock has pointed out that the long strips of laces and linen lace of early work, now sometimes found, were covers for the lectern; and this is confirmed by the fact that the figure subjects are usually worked across the width of the piece, as in a remarkable piece dating from the fifteenth century. This is a strip of *tela tirata*, six feet by twelve and one-half inches, probably worked by the nuns at Assisi as a lectern cover, and representing, among other sacred subjects, St. Francis receiving the Stigmata. Existing records as early as the twelfth century mention "worked albs" belonging to the Abbey of St. Albans, and in an inventory of 1466 of St. Stephen's, London, we read of "worked altar cloths and towels" and some with three "rayes" at each end. These "rayes" were rows of insertion of reticello work.

There is no doubt that the Church was the first patron of lace-making in Europe, and the finest existing specimens both of early and late work were made to decorate albs, Mass vestments, etc. A very curious specimen of linen lace of pre-Reformation times is the pyx veil now existing in the parish of Hesselt in Suffolk. This beautiful square, entirely worked in *tela tirata*, has a hole in the centre through which the chain passed to hand the vessel containing the Blessed Sacrament.

The earliest lace-pattern books now existing are dated 1527, which proves that the art was already well known and practised, as the patterns given in these books are only practicable for very experienced workers. From this time in Venice began the *punto in aria*, worked first as flat point and *punto avorio*, and then with numberless enrichments constituting raised, or rose, point, *point de neige*, or rosalline point, caterpillar point, etc. The flowing scrolls and graceful, though always conventional flowers, are characteristic of the splendid Venetian laces. In the Victoria and Albert Museum, London, is a very remarkable set of Mass vestments, chasuble, stole, maniple, and chalice veil, made entirely of the finest seventeenth-century Venetian rose point; the veil has emblems of the Blessed Sacrament, the vine, ears of corn, etc. In the same place is a splendid altar-frontal of seventeenth-century *gros point de Venise*.

It should be remembered that many articles made for church use in early times are much to be admired as a testimony to zeal and devotion. But some the rubrics at present in force would not approve of for use in the sanctuary. Albs and cottas should have the major part of linen; lace, to be correct, should be only twelve inches deep, as an alb flounce, and there should be no frill of lace at the neck.

Two examples of the flourishing industry of modern production of needlepoint are work done at the convent at Youghal, Ireland, and from the school of Burano, in Venice, patronized by the Holy Father, the Queen of Italy, and others.

Spanish needlepoint laces may be identified by a certain over-elaboration of design and ornaments. Much seventeenth- and eighteenth-century church lace came from Spain at the time of the Revolution and suppression of the monasteries in 1830; hence the name "Spanish point" is often given to *gros point de Venise*. The lace now made in Spain is distinctly derived and actually named from Flemish and Italian originals. Barcelona makes much silk lace.

A Venetian lace-designer was invited to France by Henry III about 1580, and lace-making was established in Auvergne. Fifty years later an edict of the Toulouse Parliament put a stop to this flourishing industry, and the inhabitants of Velay and Le Puy were reduced to misery, but by the exertions of the Jesuit Father John Francis Regis (afterwards canonized by Clement XII) the obnoxious law was repealed, and the saint is still the patron of lace-making. Lace in those days was even technically under the protection of the Church, among the names of stitches being "Pater", "Ave Maria", "Chapelet", etc. More than 100,000 workers now make pillow lace and *point Arabe*, as the modern guipure is called, at Le Puy, and lace is also made in the departments of Cantal and Vienne, and at Mirecourt in the Vosges. Alençon had an early lace-making industry, and portions of laces made for church use about 1550 by the then Duchess of Alençon are now to be seen in the museum of that town. Later, the needlepoint industry of Alençon was founded by Venetian workers imported by the State in 1665, and the magnificent *point de France* was the result. The French modifications of Venetian design were most ambitious and ingenious, and in any important piece of *point de France* may be found every variety of realistic design, or emblems of religion, war, or the arts, together with portraits of great personages and heraldic devices. Towards the end of the eighteenth century a less ambitious style was adopted, the Alençon laces lost their Venetian character, and the designs became for the most part a series of small floral patterns. Needle point is still made at Alençon by two or three hundred workers. Pillow lace flourished in Belgium and Holland from the fifteenth century and attained its apogee in the eighteenth; the designs closely followed the fashions of France and Italy. Magnificent flounces for albs of Brussels *point d'Angleterre* are mentioned in the inventories of Paris churches from 1740.

At the same time that France began to rival Italian lace King Charles II of England revived a previous edict against foreign laces. But while the French successfully rivalled Venetian laces, the fine bobbin laces of Flanders called *point de Flandre* and *point d'Angleterre* were never approached by English workers. Hollie, or holy, point is the only English distinctive needlepoint lace; this was principally used for infants' caps

and other garments at baptism, and the Holy Dove, a pot with flowers reminiscent of the Annunciation, etc., were devices often used. Bobbin lace has been made in England since early in the sixteenth century. Devonshire lace was and is the most important. Buckinghamshire and Bedfordshire follow closely, and nearly every county in England at the present time has taken up the industry with praiseworthy results.

The needlepoint lace of Youghal, Ireland, was started by the nuns of the Presentation Convent, at the time of the terrible famine of 1847. It is celebrated for excellence both of design and execution and received a gold medal from the Vatican. Lace has been made at Youghal for empresses and queens. In 1905 the sum of \$17,500 was paid to workers, and the quantity of lace made is always increasing. Needlepoint lace is also the specialty of the Poor Clares at Kenmare; the industry was founded in 1862, and beautiful lace was made for the Archbishop of New York and other prelates. The Institute for Deaf and Dumb Girls, St. Mary's, Cabra, Dublin, is most successful with Limerick darned lace. Much is made for church use, and it has received honours both at home and at Chicago in 1893. The Convent of Mercy has made Limerick and crochet laces ever since the Famine year in the beautiful old town of Kinsale. Large quantities of lace were sold at Chicago; about a hundred and fifty workers are employed. The Co-operative Lace Society established at the convent at New Ross makes every kind of crochet lace, and because of its durability this lace is much used for church purposes. Many other convents and institutions impossible to enumerate encourage this beautiful industry with success. In the report presented to Parliament in 1909, the value of lace exported was estimated at \$475,000. But as many convents sell privately, this is a very low figure.

II. MACHINE LACE

The beautiful laces made by machinery are the most widely known and used at the present time. England originated lace machines, and France may claim to have perfected them. The stocking machine was no doubt the parent of lace-making machinery. The machines were started at Nottingham in England, early in the nineteenth century, and were called bobbin-net, or point-net, or warp-net, machines, and the lace first made was often finished and enriched by hand. Owing to the destruction of more than a thousand stocking frames and lace machines by rioters, it was made a capital offence in 1812 to destroy machines. Imitation lace was shown at the Exhibition of 1851, and Nottingham now employs designers for lace of all kinds, and produces machinery for making the heaviest, as well as the finest, of modern laces. Calais in France, St. Gall in Switzerland, and Plauen in Saxony are centres of activity and enterprise in the production of lace fabrics, and the value of lace manufactured in England, France, Switzerland and Germany exceeds a billion dollars annually.

MARIA M. POLLEN

Diocese of Lacedonia

Diocese of Lacedonia

(LAQUEDONIENSIS)

Located in the province of Avellino, Southern Italy. Lacedonia is famous in history for the "conspiracy of the barons" of the Kingdom of Naples against King Ferdinand I, which took shape in the cathedral of Lacedonia (1484).

The episcopal see dates from the eleventh century. The first known bishop is Desiderius, mentioned in 1082, but he is known to have had predecessors. Among the other noteworthy bishops were Fra Guglielmo Neritono (1392); Antonio Dura (1506); Gianfrancesco Carducci (1564); the distinguished mathematician Marco Pedacca (1584); the learned and virtuous Giacomo Candido (1606); Giacomo Giordano (1651), who built the episcopal palace and planned a new cathedral; Benedetto Bartolo, who was seized by the brigands and later redeemed by the Marquess of Carpi; Morea (1684), who suppressed certain festivities of pagan origin celebrated on the vigil of Epiphany, and laid the corner-stone of the new cathedral; Francesco Ubaldo Romanzi (1798), under whom the Diocese of Lacedonia was increased by union with Trevico, a neighbouring diocese subject to the Metropolitan of Benevento, and which dates at least from the tenth century, when a Bishop Benedetto is mentioned (964). Lacedonia has suffered much from earthquakes, especially in 1694 and 1702. The diocese is a suffragan of Conza and Campagna, and has 11 parishes with 28,000 souls, 1 Capuchin monastery, and 1 house of the Daughters of St. Anne.

CAPPELLETTI, Le chiese d' Italia, XX (Venice, 1857).

U. BENIGN

Francois d'Aix de la Chaise

François d'Aix de la Chaise

(*Also Chaize*).

Confessor of King Louis XIV, born at the mansion of Aix, in Forez, Department of Loire, 25 August, 1624; died at Paris, 20 January, 1709. He entered the Jesuit novitiate at Roanne in 1649; after teaching the humanities and philosophy for some time at the Collège de la Sainte Trinité at Lyons, he became rector of the same college and, somewhat later, provincial of his order. In 1675 he succeeded the deceased Father Ferrier a confessor to King Louis XIV, and filled this influential but extremely delicate position conscientiously for thirty-four years. He is often accused of having connived at the king's liaison with Made de Montespan, and of having advised the revocation of the Edict of Nantes and the violent suppression of Protestantism. The facts are that La Chaise used all his influence to put an end to the king's illicit relations with Montespan and finally succeeded, with the help of Madame de Maintenon, in breaking the liaison. After the death of Queen Maria Theresa in 1683, he advised the king's marriage to Madame de Maintenon, through whose influence the king and the whole court of Versailles underwent a wholesome change.

It is not known in how far La Chaise was connected with the revocation of the Edict of the Nantes, but it is probable that, like most other Catholics of France, he advocated it. The accusation that he advised the use of violence against Protestants is without foundation, and does not harmonize with the admitted mildness of his character. Saint-Simon (*Mémoires*, IV, 285-7), Voltaire (*Siècle de Louis XIV*, III, 305), and other enemies of the Jesuits testify to his kindness and humanity. He corresponded with Edward Coleman concerning the lawful means for bettering the sad condition of the Catholics in England; but a letter concerning the extirpation of Protestantism, alleged to have been written by La Chaise to Father Petre, the confessor of James II of England, has been proved to be a forgery. As a mark of esteem King Louis XIV presented him with Mont-Louis, a beautiful tract of land in the south-eastern part of Paris. In 1804 it was converted into a cemetery, and it is still known as Père Lachaise.

MICHAEL OTT

Lacordaire

Jean-Baptiste-Henri Dominique Lacordaire

The greatest pulpit orator of the nineteenth century b. near Dijon, 13 May, 1802; d. at Sorèze, 21 Nov., 1861. When he was only four years old he lost his father, and was thenceforth under the care of his mother, "a brave Christian" but no *dévot*. She came of a family of lawyers, and brought her son up for the bar. While still at school he lost his faith. From Dijon he went to Paris, to complete his legal studies under M. Guillemin. His first efforts at the bar attracted the attention of the great Berryer, who predicted for him a successful career as an advocate. Meantime, however, he regained

his faith, and resolved to devote himself entirely to the service of God. He entered the seminary of Issy, 12 May, 1824, and in spite of the reluctance of the superiors, was ordained by Mgr de Quélen, Archbishop of Paris, 22 Sept., 1827. His first years in the ministry were spent as chaplain to a convent and at the Collège Henri IV. This work was little to his taste. Accordingly, when Mgr. Dubois, Bishop of New York, visited Paris in 1829 in search of priests for his diocese, he found a ready volunteer in the young Abbé Lacordaire. All arrangements were complete, but before a start could be made the Revolution broke out (July, 1830). The Abbé de Lamennais, at this time at the height of his reputation as a defender of the Church immediately offered him the post of collaborator in "L'Avenir", a newspaper intended to fight for the cause of "God and Freedom". The story of this famous journal belongs to the article LAMENNAIS. Here it will be enough to mention that Lacordaire gladly accepted the offer, and abandoned his proposed journey to America. He and Montalembert, whom he first met at the office of "L'Avenir", were the principal contributors. Their programme was to renounce all State protection and assistance, and to demand religious freedom, not as a favour, but as a right. They advocated free speech and a free press, and exhorted the Catholics to avail themselves of these weapons in defence of their rights. Their religious teaching was strongly Ultramontane. In the first sixteen numbers the leading article on seven occasions was from Lacordaire's pen. He did not write on abstract subjects; his line was to take some event of the day -- some insult to religion, some striking incident in the action of Catholics in other countries, notably Ireland -- and make this a text for the demand of religious rights. He possessed in a remarkable degree the qualities of a great journalist -- clearness, force, brilliancy, the power to discuss the graver topics of the day at short notice in limited space, and in a manner adapted to the general intelligence. Royalists and Liberals alike were assailed with a power and fierceness never before exerted in the cause of religion. Even at this long interval of time it is impossible to read his articles without feeling keenly their strength and vividness. His contributions, and not those of Lamennais, were the most aggressive.

When the paper was condemned by the bishops of France, it was Lacordaire who suggested the appeal to Rome and drew up the memoir to be presented to Gregory XVI. But it was he, also, who was the first to recognize that their cause was lost, and that they must bow to the pontiff's decision. He left Rome at once, 15 March, 1832, though Lamennais and Montalembert remained for some months longer. The three met again at Munich, and there, while at a banquet, they received the formal condemnation of the whole policy of "L'Avenir" (Encyclical "Mirari Vos", 15 Aug., 1832). On their return to France, Lacordaire went to stay at La Chênaie, in Brittany, where Lamennais had established a house of higher studies for ecclesiastics. He remained there for three months. It must be said, however, that the two men were at no time

altogether cordial in their relations, and less than ever after their defeat. The system of philosophy adopted by Lamennais was never accepted by his colleague, who also refused to pay the homage which was expected from the inmates of La Chênaie. But the main cause of the contention which arose was that Lacordaire's submission was sincere, whereas Lamennais continued to speak strongly against Rome.

Lacordaire left La Chênaie, 11 Dec., 1832, and returned to Paris, where he was admitted to the circle of Madame Swetchine, who exercised a restraining influence over him as long as she lived. As the press was no longer open to him, he began to give religious lectures (*conferences*) at the Collège Stanislas (Jan., 1834). These were attended by some of the leading men of the day, but were soon denounced on account of the Liberal views expressed. The archbishop intervened, and insisted that the lectures should be submitted beforehand to censors. The correspondence which ensued led to a complete change in the archbishop's attitude. He now offered Lacordaire the pulpit of Notre-Dame, and there, in the beginning of Lent, 1835, the first of the famous conferences was delivered. Their success was astonishing from the very outset. The second series in the following year met with even greater favour. At the conclusion of these last conferences Lacordaire announced his intention of retiring from the world for a time, in order to devote himself to study and prayer. During a retreat at the Jesuit house of St. Eusebius in Rome, he resolved to enter the religious state. Even in his seminary days he had thought of becoming a Jesuit, but had been prevented by Mgr de Quélen. He now decided to enter the Dominican Order whose name of "Friars Preachers" naturally appealed to him. Meantime he preached a course of conferences at Metz in the Lenten season of 1838, which were equally successful with those of Notre-Dame. His "Mémoire pour le Rétablissement des Frères Prêcheurs" was preliminary to his reception of the habit at the Minerva in Rome (9 April, 1839). Next year he made his vows (12 April, 1840) and returned to France. The first house of the restored order was established at Nancy in 1843, a second at Chalais in 1844; a novitiate at Flavigny in 1848, and finally a French province was erected with Lacordaire as first provincial.

Meantime, in the Advent of 1843, the conferences were resumed at Notre-Dame, and continued with one break until 1852. At first King Louis Philippe endeavoured to prevent the resumption of the conferences, but the new archbishop, Mgr Affre, was firm, and merely required that the preacher should wear a canon's rochet and mozetta over his Dominican habit. The interest in the conferences was greater than ever. It was noted that the orator had gained in depth and brilliancy by his years of retirement. And here it will be well to describe briefly the nature of the conferences and the causes of the extraordinary interest which they aroused. The old-fashioned sermon -- text, exordium, three points; and peroration -- dealt with dogmatic or moral subjects, and

was addressed to believers. It reached its highest perfection at the hands of Bossuet, Bourdaloue, and Massillon. The clergy in the first part of the nineteenth century went on preaching as before, speaking of the same subjects bringing forward the same arguments, using the same methods; forgetting all the while that they had to appeal not only to believers but also to infidels. It was Lacordaire's merit that he discerned the necessity of a complete reform, new subjects, new arguments, new methods must be adopted. The matter must be apologetic, and, as apologetics vary according to the nature of the enemy's assaults, it must be adapted to meet the attacks of the day. With the rare insight of genius, Lacordaire began where the ordinary apologist ends. He took the Church as his starting-point, considering her as a great historical fact, and drawing from her existence, her long-continued duration, and her social and moral action the proof of her authority. Thus the first conferences in 1835 treated of the Church's constitution and her social activity. In the second course he went on to speak of the doctrines of the Church viewed in their general aspect. When he resumed the conferences in 1843 he spoke of the effects of Catholic doctrine upon the human mind, upon the soul (humility, chastity, and other virtues), and upon society. Again, before treating of God he took Christ for the subject of the best known of all the series (1846). From the Son he passed to the Father (1848), proving the existence of God and dealing with His work of creation. From God he descended to man and the doctrine of man's Fall and Redemption (1849-50). The *coup d'état* prevented the continuance of the conferences in Notre-Dame, but a further course was delivered at Toulouse in 1854, treating of life, natural and supernatural.

So much for the subjects. The form of the conferences was quite unlike that of the ordinary sermon. There was no opening text, or prayer, no firstly, secondly, thirdly; no pause between the divisions. After a short exordium, indicating the subject to be dealt with, he plunged at once *in medias res*, and let his subject grow upon his hearers. His voice, feeble at the beginning, gradually grew in volume until it rang through the vast vault of the cathedral, sometimes breaking out into a cry which thrilled the hardest hearts. His gestures were graceful and yet full of vigour, his dark eyes flashed out the fire that was burning within him. His words were the choice of the moment, coming freely to his lips after careful preparation of the matter and the main lines of his discourse; indeed, his most brilliant passages were inspired by some movement among his audience, or some sudden emotion within himself. We can understand the state of prostration produced by such delivery, and how his strenuous efforts tended to shorten his life.

The government of Louis Philippe came to an ignominious end in Feb., 1848. In his opening conference of that year, delivered while the barricades were still standing, Lacordaire welcomed the Revolution in language which was greeted with prolonged

applause. Now at last he hoped to carry out his old programme of "God and Freedom" -- without the youthful excesses that marred the policy of "L'Avenir". A new paper, "L'Ere Nouvelle", was started under his editorship, but he wrote little in its columns. He realized that his strength lay rather in speech than in writing. In the elections he accepted a nomination for Paris, but obtained only a small number of votes. He was, however, returned for the department of Bouches-du-Rhône. He took his seat on the Extreme Left, clad though he was in his Dominican habit. A few benches below him sat his former friend and master, now his bitter foe, Lamennais. The invasion of the Assembly by the rabble convinced him that his dream of a Catholic republic was not to be accomplished. He resigned his seat 18 May, and some months later gave up the editorship of "L'Ere Nouvelle". He did his utmost to prevent the Church from becoming identified with the Empire established by Napoleon III. For this reason he refused to continue his conferences in 1852, though urged to do so by Mgr Sibour. His last discourse in Paris was delivered in the church of Saint-Roch in 1853. It was a sermon on the text: "Esto vir" (III Kings, ii, 2), and was an outspoken attack on the new Government. After, this it was impossible for him to remain in Paris. For the rest of his life he had charge of the military school of Sorèze, in the department of Tarn, where he inculcated the duties of manliness and patriotism as well as religion. Though he was devoted to his youthful pupils he naturally felt that he was exiled and silenced. In 1861 (24 Jan.) he was called out of his obscurity to take his seat in the Academy -- an honour which cast a gleam of brightness over his last days. It was at this time that he uttered the famous words: "J'espère mourir en religieux pénitent et en libéral impénitent." Towards the end of the year (21 Nov.) he passed away at Sorèze, after a long and painful illness, in his sixtieth year.

Lacordaire was of middle height, sparely but strongly built. He always objected to sit for his portrait, but one day at Sorèze he submitted. He is represented seated, and absorbed in prayer, with his hands crossed one over the other, for the Elevation bell was ringing in the church when the portrait was taken.

Besides his "Eloges funèbres" (Drouot, O'Connell, and Mgr Forbin-Janson) he published: "Lettre sur le Saint-Siège"; "Considérations sur le système philosophique de M. de Lamennais"; "De la liberté d'Italie et de l'Eglise", "Vie de S. Dominique"; "Sainte Marie Madeleine" (the two last-mentioned works contain many sublime passages, but are of little historical value). Mme Swetchune said of him: "On ne le connaîtra que par ses lettres." Eight volumes of these have already been published, including his correspondence with Mme Swetchune and Mme de la Tour du Pin, and "Lettres à des Jeunes Gens", collected and edited by his friend H. Perreyve in 1862 (tr. Derby, 1864; revised and enlarged ed. London, 1902). Amongst Lacordaire's most celebrated works are his "Conferences" (tr. vol. I only, London, 1851), "Dieu et l'homme" in "Conférences de

Notre Dame de Paris" (tr. London, 1872); "Jésus-Christ" (tr. London, 1869), "Dieu" (tr. London, 1870).

Oeuvres du R. P. H. D. Lacordaire (Paris, 1873); FOISSET, *Vie de Lacordaire* (Paris, 1870), CHOCARNE, *Le R. P. Lacordaire, sa vie intime et religieuse* (Paris 1866), tr. *The Inner Life of Père Lacordaire* (9th ed., London, 1901). These two *Lives* mutually complete each other: FOISSET dealing with the outer life as detailed in the above art., while CHOCANE tells the wonderful story of his mortifications and spiritual trials; MONTALEMBERT, *Le Père Lacordaire* (Paris, 1862; tr. London, 1863); IDEM, *Le Testament du P. Lacordaire* (1870); RICARD, *Lacordaire* (Paris, 1888); D'HAUSSONVILLE, *Lacordaire* (Paris, 1895), SAINTE-BEUVE, *Causeries du Lundi*, I (Paris, 1852), *Nouveaux Lundis*, IV (Paris, 1885); -- these articles are written with all the skill and discernment of the great critic, who had once been on intimate terms with Lacordaire: MacNABB, *Lacordaire 1802-1861* (London, 1890); LEAR, *H. D. Lacordaire* (London, 1882).

T.B. SCANNELL

La Crosse

La Crosse

(CROSSENSIS)

Diocese erected in 1868; included that part of the State of Wisconsin, U.S.A., lying north and west of the Wisconsin River. In 1900 the establishment of the Diocese of Superior subdivided this territory and reduced it to the Counties of Adams, Buffalo, Chippewa, Clark, Crawford, Dunn, Eau Claire, Grant, Iowa, Jackson, Juneau, La Crosse, Lafayette, Marathon, Monroe, Pepin, Pierce, Richland, Sauk, Trempealeau, Vernon, and Wood; an area of 17,299 square miles. It is suffragan to Milwaukee. At the establishment of the diocese there were ministering to the scattered Catholic population twenty-two priests, who had to care for twenty-three churches and about fifty stations. Besides the English and German congregations provision had also been made for Poles and Italians. Franciscan sisters and lay teachers had charge of six parish schools. The Very Rev. Michael Heiss, then head of St. Francis's Seminary, Milwaukee, was elected as the first bishop, and consecrated, 6 Sept., 1868. He was born at Pfalldorf, Bavaria, 12 April, 1818; in 1835 he entered the University of Munich, where Möhler, Döllinger, and Görres were professors, intending to study law, but changed his mind, took a course in theology, and was ordained at the age of twenty-two. Knowing the need of German priests in the United States, he arrived in New York, 17 December, 1842, and was affiliated to the Diocese of Louisville. Two years later he moved to Milwaukee at the invitation of Bishop Henni, and in 1846 erected the first parish church in that city,

his charge extending over an area of fifty- two square miles. He opened a seminary in a private house, which was subsequently merged into the Seminary of St. Francis, of which he was president. During the twelve years of his administration in La Crosse, he built several churches, including the cathedral, and the episcopal residence. While president of St. Francis's Seminary he published in English "The Four Gospels Examined and Vindicated on Catholic Principles" and a Latin essay "De Matrimonio." As a priest he took part in the Councils of Baltimore in 1849 and 1866, and Pius IX made him a member of one of the four great commissions of bishops engaged in the preparatory work for the Vatican Council, 1869-70. On 14 March, 1880, he was appointed coadjutor with right of succession to the Archbishop of Milwaukee, and succeeded, 7 September, 1881. He died at La Crosse, 26 March, 1890.

Kilian Flasch, second bishop, was born at Retzstadt, Bavaria, 16 July, 1837. His parents took him to the United States when he was ten years old, and settled near Milwaukee. He made his academic studies at Notre Dame University, and his theological course at St. Francis's Seminary, where he was ordained, 16 September, 1859. With two brief intermissions he spent the subsequent years as professor and rector of this seminary until he was selected as the successor of Bishop Heiss and was consecrated Bishop of La Crosse, 24 August, 1881. During his administration of ten years he laboured zealously to increase the churches and the schools of the diocese, and died after a long illness, 3 August, 1891.

James Schwebach, his vicar-general, succeeded him as the third bishop, and was consecrated, 25 February, 1892. He was born at Platten, Luxembourg, 15 August, 1847. He made his early studies at the college of Diekirch, and in 1864 emigrated to the United States, where he completed his course at the Seminary of St. Francis, Milwaukee, and was ordained. 17 July, 1870. Soon after, appointed rector of St. Mary's Church, La Crosse, he built two schools and two churches there under Bishops Heiss and Flasch. The latter appointed him vicar-general and administrator of the diocese.

Religious communities in the diocese

Men: Jesuits, Dominicans, Fathers of the Holy Ghost, Missionary Fathers of the Sacred Heart. Women: Franciscan Sisters of the Perpetual Adoration, Sisters of the Third Order of St. Dominic, Sisters of the Sorrowful Mother, Hospital Sisters of St. Francis, School Sisters of Notre Dame, Sisters of St. Dominic, Franciscan Sisters of Charity, School Sisters of St. Francis, Sisters of the Third Order of St. Francis of Assisi, Sisters of St. Benedict, Polish Sisters of St. Joseph, Sisters of the Society of the Divine Saviour. Priests, 177 (26 religious); churches with resident priests, 126; missions with churches, 86; stations, 6; chapels, 24; college, 1, students, 225; academies for girls, 2, pupils, 292; high schools, 2; parish schools, 76, pupils: boys, 4874, girls, 5044; orphan

asylums, 2, inmates, 180; total young people under Catholic care, 10,468; hospitals, 5; Catholic population, 112,400.

Official Catholic Directory, 1869-1910; Catholic Family Almanac (New York, 1892); Benziger's Almanac (New York, 1888, 1893); REUSS, Biog. Cycl. of the Cath. Hierarchy, U.S. (Milwaukee, 1898); The Catholic Citizen (Milwaukee), files.

THOMAS F. MEEHAN

Lucius Caecilius Firmianus Lactantius

Lucius Caecilius Firmianus Lactantius

A Christian apologist of the fourth century. The name *Firmianus* has misled some authors into believing that he was an Italian from Ferno, whereas he was an African by birth and a pupil of Arnobius who taught at Sicca Veneria. An inscription found at Cirta in Numidia, which mentions a certain L. Caecilius Firminianus, has led to the conclusion in some quarters that his family belonged to that place (Harnack, "Chronologie d. altchr. Lit.", II,416. Lactantius was born a pagan and in his early life taught rhetoric in his native place. At the request of Emperor Diocletian he became an official professor of rhetoric in Nicomedia. One of his poems (Hodoeporicum) is an account of his journey from Africa to his new home. It is probable that his conversion to Christianity did not take place until after his removal to Nicomedia. It seems clear, however, that he could not retain his position as public teacher after the publication of Diocletian's first Edict against the Christians (24 February, 303). After his dismissal it was easy to find pupils in that Greek city who would patronize a teacher of Latin, and he was in consequence reduced to such poverty that he at times lacked the necessities of life (St. Jerome, "Chron.", ad. ann. abr. 2333). In those circumstances, he attempted to eke out a living by writing. The persecution impelled him to leave Nicomedia and from the outbreak of hostilities until perhaps 311 or 313 he had to find a home elsewhere. The friendship of the Emperor Constantine raised him from penury and though very old (*extrema senectute*) he was appointed tutor in Latin to the emperor's son Crispus. This new appointment compelled him to follow his charge to Trier where he spent the remainder of his life. It seems very probable that his transfer to Trier did not take place until 317, when Crispus was made Caesar and sent to the city.. Crispus was put to death in 326, but when Lactantius died and in what circumstances is not know. Like so many of the early Christian authors, Lacantius in all his works betrays his dependence on classical models and true to the requirements of his profession, he is polished rather than profound. He well merits the designation of the "Christian Cicero" bestowed on him by the humanists, for he exhibits many of the shortcomings as well as the graces of his master. Among the works of his pen extant,

the earliest is the "De Opificio Dei", written in 303 or 304 during the Diocletian persecution, and dedicated to a former pupil, a rich Christian named Demetrianus. The apologetic principles underlying all the works of Lactantius are well set forth in this treatise, which may be considered as an introduction to his great work "The Divine Institutions" (Divinarum Institutionum Libri VII), written between 303 and 311. This the most important of all the writings of Lactantius is systematic as well as apologetic and was intended to point out the futility of pagan beliefs and to establish the reasonableness and truth of Christianity. It was the first attempt at a systematic exposition of Christian theology in Latin, and though aimed at certain pamphleteers who were aiding the persecutors by literary assaults on the Church, the work was planned on a scale sufficiently broad enough to silence all opponents. The strengths and the weakness of Lactantius are nowhere better shown than in his work. The beauty of the style, the choice and aptness of the terminology, cannot hide the author's lack of grasp on Christian principles and his almost utter ignorance of Scripture. The "dualistic and panegyric" passages, which have been such a puzzle to students of Lactantius, are manifestly not from his pen, but from that of someone who lived close to his time, probably a rhetorician of Trier. The "Epitome Divinarum Institutionum", made by Lactantius himself at the request of a friend named Pentadius, is much more than a mere abbreviation, rather a more summary treatment of the subject dealt with in the older work. Another treatise, "De Ira Dei", directed against the Stoics and Epicureans, is supplementary to the "Divine Institutions" (II, xvii,5) and deals with anthropomorphism in its true sense. Knowing the bent of Lactantius's mind it is not surprising that the only historical work we have from his pen, "De Mortibus Persecutorum", should have an apologetic character. In this work, we have an account of the frightful deaths of the principal persecutors of the Christians, Nero, Dormitian, Decius, Valerian, Aurelian, and the contemporaries of Lactantius himself, Diocletian, Maximian, Galerius, and Maximus. This work, notwithstanding the manifest bias of the author, is of prime importance as a source of the last and greatest of the persecutions, though, somewhat strangely, the style is not so perfect might be expected. The full text is found in only one manuscript, which bears the title, "Lucii Caecilii liber ad Donatum Confessorem de Mortibus Persecutorum". Many attempts have been made to show that the work was not written by Lactantius; however the coincidences of name, both of author and recipient the similarities in style and train of thought between this and other works of Lactantius, are too striking to admit of such a possibility. The chronological difficulties which Brandt thought he discovered are shown by Harnack to have no weight (Chronologie, II, 423). Of the poems attributed to Lactantius only one, besides the "Hodoeporicum", is genuine, viz., the "De Ave Phaelous", an account, in eighty-five distichs, of the fabulous eastern bird which is reborn from its own ashes

every thousand years, The poem "De Resurrectione" was written by Venantius Fortunatus, and the "Passione Domini" is a medieval humanist. St. Jerome (De Vir. Ill., c. lxxx) mentions two other works, "Symposium" and "Grammaticus", which have not been preserved.

Monceaux, *Histoire Littéraire de l'Afrique Chrétienne*, II (Paris 1902); Brandt, *Sitzungsberichte der philos. Hist. Klasse der Akad. Wiss.*, CXVIII, CXIX, CXX, CXXV, (Vienna, 1889-91). The best edition of the works of Lactantius is that of Brandt and Laubmann, 2 vols. in *Corpus Script. Eccl. Lat.*, XIX, XXVII (Vienna, 1890-97)

P.J. HEALY

James Laderchi

James Laderchi

An Italian Oratorian and ecclesiastical historian, born about 1678, at Faenza near Ravenna; died 25 April, 1738, at Rome. He is chiefly known for his continuation of the "Annals" of Baronius and Raynaldus, which he brought down from the year 1566 to 1571. His work, though of some usefulness, is not sufficiently critical and is encumbered with numerous unimportant documents. It appeared in Rome (1728-1737), and extends from volume XXXV to volume XXXVII in the latest edition of Baronius (Bar-le-Duc, 1864-83). Laderchi was also the author of several other historical works, two of which involved him in heated literary controversies. His voluminous "Life of St. Peter Damian" (*Vita Sancti Petri Damiani*, Rome, 1702) was mercilessly but excessively criticized in the anonymous work entitled: "Sejani et Rufini dialogus de Laderchiana historia S. Petri Damiani" (Paris, 1705). When he published his edition of the "Acts of the martyrdom of St. Crescens and companions" (*Acta passionis SS. Cresci et sociorum martyrum*, Florence, 1707), the Servite G. Caspasi attacked their authenticity and trustworthiness in a letter to the Roman scholar Fontanini. The letter fell into the hands of Laderchi, who published it with a refutation. This elicited a vehement answer from Caspasi under the title "Nugæ Laderchianæ" (Genoa, 1709). The ecclesiastical authorities seem to have put an end to the controversy; both works were placed on the Index (22 June, 1712). These controversies probably occasioned the composition of "La Critica d'oggi" by Laderchi (Rome, 1726). He was also the author of the following works: "De Basilicis 88. Martyrum Petri et Marcellini dissertatio historica" (Rome, 1705); "Acta S. Cæciliæ et transtiberina basilica illustrata" (Rome, 1722); "Acta SS. Christi martyrum vindicata" (Rome, 1723); "Sanctorum patriarcharum et prophetarum, confessorum . . . cultus perpetuus in Ecclesia catholica assertus et illustratus" (Rome, 1730).

N.A. WEBER

St. Ladislaus

St. Ladislaus

King of Hungary, born 1040; died at Neutra, 29 July, 1095; one of Hungary's national Christian heroes. He was the son of Béla I; the nobles, after the death of Geisa I, passed over Solomon, son of Andrew I, and chose Ladislaus to be their king in 1077. It is true that he made peace with Solomon, when the latter gave up all claims to the throne of Hungary; however, later on he rebelled against Ladislaus, who took him prisoner and held in the fortress of Visegrád. On the occasion of the canonization of Stephen I, Ladislaus gave Solomon his freedom, but in 1086 Solomon, with the aid of the heathen Cumans, revolted against Ladislaus a second time; the latter, however, vanquished them, and in 1089 gained another victory over the Turkish Cumans. In 1091 Ladislaus marched into Croatia, at the request of his sister, the widowed Queen Helena, and took possession of the kingdom for the crown of Hungary, where, in 1092, he founded the Bishopric of Agram (Zágráb). In the same year (1092), he also founded the Bishopric of Grosswardein (Nagy-Várad), in Hungary, which, however, some trace back to Stephen I. Ladislaus governed the religious and civil affairs of his assembly of the Imperial States at Szabolcs, that might almost be called a synod. He tried vigorously to suppress the remaining heathen customs. He was buried in the cathedral of Grosswardein. He still lives in the sagas and poems of his people as a chivalrous king. In 1192 he was canonized by Celestine III.

MICHAEL BIHL

Renee-Theophile-Hyacinthe Laennec

René-Théophile-Hyacinthe Laennec

Born at Quimper, in Brittany, France, 17 February, 1781; died at Kerlouanec, 13 August, 1826, a French physician, discoverer of auscultation, and father of our modern knowledge of pulmonary diseases. He was the son of a lawyer of literary instincts who wrote poems which are said to recall those of his better known compatriot De Forges Maillard. His mother died when he was six, and the boy went to live with his grand-uncle the Abbé Laennec. At the age of twelve he proceeded to Nantes where his uncle, Dr. Laennec, was professing in the faculty of medicine at the university. He was wonderfully successful in his studies and obtained a number of prizes, learned English and German very thoroughly, and began his medical studies under his uncle's direction. At nineteen (1800) he went to Paris and almost within a year obtained there the first

prizes in both medicine and surgery at the medical school of the university. He became a pupil of Corvisart, Napoleon's great physician, who had re-introduced into medicine Auenbrugger's neglected method of diagnosis by percussion of the chest. Laennec followed up the idea, so readily suggested by this, of listening to the sounds produced within the chest and, after twelve years of careful study and observation, laid the foundation of the modern knowledge of diseases of the chest. He also invented the stethoscope, the original employment of the instrument being suggested by his desire to save a young woman's modesty from the shock of having him listen directly to her chest. Roger sums up what Laennec had thus accomplished when he says that Laennec's ear opened to man a new world in medical science (Roger, "Les Médecins Bretons"). Laennec published his book on the subject in 1819, with the modest motto in Greek "the most important part of an art is to be able to observe properly." Prof. Benjamin Ward Richardson declared (*Disciples of Æsculapius*) that "the true student of medicine reads Laennec's treatise on mediate auscultation and the use of the stethoscope once in two years at least as long as he is in practice. It ranks with the original work of Vesalius, Harvey, and Hippocrates." Practically nothing of importance has been added to our knowledge of auscultation since Laennec wrote this book. Besides this he made very careful studies in pathology, especially on diseases of the liver. He was the first to study hyatids exhaustively, and it is to him we owe the name cirrhosis of the liver. Alcoholic cirrhosis is often spoken of as Laennec's cirrhosis. He threw much light on sclerotic conditions generally. Unfortunately while studying tuberculosis over assiduously at a time when its contagion was scarcely suspected, he contracted the disease and died at the early age of forty-five.

Laennec was noted for his kindness and was beloved by his colleagues and his students. He showed himself especially obliging towards his English-speaking pupils. As might be expected from his Breton birth and training, he was intensely religious and was a devout Catholic all his life. A characteristic story illustrates this: On his way to Paris with his wife he was thrown from his carriage. When the vehicle was righted and they had once more been seated he said to her: "Well, we were at the third decade"; then they went on with the rosary they had been reciting just before the accident. His charity to the poor became proverbial and his principal solicitude towards the end of his life was to keep as far as possible from giving trouble to others. Dr. Austin Flint in his lecture on Laennec said: "Laennec's life affords a striking instance among others disproving the vulgar error that the pursuit of science is unfavourable to religious faith." He was one of the greatest clinical students of medicine of the nineteenth century. His principal work is "*De l'auscultation médiate*", Paris, 1819.

JAMES J. WALSH

Laetare Sunday

Laetare Sunday

The fourth, or middle, Sunday of Lent, so called from the first words of the Introit at Mass, "Laetare Jerusalem" -- "Rejoice, O Jerusalem". During the first six or seven centuries the season of Lent commenced on the Sunday following Quinquagesima, and thus comprised only thirty-six fasting days. To these were afterwards added the four days preceding the first Sunday, in order to make up the forty days' fast, and one of the earliest liturgical notices of these extra days occurs in the special Gospels assigned to them in a Toulon manuscript of 714. Strictly speaking, the Thursday before Laetare Sunday is the middle day of Lent, and it was at one time observed as such, but afterwards the special signs of joy permitted on this day, intended to encourage the faithful in their course through the season of penance, were transferred to the Sunday following. They consist of (like those of Gaudete Sunday in Advent) in the use of flowers on the altar, and of the organ at Mass and Vespers; rose-coloured vestments also allowed instead of purple, and the deacon and subdeacon wear dalmatics, instead of folded chasubles as on the other Sundays of Lent. The contrast between Laetare and the other Sundays is thus emphasized, and is emblematical of the joys of this life, restrained rejoicing mingled with a certain amount of sadness. The station at Rome was on this day made at the church of S. Croce in Gerusalemme, one of the seven chief basilicas; the Golden Rose, sent by the popes to Catholic sovereigns, used to be blessed at this time, and for this reason the day was sometimes called "Dominica de Rosa". Other names applied to it were Refreshment Sunday, or the Sunday of the Five Loaves, from a miracle recorded in the Gospel; Mid-Lent, *mi-carême*, or *mediana*; and Mothering Sunday, in allusion to the Epistle, which indicates our right to be called the sons of God as the source of all our joy, and also because formerly the faithful used to make their offerings in the cathedral or mother-church on this day. This latter name is still kept up in some remote parts of England, though the reason for it has ceased to exist.

G. CYPRIAN ALSTON

Pomponius Laetus

Pomponius Laetus

Humanist, b. in Calabria in 1425; d. at Rome in 1497. He was a bastard of the House of the Sanseverino of Naples, Princes of Salerno, but owing to his great admiration for antiquity and the Roman Republic he would not recognize them as connections. When very young he went to Rome and became a pupil of Valla. His brilliant capacities won him admiration and success. He wished to live the life of the ancients. His vineyard on the Quirinal was cultivated in accordance with the precepts of Varro and of Columella, and he was himself regarded as a second Cato. On holidays he went fishing or caught birds in his lime-twigs; sometimes he would simply spend the day in the open air, refreshing himself at a spring or by the banks of the Tiber. One of the most important and first known complete MSS. of Plautus, that of Cardinal Orsini (now Vaticanus 3870), had been brought to Rome in the year 1428 or 1429. It was suggested that the plays it contained should be performed in the palaces of the prelates. Laetus became stage director of the performances. Finally, he and a few kindred souls, Platina, the future librarian of the Vatican, Sabellicus, afterwards prefect of the Library of San Marco of Venice, founded a semi-pagan academy. Its members assumed Latin names and celebrated every year the festival of the Palilia — anniversary of the foundation of Rome. They also met to commemorate a deceased member. A prelate celebrated Mass. Laetus delivered the eulogy. Latin recitations followed and a banquet closed every meeting. At other times, the members gave Latin farces much like the *Atellanae*. But Paul II, a pope who did not favour the Humanists, occupied the Chair of Peter. Laetus was looked upon as a scorner of Christianity and conspirator. Venice delivered him into the hands of the pope. Confined in the Castle of Sant' Angelo in 1468, he with Platina and others was tortured. However, he defended himself and reminded them that he had maintained the immortality of the soul, a belief often discussed by the Humanists. On the accession of Sixtus IV (1471) Laetus was released and the academy allowed to continue its meetings. He lectured in the Roman University. He was often seen at daybreak, descending, with lantern in hand, from his home on the Esquiline, on his way to his lectures where many eager hearers awaited him. He was a very conscientious professor, especially learned in Roman antiquities but exclusively a Latinist. He had declined to study Greek for fear of spoiling his Latin style. He went so far as to read the most classical authors only and disdained the Bible and the Fathers. Until the last year of his life he had desired to be buried in an ancient sarcophagus on the Appian Way, but he died a Christian death. Alexander VI wished his

obsequies at the church of Aracoeli to be magnificent. More than forty bishops attended. He was buried at San Salvatore in Lauro.

In the last period of his life, Pomponius Laetus wrote short antiquarian treatises ("De magistratibus, sacerdotiis et legibus Romanorum"; "De romanae urbis antiquitate"; "Compendium historiae romanae ab interitu Gordiani usque ad Justinum III"). He produced an edition and commentary on the whole of Virgil, under the name of Julius Sabinus or Pomponius Sabinus (Rome, 1487-1490). He owned one of the most precious manuscripts of the poet, the "Mediceus." Besides this, he edited the first edition of Quintus Curtius (about 1470), of Varro's "De lingua latina" (Rome, 1471), of Nonius Marcellus (Rome, about 1470). A little later he published the letters of the younger Pliny (Rome, 1490). We also owe to him the preservation of a part of the work of Festus. His MSS., which were first in the library of Fulvio Orsino, and later at the Vatican, show the extent of his learning, his conscientious collation of authors, his art in reviving classical antiquity in the very land of the pagan past. He had collected in his home on the Esquiline sculptures, and inscriptions. He stands as one of the best representatives of Italian Humanism, uniting great nobility of character and a sincere and artless enthusiasm to a purity of morals rare in such surroundings.

(Berlin, 1885), p. xiv; SANDYS, A History of Classical Scholarship, II, 92.

PAUL LEJAY

Comtesse de La Fayette

Marie Madeleine Pioche de la Vergne, Comtesse de la Fayette

Author of memoirs and novels, born in Paris, 1634; died there, 1693 (al., 1696). She received a very good education and acquired, among other accomplishments, a remarkable knowledge of Latin and Italian; one of her instructors was the grammarian Menage. Her wit and literary talents soon gave her a leading position in the social life of Paris. She was, with her friend, the Marquise de Sévigné, the best representative of that set of distinguished ladies known as "Les Précieuses", whose influence was so great

on the manners and language of the young Court of Louis XIV. She numbered among her friends most of the great men of the time: Condé, Huet, La Rochefoucauld, Bossuet, La Fontaine; she was also for many year the confidante of Princess Henrietta of England, the sister-in-law of Louis XIV. Her first venture in literature was a novel published without the author's name, "La Princesse de Montpensier" (1622). "Zayde", which was published in 1670 under the voluminous novel of Mlle de Scudéry. "La Princesse de Clèves", her masterpiece, appeared in 1678. It is a picture of French social life at the time of the Fronde, although the scenes are laid in the sixteenth century. The moral beauty of the characters reminds the reader of the tragedies of Corneille. It may be considered as the first French "psychological" novel. The style is clear, simple, lively; it shows no other trace of the affectation of the "Précieuses" than a constant care to avoid any word or expression that might seem vulgar. Besides these works should be mentioned: "Memoires de la Cour de France pour les années, 1688, 1689" (Amsterdam, 1731).

PIERRE MARIQUE

Joseph-Francois Lafitau

Joseph-François Lafitau

Jesuit missionary and writer, born at Bordeaux, France, 1 January, 1681; died there, 1746. He entered the Society in 1696, and the general, Tamburini, yielding to his entreaties, sent him to Canada in 1711. Appointed to the mission of Sault Saint-Louis (Caughnawaga), he made a thorough study of Iroquois character and usages, as a preparation to his great work "Mœurs des Sauvages américains comparées aux mœurs des premiers temps", published in 1724. It was then that he discovered ginseng, a root highly prized as a panacea in China and Tartary, one ounce selling for as high as three ounces of silver. This discovery created an excitement comparable to that caused later by the finding of gold in California and Australia; but the exportation of the root, after promising immense profits to Canadian trade, rapidly decreased, owing to over-production and inferiority of quality due to hasty and artificial desiccation. Lafitau's treatise on ginseng (1718) drew public attention to this apparent source of prosperity. In 1717, Lafitau returned to France in the interests of the mission, chiefly to obtain authorization from Court to transfer the Iroquois settlement to its present site, which was preferable to the former on account of its greater fertility. He likewise pleaded for the repression of the liquor traffic. In spite of his wish to return to Canada, where his knowledge of Italian languages and customs rendered him so valuable that Father Julien Garnier wished him to have him recalled, he was retained in France, and there his later years were spent in writing several works, among which, besides those already

mentioned, figures his "Histoire des découvertes et des conquêtes des Portugais dans le Nouveau-Monde" (1733). After Charlevoix, Lafitau was the most remarkable historian and naturalist ever sent to Canada by the Society of Jesus.

LIONEL LINDSAY

Louis-Francois Richer Lafleche

Louis-François Richer Laflèche

French-Canadian bishop, b. 4 Sept., 1818, at Ste-Anne de la Perade, Province of Quebec; d. 14 July, 1898. He studied the classics and theology at Nicolet College. Having offered his services to the pioneer Bishop Provencher of Red River, he was ordained in 1844, and traveled 750 leagues by canoe to reach St. Boniface. In 1846 he left with Father Taché for the mission of La Crosse island, 300 leagues distant. Besides the Sauteux language, he mastered those of the Crees and Montagnais prevalent in the North-West, and was the first to reduce the latter to grammatical form. In 1849 Pius IX preconized him Bishop of Arath *in partibus infidelium*. Five years of illness and suffering having left an infirmity in one of his limbs which he bore to the end of his life, he begged to be released from the burden of the episcopate and have Father Taché's name substituted in the Bulls of nomination. In 1851 he directed the almost incredible defense of 60 half-breeds against 2000 Sioux near Turtle Mountain, North Dakota. After a siege of two days (13 and 14 July), the assailants spied the missionary in surplice and stole, and withdrew, convinced that the Great Spirit protected the half-breeds. In 1856 he returned to Canada, where he taught mathematics, astronomy, and philosophy at Nicolet College, of which he was appointed president in 1859. In 1866 Bishop Cook of Three Rivers chose him for coadjutor, and in 1870, while at the Vatican Council, Bishop Lafleche succeeded to the vacant see. He was no less an able administrator than an eloquent orator. Besides his weekly sermons in his cathedral, where he often treated the great social and politico-religious questions of the day, his voice was heard on many important occasions. A dauntless exponent of Catholic truth and an ardent Ultramontane, his utterances were not always acceptable to the group of politicians who inclined towards Liberalism. When, in 1885, contrary to his wish, his diocese was divided, he bowed submissively to the decree of the Holy See, and soon beheld the loss partly repaired by the creation and development of several prosperous industrial centres. Besides five volumes of pastoral letters, Bishop Laflèche published the following works: "Quelques considérations sur les rapports de la société civile avec la religion et la famille" (1866); "Conférences sur l'encyclique 'Humanum Genus'".

BENOIT, Vie de Mgr. Tachi (Montreal, 1904); MORICE, Dictionnaire historique des Canadiens de l'Ouest (Quebec, 1908); DESAULNIERS, Genealogie des familles Richer de la Fleche et Hamelin (Montreal, 1909).

LIONEL LINDSAY

Jean de La Fontaine

Jean de La Fontaine

French poet, b. at Chateau-Thierry, 8 July, 1621; d. at Paris, 13 April, 1695. He was the eldest son of Charles de la Fontaine, a deputy-ranger, and Françoise Pidoux. After he had finished his studies at the college of his native town, he entered the Oratory (2 April, 1641) and was sent to the Seminary of Saint-Magloire. At the end of a novitiate of eighteen months, he realized that he was not fitted for the religious life and returned to the world. He studied law and was admitted to the bar a fact now proved by the title given him in several official deeds. In 1647 he married Marie Héricart, who gave him a son in 1653. Their married life proved unhappy, and they agreed to live apart (1658). From his childhood he had shown a strong fondness for poetry. When a boy he used to write verses for his own pleasure. The first work he published was an imitation of Terence's "Eunuchus" (1654). Two years later he was introduced to Fouquet, who granted him a pension with the understanding that the poet should send every month, as a receipt to the financier, some little piece of poetry—ode, madrigal, or rondeau. For six years he divided his time between Paris and Chateau-Thierry, giving six months to his official functions and six months to the pleasures of a courtier's life. In 1664 he was sworn in as gentleman-in-waiting to the Dowager Duchess of Orléans, and was installed in the Luxembourg. It was at this time that he made the acquaintance of Molière, Racine, Boileau, and Chapelle.

Three series of "Contes", the first six books of his "Fables", and "Psyché", a novel, were published from 1665 to 1671. The poet was in full possession of his genius and had acquired a great reputation. In 1672, having squandered his fortune, he sold his rangership and settled in Paris. For the remainder of his life he had to depend on the generosity of his patrons. He first lived at Madame de la Sablière's, in the Rue Saint-Honore (1672-93), where he met a most brilliant society and became the intimate friend of men like Turenne, the Prince of Conti, Condé, La Rochefoucauld, and distinguished women like Mme de Sévigné, Mme de La Fayette, Mme de Thianges. In 1674 he published a new series of "Contes", which were seized by the lieutenant of police, and, in 1678, five books of "Fables", that Mme de Sévigné pronounced "divine". He was elected to the French Academy in 1683, but his election was suspended by Louis XIV, on account of the scandal of the "Contes", and finally approved only in the fol-

lowing year, after the poet had publicly atoned for his licentious works in a "Ballade" published in the "Mercure" (January, 1684), and had promised "to be good". When Mme de la Sablière died, in January, 1693, he was sheltered by M. d'Hervart, *maître des requêtes* in the Parlement of Paris. A few months before, having been taken dangerously ill, he had begun to come back to the faith of his youth. In spite of his bad conduct, he had been indifferent rather than incredulous. The last two years of his life were most edifying. When he died those who put him into his shroud found that he was wearing a hair-cloth. He was buried in the cemetery of the Holy Innocents, in Paris. On account of his vivid and picturesque descriptions of the manners of animals, his wit, and his admirable *naïveté*, as well as the concise and firm composition of his little poems, he will forever be regarded as the greatest of French fabulists.

FAGUET, La Fontaine (Paris, 1886); LAFENESTRE, La Fontaine (Paris, 1895); SAINTE-BEUVE, Portraits littéraires (Paris, 1829); TAINÉ, La Fontaine et ses fables (Paris, 1853).

LOUIS N. DELAMARRE

Nicholas-Joseph Laforet

Nicholas-Joseph Laforêt

Belgian philosopher and theologian, born at Graide, 23 January, 1823; died at Louvain, 26 January, 1872. After the regular theological course at the seminary of Namur, he entered the University of Louvain, where he applied himself especially to the study of Oriental languages, Holy Scripture, and philosophy. In 1848, he was appointed to the chair of moral philosophy at the university, and, the same year, received the doctorate in theology. Two years later he became president of the Collège du Pape. Upon the death of Mgr de Ram, the bishops of Belgium chose Laforêt to succeed him in the rectorship of the university. One of his main undertakings was the foundation and organization of the schools of civil engineering, industry, and mines. He also established a new literary and pedagogical school, the Justus Lipsius Institute. Moreover his example and advice were a constant encouragement for both professors and students. Laforêt was a prothonotary Apostolic *ad instar participantium*, an honorary canon of the cathedral of Namur, an officer of the Order of Leopold, a commander of the Order of Christ, a member of the Royal Academy of Belgium, and of the Roman Academy of the Catholic Religion.

Besides a great number of articles, especially in the "Revue catholique", Laforêt's main works are: "Dissertatio historico-dogmatica de methodo theologiae, sive de auctoritate Ecclesiae catholicae tanquam regula fidei christianae" (Louvain, 1849); "Etudes sur la civilisation européenne considérée dans ses rapports avec le christianisme"

(Brussels, 1850); "La vie et les travaux d'Arnold Tits" (Brussels, 1853); "Principes philosophiques de la morale" (Louvain, 1852; 2nd ed., under the title "Philosophie morale", Louvain, 1855); "Les dogmes catholiques exposés, prouvés et vengés des attaques de l'hérésie et de l'incrédulité" (Brussels, 1855-59); "Pourquoi l'on ne croit pas" (Louvain, 1864; Eng. tr. "Why men do not believe", London, s. d., and new ed., New York, 1909; Germ. tr. by Vosen, "Der moderne Unglaube und seine Hauptursachen", Mainz, 1873); "Histoire de la philosophie" (Brussels, 1866-67), which includes only the history of ancient philosophy, the author dying before he completed the work "Les martyrs de Gorcum" (Louvain, 1867; Germ. tr. Münster, 1867); "Le syllabus et les plaies de la société moderne", a posthumous work, including the author's testament (Louvain, 1872).

Annuaire de l'université de Louvain, XXXVII (1873), 261, 296: DE MONGE, Monseigneur Laforêt in *Revue catholique*, XXXIII (1872), 241; ANON., *Bibliographie de l'université de Louvain* (Louvain, 1900), 25; ANON., *L'université de Louvain* (BRUSSELS, 1900), 76.

C.A. DUBRAY

Charles de La Fosse

Charles de la Fosse

Painter, b. in Paris, 15 June, 1636; d. in Paris, 13 December, 1716, and buried in the church of Saint Eustache. His father was a jeweler, his mother Marguerite Langlois, and he was the seventh of sixteen children. He was educated under Francois Chauveau, and then in the studio of Lebrun. In 1663 he was in Venice, and attracted the attention of Pierre de Bonzy. He was employed (1669) in decorating the Tuileries, and the churches of Saint Eustache and the Assumption. On 23 June, 1673, he became a member of the academy, and five months afterwards married Elizabeth Beguin, at the church of Saint Sulpice, but had no family. Lord Montagu, when ambassador to Paris in 1688, came into contact with La Fosse, and so much admired his work that he called him to England, and employed him to decorate Montagu House, on the site now occupied by the British Museum.

William III begged La Fosse to remain in England and decorate Hampton Court, but Mansart the architect recalled him to Paris, that he might carry out the decoration in the dome of the Invalides. He decorated the dome in fresco with an immense scene representing S. Louis placing his crown and sword in the hands of Christ. The ceiling of the Galerie d'Apollon in the Louvre is also by La Fosse, and he executed a good deal of work at Versailles, including the Salle de Diane and the roof of the chapel, and there are five of his panel pictures in the Louvre. He painted several works for the Trianon

which were commissioned in May, 1688. He was one of the finest colourists France ever produced, and had a fine sense of decoration and extraordinary power in composition, but his drawing was inaccurate, and to compare his work with that of Titian and Veronese is to do it far too great honor. La Fosse was intimate with Crozat, and executed some decoration for him at his country house. He exhibited at the Salon in 1699, and in 1704, and his works have been engraved by various artists, especially Audrin, Picart, Thomassin, and Simonneau.

JALS, *Dictionnaire Critique* (Paris, 1872), to which book critics are indebted for almost all the definite information respecting the painter; VILLOT, *Notice des Tableaux du Louvre* (Paris, 1878); KINGSLEY, *History of French Art* (London, 1899); also various numbers of the *Gentleman's Magazine*, with descriptions of the paintings at Montagu House.

GEORGE CHARLES WILLIAMSON

Modesto Lafuente y Zamalloa

Modesto Lafuente y Zamalloa

Spanish critic and historian, b. at Ravanal de los Caballeros, 1 May, 1806; d. at Madrid, 25 October, 1866. He received his early education in his native town, but later took courses at the Universities of Santiago, Astorga, and Valladolid, receiving at the last institution the degree of Bachelor of Theology in 1832. He was appointed to the chair of philosophy and later to that of theology at the University of Astoria, but he remained only a short time, for he decided to devote himself to journalism. He moved to Madrid where he published with success a critical and satirical newspaper under the title of "Fray Gerundio", a name which, according to Ferrer del Rio, he borrowed from the work of Father Isla. Under the pseudonyms of Fray Gerundio and Tirabeque, he wrote many *capilladas* or essays on a great variety of subjects, including the political questions of the day. His articles became so popular that it was not long before his paper was read in every corner of Spain. Lafuente's chief work, however, and the one by which he is best known, is his "Historia general de España", which he published in Madrid (1850-1869, 30 vols.). A second edition (13 vols.) was published in 1874-1875. Among his other works may be mentioned his "Teatro social del siglo XIX" (1846), dealing with the manners and customs of the day; "Viaje aerostático del Fray Gerundio y Tirabeque". The latter is divided into two parts, the first being a review of aerial navigation, and the second, a satire on the political situation in Europe. The important events of 1848 caused him to write his "Revista Europea" which he published as a periodical for about one year. His works are all written in an easy, flowing, popular style.

FERRER DEL RIO in LAFUENTE Y ZAMALLOA, *Historia general de Espana* (Madrid, 1874-75).

VENTURA FUENTES

Lagania

Lagania

A titular see in Galatia Prima. The town is mentioned by Ptolemy, V, i, 14, and in several ancient geographical documents, often with an altered name and with no historical information. It received the name of Anastasiopolis in the reign of Emperor Anastasius I (491-518), and is very probably to be identified with the actual Bey-Bazar, chief town of a *caza* of the vilayet of Angora, with 2500 Mussulman inhabitants. Lagania, or Anastasiopolis, had an episcopal see, suffragan of Ancyra, and mentioned by the "Notitiae Episcopatum" up to the twelfth and thirteenth centuries. Lequien (*Oriens Christ.*, I, 485-88) wrongly took these names as indicating two distinct sees, and his list of bishops is very incorrect. It must be revised as follows: Euphrasius, who attended the Council of Nicaea, 325; Theodosius, end of the sixth century; Timothy, his successor; St. Theodore the Syceote, d. 22 April, 613; Genesisius, present at the Councils of Constantinople, 680 and 692; Theophilus, at Nicaea, 787; Marianus, at Constantinople, 879.

RAMSAY, *Historical Geography of Asia Minor* (London, 1890), 240; PERROT, *Exploration archeologique de la Galatie* (Paris, 1872), 217 19; BAUDRILLART, *Dictionnaire d'histoire et de geographie eccles.*, s. v. Anastasiopolis.

S. PÉTRIDÈS

Pierre Lagrene

Pierre Lagrené

A missionary in New France, b. at Paris, 12 Nov. (al. 28 Oct.), 1659; d. at Quebec in 1736. He entered the Society at Paris, 10 Oct. (al. 2 Oct.), 1677, studied philosophy at La Fleche (1679-81), and after teaching some time, was ordained priest, and in 1694 was sent to the Canada mission. After a short stay at Lorette, spent in the study of the Huron language, he was stationed (1697-1701) at Sault St. Louis with the Iroquois, then returned to Lorette for a year. In 1704 he was back at Sault St. Louis, where he remained until transferred to Montreal in 1707, of which residence he was named superior in 1716. This position he still occupied in 1720. During the last eleven years of his stay in Montreal, besides his spiritual ministrations to the transient bands of Indians

and the ordinary ministry of the Church, he was director of the Montreal *Congrégation des Hommes*, then in its infancy. This sodality, affiliated to the Roman, 3 May, 1693, by the General of the Society of Jesus, under the title of the Assumption of Our Lady, passed into the hands of the priests of St-Sulpice, when the last Jesuit at Montreal, Father Bernard Well, died in 1791. To Father Lagrené it owes in great part its admirable organization, which has enabled it to resist to the present the test of time. On 10 August, 1710, Lagrené had the satisfaction of seeing the completion of the sodality chapel, commenced 24 May, 1709, and in taking part in the ceremony of its blessing with the then local superior, Father François-Vaillant de Gueslis. It was Joseph-Séré de La Colombière, brother of the distinguished Jesuit, Claude, who, as vicar-general of the Bishop of Quebec, presided and blessed the chapel. In 1723 Father Lagrené was transferred to Quebec College, there to be prefect of schools. He filled this position until 1735, but other responsibilities were added. Minister in 1724-25, he became director of the sodality in 1730. In 1735 his increasing infirmities incapacitated him for further work. He died at the College of Quebec the following year.

Docs. in St. Mary's College Archives, Montreal; Extracts from the MSS. Catalogues of the Society; DE ROCHEMONTEIX, *Les Jesuites et La Nouvelle France*, III (Paris, 1895), 384.

ARTHUR EDWARD JONES

Jean-Francois La Harpe

Jean-François La Harpe

A French critic and poet, b. at Paris, 20 November, 1739; d. February, 1803. He was ten years old when his father, a Swiss nobleman in the service of France, died. He was cared for by Sisters of Charity and then sent as a free scholar to the Collège d'Harcourt. He began his literary career by some satirical couplets, on account of which he was imprisoned at Fort-l'Evêque. At the age of twenty he published "Héroïdes", preceded by "Essai sur l'héroïde", and followed by a second volume, "Héroïdes et Poésies fugitives" (Paris, 1762). In the following year, his tragedy "Warwick" met with a tremendous success. He then became intimately acquainted with Voltaire, whose "son" he professed to be, and whom he imitated so closely that he was nicknamed "the monkey of Voltaire". A few other tragedies—"Timoléon" (1764), "Pharamond" (1765), and "Gustave Wasa" (1766)—were a complete failure. In 1768 he entered the "Mercure" then a famous magazine, and contributed some remarkable articles. His drama, "Mélanie ou la religieuse" (1770), a violent attack upon the religious vows, the representation of which was forbidden by the censors, was enthusiastically received by the public and widely read, although it is the most tedious book that has ever been written.

Three years in succession he won the prize in the competition instituted by the French Academy, with his "Eloge de Henri IV" (1770), "Eloge de Fénelon" (1771), and "Eloge de Racine" (1772) respectively. In 1776 he was elected to the Academy. He then once more attempted to work for the stage and force the admiration of the public, but failed anew. His tragedies, "Menzicoff" (1776), "Les Barmécides" (1778), "Jeanne de Naples" (1781), "Les Brame" (1783), "Coriolan" (1784), and "Virginie" (1786), were received worse than coolly. "Philoctète" alone (1783) won some applause. In 1787 he was made professor of literature in the Lycée, a school recently established in Paris by Pilâtre du Rozier. The lectures he gave in that institution were published in eighteen volumes (Paris, 1799-1805) under the title of "Lycée, ou Cours de littérature". This work, although containing excellent chapters, is now antiquated. When the French Revolution broke out, he welcomed it with enthusiasm until he was sent to prison (1794). Once set free, he renounced his former ideas and became a zealous Catholic. His last works bear the stamp of his new-found faith. Among them may be mentioned: "De la guerre déclarée par nos derniers tyrans à la Raison, à la Morale, aux Lettres et aux Arts" (Paris, 1796); an epic in six books, "Le Triomphe de la Religion, ou le Roi Martyr", published after his death; "La prophétie de Cazotte", which was regarded by Sainte-Beuve as a masterpiece.

LOUIS N. DELAMARRE

Jean de La Haye

Jean de La Haye

Franciscan Biblical scholar, b. at Paris, 20 March, 1593; d. there 15 Oct., 1661. He passed his boyhood in Spain and received the Franciscan habit in the province of St. Gabriel, of the Alcantarine Reform. He taught philosophy and theology, and distinguished himself as pulpit orator. Being called to France in 1620, he was assigned important offices both in the order and at the Court of Louis XIII. De la Haye is the author or editor of some forty folio volumes, besides several unpublished manuscripts. He edited the works of St. Bernardine of Siena, and the writings of St. Francis and St. Anthony of Padua, but his project of bringing out all important works by Franciscan authors in a "Bibliotheca Ordinis Minorum" was not realized. Designed principally for the use of preachers are his commentaries "In Genesim, sive Arbor vitae concionatorum", 4 vols.; "In Exodum, vel Concionatorum virga, percutiens peccatores", 3 vols.; "In Apocalypsim", 3 vols. We have from de La Haye's pen two works of monumental

importance, namely, the "Biblia Magna", 5 vols. (Paris, 1643) and the "Biblia Maxima", 19 vols. (Paris 1660). The text of the Vulgate forms the basis of the two. In the former the author quotes verbatim, after every chapter, the commentaries of Gagnaeus, Estius, Sa, Menochius, and Tirinus, S.J.; whereas in the latter he appends to each extract (1) the various readings of the versions, (2) a paragraph in which the harmony of these readings and the literal meaning of the text are briefly discussed, and (3) annotations drawn from the commentators above cited, but headed, in this case, by Nicolaus Lyranus, O.F.M. The methods followed by the author have been pronounced excellent, and the wonderful assiduity and toil to which the twenty-four volumes bear witness have been the object of undivided praise; yet it has been rightly observed that the prolegomena and his own interpretations of the text are lacking in judgment and solidity. Withal, the "Biblia Maxima", and even more so the "Biblia Magna", will continue to be of invaluable service to the student of exegesis.

WADDING, *Scriptores* (Rome, 1908), s. v.; SBARALEA, *Supplementum* (Rome, 1806), s. v.; JUNGSMANN in *Kirchenlex.*, s.v. Lahaye; JEILER, *ibid.*, s.v. Haye; APOLINAIRE in *VIG.*, *Dict. de la Bible*, s.v.; HURTER, *Nomenclator*.

THOMAS PLASSMANN

Philippe de La Hire

Philippe de la Hire

Mathematician, astronomer, physicist, naturalist, and painter, b. in Paris, 18 March, 1640; d. in Paris, 21 April, 1718; was, as Fontenelle said, an academy in himself. His father, Laurent de La Hire, (1606-1656), was a distinguished artist. Philippe first studied painting in Rome, where he had gone for his health in 1660, but on his return to Paris, soon devoted himself to the classics and to science. He showed particular aptitude for mathematics, in which subject he was successively the pupil and associate in original investigation of Desargues. In 1678, he was made a member of the Academy of Sciences, section of astronomy. Beginning in 1679, in connexion with the construction of a map for the Government, he made extended observations in Brittany, Guienne, Calais, Dunkirk, and Provence. In 1683, he continued the principal meridian north from Paris, Cassini at the same time continuing it south, and, in 1684, he investigated the flow and fall of the River Eure in connexion with the water-supply of Versailles. His attainments won for him professorships both at the Collège de France, in 1682, and at the Academy of Architecture. Two of his sons rose to distinction, Gabriel-Philippe (1677-1719), in mathematics, and Jean-Nicolas (1685-1727) in botany. Industry, unselfishness, and piety were noteworthy traits of his character.

The chief contributions of La Hire were in the department of pure geometry. Although familiar with the analytic method of Descartes, which he followed in treatises published in 1679, his most important works were developed in the method of the ancients. He continued the work of Desargues and of Pascal and introduced into geometry, chiefly by a new method of generating conics in a plane, several conceptions related to those of recent times. In his exhaustive work on conics, published in 1685, he not only simplified and improved the demonstrations of many well-known theorems, but he also established several new ones, particularly some concerning the theory of poles and polars, a subject not fully developed until the nineteenth century. In this work appears for the first time the term "harmonic". Of the writings of La Hire which were, for the most part, published in the "Mémoires" of the Academy of Sciences, and which treat of mathematics, astronomy, meteorology, and physics, the following are the most important: "Nouvelle Méthode en Géométrie pour les sections des superficies coniques et cylindriques" (1673); "Nouveaux Eléments des Sections Coniques: Les Lieux Géométriques: Les Constructions ou Effections des Equations" (in one vol., Paris, 1679); "Traité de Gnomonique" (1682); "Sectiones conicæ in novem libros distributæ" (Paris, 1685); "Tables du soleil et de la lune" (1687); "Ecole des arpenteurs" (1689); "Mémoire sur les conchoïdes" (1708); "Traité de mécanique" (Paris, 1729).

CHASLES, *Aperçu historique sur l'origine et le développement des Méthodes en Géométrie* (3rd ed., Paris, 1889); LEHMANN, *De La Hire und seines Sectiones Conicæ*, in supplement to *Jahresbericht des königlichen Gymnasium zu Leipzig* (Leipzig, 1888, 1890).

PAUL H. LINEHAN

Lahore

Lahore

(LAHLORENSIS).

Diocese in northern India, part of the ecclesiastical Province of Agra. Its boundaries comprise the civil Province of the Punjab, except two small portions assigned to Kashmer and Agra respectively. It also includes the native state of Bahawalpur. Down to the sixteenth century Christianity seems never to have come in touch with the Punjab. During the reign of Akbar, and in answer to his invitation, a mission of Jesuits from Goa visited the Mogul court, spending part of their time at Fatehpur-Sikri and part at Lahore (1579-81). Akbar's successor, Jahangir, allowed some Portuguese Jesuits to build a church and establish a mission at Lahore, and assigned a salary for their maintenance. This favor was, however, canceled by the next Mogul emperor, Shah Jahan, who, being a strict Moslem, withdrew the pension and ordered the church to

be pulled down. Some fragments of it still remained when Lahore was visited by the French traveler Thévenot in 1665; but these have since been totally effaced, and from that time all traces of Christianity disappeared from the place. About 1637 the Holy See established the Vicariate of the Deccan, which soon afterwards (1669) became the Vicariate of the Great Mogul, with an indefinite extension over the whole of the Mogul empire. But missionary enterprise was limited to the southern parts such as Surat, Golconda, Bijapur, etc., nothing being done for the Punjab. From 1720 this vicariate came to be centered in Bombay, and so acquired that name. In 1784 the northern portion, including the Punjab, was divided off and attached to the mission of Tibet, which had been assigned to Italian Capuchins in 1703. The Prefecture Apostolic of Tibet developed into the Vicariate of Agra in 1822. It continued to include Lahore till 1880, when the Punjab was divided from Agra and made into a separate vicariate. In 1882 the limits of the Vicariate of Lahore were more exactly defined and made to include Kashmer. In 1886, when the Indian hierarchy was established, Agra was elevated into an archbishopric with the Diocese of Lahore as one of its suffragans. In 1887 Kashmer and Kafiristan were separated into a new prefecture Apostolic. Down to 1889 the Lahore diocese was in charge of the Italian Capuchins, but in that year it was taken over by the Belgian province of the same order in whose hands it now remains. The following is a list of the bishops who have governed Lahore:

- Paul Tosi, Bishop of Rhodiopolis, Vicar Apostolic of Patna, took charge of the new vicariate on its formation in 1880 and became the first Bishop of Lahore in 1886;
- Symphorian Mouard, transferred from the Seychelles in 1888;
- Emmanuel van den Bosch, 1891, transferred to Agra in 1892;
- Godfrey Pelckmans, 1892;
- Fabian Anthony Eestermans, from 1905.

Out of a total of 16,000,000 inhabitants the Catholic population is calculated at about 5700. The diocese is served by 38 Capuchin fathers and contains 30 churches and chapels. Of educational institutions for boys there are the following: St. Anthony's High School, Lahore, for Europeans and Eurasians, with 108 pupils; Anglo-vernacular school, Dalwal, with 280 native pupils; St. Francis's primary school, Lahore, under the Tertiary Brothers of St. Francis of Assisi, with thirty orphans; elementary schools at three other places with 300 pupils. Agricultural school orphanage at Maryabad, under the same tertiaries, with thirty orphans. Educational establishments for girls: two under the Nuns of Jesus and Mary, namely, at Lahore with sixty boarders and sixty day-

scholars, and at Sialkot with sixty-seven pupils; four under the Sisters of Charity, namely, St. Mary's Convent, Multan, with about eighty-six pupils, St. Joseph's Orphanage, Lahore, with ninety native pupils, including a foundling home and high class school for native girls, Convent of the Sacred Heart, Dalhousie, with forty-six pupils; and St. Vincent's convent dispensary, school, and catechumenate at Khushpur—two under the Franciscan Nuns of the Propagation of the Faith, namely, Convent School with catechumenate at Maryabad, with seventy-five children, and a lunatic asylum for females at Lahore. Total, 5 high schools, 15 middle or primary schools, 2 industrial schools, 5 orphanages, 1 home for abandoned children, 6 free dispensaries, and 1 lunatic asylum. The missionary centres are at Lahore, Multan, Ferozpur, Amritsar, Jalandhar, Dalhousie, Sialkot, Mean-Meer, Maryabad, Adah, Sahowala, Khushpur, Francisabad, and Lyallpur. A new cathedral at Lahore, in the Romanesque style, and of notable size and magnificence, built at a total cost of about four lacs of rupees, was consecrated 19 November, 1907.

Madras Catholic Directory, 1909, and earlier issues, Directory of Archdiocese of Agra and Suffragan Dioceses (1908); GOLDIE, *The First Mission to the Great Mogul* (London, 1897, ch. vii-viii; HOSTEN, *Jesuit Missionaries in North India* (Calcutta, 1907).

ERNEST R. HULL

Diocese of Laibach

Diocese of Laibach

(LABACENSIS).

Austrian bishopric and suffragan of Görz, embraces the territory of the Austrian crown-land of Carniola (Krain).

HISTORY

The Diocese of Laibach was founded in the fifteenth century. From the overthrow of the Kingdom of the Avars (811) to the date of the erection of the new see, the region now included in the diocese always belonged ecclesiastically to the Patriarchate of Aquileia, of which is formed one of the five archdiaconates. The German emperors repeatedly invested the patriarchs of Aquileia with the title and authority of Margrave of Krain (as in 1077, 1093, 1210), but the patriarchs were never able to maintain themselves in this position for any length of time. Rudolf of Habsburg secured the territory for the House of Habsburg, and as in the later Middle Ages the secular power of the patriarchs of Aquileia had been almost entirely acquired by the Republic of Venice, Frederick III decided in 1461 to found a separate diocese in order to detach

the province ecclesiastically also from Aquileia. The erection of the Diocese of Laibach was confirmed in 1462 by Pius II, who made it directly dependent on the Holy See. The first bishop was Sigismund von Lamberg (1463-88). The new diocese did not include the whole of Carniola, large portions of which were subject to the bishops of Brixen and Freising, while on the other hand parts of Carinthia and Styria, where the episcopal resident of Oberberg was situated, belonged to Laibach. The work of the bishops was greatly hampered by this irregular distribution of their territory. The teachings of Luther gained a footing in the diocese under the second bishop, Christoph Rauber (1495-1536), and still more under his successor, Franciscus Kazianer von Katzenstein (1534-44). The new doctrines found warm supporters in two cathedral canons, Primus Truber and Paul Wiener, so that by the middle of the sixteenth century the greater part of the nobility and almost a majority of the middle class professed Protestantism.

Bishop Johann Tautscher (1580-97), who lived most of the time at Graz with Archduke Karl, energetically combated the further advance of the new doctrine, and labored incessantly for the reform of the clergy, the promotion of church services, and the reestablishment of the Catholic Faith. Still greater credit is due to his successor, Thomas Chroën (1598-1630), called the "Apostle of Krain", who in a few years brought about the triumph of the counter-Reformation in the city and diocese. His success was largely due to the aid received from the Archduke Ferdinand, who had become Emperor Ferdinand II in 1597, and from the Jesuits who had been called to Laibach. In 1616 the bishop sent a detailed report of his labors to Pope Paul V (cf. Joseph Schmidlin, "Die kirchlichen Zustände in Deutschland vor dem Dreissigjährigen Krieg", I, Freiburg, 1908. pp. 33-50; concerning Bishop Chroen see the monograph by Stepischneg, Salzburg, 1856). On the reorganization of the dioceses by Joseph II, Laibach was raised to an archdiocese (1787), the elevation being confirmed by Pius VI in 1788. The Archdiocese of Görz was suppressed (see GORZ), and Laibach received as suffragans the dioceses of Zengg-Modrus, Gradisca, and later also Trieste. In 1807 Pius VII dissolved the Archdiocese of Laibach, and made it once more a simple diocese directly dependent on the Holy See. On the re-elevation of Görz to an archdiocese in 1830, Laibach was made suffragan to it and given its present boundaries. The then Bishop of Laibach, Antonius Aloysius Wolf (1824-59), received as compensation the title of prince-bishop. The present bishop is Antonius Bonaventura Jeglic (b. 20 May, 1850, at Begunje; consecrated 12 September, 1897, at Serajevo).

STATISTICS

The diocese is divided into 5 archdeaneries: Laibach, Upper Krain, Interior Krain Middle Krain, and Lower Krain. These are subdivided into 22 deaneries. At the beginning of 1909 the see contained 17 cathedral prebends, 296 parishes (of which 28 were

vacant), 1 vicarship, 3 ancient chaplaincies, 17 *Exposituren* (i. e. filial churches joined to the mother church only by some unimportant link to recall their former relations), 235 positions for assistant clergy (95 vacant), 36 other benefices, 321 parish churches, 1000 dependent churches, 11 monastery churches, 229 chapels. Besides the prince bishop there are 16 canons, 444 parish priests, 76 ecclesiastics in other positions, 51 priests retired on pensions, 134 regulars. The population consists of 572,613 Catholics, about 400 Protestants, 290 Orthodox Greeks, 145 Jews. The language spoken by the great majority of the inhabitants of the diocese (about 94 per cent.) is Slovenian. German is spoken in the larger cities like Laibach and Rudolstadt, and in the German-speaking centre of Gotschee. The cathedral chapter consists of 12 regular and 6 honorary canons; they are nominated in part by the emperor, in part by noble families and the provincial council, and are partly the free appointment of the bishop. Since 1493 a collegiate chapter has also existed in connection with the parish church of St. Nikolaus at Rudolfswert; it consists of a mitred provost and 4 members. The consistory of the prince-bishop is made up of the cathedral chapter, 2 honorary canons, and 2 other members. The training of the clergy is provided for by a diocesan theological institute, founded in 1791, which has a pro-rector, 8 professors and 3 instructors; a diocesan clerical seminary with 63 students, and a seminary for boys, the *Collegium Aloysianum*, founded in 1846, which has 36 students. Ecclesiastical professors give religious instruction in the gymnasium of St Veit near Laibach (190 students), in the 3 gymnasia and the upper high school at Laibach, also in other schools.

The religious orders and congregations for men in the diocese are: Cistercians, 1 abbey at Sittich, 12 priests, 3 clerics, and 14 lay brothers; Carthusians, 1 monastery at Pletrije, 29 priests, 31 brothers, Franciscans, 5 monasteries, 49 priests, 17 clerics, 32 lay brothers; Capuchins, 2 monasteries, 8 priests, 6 brothers; Brothers of Mercy, 1 monastery, 1 priest, 18 brothers; Jesuits, 1 residence, 7 priests, 3 coadjutors; Society of St. Vincent de Paul, 1 mission house, 9 missionaries, 9 lay brothers; Priests of the Teutonic Order, 1 branch monastery, 8 priests, 2 clerics, 1 lay brother; Salesians, 2 houses, 10 priests, 24 clerics, 33 novices, 7 lay brothers. The religious orders and congregations for women in the diocese are: Ursulines, 187 in 3 houses with which are connected primary schools and 2 seminaries for female teachers; Discalced Carmelite Nuns, 1 convent with 16 sisters; Sisters of Christian Charity, 284 sisters in 17 houses, nearly all of which are connected with hospitals, orphanages, insane asylums, and similar institutions; School Sisters of the Third Order of St. Francis, 68 sisters in 4 houses; 1 orphan asylum, and 3 schools; Sisters of Mercy of the Holy Cross, 7 sisters attached to the home for girls, Josephinum, at Laibach. Among the religious associations of the diocese are: the Society of St. Hermagores which, like the Society of St. Charles Borromeo, encourages the diffusion of good literature; the Society of Sts. Cyrillus and

Methodius, which aims to promote religious and national instruction in the elementary schools; the Third Order of St. Francis; the Society of St. Vincent de Paul, and the Congregation of Mary.

The Cathedral of St. Nikolaus was built 1700-07 in Renaissance style by the Jesuit Andrea Pozzo. Hardly any large churches of the early Middle Ages still exist, on account of the repeated incursions of the Turks into Krain from 1396. The largest Gothic church of the earlier ages still standing is that of Krainburg, built in 1491, of which the church at Bischoflack, erected in 1532, is a copy. The finest churches in the Barocco style are: the Franciscan church at Laibach (1546), the church of St. Peter (eighteenth century) at the same place, and the church of St. Jakob (1714), also at Laibach.

Vereins für Krain and Archiv für Gesch. von Krain.

JOSEPH LINS

Laicization

Laicization

(Lat. *laicus*, lay).

The term *laity* signifies the aggregation of those Christians who do not form part of the clergy. Consequently the word *lay* does not strictly connote any idea of hostility towards the clergy or the Church much less towards religion. *Laicization*, therefore, considered etymologically, simply means the reducing of persons or things having an ecclesiastical character to a lay condition. But in recent times, especially in France, the word *lay* has assumed a decidedly anti-clerical and even anti-religious meaning, which has extended also to the derivatives *laicize* and *laicization*. This change seems to have originated in the struggles and controversies, at once religious and political, that have arisen in that country in connection with the educational question; teachers belonging to religious congregations (*congréganistes*) have been driven from the public schools; all religious instruction has been forbidden therein, and this new lay character (*laïcité*) of the public school has been declared to be essential and inviolable. The expression, once current, has received a formidable extension and an aggressive anti-religious meaning applied to everything relating, whether more or less remotely, to the Catholic Church and even to religion in general. So it is usual to designate as "laicized" any institution withdrawn from the influence of ecclesiastical or religious authority, or from

which the priest and his ministry have been excluded. A "lay" school, therefore, is one in which, not only is no place found for the catechism or the priest, but wherein the instruction given ignores all religion and God himself; "lay" legislation is that which is inspired by no religious idea, which looks on society as atheistic, and reduces religious worship to the purely voluntary acts of individuals; finally, the "lay" State, or Government, is one that recognizes no Church, no religion, and which excludes even the name of God from all its institutions or establishments, and from all its acts. An attempt has been made to set up a "lay" morality, i.e. a moral code independent of all revealed religion, as if Christian morality were aught else than the dictates of natural law; while some think they can establish a rationalistic morality without religion and without a Deity, without a future life, and with no real responsibility—a determinist morality which is the very negative of all morality. (See ETHICS.)

To laicize, then, is to give this lay character to whatever had not previously had it—or, at least, not entirely. It is to exclude religion from entering in any manner into the life of society as such. In this way education, the courts of justice, the army, the navy, the hospitals—in a word all activities under the control of the public authorities have been laicized in France. Laicization is the externalization and product of the rationalistic, anti-Catholic, and anti-religious movement. It is evident, therefore, that laicization thus understood, goes far beyond "equality", by which the State recognizes equal rights as possessed by various confessions or religions; it is much more than "neutrality", the attitude adopted by the state in its dealings with the divers confessions to which its citizens belong; it is something quite different from "separation", by which the concordats existing between the two powers are dissolved, and the official character of the Church, as hitherto recognized by the State, abolished. In addition to all this, the "laicization" of which we are speaking implies the negation of all religion in matters concerning temporal society; it is the ultimate outcome of absolute Rationalism applied to social life as such.

Looked at historically, laicization is the final outcome of what was formerly called "secularization", i.e., the hostile action of the secular power, which has successively despoiled the Church of the prerogatives she enjoyed in European society as moulded by the influence of Christianity for centuries. It is true that all the European nations have not moved with equal rapidity in this matter, and that they are far from having all arrived at the same point in their evolution towards complete secularization. Moreover, it must be recognized that this movement, hastened, in so far as concerns the Catholic religion, by the Reformation, has been retarded and partially eliminated in non-Catholic countries—where the civil power already possesses more or less complete influence, if not authority, over religion—whilst in Catholic countries it is in presence of an independent religious authority which it even accuses at times of

being foreign. But if we abstract from local differences, the main lines of this secularizing movement, as yet incomplete, are clearly all the nations of the Christian world. It is advancing towards two not disconnected results: first, it is marking off more and more distinctly the spheres of action of the two powers, "the spiritual and the temporal", as the Gallicans formerly said; secondly, the secular power, while it frees itself from the influence of the spiritual power, confines the latter to a purely religious domain, depriving it gradually of the privileges it enjoyed in the Christian societies of the Middle Ages.

It is not the object of this article to give the history of secularization, which rather belongs to the history of each country where it has been attempted or effected. This is only a cursory review, pointing out in their chronological order the various stages and the divers aspects of the movement. If at first we consider the privileged situation of the Church in the Roman empire, and the intimate union of the two powers occasionally confused, we must admit that the Church, though greatly favored, was in real danger of secularization, owing to the excessive power which the imperial authority arrogated to itself in religious affairs. The Church received from the emperors, not only considerable endowments, but numerous privileges: she acquired an official position such as had been held by the ancient pagan religion. The Theodosian Code and, still more, that of Justinian are impregnated with Christianity: the bishops are official personages and the emperor executes ecclesiastical decisions. Yet it is clear that he controls the Church. He is no longer the *pontifex maximus*, but he assumes the title "Bishop of the Exterior", convokes councils, makes and unmakes bishops, and legislates in ecclesiastical and even spiritual matters. Under these circumstances, the only peril for the Church lay in too close a dependence on the civil authorities—a misfortune that happened to the Byzantine Church after the schism. On a few occasions she did suffer some violence—e.g. certain attacks on the popes, and the laicization of the monasteries by Constantine Copronymus (767).

The situation of the Church in the Western kingdoms that rose on the ruins of the empire was different. The two authorities are still closely united, but the power of the king is less, while the Church is the civilizing element, and represents the tradition of government. As a natural result, her influence preponderates; she receives considerable gifts from kings and from the faithful; her privileges and exemptions are constantly extended. Thus, when the feudal order came into being, many ecclesiastical dignitaries were in possession of extensive rights, and some were veritable temporal lords. However, the kings always had influence, and even real power, over the Churches in their realms: they took part in the selection of bishops when they did not elect them; they called the bishops together in councils or mixed assemblies; they authorized and confirmed disciplinary canons, which they afterwards published as state or capitular

laws; but they did not interfere with the purely spiritual power. In such a state of affairs the Church had not to fear any hostile civil legislation; yet she had to submit to a certain amount of usurpation on the part of the royal power, particularly in connection with episcopal elections and church property. The institution of the *precaria*, by which princes bestowed on their lay servants, especially their fellow-warriors, the revenues of churches and monasteries, was really a secularization of the goods of the Church. The abuse had existed in the sixth century, but it developed to an alarming extent under Charles Martel (716-41), who adopted the system to reward his soldiers (see CHARLES MARTEL; FRANKS). The *precaria* officially left the Church her property, but the *dominium utile*, or benefit, of it was transferred at the request, or prayer, of the king (*preces*, hence *precaria*), which was equivalent to a command, to the layman whom he wished to recompense. The *dominium utile* thus acquired was apt to pass to the heirs of the person who acquired it.

Under Pepin and Carloman, sons of Charles Martel, the Frankish councils, especially that of Lestines (also called Liftines and Leptines), in 743, corrected the abuse to a certain extent (Hefele, "Hist. des conciles", III, 342 sq.). Canon ii, owing to the circumstances of the times, does not abolish the *precaria*, but it reserves to the Church a tax of a silver penny per hearth (*casata*); on the death of the beneficiary the property returns to the Church, though the prince may bestow it again. In this way the Church's right of property was safeguarded against indefinite transmission, and at the same time she enjoyed some portion of the revenues accruing from her property. Although less common, the practice continued for a long time, gradually changing into the system of "commendations". The latter, though differing juridically from the *precaria*, had the same effect so far as the property of the Church is concerned: the revenues, diverted from their proper purpose, were received by laymen named by the king. This abuse spread extensively in the ninth century, especially under Emperor Lothair, and we find reforming councils of the Frankish Empire, particularly that of Meaux (845), striving to end it. In the tenth century, when the papacy had grown weak and was unable to counterbalance the civil power, the dignities and property of the Church were invaded by the creatures of kings and emperors: the Othos and their successors made the popes and, at times, the antipopes; they invested the dignitaries with crosier and ring, symbols of ecclesiastical jurisdiction. Such secularization would soon have proved fatal to the necessary independence of the spiritual power. The liberation of the Church from secular control was accomplished by Gregory VII. After long years of struggle, the separation of the two powers grew more marked; the dispute about investitures was ended by the Concordat of Worms (1122); lay influence was eliminated from the elections of popes and bishops, from ecclesiastical trials, synods and, to a large extent, from the administration of church property; and under the great popes who succeeded

Gregory VII it seemed for a while as if the ideal of the Christian world was realized, the Catholic nations forming one family under the high suzerainty of the pope, the representative of God upon earth, among nations and individuals.

This was the apogee: the movement towards secularization began forthwith. In the twelfth century, under the influence of Irnerius, the school of Bologna witnessed a revival of the Roman Law; the laws of the Caesars became the basis of the claims of the secular power; and, while the canonists, finally systematizing the ecclesiastical laws, were establishing the thesis of pontifical power, indirect or even direct, over empires and kingdoms (the Bull "Unam sanctam"), the imperial and royal jurisconsults were building up the opposite thesis, and claiming for secular princes entire independence in temporal matters, authority in ecclesiastical matters not strictly spiritual, and eventually a Divine origin for their power. In the opinion of these jurisconsults ecclesiastical privileges and immunities were graceful concessions of the civil authorities, who could, consequently, withdraw them. From that time laicization had begun, thenceforward carried into effect, not by expedients or by violence, but on principle; it was a battle of systems, in which the secular power, becoming more and more centralized and conscious of its strength, was destined always to prevail.

The struggle which, as before, centres around the temporal goods of the Church, begins with Philippe le Bel (1285-1314) and Boniface VIII. The king imposed taxes on church property; after having resisted as a matter of principle, the pope authorized their imposition, provided it was done with his consent. In this way the canonical immunity of ecclesiastical property was violated. Later it was the jurisdiction of the Church in mixed matters which yielded little by little to that of the royal courts: these adjudicated, not only in questions arising out of marriage—e.g. inheritances, legitimacy of children, adultery but also in most cases relating immediately to matrimony or benefices, whether presenting questions of fact or involving bare right of possession; further, the system of appealing against so-called abuse of ecclesiastical power (*appel comme d'abus*) permitted almost all ecclesiastical acts to be brought, if the State so chose, under the cognizance of the royal judges. Papal Bulls and decrees of councils were recognized only after examination and in virtue of royal authorization; moreover, they had to be ratified in order to obtain the force of laws. In regard to benefices, the pontifical laws were openly resisted; the royal prerogative of nomination to vacant benefices was exercised, and the Pragmatic Sanction of Bourges, under Charles VII (1438), applying in France the quasi-schismatical principles of Basle, refused to acknowledge the papal right of reservation and forbade direct appeals to Rome. If the principle of spiritual jurisdiction was safeguarded by the Concordat of 1516 between Leo X and Francis I, this agreement, nevertheless, abandoned to the civil power all control of the temporal possessions of the Church. The clergy of France came to depend

more on the king than on the pope: Louis XIII forbade the holding of ecclesiastical assemblies and councils without royal permission; Louis XIV put into practice the most advanced principles of Gallicanism, and regulated the affairs of the Church almost as if he were a Justinian; his parliamentary courts, his *grand conseil* adjudicated in all ecclesiastical affairs, except questions of dogma and purely spiritual matters. In a word, while the Church was treated with favor and enjoyed numerous privileges, it was only by reason of her yielding to the State all authority in temporal or mixed affairs.

Other Catholic countries followed in the same path. The extreme limits of this encroachment of Secular power was reached by the minute ecclesiastical regulations of Joseph II of Austria. In other countries the Reformation greatly advanced the policy of secularization. The privileged situation of the Church in the matter of temporal property had been weakened by the errors of John Hus and Wyclif, and the troubles resulting therefrom. Soon the leaders of the Reformation placed themselves under the protection of the princes and gave them with the property of the Church, an almost absolute authority over the new religious bodies. In many German principalities, in England, and in the countries of Northern Europe, the Church disappeared, her goods were confiscated, pillaged, or else transferred to the new religious organizations. It suffices to recall the secularizations of the Teutonic Knights and their property and then, in England, the confiscation of the monasteries and churches under Henry VIII and his successors. Ecclesiastical jurisdiction was also secularized and taken over by the kings and the civil courts, or at most left in some small degree with the clergy, who were entirely dependent on the civil power. A little more, and the two powers would have blended into one.

To return to the Catholic Church, the most complete secularization was that effected by the French Revolution; if the movement seemed at first to be to the advantage of the "constitutional church", a creation of the civil power, and afterwards to that of a vaguely Deistic form of worship, it was to the profit of the sovereign State, freed from all religion, rationalistic if not atheistic. The facts are well known: church property was confiscated and sold; the clergy divided into "jurors", or "constitutionalists", and "non-jurors"—an absolute proscription of the Catholic religion. The functions confided for ages to the Church were again assumed by the State: schools, hospitals, registration of births, marriages, and deaths, marriage itself, and even worship—all was secularized. And when, after the storm, the Concordat of 1801 restored the Church to her official position, everything or almost everything remained secularized. The property that had been confiscated and sold was not returned to her; the places of worship left at her disposal still remained the property of the civil authorities; public teaching had become a function of the State, whose permission she had to obtain for her few schools; civil life and marriage were regulated independently of her, while awaiting the re-establish-

ment of divorce; her tribunals were no longer acknowledged; the members of her hierarchy were officially recognized, but only as functionaries in strict accordance with the *articles organiques*—in spirit at least, a survival of the old regime; her former immunities were restricted and finally abolished.

Like the other developments of the Revolution, the policy of secularization was imitated by the different States in varying degrees. The ecclesiastical principalities of the German Empire which had survived the Reformation were secularized at the beginning of the nineteenth century, and the movement culminated in the suppression of the Papal States, swallowed up in the new Kingdom of Italy. Ecclesiastical property, especially that of the monasteries, already encroached upon by partial secularization in the eighteenth century, was confiscated in Spain (1820, 1835, and 1837), in Portugal (1833), in Mexico (1856), and, for the most part, in Italy (1866). Almost everywhere the ecclesiastical immunities (see IMMUNITY) disappeared, legislation became purely secular, civil marriage was established, and the Church, except in the case of Divine worship, excluded from public service, or participating in it only by the favor of the sovereign State.

In this brief exposé it has not been intended to generalize to any great extent. The situation is not the same in all countries; it is only in France that official secularization and laicization have been carried to the extreme limits. On the other hand, we are far from overlooking those deeply rooted general causes of the transformation of modern society which have rendered inevitable a certain amount of secularization. There is no longer unity of faith: various confessions have multiplied and mingled in the same country; temporal interests have assumed a preponderating importance in the life of each state; ideas of religious toleration and liberty have spread and are accepted everywhere. In a word, the ideal harmony between the two powers is no longer capable of realization. Moreover, this marked separation of the two authorities is not without certain advantages for the Church. But while all this must be recognized, it remains true that laicization pushed to extreme limits is contrary to Catholic teaching, and therefore must be condemned; moreover, it is injurious to the real interests of temporal society. To understand the position of the Church in this matter, we must first make allowance for her just protests against violation of her acquired rights. Theoretically, the Church can and does submit to secularization that does not affect her rights as a spiritual society or interfere with the exercise of these rights in concrete social conditions, the demands made upon her naturally varying according to time and place. However, she must condemn any measures that affect her essential rights and the freedom necessary for the exercise of her sacred ministry. No principle can justify in a society composed of Christians the exclusion of every Christian idea, nor in any human society the exclusion of all religion and of the Deity. The Catholic doctrine on

the juridical relations of the Church and the State is explained elsewhere (see Pius IX, "Syllabus", props. 39 sq., 77 sq.). But the most superficial attention to the influence of religion, especially of the Catholic religion, on the moral life suffices to show the absurdity and danger of laicization, even when this is not identical with legalized persecution of the religious idea.

(See also STATE. For the present progress of laicization in France, see FRANCE, VI, 179 sq. For the facts relating to the history of the different countries, see ENGLAND; FRANCE, GERMANY, etc. Also INVESTITURES, CONFLICT OF, GALLICANISM; LOUIS XIV, etc.)

The principal facts may be found in SAGMULLER, *Kirchenrecht* (Freiburg, 1909), 14, 173 sq., containing a full bibliography. On the question of ecclesiastical rights, see CAVAGNIS, *Institutiones juris publici ecclesiastici*, I (Rome, 1906), WEBER in *Kirchenlexikon*, s.v. *Sacularisation der Kirchenguter* (for Germany).

A. BOUDINHON

James Lainez

James Lainez

(LAYNEZ).

Second general of the Society of Jesus, theologian, b. in 1512, at Almazan, Castille, in 1512; d. at Rome, 19 January, 1565. His family, although Christian for many generations, had descended from Jewish stock, as has been established by Sacchini (*Historia Societatis Jesu*, II, sec. 32). Lainez graduated in arts at the University of Alcalá (1531), and won his licentiate in philosophy there at the age of twenty (1532). At Alcalá, the young Castilian and his friend Salmerón had heard of Ignatius Loyola. To meet him, they betook them to the great University of Paris (1533) and there fell under the spell of his masterful will. Lainez was the second to Join Loyola and was one of the seven who on 15 August, 1534, made the vows of religion in the chapel of St. Denis, on Montmartre. Three years were now spent by Lainez, in works of charity and zeal, for the most part in Northern Italy. In 1537, Ignatius sent his companions to present themselves to the Holy Father. Paul III discussed doctrinal questions with them. He was struck by their bearing and learning, granted them permission to be ordained priests and to go to the Holy Land. This pilgrimage was prevented by political troubles. Lainez was charged by the pope to teach theology in the Sapienza. His teaching and preaching were productive of immense good in those unsettled days. Rome, Venice, and Vicenza were saved from heresy by his labors. Paul III became an enthusiastic admirer of the new society. He chose three Jesuits, Lainez, Salmerón, and Lefèvre as sole papal theologians to the Council of Trent. The latter died in Rome before the

council began its sessions. Lainez and Salmerón were joined by two other Jesuits at Trent, Le Jaye who represented the Bishop of Augsburg, and Covillon the theologian to the Duke of Bavaria.

At Trent, Lainez came into prominence just as soon as the question of justification was reached. Luther and his followers had gone astray chiefly on this very doctrine. No more important subject could have come before the council. Long discussions preceded the definition, and Lainez and Salmerón stood out most prominently. These dogmatic discussions, in the early sessions of Trent, took place without formality of precedence. The theological discussions were under the charge of Cardinal Cervini, later Pope Marcellus II; he arranged that Salmerón should be among the first speakers on each topic, so as to set down the right doctrine from the outset; Lainez should be the last to speak, so as to sum up the discussion and point out clearly the errors of preceding theologians. The two Jesuits were immensely influential against some of the Lutheran ideas wherewith unfortunately not a few of the theologians of the council were tainted. The bishops asked for copies of the vote of Lainez and Salmerón. While the two papal theologians thus bore the brunt of the battle for Catholic truth in the matter of justification, at Trent, strong influence was brought to bear on Ignatius to send Lainez to do apostolic work in Florence. Salmerón prevented such a loss to the council by telling Ignatius the power of Lainez in Trent. Shortly thereafter, Lainez did his greatest service to the council in the discussion on justification. Jerome Seripando, a most devoted and saintly man, who later presided over the sessions of Trent, tried to combine the Catholic with the Lutheran idea of justification; and defended a twofold formal justice, our own and the imputed justice of Christ (Theiner, "Acta Con. Trid.", I, 235). The answer of Lainez so pleased the Fathers of Trent that they honored it by incorporating it word for word in the Acts of the council, a unique honor. On 13 January, 1547, by unanimous vote, their clear and definite decree on justification was passed unanimously, the doctrines which Lainez had stood for being defined. Hereafter, whereas very few theologians were allowed to speak an hour, Lainez was privileged to address the assembly for three hours or more. We are not surprised to find Salmerón writing to Ignatius that to take away Lainez from Trent "were, without any exaggeration whatsoever, to take away one of its eyes from this council" (Epistolae Salmerón, 20 Jan., 1547). In April, 1547, Lainez went with the council to Bologna, where he spoke on penance and extreme unction. The opposition of Charles V preventing many bishops from reaching Bologna, the council was indefinitely prorogued. When the Fathers met a second time at Trent (1 May, 1551) Lainez (now provincial of the Jesuits in Italy) and Salmerón were there as papal theologians to Julius III. During the previous sessions, Lainez had spoken at a time when the Fathers of the council were already fagged out, and yet he held their attention and carried their votes. Now the first to

speak were the papal theologians. Lainez dwelt at great length on the Holy Eucharist and the Sacrifice of the Mass. It is said that the decrees and canons of the Fourteenth Session were at this time written by him (*Cartes de S. Ignacio*, I, 491).

After the death of St. Ignatius (1556) Lainez was elected vicar-general of the Society; about two years later he became its second general (1558). Paul IV now insisted on the triennial election of a general and the chanting of the Office in choir by the Jesuits. His wish was only verbally expressed, and that by a messenger. After his death (1559), at the advice of eminent canonists, Lainez discontinued the choir, and observed the constitutions of the order in regard to the generalate. A new difficulty now confronted him. Twelve votes were cast for Lainez in the effort to choose a successor for Paul IV, the reform party being intent upon electing him. His entreaties and sudden departure for parts unknown saved him from the possibility. To Lainez is due the adoption of the "Constitutions" of the Society, and the importance that higher education was destined to have in working out in detail the general principle of its institution. Notwithstanding the labours incident to the governing of his order, Lainez still busied himself with the battle of the Church against heresy and neglect of ecclesiastical discipline. Pius IV sent him as theologian to the famous Conference of Poissy (1561) along with Cardinal Ippolito d'Este. There he engaged the Calvinistic ministers in dispute before the Queen Regent Catherine de' Medici. In his absence, Salmerón was vicar-general at Rome. Meanwhile the third convocation of Trent was opened (18 January, 1562). Two Jesuits were present, Covillon and Canisius. Pius IV was not satisfied, nor were the party of reform, that the two protagonists of former convocations were absent; Salmerón, Lainez, and Polanco were straightway ordered by the Holy Father to go to Trent as his theologians. Salmerón was the first to arrive. He spoke three hours on communion under one species. Lainez reached Trent in August, 1562. He was the first, as papal theologian, to speak on the Sacrifice of the Mass. His proofs were well under way, when the Fathers voted to allow him the whole of the next day for his discourse, which he delivered from a platform in the body of the cathedral. The opinions of Lainez, not only in matters dogmatic but in the practice of refusing the cup to the faithful, prevailed in the twenty second session.

The matter of the next session was exceedingly delicate—the question of orders, involving as it did the origin of episcopal jurisdiction. Lainez was one of the committee appointed to draw up the decrees and canons on the Sacrament of Orders; and to him the rest of the committee consigned that task. At the very outset of the discussions, the question of the Divine right of bishops came up; the discussions were carried on vigorously for nine months. Lainez stood firm for the Divine origin of the powers of the order of bishops, the Divine right of the episcopal body to jurisdiction and the conferring of this jurisdiction upon each individual bishop directly by the pope and

not by God. On two other occasions at Trent Lainez defended the papal origin of episcopal jurisdiction. In the end the council left the mooted question out of the decrees of the Twenty-third Session. Lainez remained in the council until its adjournment (4 December, 1563). A little more than a year later (19 January, 1565), he died at Rome.

Ribadeneira (*Vida del Padre Lainez*, III, xvi), who knew Lainez, says he was small of stature and delicate; his eyes were large, clear and full of life; his mind was quick and accurate; his character noble, deep, serious, large minded, firm, and strong. The chief published works of Lainez are "*Disputationes Tridentinae*", ed. Grisar, 2 vols. (Innsbruck, 1886); for long list of other works, see Hurter, "*Nomenclator*", and Sommervogel, "*Bibliothèque de la Compagnie de Jésus*" (Paris, 1893).

ASTRAIN, *Historia de la Compania de Jesus*, I and II (Madrid, 1902, and 1905); IDEM, *Los Espanoles en el Concilio de Trento in Razon y Fe*, III, IV; DUHR, *Geschichte der Jesuiten in den Landern Deutscher Zunge*, I (Freiburg im B., 1907); TACCHI VENTURI, *Storia della Compagnia di Gesu in Italia* (ROMA, 1910). The standard lives are those of RIBADENEIRA and BOERO.

WALTER DRUM

Laity

Laity

(Gr. *laos*, "the people"; whence *laikos*, "one of the people").

Laity means the body of the faithful, outside of the ranks of the clergy. This article treats the subject under three heads: (1) General Idea; (2) Duties and Rights of the Laity; (3) Privileges and Restrictions of the Laity.

GENERAL IDEA

Whereas the word *faithful* is opposed to infidel, unbaptized, one outside the pale of Christian society, the word *laity* is opposed to clergy. The laity and clergy, or clerics, belong to the same society, but do not occupy the same rank. The laity are the members of this society who remain where they were placed by baptism, while the clergy, even if only tonsured, have been raised by ordination to a higher class, and placed in the sacred hierarchy. The Church is a perfect society, though all therein are not equal; it is composed of two kinds of members (see can. "*Duo sunt*", vii, Caus. 12, Q. i, of uncertain origin): in the first place, those who are the depositaries of sacred or spiritual authority under its triple aspect, government, teaching, and worship, i.e. the clergy, the sacred hierarchy established by Divine law (Conc. Trid., Sess. XXIII, can. vi); in the second place, those over whom this power is exercised, who are governed, taught, and sanctified, the Christian people, the laity; though for that matter clerics also, con-

sidered as individuals, are governed, taught, and sanctified. But the laity are not the depositaries of spiritual power; they are the flock confided to the care of the shepherds, the disciples who are instructed in the Word of God, the subjects who are guided by the successors of the Apostles towards the last end, which is eternal life. Such is the constitution which Our Saviour has given to His Church.

This is not the place for a detailed demonstration of this assertion, the proof of which may be reduced to the following points more fully developed under CHURCH: on the one hand, a distinction between the governed and those governing is necessary in every organized society; now Jesus Christ established His Church as a real society, endowed with all the authority requisite for the attaining of its object. On the other hand, in the Church, government has always been in the hands of those who were entrusted exclusively with the teaching of doctrine and the care of Divine worship. If one studies without prejudice the New Testament and the beginnings of Christianity, some doubt may arise on certain matters of detail; but the conclusion will certainly be that every Christian community had its superiors, these superiors had a stable spiritual authority, and this authority had as its end the exclusive care of religious functions (including teaching) as well as the government of the community. There have been differences of opinion concerning the origin of the monarchical episcopacy, which soon became the sole form of ecclesiastical organization; but no one holds that the monarchical episcopacy succeeded a period of anarchy or of government by a community where all had equal authority. The organization of all Christian Churches under the authority of the bishops and clergy, as early as the third century, is so evident as to place beyond all doubt the existence at that time of two distinct classes, the clergy and the laity. Moreover, in all societies among which Christianity had spread, religious service had already its special ministers, and the Christian organization would have retrograded if its worship and its sacrifice had not been entrusted exclusively to a special class.

Christ selected the Apostles from among His disciples, and among the Apostles He selected Peter to be their head. He entrusted them with the furtherance of His work; to them he confided the power of the keys, i.e. spiritual authority, for they are the keys of the Kingdom of Heaven (Matt., xvi, 19); He gave them the mission to teach and baptize all nations (Matt., xxviii, 18); to them also He addressed those words at the Last Supper: "Do this in commemoration of me" (Luke, xxii, 19). As soon as the Church begins to live, the Apostles appear as its leaders; they are distinct from the "multitude of believers"; it is into their ranks that they bring Matthias (Acts, I, 15), and later, by the command of the Holy Ghost, Saul and Barnabas, whom they receive with the imposition of hands (Acts, xiii, 2). Wherever St. Paul founds Churches he gives them leaders "placed by the Holy Spirit to govern the Church of God" (Acts, xx, 28); the

Pastoral Epistles reveal to us a directing body composed of the bishops, or priests, and deacons (I Clement., xliii, 4); and they it is, especially the bishops, who perform exclusively the liturgical services (Ep. Ignat., "ad. Smyrn.", 8). If at times the Christian people participate in the Divine service or the government, they never appear acting independently nor even on an equal footing with the heads of the community (cf. Batiffol, "L'Eglise naissante et le catholicisme", Paris, 1909). This distinction between the two classes in the Christian society refers to social rank, not to individual moral perfection. It is true that the clergy, being dedicated to the service of the altar, are thereby bound to strive after perfection; yet neither their virtues nor their failing influence in any way their powers. On the other hand, the laity, besides their right to aspire freely to admission into the ranks of the clergy, on complying with the requisite conditions, are exhorted to practise every virtue, even in the highest degree. They can also bind themselves to observe the evangelical counsels, under the guidance of the Church, either in the world, as did the ancient ascetics, or by withdrawing from the world into one of the many religious houses. But ascetics, nuns, and unordained members of religious associations of men were not originally in the ranks of the clergy, and, strictly speaking, are not so even to-day, though, on account of their closer and more special dependence on ecclesiastical authority, they have long been included under the title clergy in its wider sense (see RELIGIOUS). The juridical condition of the laity in the Christian society is therefore determined by two considerations: their separation from the clergy, which excludes them from the performance of acts reserved to the latter; and second, their subjection to the spiritual authority of the clergy, which imposes certain obligations on them, while at the same time it confers on them certain rights.

DUTIES AND RIGHTS OF THE LAITY

Having come through Baptism to the supernatural life, being members of the Christian society and adopted children of God, the laity belong to the "chosen race", the "royal priesthood" (I Peter, ii, 9) formed of all those who are born again in Christ. They have therefore a right to share in the common spiritual goods of the Christian society, which implies a corresponding obligation on the part of the clergy to bestow on them these goods, in as far as this bestowal requires the intervention of the ministers of religion and of the spiritual authority. But if the laity are to share in these common goods they must employ more or less frequently the means of sanctification instituted by Jesus Christ in His Church, and of which the clergy have been put in charge. Further, the laity, being subject to ecclesiastical authority, must obey and respect it; but in return they have the right to obtain from it direction, protection, and service. Thus, for the laity rights and duties are, as always, correlative. The first duty of a Christian is to believe; the first obligation imparted to the laity is, therefore, to learn the truths of faith and of religion, at first by means of the catechism and religious instruction, and later

by being present at sermons, missions, or retreats. If they are thus obliged to learn, they have the right to be instructed and consequently to require their priests to give them and their children Christian teaching in the ordinary way. Second, a Christian's moral conduct should be in keeping with his faith; he must, therefore, preserve his spiritual life by the means which Jesus has established in His Church; The Divine service, especially the Mass, the Sacraments, and other sacred rites.

This necessity of having recourse to the pastoral ministry gives rise to a right in the laity as regards the clergy, the right of obtaining from them the administration of the sacraments, especially Penance and the Holy Eucharist, and others according to circumstances; also all the other acts of Christian worship, especially the Mass, the sacramentals and other rites, and lastly Christian burial. These are the spiritual goods destined for the sanctification of souls; if the clergy are appointed to administer them, they are not free dispensers, and they are bound to give their services to the faithful, as long, at least, as the latter have not by their own fault placed themselves in a condition that deprives them of the right to demand these services. Considered from the standpoint of the laity, this recourse to the ministry of the clergy is sometimes obligatory and sometimes optional, according to circumstances. It may be an obligation imposed by a command of the Church, or necessitated by personal reasons; in other cases, it may be a matter of counsel and left to the devotion of each one. This is a subject which exhibits most clearly the difference between a precept and a counsel with regard to our outward Christian life. Assistance at Mass on Sundays and holy days of obligation, annual confession, Easter communion, the reception of the viaticum (q.v.) and the last services of religion, the celebration of marriage in the prescribed form, the baptism and religious instruction of children, and, finally, the rites of Christian burial---all these suppose a recourse to the ministry of the clergy which is of obligation for the laity, abstracting from individual cases when there may be a legitimate excuse. On the other hand, more or less frequent confessions and communions, hearing of daily Mass, frequenting the Divine Office, asking for special ceremonies (for instance, churching) celebration of Masses, obtaining services and prayers for the dead or for other intentions, are things that are perfectly legitimate and are counselled, but are optional. We may also mention the obligatory or free acts intended for the personal sanctification of the laity, but which do not require the help of the clergy: private prayer, fasting and abstinence, avoidance of servile work on Sundays and holy days of obligation, and, lastly, in general all that relates to the moral life and the observance of the commandments of God.

From these obligatory and optional relations existing between the laity and the clergy there arise certain duties of the former towards the latter. In the first place, respect and deference should be shown to the clergy, especially in the exercise of their function,

on account of their sacred character and the Divine authority with which they are invested (Conc. Trid., Sess. XXV, c. xx). This respect should be shown in daily intercourse, and laymen inspired with a truly Christian spirit do homage to God in the person of His ministers, even when the conduct of the latter is not in keeping with the sanctity of their state. In the second place the laity are obliged, in proportion to their means and circumstances of the case, to contribute towards the expenses of Divine service and the fitting support of the clergy; this is an obligation incumbent on them in return for the right which they have to the services of their priests with regard to the Mass and other spiritual exercises. These contributions fall under two distinct classes: certain gifts and offerings of the faithful are intended in general for the Divine services and the support of the clergy; others, on the contrary, are connected with various acts of the sacred ministry which are freely asked for, such as the stipends for Masses, the dues for funeral services, marriages, etc. There is no fixed sum for the former class, the matter being left to the generosity of the faithful; in many countries they have taken the place of the fixed incomes that the various churches and the clergy were possessed of, arising especially from landed property; they have likewise replaced the tithes, no longer recognized by the secular governments. The latter class, however, are fixed by ecclesiastical authority or custom and may be demanded in justice; not that this is paying for sacred things, which would be simony, but they are offerings for the Divine service and the clergy on the occasion of certain definite acts (see OFFERINGS; TITHES).

There remains to speak of the duties and rights of the laity towards the ecclesiastical authority as such, in matters foreign to the sacred ministry. The duties, which affect both laity and clergy, consist in submission and obedience to legitimate hierarchical authority: the pope, the bishops, and, in a proportionate degree, the parish priests and other acting ecclesiastics. The decisions, judgments, orders, and directions of our lawful pastors, in matters of doctrine, morals, discipline, and even administration, must be accepted and obeyed by all members of the Christian society, at least in as far as they are subject to that authority. That is a condition requisite to the well-being of any society whatsoever. However, in the case of the Christian society, authoritative decisions and directions, in as far as they are concerned with faith and morals, bind not merely to exterior acts and formal obedience; they are, moreover, a matter of conscience and demand loyal interior acceptance. On the other hand, seeing that in the Church the superiors have been established for the welfare of the subjects, so that the pope himself glories in the title "servant of the servants of God", the faithful have the right to expect the care, vigilance, and protection of their pastors; in particular they have the right to refer their disputes to the ecclesiastical authorities for decision,

to consult them in case of doubt or difficulty, and to ask for suitable guidance for their religious or moral conduct.

PRIVILEGES AND RESTRICTIONS OF THE LAITY

Since the laity is distinct from the clergy, and since Divine worship, doctrinal teaching, and ecclesiastical government are reserved, at least in essentials, to the latter, it follows that the former may not interfere in purely clerical offices; they can participate only in a secondary and accessory manner, and that in virtue of a more or less explicit authorization. Any other interference would be an unlawful and guilty usurpation, punishable at times with censures and penalties. We will apply this principle now to matters of worship, teaching, and government or administration.

(1) As to the Liturgy

As to Divine service, the liturgy and especially the essential act of the Christian worship, the Holy Sacrifice, the active ministers are the clergy alone. But the laity really join in it. Not only do they assist at the Sacrifice and receive its spiritual effects, but they offer it through the ministry of the priest. Formerly they could, and even were obliged to, bring and offer at the altar the matter of the sacrifice, i.e. the bread and wine; that is what they really do to-day by their offerings and their stipends for Masses. At several parts of the Mass, the prayers mention them as offering the sacrifice together with the clergy, especially in the passage immediately after the consecration: "Unde et memores, nos servi tui (the clergy) sed et plebs tua sancta (the laity) . . . offerimus praeclare Majestati tuae, de tuis donis ac datis", etc. The laity reply to the salutations and invitations of the celebrant, thus joining in the solemn prayer; especially do they share in the Holy Victim by Holy Communion (confined for them in the Latin Liturgy to the species of bread), which they can receive also outside of the time of Mass and at home in case of illness. Such is the participation of the laity in the Liturgy, and strictly they are limited to that; all the active portion is performed by the clergy.

Regularly, no layman may sit within the *presbyterium*, or sanctuary, nor may he read any part of the Liturgy, much less pray publicly, or serve the priest at the altar, or, above all, offer the Sacrifice. However, owing to the almost complete disappearance of the inferior clergy, there has gradually arisen the custom of appointing lay persons to perform certain minor clerical duties. In most of our churches, the choirboys, schoolboys, sacristans, and chanters, serve low Masses and *Missae cantatae*, occupy places in the sanctuary, and act as acolytes, thurifers, masters of ceremonies, and even as lectors. On such occasions they are given, at least in solemn services, a clerical costume, the cassock and surplice, as if to admit them temporarily to the ranks of the clergy and thus recognize and safeguard the principle of excluding the laity. These remarks apply not only to the celebration of Mass, but to all liturgical services: the laity are separated from the clergy. In processions especially, confraternities and other

bodies of the laity precede the clergy; the women being first, then the men, next regular clergy, and lastly the secular clergy.

In the administration of the sacraments, the sacramentals, and other like liturgical offices, the same principle applies, and ordinarily everything is reserved to the clergy. But it should be mentioned that the laity may administer baptism (q. v.) in cases of necessity, and though not of practical importance with regard to adults, this frequently occurs when children are in danger of death. In the early ages, the faithful carried away the Blessed Eucharist to their homes and gave themselves the Holy Communion (cf. Tertullian, "Ad uxorem", ii, 5). That was a purely material administration of the sacrament, and hardly differed from the communion ceremony in the church, where the consecrated host was placed in the hand of each communicant. We should mention also that the use of the blessed oil by those who were sick, if that be considered an administration of extreme unction (cf. the Decretal of Innocent I to Decentius of Eugubium, n. 8; serm. cclxv and cclxxix; append. of the works of St. Augustine, really the work of St. Caesarius of Aries). But those practices have long since disappeared. As to matrimony, if the sacrament itself, which is none other than the contract, has as its authors the lay persons contracting, the liturgical administration is reserved to-day, as formerly, to the clergy. With these exceptions, there is nothing to prevent the laity from using the liturgical prayers in their private devotions, from reciting the Divine Office, or the various Little Offices drawn up particularly for them, or from joining in associations or confraternities to practise together and according to rule certain pious exercises, the confraternities having been formed lawfully in virtue of episcopal approbation.

(2) As to Doctrine

The body of the faithful is strictly speaking the *Ecclesia docta* (the Church taught), in contrast with the *Ecclesia docens* (the teaching Church), which consists of the pope and the bishops. When there is question, therefore, of the official teaching of religious doctrine, the laity is neither competent nor authorized to speak in the name of God and the Church (cap. xii et sq., lib. V, tit. vii, "de haereticis"). Consequently they are not allowed to preach in church, or to undertake to defend the Catholic doctrine in public discussions with heretics. But in their private capacity, they may most lawfully defend and teach their religion by word and writing, while submitting themselves to the control and guidance of ecclesiastical authority. Moreover, they may be appointed to give doctrinal instruction more or less officially, or may even become the defenders of Catholic truth. Thus they give excellent help to the clergy in teaching catechism, the lay masters in our schools give religious instruction, and some laymen have received a *missio canonica*, or due ecclesiastical authorization, to teach the religious sciences

in universities and seminaries; the important point in this, as in other matters, is for them to be submissive to the legitimate teaching authority.

(3) As to Jurisdiction and Administration

The principle is that the laity as such have no share in the spiritual jurisdiction and government of the Church; but they may be commissioned or delegated by ecclesiastical authority to exercise certain rights, especially when there is no question of strictly spiritual jurisdiction, for instance, in the administration of property. The laity are incapable, if not by Divine law at least by canon law, of real jurisdiction in the Church, according to chap. x, "De constit." (lib. I. tit. ii): "Attendentes quod laicis etiam religiosis super ecclesiis et personis ecclesiasticis nulla sit attributa facultas, quos obsequendi manet necessitas non auctoritas imperandi", i.e., the laity have no authority over things or persons ecclesiastical; it is their duty to obey not to command. Therefore no official acts requiring real ecclesiastical jurisdiction can be properly performed by the laity; if performed by them, they are null and void. A layman therefore cannot be at the head of a Church or any Christian community, nor can he legislate in spiritual matters, no act as judge in essentially ecclesiastical cases. In particular, the laity (and by this word we here include the secular authority) cannot bestow ecclesiastical jurisdiction on clerics under the form of an election properly so called, conferring the right to an episcopal or other benefice. An election by the laity alone, or one in which the laity took part, would be absolutely null and void (c. lvi, "De elect.") (see ELECTION). But this refers to canonical election strictly so called, conferring jurisdiction on the right to receive it; if it is merely a question, on the other hand, of selecting an individual, either by way or presentation or a similar process, the laity are not excluded, for the canonical institution, the source of spiritual jurisdiction, is exclusively reserved to the ecclesiastical authority. That is why no objection can be raised against the principle we have laid down from the fact that the people took part in the episcopal elections in the first ages of the Church; to speak more accurately, the people manifested their wish rather than took part in the election; the real electors were the clerics; and lastly, the bishops who were present were the judges of the election, so that in reality the final decision rested in the hands of the ecclesiastical authority. It cannot be denied that in the course of time the secular power encroached on the ground of spiritual jurisdiction, especially in the case of episcopal elections; but the Church always asserted her claim to independence where spiritual jurisdiction was involved, as may be clearly seen in the history of the famous dispute about investitures (q.v.).

When jurisdiction properly so called is duly protected, and there is question of administering temporal goods, the laity may and do enjoy as a fact real rights recognized by the Church. The most important is that of presentation or election in the wide sense of the term, now known as nomination, by which certain laymen select for the ecclesi-

astical authorities the person whom they wish to see invested with certain benefices or offices. The best known example is that of nomination to sees and other benefices by temporal princes, who have obtained that privilege by concordats (q. v.). Another case recognized and carefully provided for in canon law is the right of patronage. This right is granted to those who from their own resources have established a benefice or who have at least amply endowed it (contributing more than one-third of the revenue). The patrons can, from the moment of foundation, reserve to themselves and their descendants, the right of active and passive patronage, not to mention other privileges rather honorary in their nature; in exchange for these rights, they undertake to protect and maintain their foundation. The right of active patronage consists principally in the presentation of the cleric to be invested with the benefice by the ecclesiastical authorities, provided he fulfils the requisite conditions. The right of passive patronage consists in the fact that the candidates for the benefice are to be selected from the descendants or the family of the founder. The patrons enjoy by right a certain precedence, among other things the right to a more prominent seat in the churches founded or supported by them; sometimes, also, they enjoy other honours; they can reserve to themselves a part in the administration of the property of the benefice; finally, if they fall upon evil days, the Church is obliged to help them from the property that was acquired through the generosity of their ancestors. All these rights, it is clear, and particularly that of presentation, are concessions made by the Church, and not privileges which the laity have of their own right.

It is but equitable that those who furnish the resources required by the Church should not be excluded from their administration. For that reason the participation of the laity in the administration of church property, especially parish property, is justified. Under the different names such as, "building councils", "parish councils", "trustees", etc., and with rules carefully drawn up or approved by the ecclesiastical authorities, and often even recognized by the civil law, there exist almost everywhere administrative organizations charged with the care of the temporal goods of churches and other ecclesiastical establishments; most of the members are laymen; they are selected in various ways, generally co-optation, subject to the approval of the bishop. But this honourable office does not belong to the laity in their own right; it is a privilege granted to them by the Church, which alone has the right to administer her own property (Conc. Plen. Baltim. III, n. 284 sq.); they must conform to the regulations and act under the control of the ordinary, with whom ultimately the final decision rests; lastly and above all, they must confine their energies to temporal administration and never encroach on the reserved domain of spiritual things (Conc. Plen. Baltim. II, n. 201; see BUILDINGS, ECCLESIASTICAL). Lastly, there are many educational and charitable institutions, founded and directed by laymen, and which are not strictly

church property, though they are regularly subject to the control of the ordinary (Conc. Trid., Seess. VII, c. xv; Sess. XXII, c. viii); the material side of these works is not the most important, and to attain their end, the laity who govern there will above all be guided and directed by the advice of their pastors, whose loyal and respectful auxiliaries they will prove themselves to be.

A. BOUDINHON

Lake Indians

Lake Indians

Called by themselves Senijextee and possibly identical with the Lahanna of Lewis and Clark in 1805, a small tribe of Salishan stock, originally ranging along Columbia River in northeast Washington from about Kettle Falls to the British line. In 1820 Fort Colville trading-post was established by the Hudson Bay Company in their country, but they remained almost unchanged until Christianized in 1846, chiefly through the efforts of the Jesuit Father Adrian Hoecken, who in that year established the summer mission of St. Paul at the Falls. In 1870 they were officially described as living entirely by hunting and fishing, selling their furs to the traders, well fed and clothed, peaceable, friendly, independent, and Catholic in religion. They numbered then 239. In 1872 they were collected with other kindred tribes upon Colville Reservation in the same territory. With the other confederated tribes they are now attached to the mission of Saint John Francis Regis, at Ward, in charge of the Jesuit Fathers, assisted by the Sisters of Charity of Providence. They numbered 283 in 1908, a considerable increase over earlier figures. (See also KALISPEL INDIANS.)

JAMES MOONEY

Charles Lalemant

Charles Lalemant

Born at Paris, 17 November, 1587; died there, 18 November, 1674. He was the first superior of the Jesuit missions in Canada, and his letter to his brother dated 1 August, 1626, inaugurated the series of "Relations" about the missionary work in that country. Thwarted by the Trading Company at Quebec in his efforts to evangelize the Indians, he went to France to protest. Attempting to return to America his vessel was captured by Kirke who was then blockading the St. Lawrence and he was sent as a prisoner to England. A second attempt resulted in shipwreck off Cape Canso, and on his way back to France in a fishing smack which picked him up he was wrecked a second time on the coast of Spain. He finally reached America in 1632 after Quebec was restored to the French. He was the friend and confessor of Champlain, who died in his arms. He returned again to France in 1638, where he became procurator of the Canadian missions, vice provincial and superior of the "Professed house" in Paris. It was he who obtained the concession of the Island of Montreal for the colony of Dauversière, and he also got Maisonneuve and Jeanne Mance to engage in the undertaking. When there was question of appointing the first Bishop of Quebec, his candidacy was urged. He is the author of a spiritual work, not generally known, entitled "La vie cachée de Notre Seigneur Jésus-Christ", and is not to be confounded with Louis Lallement who is the author of "Les conférences spirituelles".

T.J. CAMPBELL

Gabriel Lalemant

Gabriel Lalemant

Jesuit missionary, b. at Paris, 10 October, 1610, d. in the Huron country, 17 March 1649. He was the nephew of Charles and Jerome Lalemant, and became a Jesuit at Paris, 24 March 1630. He arrived in Canada, 20 September, 1646 and after remaining in Quebec for two years, was sent to the Huron missions as de Brébeuf's assistant. He was scarcely there a month when the Iroquois attacked the settlement of St. Ignatius which they burned, and then descended on the mission of St. Louis where they found de Brébeuf and Lalemant. After setting fire to the village and killing many of the inhabitants, they led the two priests back to St. Ignatius where they were tied to stakes and after horrible torture put to death. Lalemant stood by while his companion was being killed. De Brébeuf expired at three in the afternoon. Lalemant's suffering began at six

that evening and lasted until nine o'clock next morning. When the Iroquois withdrew, the bodies of the two priests were carried over to St. Mary's where they were interred. Some of the relics of Lalemant were subsequently carried to Quebec.

Relations, passim; ROCHEMONTEIX, Les Jesuites de la Nouvelle France; MARTIN, Hurons et Iroquois; FERLAND, Histoire du Canada; Journal des Jesuites.

T.J. CAMPBELL

Jerome Lalemant

Jerome Lalemant

Alias Hierosme.

Jesuit missionary, b. at Paris, 27 April, 1593, d. at Quebec, 16 November, 1665. He entered the order at Paris, 2 October, 1610. Arriving in Canada 25 June, 1638, he immediately went to the Huron missions as superior. He took the first regular census of the Indians, instituted the organization of the *donnés* or lay assistants of the missionaries, and re-arranged the different missionary posts making the new establishment of St. Mary's on the Wye the central one. In 1645 he returned to Quebec as general superior. In 1656 he was recalled to France and in 1658 was made rector of the Royal college of La Flèche; but was hardly installed when he was asked for by Laval as Vicar-General of Quebec. He returned with Laval in 1659 and acted as his vicar during all the troubles with the Governors d'Argenson, d'Avaugour, and de Mesy, and also with de Queylus who was an aspirant for the Bishopric of Quebec. He remained superior and vicar-general until the end of his life. He wrote many of the "Relations", and also most of the only volume we have of the "Journal des Jésuites".

T.J. CAMPBELL

Jacques-Philippe Lallemant

Jacques-Philippe Lallemant

French Jesuit, b. at St-Valéry-sur-Somme about 1660; d. at Paris 1748. Little is known of him beyond his writings. He took part in the discussion on the Chinese rites, and wrote the "Journal historique des assemblées tenues en Sorbonne pour condamner les Mémoires de la Chine" (Paris, 1700), a defense of his confrère Lecomte against the Sorbonnist, Jacques Lefèvre. In his "Histoire des Contestations sur la Diplomatie" (Paris, 1708) he sided with the Jesuits Hardouin and Papebroch against the Benedictine Mabillon. His principal works, however, are against the Jansenists. In close succession he published: "Le Père Quesnel séditieux dans ses Réflexions sur le Nouveau Testament"

(Brussels, 1704); "Jansénius condamné par l'Eglise par lui-même, par ses défenseurs et par St-Augustin" (Brussels, 1705); "Le véritable esprit des nouveaux disciples de St-Augustin" (Brussels, 1706-7); "Les Hexaples ou les six colonnes sur la Constitution Unigenitus" (Amsterdam, 1714), with a number of pamphlets in defense of the same; "Entretiens au sujet des affaires présentes par rapport à la religion" (Paris, 1734-1743). The better to counteract Quesnel's "Réflexions morales", Lallemand composed, in collaboration with other Jesuits (e.g. Bouhours and Michel), "Réflexions morales sur le Nouveau Testament traduit en français" (Paris, 1713-25), which Fénelon styled very pious and capable of guiding the reader through any part of the sacred text. This work, translated into many languages, enjoyed a well-deserved popularity, and the latest edition (Lille, 1836) was warmly praised by the "Revue Catholique". Lallemand is also the author of "Le Sens propre et littéral des Psaumes de David" (Paris, 1709) and of "L'Imitation de Jésus-Christ, traduction nouvelle" (Paris, 1740), of which there have been countless editions and translations. The "Mémoires de Trévoux" (Aug., 1713, and May, 1714) contain several dissertations with Lallemand's initials, and the Jansenists attributed to him several writings like the "Mandement of M. de Vintimille contre les Nouvelles Ecclésiastiques" (1732) and the supplement to the "Nouvelles Ecclésiastiques" (1734-8).

DE BACKER AND SOMMERVOGEL, *Bibliothèque des Ecrivains de la Compagnie de Jésus*, s. v.; QUERARD, *Auteurs pseudonymes et anonymes*, s. v., BARBIER, *Dictionnaire des ouvrages anonymes*.

J.F. SOLLIER

Louis Lallemand

Louis Lallemand

French Jesuit, b. at Châlons-sur-Marne, 1588; d. at Bourges, 5 April, 1635. After making his studies under the Fathers of the Society of Jesus, he entered that order in 1605, having completed the usual course of study and teaching which is the lot of its younger members, he was ordained, and taught philosophy and theology for some time until he was made master of novices, an office he filled for four years. Having exercised it with success he was appointed director of the fathers in third probation; but after three years in this difficult post he broke down in health, and was sent to the college of Bourget, in the hope that change of occupation would restore him. The hope was not to be fulfilled; and he died after a few months. Lallemand has been called the Balthazar Alvarez of France, and not without reason. His ideals were no less heroic and his efforts after them as uncompromising as those of that great master of spiritual life. Like him also, he expected from others what he did himself. He set, therefore, the

highest ideals before his disciples, especially the Fathers of the third probation, and required them to rise to such ideals. Moreover, as Father Balthazar Alvarez may be held to have contributed not a little, through the great masters of spiritual life he formed, to fix that special type of spirituality which characterized the Spanish Jesuits, so to Father Lallemand's teaching may be traced in no small measure the specific spirituality of the French Jesuits, which the eminent men who came under his teaching and formation diffused throughout the French provinces. He is known today chiefly by his "Doctrin Spirituelle", a collection of his maxims and instructions gathered together by Father Jean Rigoleuc, one of his disciples, and detailing very thoroughly his spiritual method.

CHAMPION, *La Doctrin Spirituelle* du P. Louis Lallemand (Paris, 1694), preceded by a life of Lallemand, GUILHERMY, *Menologie de l'Assistance de France*, 5 April, PATRIGNANI, *Menologio della Compagnia di Gesu*.

HENRY WOODS

Teresa Lalor

Teresa Lalor

Co-foundress, with Bishop Neale of Baltimore, of the Visitation Order in the United States, b. in Ireland; d. 9 Sept., 1846. Her childhood, spent in Co. Kilkenny, gave such evident manifestations of a vocation to the religious life that Bishop Lanigan of Ossory had made arrangements for her entrance into a convent of his diocese, when she was obliged to accompany her family to America. Arriving at Philadelphia in 1797, she became acquainted with Rev. Leonard Neale, pastor of St. Joseph's church in that city, and under his direction she devoted herself to works of piety and charity. He recognized in her an instrument for the formation of a religious community, and with this object in view an academy was opened for the instruction of girls. But an epidemic of yellow fever carried off Miss Lalor's companions, and as Father Neale was transferred in 1799 from Philadelphia, to become president of Georgetown College, she also went to Georgetown, D. C., and was for a time domiciled with a small community of Poor Clares, exiled from France. On the departure of the Poor Clares from America, Miss Lalor and two companions opened a school of their own in a house which stood within the present grounds of the Visitation convent, the oldest house of the order in the United States. The "pious ladies", as they were called, aspired to become religious, and, as Bishop Neale was greatly in favor of the rule of St. Francis de Sales, he wished to affiliate them with the order founded by the saintly Bishop of Geneva; but the disturbed condition of ecclesiastical affairs in Europe prevented this until 1816, when he obtained a grant from Pius VII for the community to be considered as belonging to

the Order of the Visitation, sharing in all the spiritual advantages thereto annexed. Mother Teresa with two other sisters was professed on the feast of the Holy Innocents of that same year, and became the first superioress of the Georgetown Convent. She lived to see three other houses of the institute founded, offshoots of the mother-house: Mobile, in 1832; Kaskaskia (afterwards transferred to St. Louis), in 1833; and Baltimore, in 1837. She was assisted in her last moments by Archbishop Eccleston of Baltimore. She was about seventy-seven years of age, forty-six of which had been spent in the enclosure where her remains repose, with those of Archbishop Neale, in the crypt beneath the chapel of the convent which they founded.

LATHROP (GEORGE PARSONS AND ROSE HAWTHORNE), *A Story of Courage* (Cambridge, 1895); MS. records of the Visitation convent, Georgetown, D. C., a short account of the life of the foundress of the Visitation Order in America.

E. DEVITT

Cesar Guillaume La Luzerne

César-Guillaume La Luzerne

French cardinal b. at Paris, 1738; d. there, 1821. He studied at the Collège de Navarre, and rose, through the influence of his kinsmen Lamoignon, to the See of Langres (1770), thus becoming duke and peer of the realm. In that Capacity he took part in the Assemblée des Notables (1788) and in the Etats-Généraux (1789). The futility of his efforts to keep the "Constituante" within the limits of moderation caused him to withdraw from that body. In 1791, he refused to take the constitutional oath and emigrated to Constance and Venice where he gave a generous hospitality to the French exiles and wrote extensively. Under the Restoration he returned to France, became cardinal and state minister (1817) and was re-appointed to the See of Langres which he had resigned at the time of the Concordat. His principal works are: "Oraison funèbre de Louis XV" (Paris, 1774); "Considérations sur divers points de la morale chrétienne" (Venice, 1795-1799); "Explication des évangiles des dimanches et des fetes" (Venice, 1807); "Considérations sur la déclaration du clergé de France en 1682" (Paris, 1821). An excellent apologist and a lucid expounder of Catholic faith and Christian ethics, La Luzerne, like Frayssinous, Talleyrand-Perigord and Bausset, was a belated representative of the old Gallicanism. His efforts to revive it failed, owing partly to the fall of the Bourbons and partly because of the galaxy of brilliant writers who, in "L'Avenir" and other publications, gave to France a definite Roman orientation.

Vie de la Luzerne in MIGNE, *Demonstrations Evangeliques*; DEIMIE in *Encyclopedie du XIX Siecle*, s. v.; ROHRBACHER, *Hist. de l'Eglise*, ed. GAUME, IV (Paris,

1869), 623; BELAMY, *La theologie Catholique au XIX^e siecle* (Paris, 1904); BAUNARD, *Un siecle de l'Eglise de France* (Paris, 1902).

J.F. SOLLIER

Chevalier de Lamarck

Chevalier de Lamarck

(Jean-Baptiste-Pierre-Antoine de Monet; also spelled La Marck; botanical abbreviation *Lam.*; zoological abbreviation *Lm.*)

Distinguished botanist, zoologist, and natural philosopher, b. at Bazentin in Picardy (department of Somme), France, 1 August, 1744; d. at Paris, 18 December, 1829. His father, Pierre de Monet, intended him for the priesthood, so Lamarck first studied at the Jesuit college at Amiens. Upon the death of his father, however, he joined, in 1671 the French army in northern Germany, and on the day of his arrival, during the Seven Years' War, was made an offleer on the field of battle for bravery. When twenty-four years old he was obliged, on account of illness, to leave the army with a very small pension. While supporting himself by working as clerk in a bank at Paris, he studied medicine, meteorology, and botany in his spare hours. He never practised medicine, and his numerous meteorological writings have no scientific value; the same is true of his physical and chemical works, in which he opposed Lavoisier. They were all written to support himself and his family. It was otherwise with the different branches of biology; from 1778 he was an able botanist, from 1794 a zoologist, about 1800 began his speculative labours upon the variation of species.

In 1778 he wrote in six months the first complete account of the flora of France, "*Flore française*" (3 vols., Paris, 1778; 3rd ed. edited by de Candolle, 6 vols., 1805-15). Both in the introduction to this work and in several treatises, Lamarck explained the analytical, dichotomous system of determining the species of plants, a system originated by him and now much used. In classification he maintained the principle, in opposition to Jussieu, that a single part, no matter how essential, was not sufficient for the classification of the plant but that, in classification, all parts should be considered. This work led to his acquaintance with Buffon and in 1779 gained his election to the Academy of Sciences. With Buffon's son he then travelled through Holland, Germany, and Hungary. Once more in Paris he became a contributor to the "*Encyclopédie méthodique*", for which he wrote the first four volumes of the "*Dictionnaire de botanique*" (Paris, 1783-96). In this work the genera of plants are skilfully treated in alphabetical order from A to P, the great collections of Paris being exhaustively drawn upon. The large atlas "*Illustration des Genres*", which accompanied the work, contains 900 plates. Lamarck began a "*Histoire naturelle des végétaux*" (Paris, 1802), as part of the

compilation "Suites de Buffon"; Mirbel continued the "Histoire naturelle" from volume III to XV. In the meantime Lamarck had received, in 1789, the position of keeper of the herbarium at the Jardin des Plantes as assistant to Daubenton, but he soon lost it. At no time in his life was he in very prosperous circumstances. When the Muséum d'Histoire Naturelle was reorganized in 1793 there were no professors of zoology. The professorship for the lower animals was offered to the botanist Lamarck, and he had the courage at the age of forty-nine to teach himself zoology. He commenced his zoological lectures in 1794 and carried them on until blindness forced him in 1818 to transfer them to the entomologist Latreille.

Lamarck began by separating the animal kingdom into the two important divisions of vertebrates and invertebrates. He sought to develop the classification of invertebrates ("Système des animaux sans vertèbres", Paris, 1801), and established numerous new genera and species for them. His most important zoological work is the "Histoire des animaux sans vertèbres" (7 vols., Paris, 1815-22; 2nd ed., 11 vols., 1835-45). Particular mention should be made of Lamarck's investigations concerning molluses, especially his studies of the geologically important fossil molluses. For the last twenty years his reputation has been far greater than in his lifetime in a steadily increasing degree. His theoretical views concerning life-forms which were often regarded by his contemporaries, as by Cuvier, only as droll, fantastic crotchets, unworthy of notice or even of contradiction, are now considered by many biologists as showing in the highest degree the originality of genius. These views are expressed in numerous treatises issued during the period 1802-20 but especially in his work "Philosophie zoologique" (2 vols., Paris, 1809, 1839, 1873, etc.; lately translated into other languages). They are the basis of that form of evolution which as Lamarckism, and of late in sharp opposition to Darwin as neo-Lamarckism, has distinguished adherents among botanists, zoologists, and palaeontologists. These adherents, however, do not agree among themselves. Every year an increasing number appear popular and scientific works upon Lamarck and Lamarckism. His ideas were partly influenced by Maillet, Condillac, Rousseau, and especially by Buffon. Lamarck can with more right than Darwin be called the originator of the theory of evolution, just as he was also the first to choose the form of a genealogical tree to illustrate the genetic connection of organisms. According to him only a few species have died out; for the most part they have been modified. However, the word Lamarckism means above all the impelling forces, postulated by Lamarck, of phylogeny: the use or disuse of the organs, occasioned by need, consequently by a factor inherent in the life-form, is said to call forth adaptations which become permanent by heredity. Lamarck was, therefore, a vitalist, not a materialist; he was also neither an atheist, nor irreligious, nor an opponent of the Scriptures. On the contrary, in regard to the creation of man he frankly placed the authority of the Bible higher than his own ideas. At least

there is no valid reason for regarding his words relative to this as hypocritical, as many Lamarckians do. Lamarck's name is perpetuated in botany in the genera *Monetia*, *Markea*, *Lamarchea*, and *Lamarckia*. In 1909 a monument to him was unveiled in the Museum d'Histoire Naturelle at Paris.

Of the extensive literature on Lamarck may be mentioned:

CUVIER, *Eloge de Lamarck* (Paris, 1835); COPE, *The Origin of the fittest* (New York, 1887); PACKARD, *Lamarck, the Founder of Evolution* (New York, London, and Bombay, 1901); PAULY, *Darwinismus und Lamarckismus* (Munich, 1905); LOTSY, *Vorlesungen uber Desce: denztheor er*, (Jena, 1906-08); BURCKHARDT, *Geschichte der Zoologie* (Leipzig, 1907); PERRIER, GUIGNARD, and DELAGE in *Acad. des Sciences, Inst. de France, CXLIX* (Paris, 1909); RADL, *Geschichte der biolog. Theorien* (Leipzig 1905-09).

JOSEPH ROMPEL

Alphonse de Lamartine

Alphonse de Lamartine

Poet, b. at Macon Saône-et-Loire, France, 21 Oct., 1790; d. at Paris, 1 March, 1869. Born of a noble and Christian family, Lamartine at an early age read selected passages from the Bible, later from Fénelon, Bernardin de Saint-Pierre, Chateaubriand, Mme de Staël, Racine, Voltaire, Parny, and among foreign poets, Tasso, Dante, Petrarch, Shakespeare, Ossian, especially the last, who was then very popular. About the age of twenty he met at the house of one of his relatives at Naples a little cigarette girl called Graziella, who captured his heart or his imagination, and of whom he sang in his works. Two years later, in 1814, when he was a member of the life-guards, he made the acquaintance of a delicate young woman, the wife of a physician named Charles, who died shortly afterwards. This ideal passion and the grief which followed so soon upon its blossoming revealed him to himself. Hitherto he had been an imitator; henceforth he would accept no guide save his own inspiration. Madame Charles is the Julie of his "Raphael", and the Elvire of his poems. He made his entrance into the field of poetry by a masterpiece, "Les Méditations Poétiques" (1820), and awoke to find himself famous; he may be said to have taken glory by storm. His other poetical works are "Les Secondes Méditations" (1823); "Harmonies Poétiques et Religieuses" (1830); "Jocelyn" (1836); and "La Chute d'un Ange" (1838); two fragments of a great epic which he dreamed of dedicating to humanity, and lastly the "Recueils Poétiques" (1839), in which he returned to lyricism, but without equaling his early works. He had already made himself known in prose. In 1835 he published the "Voyage en Orient", a brilliant and bold account of the journey he had just made, in royal luxury, to the

countries of the Orient, and in the course of which he had lost his only daughter, Thenceforth he confined himself to prose. He published volumes on the most varied subjects (history, criticism, personal confidences, literary conversations) especially during the Empire, when, having retired to private life and having become the prey of his creditors, he condemned himself to what he calls "literary hard-labor in order to exist and pay his debts". The most famous of these prose works was the "Histoire des Girondins" (1847). Lamartine had long been taking part in politics, and had been elected a member of Parliament in 1833. He displayed astonishing ability as an extempore speaker, his brilliancy and grace being joined to fluency and action, and he waged a formidable opposition against the government of Louis-Philippe. The "Histoire des Girondins" was an episode in this: it was written with the desire to glorify the principles and the men of the French Revolution, without, however, approving their crimes. Immediately becoming popular the author shared in the provincial government at the downfall of the monarchy (1848). But his popularity was ephemeral and the *Coup d'etat* of 2 December, 1851, caused his return to literature for the remainder of his life. He died quietly, almost forgotten.

In him France lost a great poet; Lamartine may be reproached with not paying sufficient attention to the poetic vocation for which he affected an aristocratic disdain. Hence his lack of revision and faultiness of plot, whenever his plot requires detailed thinking out, as in his longer compositions; hence also his carelessness in rhyme and sometimes even in syntax. Even when he writes, Lamartine is an improviser who abandons himself to nature. But on the other hand he displays great simplicity, imagination, ease, fullness, and melody.

When the "Meditations" first appeared they revealed to France an entirely new kind of poetry, one which, according to the phrase of the author, "cessait d'etre un jeu stérile de l'esprit pour renaître fille de l'enthousiasme et de l'inspiration". In fact, despite the softness of the sentiments to which he abandoned his heart, he was a writer of rare elevation. No poet has sung of God with more Christian love than he in his earliest works; though in later life he became a mere spiritualist, he returned in his old age to the religion of his youth, and died the death of a Christian. But at every period he loved to see the Creator through the transparent veil of the creature and to sing to Him hymns of adoration.

DE MAZADE, Lamartine, sa vie politique et litteraire (Paris, 1870); OLLIVIER, Lamartine (1874); DE POMAIROLS, Lamartine (Paris, 1889); CHAMBORANT DE PERISSAT, Lamartine Inconnu, 1892; DESCHANEL, Lamartine (Paris, 1893).

GEORGES BERTIN

Paschal Lamb

Paschal Lamb

A lamb which the Israelites were commanded to eat with peculiar rites as a part of the Passover celebration. The Divine ordinance is first recorded in Exodus, xii, 3-11, where Yahweh is represented as giving instructions to Moses to preserve the Hebrews from the last of the plagues inflicted upon the Egyptians, viz. the death of the firstborn. On the tenth day of the first month each family (or group of families, if they are small) is commanded to take a lamb without blemish, male, of one year, and keep it until the fourteenth day of the month, and sacrifice it in the evening. The blood of the lamb must be sprinkled on the transom and doorposts of the houses in which the paschal meal is taken. The lamb should be roasted and eaten with unleavened bread and wild lettuce.

The whole of the lamb must be consumed -- head, feet, and entrails -- and if any thing remain of it until morning it must be burned with fire. The Israelites are commanded to eat the meal in haste, with girded loins, shoes on their feet, and staves in their hands "for it is the Phase (that is, Passage) of the Lord." The blood of the lamb on the doorposts served as a sign of immunity or protection against the destroying hand of the Lord, who smote in one night all the first-born in the land of Egypt, both man and beast. This ordinance is repeated in abridged form in Numbers xix, 11, 12, and again in Deuteronomy, xvi, 2-6, where sheep and oxen are mentioned instead of the lamb.

That the Paschal Lamb prefigured symbolically Christ, "the Lamb of God", who redeemed the world by the shedding of His blood, and particularly the Eucharistic banquet, or new Passover, has always remained the constant belief of Christian tradition.

JAMES F. DRISCOLL

The Lamb (In Early Christian Symbolism)

The Lamb (in Early Christian Symbolism)

One of the few Christian symbols dating from the first century is that of the Good Shepherd carrying on His shoulders a lamb or a sheep, with two other sheep at his side. Between the first and the fourth century eighty-eight frescoes of this type were depicted in the Roman catacombs.

The signification which may be attached to this symbol, according to Wilpert's interpretation, is as follows. The lamb or sheep on the shoulders of the Good Shepherd is a symbol of the soul of the deceased being borne by Our Lord into heaven; whereas the two sheep accompanying the Shepherd represent the saints already enjoying eternal bliss. This interpretation is in harmony with an ancient liturgical prayer for the dead of the following tenor: "We pray God . . . to be merciful to him in judgment, having redeemed him by His death, freed him from sin, and reconciled him with the Father. May He be to him the Good Shepherd and carry him on His shoulders [to the fold] May He receive him in the following of the King, and grant him to participate in eternal joy in the Society of the saints" (Muratori, "Lit. Rom. Vet.", I, 751). In catacomb frescoes this petition is represented as already granted; the deceased is in the company of the saints.

Another cycle of catacomb paintings (not numerous) represents a lamb, or a sheep, with a milk-pail either on its back or suspended from a pastoral staff. A unique fresco of this order shows a shepherd milking a sheep, while still another shows milk-pail on an altar between two sheep. The frescoes of this type (of the sheep and milk-pail) were, until recently, generally regarded as symbols of the Eucharist, but Mgr. Wilpert dissents from the received opinion, and regards all frescoes in which allusions to milk occur as symbolic of the joys of Heaven. Both the earlier and the later interpretations depend on a well-known text of the Acts of Sts. Perpetua and Felicitas. While in prison awaiting martyrdom, St. Perpetua tells us she beheld in a vision an immense garden, and in the centre thereof the tall and venerable figure of an old man in the dress of a shepherd, milking a sheep. Raising his head, he looked at me and said, 'Welcome, my daughter.' And he called me to him and he gave me of the milk. I received it with joined hands and partook of it. And all those standing around cried 'Amen'. And at the sound of the voice I awoke, tasting an indescribable sweetness in my mouth." The community of ideas between this description and the catacomb frescoes of the sheep and milk-pail is so apparent that, at first view, the current interpretations of this class of representations would seem to be obviously accurate. Wilpert, however, calls attention to the fact that the things described in the vision of St. Perpetua took place not on earth, but in heaven, where the Eucharist is no longer received. Hence he regards the frescoes of the milk-pail class as symbolic of the joys which the soul of the deceased possess in paradise.

The lamb, or sheep, symbol, then, of the first class described, has, in all catacomb paintings and on sarcophagi of the fourth century, always a meaning associated with the condition of the deceased after death. But in the new era ushered in by Constantine the Great the lamb appears in the art of the basilicas with an entirely new signification. The general scheme of apsidal mosaic decoration in the basilicas that everywhere

sprang into existence after the conversion of Constantine, conformed in the main to that described by St. Paulinus as existing in the Basilica of St. Felix at Nola. "The Trinity gleams in its full mystery", the saint tells us. "Christ is represented in the form of a lamb; the voice of the Father thunders from heaven; and through the dove the Holy Spirit is poured out. The Cross is encompassed by a circle of light as by a crown. The crown of this crown are the apostles themselves, who are represented by a choir of doves. The Divine unity of the Trinity is summarized in Christ. The Trinity has at the same time Its own emblems; God is represented by the paternal voice, and by the Spirit; the Cross and the Lamb denote the Holy Victim. The purple background and the palms indicate royalty and triumph. Upon the rock he stands Who is the Rock of the Church, from which flow the four murmuring springs, the Evangelists, living rivers of Christ" (St. Paulinus, "Ep. xxxii, ad Severum", sect. 10, P. L. LXI, 336). The Divine Lamb was usually represented in apsidal mosaics standing on the mystic mount whence flow the four streams of Paradise symbolizing the Evangelists; twelve sheep six on either side, were further represented, coming from the cities of Jerusalem and Bethlehem (indicated by small houses at the extremities of the scenes) and proceeding towards the lamb. The lower zone, no longer in existence, of the famous fourth-century mosaic in the church of St. Pudenziana, Rome, originally represented the lamb on the mountain and probably also the twelve sheep; the existing sixth-century apse mosaic of Sts. Cosmas and Damian at Rome gives a good idea of the manner in which this subject was represented.

According to the "Liber Pontificalis", Constantine the Great presented to the Lateran baptistery, which he founded, a golden statue of a lamb pouring water which was placed between two silver statues of Christ and St. John the Baptist; the Baptist is represented holding a scroll inscribed with the words: "Ecce Agnus Dei, ecce qui tollit peccata mundi." From the fifth century the head of the lamb began to be encircled by the nimbus. Several monuments also show the lamb with its head surmounted by various forms of the Cross; one monument discovered by de Vogüé in Central Syria shows the lamb with the Cross on its back.

The next step in the development of this idea of associating the Cross with the lamb was depicted in a sixth-century mosaic of the Vatican Basilica which represented the lamb standing on a throne, at the foot of a Cross studded with gems. From the pierced side of this lamb, blood flowed into a chalice whence again it issued in five streams, thus recalling Christ's five wounds. Finally, another sixth-century monument, now forming part of the ciborium of St. Mark's, Venice, presents a crucifixion scene with the two thieves nailed to the cross, while Christ is represented as a lamb, standing erect at the junction of the crossbeams. One of the most interesting monument

showing the Divine Lamb in various characters is the sarcophagus of Junius Bassus (d. 358). In four of the spandrils between the niches of

- raising Lazarus, by means of a rod, from the tomb;
- being baptized by another lamb, with dove dominating the scene;
- multiplying loaves, in two baskets, by the touch of a rod;
- joining three other lambs.

Two other scenes show a lamb receiving the Tables of the Law on Mount Sinai and striking a rock whence issues a stream of water. Thus in this series, the lamb is a symbol, not only of Christ, but also of Moses, the Baptist, and the Three Children in the fiery furnace. The fresco the cemetery of Praetextatus, showing Susanna as a lamb between two wolves (the elders), is another example of the lamb as symbol of one of the ordinary faithful.

MAURICE M. HASSETT

Peter Lambeck

Peter Lambeck

Generally called LAMBEC[C]IUS, historian and librarian, b. at Hamburg, 13 April 1628; d. at Vienna, 4 April, 1680. After studying under private tutors and at the Johanneum, he entered in 1644 the gymnasium where he came under the influence of Friedrich Lindenberg, and especially of his mother's brother, Lucas Holste (Holstein, Holstenius), the most distinguished philologist, antiquarian, and critic of his time. The latter had early recognized his nephew's gifts, and entered into a lively correspondence with the lad of barely twelve. On his recommendation Peter went in 1645 to Holland to continue his studies, and at the University of Amsterdam, came in contact with many scholars, especially the philologist Gerhard Johann Voss. He later left the Netherlands at his uncle's wish and went to Paris, where his relationship with the celebrated Holste, as well as his own abilities, secured him access to the most distinguished savants of his time. He here received the degree of Doctor of Laws. After finishing his studies, he made a tour through France, Liguria, and Etruria, and spent two years in Rome, where under the special direction of his uncle, who in the interim had become papal librarian, he undertook classical and historical researches. When barely nineteen, his learned work (*Lucubrationes criticae in Auli Gellii Noctes Atticas*, Paris, 1647) had already brought him the approval of the learned public of Paris.

On his return to Hamburg, he was made in 1652 professor of history at the gymnasium, and in 1664 became rector. He had many enemies on account of his success, and, being accused of atheism, decided to give up his position. He was confirmed by his unfortunate marriage in his decision to leave the country and return to Rome. Here he soon won the favor of Alexander VII. Queen Christina of Sweden, then resident at Rome, also exercised a great influence over him, and soon he entered the Catholic Church. To secure a permanent position he went to Vienna, where Emperor Leopold appointed him librarian and court historiographer. In this position he performed great services by his arrangement of the library, and especially by his catalogues of its treasures ("Commentariorum de Bibliotheca Caesarea Vindobonensi libri VIII", Vienna, 1865-79; re-edited by Kollar, 1766-82). These catalogues are even to-day of value, being especially important for the numerous contributions they contain to our knowledge of the Old German language and literature. Of great importance for the history of literature is his "Prodromus Historiae literariae" (Hamburg, 1659), of which a second enlarged edition was issued by J. A. Fabricius (Leipzig, 1710), with a biographical sketch of the author, published separately at Hamburg in 1724. The "Prodromus" was the first comprehensive history of literature, chronologically arranged. Lambeck also published among other works a history of his native town ("Origines Hamburgenses ab anno 808 ad annum 1292", 2 vols., 1652-61), and researches into the history of the Byzantine Empire ("Syntagma originum et antiquitatum Constantinopolitanarum" Paris, 1655).

HOFFMANN, P. Lambeck als Schriftsteller u. Bibliothekar (Soest, 1864); KARAJAN, Kaiser Leopold I. u. P. Lambeck (Vienna, 1868).

PATRICIUS SCHLAGER

St. Lambert

St. Lambert

(LANDEBERTUS).

Martyr, Bishop of Maestricht, b. at Maestricht between 633 and 638; d. at Liège, between 698 and 701. His parents, who belonged to the nobility, gave him a very religious education, and chose as his preceptor St. Landoaldus, priest of the cathedral church at Maestricht. Later, Lambert received instruction from St. Theodardus (668 or 669), whom he succeeded in 670 as Bishop of Maestricht. During the calamitous days of Ebroin, Mayor of the Palace, Lambert, having defended the interests of King Childeric, was forced to flee from Maestricht. While Pharamundus administered his see, Lambert spent seven years (674-681) in the well-known Abby of Stavelot, where he edified the monks by his saintly life. In 681 Ebroin received his well-earned retribu-

tion, and Pepin of Heristal became mayor of the palace, at first of Austrasia, but in 687 of the whole domain of the Franks. Pepin, who liked Lambert, permitted him to return to Maestricht and resume the administration of his see. Some time later we find Lambert as a missionary in Toxandria, the Kempenland and Brabant of today. In order to spread the Gospel, he descended the River Meuse as far as Tiel and laboured along its banks in company with St. Willibrord, who had come from England in 691. It is very probable that Lambert came in contact with Sts. Wiro, Plechelmus, and Otger, who had built a church and monastery on the Pietersburg, later called the Odilienberg, near Roermond. St. Landrada aided Lambert in founding the Abbey of Munsterbilsen. For several centuries a controversy has been carried on concerning the manner of the saint's death. According to tradition, Lambert became a martyr to his defence of marital fidelity. The Bollandists, Mabillon, Valois, Lecointe, Pagi and others held, however, that the saint was killed by Frankish nobles in revenge for the failure of a plundering expedition. Kurth in 1876 critically examined the centuries-old tradition and, documents in hand, proved beyond further doubt that Lambert was martyred because of his defence of the marriage tie. Pepin of Heristal lived for many years in irreproachable wedlock with the pious Plectrude, who bore him two sons. Later he entered into unlawful relations with Alpais, who became the mother of Charles Martel. When no one had the courage to remonstrate with Pepin, Lambert went to his court like another John the Baptist. Alpais, fearing that Pepin might heed the admonitions of the saint, appealed to her brother Dodo. The latter sought revenge and caused Lambert to be assassinated in the chapel of Sts. Cosmas and Damian, built by St. Monulphus at Liège. His heart was pierced by a javelin while he was at the altar. The servants of the martyr placed his remains in a vessel, descended the Meuse to Maestricht, and buried them in the cemetery of St. Peter, in the vault of his parents, Aper and Herisplindis, beneath the walls of Maestricht. Between 714 and 723, St. Hubert exhumed the remains and had them translated to Liège, whither he had transferred, presumably as early as 723, his episcopal see. The saint's feast is celebrated on 17 Sept. A large number of churches have St. Lambert as their patron.

P. ALBERS

Lambert Le Begue

Lambert Le Bègue

Priest and reformer, lived at Liège, Belgium, about the middle of the twelfth century. The son of poor people, he was ordained priest in a more or less legitimate way, and was probably parish-priest of St-Christophe at Liège. He began preaching against the abuses and the vices of the clergy, protesting against simony, the ordination of sons of priests, and certain customs in the administration of the Sacrament of Baptism and the celebration of Mass. Some of his opinions are not above suspicion, his ideas for instance concerning the day of rest and Masses for the dead. In time he gathered about him a popular following, for whom he translated into the vernacular the Life of the Blessed Virgin, the Acts of the Apostles, and the Epistles of St. Paul, with commentaries; these translations unfortunately have not been preserved. Probably at this period he organized the association known as Béguines, whose name cannot be derived philologically from "to beg" (i.e. to pray), but is probably derived from the name *bègue* (stammerer) given to Lambert, to whom, in fact, the foundation is attributed by several contemporary and trustworthy authorities. But he also had adversaries, especially among the clergy, and it was to refute them that he wrote a defense of his theories, entitled "Antigraphum Petri". His writings reveal him a man very learned for his time; they abound with quotations, not only from the Bible, but also from the Fathers of the Church (e.g. St. Gregory, St. Augustine, and St. Bernard), and even from profane authors like Ovid, Virgil, and Cicero. Accused of heresy, he was condemned and imprisoned notwithstanding his appeal to the Holy See. He succeeded in making his escape and went over to the antipope Callistus III, who had been recognized by Raoul of Zahringen, Prince-Bishop of Liège. He wrote to the pope several letters in justification of his doctrines and conduct, but the result of these endeavors is not known. In all probability he returned to Liège and died there in 1177.

M.A. FAYEN

Lambert of Hersfeld

Lambert of Hersfeld

A medieval historian; b. in Franconia or Thuringia, c. 1024; d. after 1077. On 15 March 1058, he entered the Benedictine monastery of Hersfeld, in Hesse, and was ordained priest in the fall of the same year, at Aschaffenburg, by Bishop Liutpold of Mainz. Immediately after his elevation to the priesthood he started on a pilgrimage to the Holy Land without previously obtaining the permission of his abbot. On 17 September, 1059, he returned to his monastery and asked and obtained from his abbot, Meginher, who was then lying on his death bed, pardon for this act of disobedience. Only once more during the rest of his life did Lambert leave his monastery. It was in the year 1071 when, by order of his abbot, Rudhard, he spent fourteen weeks at the monasteries of Siegburg and Saalfeld, studying the reform which had been introduced into these monasteries from the Italian monastery of Fruttuaria in Piedmont. Lambert was not favorably impressed with the reform. In his opinion the old monastic discipline, if strictly observed, was more in accordance with the spirit of St. Benedict than the reform of Fruttuaria.

Lambert of Hersfeld is best known to the world as the author of "*Annales Lamberti*", a chronicle of the world from its beginning to the year 1077. Up to the year 1040 the Annals of Lambert are little more than a reproduction of preceding annals; from 1040 to 1068 they are more diffuse, and to some extent based on personal observation and the authority of eyewitnesses; from 1068 to 1077 they widen into an elaborate history of the times written in the elegant style of Sallust and ranking among the most perfect literary productions of the Middle Ages. The impartiality and truthfulness of Lambert as a historian were unquestioned until the middle of the nineteenth century. The German historian Ranke ["*Zur Kritik frankischdeutscher Reichsannalisten*" printed in "*Abhandlungen der Berliner Akademie*" (Berlin, 1854), 436 sq.] was the first to discredit Lambert's reliability as a historian. His view has been corroborated by the researches of most succeeding historians, some of whom have charged him even with wilful falsifications of historical facts. Lefarth and Eigenbrodt (loc. cit. in bibliography below) attempted to rehabilitate Lambert, but with little success. Though Lambert may not have been a wilful falsifier of historical facts, as has been asserted by Delbruck and Holder-Egger (loc. cit. below) it is an established fact that he was prejudiced against Henry IV, not so much on account of the emperor's encroachments upon the rights of the pope as on account of the injury sustained by the monastery of Hersfeld through an imperial decree concerning the tithes in Thuringia (see Lambert's "*Annals*", ad annum 1073, pp. 141 sq.). Though not in sympathy with the great ideas of Gregory VII,

he was prepossessed in his favor simply because the emperor was his enemy. His method, moreover, of writing history was to a great extent pragmatic. Instead of impartially investigating into the motives of his historical personages, he is often led by his prepossessions and prejudices to give a very subjective coloring to historical facts.

Lambert is also the author of "Vita Lulli" a life of Archbishop Lullus of Mainz who founded the monastery of Hersfeld in 768. It was written between 1063 and 1073, is of even less historical value than the "Annals", but, like the "Annals", it is a masterpiece of pure and elegant latinity. His history of Hersfeld, entitled "De institutione ecclesiae Hersfeldensis", has been lost, with the exception of the prologue and a few fragments. It was written before the year 1076. His epic on the history of his times has been entirely lost. Some historians thought it was identical with "Carmen de Bello Saxonico", written by an unknown author shortly after the victory of Henry IV over the Saxons (1075), but of late this opinion has lost ground. The complete works of Lambert were edited, with a learned disquisition, by Holder-Egger "Lamperti monachi Hersfeldensis opera" (Hanover, 1894). The "Annals" are printed separately in "Mon. Germ.: Script.", III, 22-263. They are also in P.L., up to the year 1040, CXLI, 450-582, and from the year 1040 to 1077, CXLVI, 1053-1248. Lambert's "Vita Lulli" is also printed in Acta SS., 16 October, VII, 1083-1091 and in "Mon. Germ.: Script.", XV, I, 132-148. Gundlach in "Heldenlieder der deutschen Kaiserzeit" (Innsbruck, 1894-99), II, 191, sq., and Kurze in "Deutsche Zeitschrift für Geschichtswissenschaft", New Series (Freiburg im Br., 1898), II, 174 sq., attempt to prove that Lambert is identical with Abbot Hartwig of Hersfeld.

HOLDER-EGGER, Studien zu Lambert von Hersfeld in Neues Archiv der Gesellschaft für ältere deutsche Geschichtskunde (Hanover and Leipzig, 1893-4), XIX, 143-213; 371-430; 500-74; MEYER VON KNONAU, Jahrbuch des deutschen Reiches unter Heinrich IV und Heinrich V (Leipzig, 1894), II, 791-856; DELBRUCK, Ueber die Glaubwürdigkeit Lamberts von Hersfeld (Bonn, 1873); DIEFFENBACHER, Lambert von Hersfeld als Historiograph (Wurzburg, 1890); EIGENBRODT, Lambert von Hersfeld und die neuere Quellenforschung (Cassel, 1896); LEFARTH, Lambert von Hersfeld, ein Beitrag zu seiner Kritik (Düsseldorf, 1871); KUBO, Beiträge zur Kritik Lamberts von Hersfeld (Halle, 1890); WATTENBACH, Geschichtsquellen im Mittelalter (Berlin, 1894), II, 97-109. For an exhaustive bibliography see POTTHAST, Bibliotheca historica medii aevi (Berlin, 1896), I, 705 sq.

MICHAEL OTT

Lambert of St-Bertin

Lambert of St-Bertin

Benedictine chronicler and abbot, b. about 1060; d. 22 June, 1125, at St-Bertin, France. He came of a distinguished family, and, when still young, entered the monastery of St-Bertin. He afterwards visited several famous schools in France, having first laid the foundation of his subsequent learning by the study in his own monastery of grammar, theology, and music. For some time he filled the office of prior, and in 1095 was chosen abbot at once by the monks of St-Bertin and by the canons of St-Omer. He was thus drawn into closer relations with Cluny, and, instituted through the Cluniac monks many reforms in his somewhat deteriorated monastery. Needless to say, he encountered no little opposition to his efforts, but, thanks to his extraordinary energy, he finally secured acceptance for his views, and rehabilitated the financial position of the monastery. He was a friend of St. Anselm and exchanged verses, still extant, with Reginald of Canterbury (ed. Libermann in "Neues Archiv der Gesellschaft für altere Geschichte", XIII, 1888, pp. 528; 531-34). Even during his lifetime, Lambert was lauded in glowing terms for his great learning by an admirer—not a monk of St-Bertin—in the "Tractatus de moribus Lamberti Abbatis S. Beretini" (ed. Holder-Egger in "Mon. Ger. Hist. SS.", XV, 2, 946-53). This work mentions several otherwise unknown writings of Lambert, e.g. "Sermones de Vetere Testamento", also studies on free will, the Divine prescience, original sin, origin of the soul, and questions of physical science. He is probably identical with Lambert, the Canon of St. Omer who wrote the famous "Liber floridus", a kind of encyclopedia of Biblical, chronological, astronomical, geographical, theological, philosophical and natural history subjects, a detailed description of which is given in the "Historia comitum Normannorum, comitum Flandriae". It is an extract or synopsis from different authors, and was begun in 1090 and finished in 1120.

PATRICIUS SCHLAGER

Jacques and Jean de Lamberville

Jacques and Jean de Lamberville

Jacques de Lamberville

Jesuit missionary, b. at Rouen, 1641; d. at Quebec, 1710. He joined the Society in 1661, and proceeded to Canada in 1675 to labour almost uninterruptedly on the Iroquois missions until his death. At Onondaga he discerned the soul of a saint in the Algonquin captive, Catherine Tegakwitha, whom he instructed and baptized. He helped his brother Jean to pacify the Iroquois, irritated by Governor de la Barres untimely campaign. After a few years of respite in Quebec and Montreal, he returned to Onondaga at the request of the natives, only to leave it in 1709 through the intrigues of Abraham Schuyler. Like his elder brother, he lived among the Iroquois during a period when the rivalry of the French and English to secure the alliance of that fierce nation endangered the lives of the missionaries. Charlevoix says he was "one of the holiest missionaries of New France"; he was called the "Divine man" by the Indians.

Jean de Lamberville

Elder brother of the preceding and also a Jesuit missionary, b. at Rouen, 1633; d. at Paris, 1714. He joined the Society in 1656, and came to Canada in 1669. He spent fourteen years with the Onondaga Iroquois. His patriotic aim was to maintain peace between the French and the Iroquois, with the latter of whom his influence was paramount. When Denonville secretly prepared to avenge the humiliating conditions of peace resulting from de la Barres rash expedition, Lamberville's life was greatly exposed through the governor's fault, as he had been deceived into convoking the assembly at Cataracoui where several Iroquois chiefs were treacherously captured and condemned to the galleys; his reputation for honesty and uprightness alone saved him. He vainly strove to prevent the devastation of the Tsonnontouan villages, of which the massacre of Lachine (1689) was the retaliation. When the Onondagas and Mohawks harassed the French allies, Lamberville consented to negotiate peace. His wise diplomacy obtained a mitigation of the humiliating terms proposed at Governor Dongans instigation, and Denonville duly praised his ability and devotedness. From France where shattered health forced him to retire, he tried to come back to his mission, but death intervened in 1714. The Menology of the Society says that "he had the spiritual physiognomy of Brébeuf."

LIONEL LINDSAY

Trancribed by W.S. French, Jr.

Louis Lambillotte

Louis Lambillotte

Belgian Jesuit, composer and paleographer of Church music; born at La Hamaide, near Charleroi, Belgium, 27 March, 1796; died at Paris, 27 February, 1855. His name is now chiefly remembered in connection with the restoration of Gregorian music, which he inaugurated and greatly promoted by his scientific researches and publications. At the age of fifteen, he became organist of Charleroi; later he went in a similar capacity to Dinan-sur-Meuse. In 1820 he was appointed choirmaster and organist of the Jesuit College of Saint-Acheul, Amiens. While exercising these functions he also studied the classics, and at the end of five years, in August, 1825, he entered the Society of Jesus. The thirty years of his Jesuit life were spent successively in the colleges of Saint-Acheul, Fribourg, Estavayer, Brugelette and Vaugirard. While occupied in teaching and directing music, he gave himself up more entirely to composition, with a view to enhance the splendour both of the religious ceremonies and the academic entertainments in those newly founded colleges. His powers of composition were necessarily checked by the limited ability of his performers, his orchestra, like his chorus, being entirely recruited from the ranks of the students; nevertheless his facility and his fluency were such that he provided new music for almost every occasion, producing in the course of time, besides his celebrated volumes of *cantiques* (French hymns or sacred songs), a vast number of motets, short oratorios, masses and secular cantatas, mostly for four-part chorus and orchestra. This music became very popular, especially in educational institutions. Late in life Lambillotte regretted having published those written improvisations without taking time to revise them. After his death a revision of the greater part of them was made and published (Paris, 1870) by his pupil, Father Camille de la Croix, S.J., and by Louis Dessane, organist of St. Sulpice, Paris, and afterwards of St. Francis Xavier New York.

The irreligious levity of some of Louis Lambillottes church music is condemned by his own writings in which he upheld the correct principles; that he did not always remember them in practice is owing no doubt to the utterly secular style prevalent in his day. He spent his best energies in seeking to restore to Gregorian music its original sweetness and melodious character. The decadence of the liturgical chant had been brought about by its faulty execution, and this in turn was due to the corrupt versions that had been in use for several centuries. As a practical guide towards a radical restoration the celebrated Benedictine Abbot Dom Guéranger, in his "Institutions Liturgiques", had laid down the principle that "when a large number of manuscripts of various epochs and from different countries agree in the version of a chant, it may be

affirmed that those MSS. undoubtedly give us the phrase of St. Gregory." Acting upon this principle, Lambillotte for many years gathered and compared all the documents that were to be found in the Jesuit houses. He next undertook to visit and re-visit almost every country of Europe, exploring libraries, secular as well as monastic, in search of the most ancient MSS. and all treatises bearing on the history or the theory of the chant.

His success surpassed all his expectations when, in the library of the former Benedictine Abbey of St. Gall in Switzerland, he found himself in presence of what seems to be the most authentic Gregorian manuscript in existence, i.e. a transcription from the original "Antiphonarium of St. Gregory", brought from Rome to St. Gall by the monk Romanus in the closing years of the eighth century. The doubts of Fétis and Danjou regarding the identity of this document are proved by Lambillotte to be founded on mere conjectures. This volume of 131 pages of old parchment, the ivory binding of which depicts ancient Etruscan sculptures, contains all the Graduals, the Alleluias, and the Tracts of the whole year, in the ancient neumatic notation (a sort of musical stenography), together with the so-called Romanian signs, i.e. the special marks of time and expression added by Romanus. Lambillotte succeeded, not without serious difficulty, in obtaining permission to have a facsimile of this manuscript made by an expert copyist. This he published (Brussels, 1851), adding to it his own key to the neumatic notation, and a brief historical and critical account of the document. The appearance of the "Antiphonaire de St. Grégoire" made a deep impression on the learned world, and obtained for its author a Brief of congratulation and encouragement from Pope Pius IX, 1 May, 1852, and a "very honourable mention" from the French Institute, 12 Nov. of the same year. Lambillotte now undertook to embody the results of his investigations in a new and complete edition of the liturgical chant books. He lived to finish this extensive work, but not to see its publication. The Gradual and the Vesperal appeared 1855--1856 in both Gregorian and modern notations, under the editorship of Father Dufour, who had for years shared the labours of Lambillotte. He also published the "Esthétique", a volume of 418 pages, 8, setting forth Lambillottes views on the theory and the practice of Gregorian music. This treatise is the best testimony to the authors untiring zeal and critical ability.

Dom Pothier, the learned Benedictine, who has gone over the same ground, and who has just succeeded in completing the Gregorian restoration, says of the "Esthétique" that it is "filled with precious information" (*Mémoires Grégoriennes*, p. 145, note). At the same time he calls attention to some serious errors in translation and even in reading, on the subject of rhythm, which, he holds, have been conclusively refuted by Chanoine Gontier, in his "Méthode de Plain Chant", pp. 96 etc. De Monter also speaks of grave errors and numerous assertions contrary to its own method, that have crept

into the treatise. He attributes the introduction of the sharp into the Gregorian scales to the editors of this posthumous work (p. 207). Lambillottes "Gradual" and "Vesperal" were adopted by only a small number of French dioceses. The time had really not yet arrived for the practical application of theories, nor for the introduction of the full text of St. Gregory. This Lambillotte seems to have felt when he so far yielded to the temper of his generation as to make some of those very cuts and alterations which had been the chief reproach of former editions. Twenty-five years were still to elapse before the classical work in Gregorian music, the "Mélodies Grégoriennes" by Dom Pothier, O.S.B., could make its appearance (Tournay, 1880), and another twenty-five before the teaching of Dom Pothier was to receive official sanction and practical application through the Vatican edition, now in progress of publication. To Father Louis Lambillotte belongs the credit of having successfully inaugurated this important movement. By his writings the issue of Gregorian restoration was forced upon the world; by his researches and especially by the publication of the "Antiphonarium of St. Gregory", this arduous enterprise was placed on a solid, scientific basis. His contemporaries placed the following inscription on his tomb at Vaugirard:

Qui cecinit Jesum et Mariam, eripuitque tenebris
Gregorium, hunc superis insere, Christe, choris.

Receive, O Christ, into Thy choirs above him who sang the praises of Jesus and Mary, and rescued the music of Gregory from the darkness of ages.

The detailed list of works is given by SOMMERVOGEL in *bibliothèque de la Cie de Jésus*, IV (Paris, 1893): also by DE MONTER in *Etudes biographiques et critiques*, III, *Louis Lambillotte et ses frères*, which contains a portrait by Jacott, and two autographs (Paris, 1871); DIDOT, *Nouvelle biographie générale*; FÉTIS, *Biographie des Musiciens*, 2nd ed.; LE GLAY, *Supplém. au Diction. de Feller*, 1856; SOULLIER, *De la restauration du chant Grégorien* in *Etudes religieuses*, XLVI (1889), 12-15.

J.B. YOUNG

Denis Lambin

Denis Lambin

(DIONYSIUS LAMBINUS.)

French philologist, b. about 1520, at Montreuil-sur-mer, in Picardy; d. at Paris, 1572, from the effects of the shock given to him by the Massacre of St. Bartholomew. He began his studies at Amiens. He entered the service of the Cardinal de Tournon, whom he accompanied on two visits to Italy (1549-53; 1555-60). In this way he saw

Rome, Venice, and Lucca, and was brought into contact with Italian scholars such as Faerno, Muret, Sirleto, Fulvio Orsini. During his sojourn in Venice, at the suggestion of the Cardinal de Tournon, he translated Aristotle's "Ethics" (1558). Later he translated the "Politics" (1567), and also various orations of Æschines and of Demosthenes (1565, 1587). Shortly before his death he published a discourse on the usefulness of Greek studies and on the method of translating Greek into Latin (1572). On his return to France (1561) he was appointed royal professor of Latin language and literature in the Collège de France, but that, same year he was transferred to the chair of Greek. However, excepting his translations and an edition of Demosthenes (1670), his most important works are editions of Latin authors: Horace (1561), Lucretius (1564), Cicero (1566), Cornelius Ne pos (1569). In the matter of these four authors Lambins work shows a marked advance, and opens a new era in the history of their text. He does not, however, indicate with sufficient exactness the manuscripts he consulted. It is evident that for Lucretius he had examined one of the two manuscripts recognized as fundamental by Lachmann. Moreover, the commentary on Horace and Lucretius is extensive and accurate, contains many quotations, correct remarks, and explanations based on a profound knowledge of Latin. Lambin does not affect the rigorous method of modern philologists. Like older scholars he is often capricious, arbitrary, erratic. Despite these defects, common in his day, Lambin's work retains an important value and is consulted even today.

In 1559 Muret published his "Variæ Lectiones". Lambin recognized in it some of his own notes on Horace, and accused Muret of having abused his confidence and plagiarized him. In 1561 he published their correspondence. The two former friends, moreover, were separated by their tendencies. Muret had become a friend of the Jesuits, whom Lambin detested on account of their differences with the University of Paris. Lambin was regarded by the Catholics of Italy as inclined to heresy, although on 8 July, 1568, he, with seven of his colleagues, took the oath of Catholicism. Before his death Lambin had undertaken a commentary on Plautus, and had begun the notes on the thirteenth play, the "Mercator". His notes, though imperfect and unmethodical, were published (1576) after his death.

PAUL LEJAY

Luigi Lambruschini

Luigi Lambruschini

Cardinal, b. at Sestri Levante, near Genoa, 6 March, 1776, d. at Rome, 12 May, 1854. As a youth he entered the Order of the Barnabites, in which he held many important offices. On account of his learning he was made consultor of several Roman Congregations, and in 1815 accompanied Cardinal Consalvi to the Congress of Vienna in the capacity of secretary. After his return to Rome he was made secretary of the Congregation of Extraordinary Ecclesiastical Affairs, then recently instituted by Pius VII, and thus took a great part in concluding concordats with various states, especially with Naples and Bavaria. In 1819 he was appointed Archbishop of Genoa and governed the archdiocese with prudence and zeal. His eloquent sermons attracted large audiences, and his pastoral letters exhibit much spiritual unction. In 1827 Leo XII sent him as nuncio to Paris, but the Revolution of July, 1830, compelled him to interrupt his mission. On his return to Rome he was made a cardinal (1831) by Gregory XVI, who, on the resignation of Cardinal Bernetti, appointed Lambruschini Secretary of State. This appointment aroused much discontent among the Romans, but it was soon evident that Lambruschini was the proper man for the post. His character and disposition accorded perfectly with those of the pope: in the ecclesiastico-political relations with other nations both were persuaded that it was time to abandon the conciliatory policy inaugurated by Benedict XIV, a conviction that was soon justified by events. The occasion was the Cologne question, which had arisen in 1837 out of the imprisonment of Mgr. Droste-Vischering, Archbishop of Cologne. The diplomatic documents exchanged at this time between the Holy See and the Prussian Government, and published in 1838, are models of clear exposition, close argument, and elegant form. Gorres described the series as a "calm, vigorous, masculine, and substantial polemic". Lambruschini's firm stand caused the recall of Bunsen, the Prussian minister at Rome. Next to Consalvi and Pacca, Lambruschini was among the greatest diplomats of the Holy See in the nineteenth century. As regards the internal policy of the Pontifical States, he, like Gregory XVI, was opposed to the constitutional form, and certainly, if we consider the arrogance of Liberalism under Gregory, neither the pope nor his secretary can be charged with serious error.

In the first ballot of the conclave of 1846, Lambruschini received a majority of the votes, but not enough for election. When Pius IX was chosen, Lambruschini recognized that he could not follow the policy of the new pope, who favored constitutionalism. He accordingly resigned his office for that of secretary of Briefs, and later that of prefect

of rites. In the Revolution of 1848 he was the object of especial hatred; his dwelling was plundered, his bed cut to pieces with daggers, and he himself was scarcely able, disguised as a stableman, to join Pius IX at Gaeta. As the Suburbicarian Bishop of Porto and Santa Rufina he restored the cathedral of Porto. He was also commendatory Abbot of Farfa, where he founded a seminary. He was buried in the college of the Barnabites at Catinari, where he had spent a great part of his religious life. He published "Opere spirituali" in three volumes (Rome, 1838) and later a small work in defense of the Immaculate Conception.

Giambattista Lambruschini

Brother of the preceding, d. at Orvieto, 24 Nov., 1826. He was vicar-general of Genoa, whence he was expelled by Napoleon in 1800, when he went to Rome. Appointed Bishop of Orvieto in 1807, he was deported to France for not taking the oath. In 1814 he returned to Orvieto.

Raffaele Lambruschini

Nephew of Luigi and Giambattista, b. at Genoa, 14 August, 1788; d. 8 March, 1873, at Figline in Tuscany. As a priest he was first with his uncle Giambattista at Orvieto. Being suspected of Liberal ideas, he returned to Figline, where he devoted himself to the natural sciences, especially agriculture, and in 1827 founded the "Giornale Agrario Toscano". He also established an educational institution, and published (1836-44) the "Guida dell' educatore", as well as several pedagogical and scholastic works. In 1848 he was elected to the Parliament of the republic, and in 1860 was appointed senator of the realm. He was also consul of the Accademia della Crusca and (1868-69) professor at the Institute of Higher Studies at Florence.

SCHLECHT in Kirchliches Handlexikon (Munich, 1907), s.v.; BROSCH, Gesch. des Kirchenstaats, II (1883).

U. BENIGNI

Joseph Lambton

Ven. Joseph Lambton

English martyr, b. 1569; d. at Newcastle-on-Tyne. The day of his death is variously given as 23 June, 23 July, and 27 July, and the year as 1592 and 1593; but from a letter of Lord Huntingdon it is clear he died before 31 July, 1592, and Father Holtby's Stonyhurst MS. says he died on a Monday, so that the probable date is 24 July, 1592. He was the second son of Thomas Lambton of Malton-in-Rydall, Yorks, and Katharine, daughter of Robert Birkhead of West Brandon, Durham. He arrived at the English College, Reims, in 1584, and at the English College, Rome, in 1589. Being allowed to curtail his theological course, he was ordained priest when only twenty-three, and sent

on the mission on 22 April 1592. He was arrested at Newcastle on landing with the Ven. Edward Waterson, and condemned at the next assizes under 27 Eliz., c. 2. He was cut down alive, and the reprieved felon who acted as hangman refused to complete the sentence, which was at last carried out by a Frenchman practicing as a surgeon at Kenton.

JOHN B. WAINWRIGHT

Diocese of Lamego

Lamego

(LAMECENSIS).

Diocese situated in the district of Vizeu, province of Beira, Portugal. The city has a Gothic cathedral, with a high tower, and a Moorish castle, and is known as the meeting-place of the famous parliament of 1143, which settled the royal succession for the Kingdom of Portugal and established the old feudal Cortes, convened for the last time in 1698; the Cortes of Lamego spoken of in modern Portuguese history is the one called by Dom Miguel after he had dissolved the constitution in 1828. According to local but untenable tradition the city received the Gospel from St. James the Greater, or St. Paul. Many Portuguese authorities mention as first Bishop of Lamego Petrus Rathensis, who is said to have been a disciple of the Apostle St. James, and who subsequently became first Bishop of Braga and a martyr (see BRAGA, ARCHDIOCESE OF). The authentic history of the See of Lamego begins with Bishop Sardinarius, whose signature appears in connection with the Second (Third) Council of Braga (572) among the suffragans of the well-known Martín of Braga. Shortly before this, at the Council of Lugo (569), at the commission of King Theodomir, several new dioceses were created. It is probable, therefore, that the foundation of the See of Lamego took place between 569 and 572. Among its early bishops are: Philippus (c. 580-89), Profuturus (c. 630-38), Witaricus (c. 646), Filimirus (653-56), but scarcely more than their names is known. In 666 a new circumscription of the Lusitanian sees was made, by which Lamego was placed under the jurisdiction of Mérida (Hefele, "Conciliengeschichte", III, 2nd ed., Freiburg im Br., 110). From 693 to 876 there is a gap in the episcopal list of Lamego. On the invasion of the Moors in 714, the Bishop of Lamego, like many of his contemporaries, was obliged to take refuge in the Asturias. It is not until 876 that we again come across a Bishop of Lamego, Argimirus (Flórez, "España Sagrada", who is apparently identical with Argimirus (II) who, in 899, took part in the consecration

of the cathedral of Compostela (cf. López Ferreiro, "Historia de la Santa A. M. Iglesia de Santiago de Compostela", II, Santiago, 1899, 192). It is doubtful if even the few known bishops of Lamego who are mentioned during the time of the Moors (except Argimirus, Brandericus, Pantaleon, and Jacobus) resided at all at Lamego; it is probable that they were only titular bishops, especially as Almansur of Cordova destroyed the city in 982. This confusion lasted till Ferdinand the Great reconquered the city in 1057 (or 1038?) and the Church was reorganized. In 1071 a Bishop Peter of Lamego is mentioned in a deed of gift by the Infanta Urraca, daughter of Ferdinand the Great, to the Church of Tuy. The see seems to have been vacant for several decades, as is evident from a letter of Pope Paschal II (1099-1118) to Bishop Mauritius of Coimbra. When Portugal was established as an independent kingdom, in 1143, by Alfonso I, the See of Lamego was revived and the Augustinian Mendo Godinu. (d. 1176) became the first bishop. It was at that time a suffragan of Braga. At the instance of Archbishop Peter of Santiago de Compostela, Innocent III, in 1199, re-arranged the Dioceses of Coimbra, Vizeu, Lamego, and Egítania (the present Guarda), allotting the first two to the Archbishopric of Braga and the last two to Santiago de Compostela (Flórez, *op. cit.*, IV, 274 sqq.; López Ferreiro, *op. cit.*, V, 29 sqq.). Lamego remained a suffragan of Compostela until the Archdiocese of Lisbon was established in 1394, after which it was a suffragan of that see. The diocese was enlarged in 1430, when the district of Riba Coa was ceded to Portugal by the Kingdom of Leon. Until then this district had belonged to the Spanish See of Ciudad Rodrigo, but once joined to Portugal, it became part of the Diocese of Lamego. Clement XIV (10 July, 1770) created the Diocese of Pinhel (Pinelensis) in the aforesaid district, which, however, was suppressed by Leo XIII by the Bull "Gravissimum" (30 Sept., 1881), which replaced Lamego under the metropolitan of Braga and gave new limits to the diocese.

Lamego is bounded on the east by the Diocese of Guarda, on the south by that of Vizeu, on the west by Coimbra, on the north by Porto and Braga; it has (1909) 273,741 inhabitants, almost entirely Catholic, 283 parishes, 283 parish churches, 1144 public chapels, 314 secular priests, one college for boys at Lamego conducted by Benedictines; 2 houses of Portuguese Franciscan nuns, one house of Sisters of St. Joseph of Cluny, and one of Franciscan nuns. The present bishop (1910) is Francisco José de Vieira e Brito, who was born 5 June, 1850, at Rendufinho (Archdiocese of Braga), studied at Coimbra, was professor of theology at the seminary at Braga, also canon and vicar-general there. On 13 Jan., 1892, he was nominated to the See of Angra (Azores), and in 1902 was transferred to Lamego. He restored the cathedral and the bishop's palace, enlarged the diocesan seminary, and assisted in the foundation of a new Catholic workingmen's club.

FLOREZ, Espana Sagrada, XIV (Madrid, 1758), 153-66; DA FONSECA. Memoria chronologica dos excellentissimos prelados de Lamego (Lisbon, 1789); DE FIGUEIREDO, Introduccao para a historia eccles. do bispado Lamecense (Lisbon, 1787); DE AZEVEDO, Historia eccles. da cidade e bispado de Lamego (Porto, 1878).

GREGOR REINHOLD

Felicite Robert de Lamennais

Félicité Robert de Lamennais

Born at Saint-Malo, 29 June, 1782; died at Paris, 27 February, 1854. His father, Pierre Robert de Lamennais (or La Mennais), was a respectable merchant of Saint-Malo, ennobled by Louis XVI at the request of the Estates of Brittany in acknowledgment of his patriotic devotion. Of the six children born of his marriage with Gratienné Lorin, the best-known are Jean-Marie (see below) and Félicité. The latter, though delicate and frail in physique, early exhibited an exuberant nature, a lively but indocile intelligence, a brilliant but highly impressionable imagination, and a will resolute to obstinacy and vehement to excess.

EDUCATION

At the age of five Lamennais lost his mother: his father, absorbed in business, was thus obliged to confide the education of Jean-Marie and Félicité to Robert des Saudrais, the brother-in-law of his wife, who had no children of his own. Jean-Marie and Félicité -- or Féli, as he was called in the family -- were taken to live with their uncle at La Chênaie, an estate not far from Saint-Malo, which Félicité was afterwards to make famous. At La Chênaie there was a well filled library in which works of piety and theological books were mingled with the ancient classics and the works of the eighteenth-century philosophers. Félicité was not very docile at his lessons, and, to punish him, M. des Saudrais would sometimes shut him up in the library. The child acquired a taste for the books he found around him, and read voraciously and indiscriminately all that came to his hands, good and bad. He even multiplied reasons for being shut up in the library, abandoned himself there to his favorite reading, and made such rapid progress that he was soon able to read the classical authors without difficulty. The Revolution was then at its height; the proscribed priests had been obliged to leave France, or to continue from hiding-places their sacred ministrations at the peril of their lives. The Lamennais household afforded an asylum to one such priest, Abbé Vielle, who sometimes said Mass at La Chênaie in the middle of the night. Félicité, who used to assist at the Divine services, derived from these early impressions a lasting and lively hatred of the Revolution. At the same time, his unwise reading, especially

of Jean-Jacques Rousseau, seduced his ardent mind and prejudiced him against religion. These prejudices found vent in objections which moved his confessor to postpone indefinitely his First Communion.

His father at first intended Lamennais to join him in his business, but the youth obeyed without enthusiasm. Always ill-at-ease in the office, he visited it as little as possible, and gave to reading all the time he could steal from his regular occupation. While he thus succeeded in completing his literary education and acquiring foreign languages, these studies undertaken without teachers or guidance necessarily left gaps in his training, and made him liable to contract dangerous habits of intellectual intolerance. The passions, too, gained a certain mastery over him, drawing him into lapses which he says, not without some exaggeration, in a letter written in 1809 to his friend Brute de Rémur, the future Bishop of Vincennes in Indiana, "the most rigorous austerities, the severest penance would not suffice to expiate". The happy influence of his brother Jean-Marie, who had recently (1804) been ordained a priest, rescued him from this condition. Restored to Christian sentiments, he made his First Communion, and resolved to consecrate himself to the service of the Church. He withdrew to La Chênaie and there gave himself up under his brother's direction to ecclesiastical studies, briefly interrupted (January to July, 1806) to reestablish his threatened health by a sojourn at Paris.

The Church of France was then in a struggling and precarious condition, being deprived of material resources and served but poorly by a clergy either enfeebled by age or inadequately prepared to meet the intellectual demands of the time. The two brothers set themselves to labor as best they could for the relief of the Church. In the common task which they imposed on themselves with this aim, the part that fell to Félicité, as being the better suited to his tastes, was chiefly intellectual and literary. In fact the story of his life is almost entirely contained in his books and articles. The first result of the joint labors soon appeared in a book published in 1808 under the title "Réflexions sur l'état de l'Eglise en France pendant le dix-huitième siècle et sur sa situation actuelle". The first idea of this work and the materials were due to Jean-Marie, but the actual writing was done almost exclusively by Félicité. After describing the evils under which the Church labored in France, the authors point out the causes and propose remedies, among others provincial councils, diocesan synods, retreats, ecclesiastical conferences, community life, and proper methods in recruiting the clergy. Many of these views were calculated to offend the imperial government; the book was suppressed by the police, and was not republished until after the fall of the Empire. Meanwhile, the two brothers had left La Chênaie for the College of St-Malo, in which they had been appointed professors. Félicité was to teach mathematics; for he had to earn a living now that his father, already financially injured by the wars of the Conven-

tion, saw his business ruined by the Continental Blockade, and was obliged to surrender all his property to his creditors. This ecclesiastical college having been closed by imperial authority, Félicité withdrew to La Chênaie, while his brother was called, as vicar-general, to Saint-Brieuc. There Félicité completed another work, in which also he had his brother's collaboration, and which was to have been printed and published at Paris in 1814. In opposition to Napoleon, who wished to transfer the right to the metropolitans, the two brothers vindicated the pope's exclusive claim to the canonical institution of bishops. This work marked the beginning of Lamennais' long struggle against Gallicanism. However, the fall of Napoleon, coming some months before the book appeared, made it no longer appropriate, and it thus obtained only a *succès d'estime*. Lamennais next published a violent article against the imperial university; indeed, when Napoleon returned from Elba, the young writer, thinking himself insecure in France, went over to England, where he found a temporary asylum with M. Carron, a French priest who had established in London a school for the children of *émigrés*. On his return to France after the Hundred Days, Lamennais made M. Carron his confidant and took up his residence near him in Paris. Under the influence of this worthy priest and on the advice of M. Beysserre, a Sulpician, he decided, though not without strong repugnance and some sharp prickings of conscience, to take Holy orders, and was ordained a priest on 9 March, 1817.

STRUGGLE AGAINST INFIDELITY AND GALLICANISM

Towards the end of the same year appeared the first volume of the "Essai sur l'indifférence en matière de religion". >From beginning to end the book was a vigorous attack on that indifference which appears (1) among those who, seeing in religion nothing but a political institution, think it a necessity only for the masses; (2) among those who admit the necessity of a religion for all men, but reject Revelation; (3) among those who recognize the necessity of a revealed religion, but think it permissible to deny all the truths which that religion teaches with the exception of certain fundamental articles. While open to some criticism in regard to the development of its ideas and the force of some of the arguments employed, the "Essai" brought to Catholic apologetics a new strength and brilliancy, and at once commanded public attention. Not content with a defensive attitude in the presence of incredulity, it attacks the enemy boldly, supported by all the resources of dialectic, invective, irony, and eloquence. The clergy and all educated Catholics thrilled with joy and hope, when this champion entered the lists armed as none since Bossuet, for it was indeed with Bossuet and Pascal that this priest, yesterday unknown, was now compared. In the pulpit of Notre-Dame of Paris Frayssinous hailed Lamennais as the greatest thinker since Malebranche. Meanwhile, editions of the "Essai" came rapidly from the press; 40,000 copies were sold within a few weeks, it was translated into many foreign languages, and its perusal

effected in some places notable returns, in others brilliant conversions to Catholicism. Some of these converts, such as Mme de Lacan (afterwards, by her second marriage, the Baroness Cottu), Benoît d' Azy, Senfft-Pilsach, thenceforth carried on an uninterrupted epistolary correspondence with Lamennais. These letters, with others published since then or about to be published (addressed to such friends as Mlle Cornulier de Lucinière, de Vitrolles, Coriolis, Montalembert, Berryer, Marion, Vaurin, David Richard), add considerably to our knowledge of his writings, and are not the least interesting part of his works. With their aid we can witness the intimate workings from day to day of a mobile and impressionable mind; in them we perceive an aspect of his character which so seldom appears in his other works his loving, kind, and tender disposition, lavish in devotion and of a timidity which sought a refuge in outspokenness.

Lamennais was now looked upon as the most eminent personality among the French clergy; visitors flocked to see him; the press solicited his contributions. He promised his collaboration to "Le Conservateur", a royalist paper of the Extreme Right party, for which Chateaubriand and de Bonald were writing. Lamennais, however, cared much less for politics than for religion, and contributed to "Le Conservateur" only in defense of Catholic interests. For him it was not enough to discredit infidel philosophy: he meant to put something else in its place. He believed that the Cartesian rationalism which had recently attacked the foundations of Christian faith, and therefore necessarily of human society, could be combated by a system which should firmly re-establish both. To this object he devoted the second volume of the "Essai", published in 1820. The philosophic system which he expounded in this volume was based on a new theory of certitude. In the main, his theory is that certitude cannot be given by the individual reason; it belongs only to the general reason, that is to the universal consent of mankind, the *common* sense; it is derived from the unanimous testimony of the human race. Certitude, therefore, is not created by evidence, but by the authority of mankind; it is a matter of faith in the testimony of the human race, not the result of free enquiry. In the last chapters of the book this philosophic system supports an entirely new method of apologetics. There exists, says Lamennais, a true religion, and there exists but one, which is absolutely necessary to salvation and to social order. Only one criterion will enable us to discern the true religion from the false, and that criterion is the authority of testimony. The true religion, therefore, is that which can put forth on its own behalf the greatest number of witnesses. This is the case with the Christian, or rather the Catholic religion. It is in reality the true, the only religion which began with the world and perpetuates itself with it. The result of a primitive revelation, this unique religion has perfected itself in the course of ages without being essentially modified; Christians now believe all that the human race has believed, and the human race has always believed what Christians believe. The last

two volumes of the "Essai" (1823) were devoted to this thesis. In these he attempts to prove, with the aid of history, that the chief dogmas of Christianity have been and are still, under various disguises, professed throughout the world. Naturally, these later volumes failed to secure the success which the first had attained.

The philosophic system of Lamennais, like his apologetics, called forth serious objections. It was pointed out that this philosophy and apologetics favored scepticism by denying the validity of individual reason. If the latter can furnish no certitude, how can we expect any from the general reason, which is but a synthesis of individual reasons? It was also a confusion of the natural and the supernatural orders, of philosophy and theology, to base both alike on the authority of the human race; and, since according to him both alike are based on human testimony, religious faith was at once reduced to human faith. These criticisms and others irritated Lamennais without convincing him of his error; he submitted his book to Rome and, in reply to his critics, wrote the "Défense de l'Essai" (1821). Rome confined its intervention to giving its *imprimatur* to an Italian translation of the "Défense de l'Essai". Lamennais himself soon visited the Holy See; Leo XII received him very kindly and at one time even thought of making him a cardinal, despite his excitable character and exaggerated ideas. On his return to France, Lamennais showed a greater determination than ever to combat Gallicanism and irreligious Liberalism. On the occasion of a ministerial ordinance prescribing the teaching of the famous Declaration of 1682 (see GALLICANISM, VI, 384), he published his "Religion considérée dans ses rapports avec l'ordre civil et politique" (1825), in which he denounced Gallican and Liberal tendencies as the joint causes of the harm done to religion, and as equally fatal to society. Irritated by these attacks, a majority of the French bishops, who were moderate Gallicans, signed a protest against this pamphlet which accused them of leanings towards schism. Lamennais was also cited before the Tribunal of the Seine for attacking the king's government and the Four Articles of 1682 in their character of existing laws. Defended by his friend, the great advocate Berryer, he escaped with a fine of thirty francs. From this incident he conceived a lively hostility to the Bourbons, and was all the more energetic in maintaining ultramontane ideas against Frayssinous, Clausel de Montals, Bishop of Chartres, and other representatives of moderate Gallican principles.

On the other hand, he derived valuable assistance from a certain number of young men, ecclesiastics and laymen, who gradually formed a group of which he was the centre. Of these the best known are Gerbet, de Salinis, Lacordaire, Montalembert, Rohrbacher, Combalot, Maurice de Guérin, Charles de Sainte-Foy, Eugène and Léon Boré, de Hercé. With them Lamennais founded the "Congrégation de St. Pierre", a religious society whose distinctive duty was to defend the Church by the study of theological and other sciences, by propagating Roman doctrines, by teaching in colleges

and seminaries, by giving missions and spiritual direction. Hardly had this congregation come into existence when Mgr. Dubois, Bishop of New York, appealed to it to supply teachers to the Catholic University which it was then proposed to found in that city. The Revolution of 1830 put an end to this project. The congregation at one time possessed three houses -- La Chênaie, Malestroit, and Paris -- but it lived only about four years. Obligated to reckon with the demands of the Liberals, whom the elections had returned to the Chamber of Deputies, the government of Charles X had revived (15 June, 1828) former legislative enactments against the religious congregations -- particularly against the Jesuits, eight of whose colleges were closed. Although ill-disposed towards the Jesuits on account of their lack of sympathy for his philosophic system, Lamennais took up their defense in a book published in 1829 under the title "Progrès de la Révolution et de la guerre contre l'Eglise". His attacks spared neither the king nor the bishops, whom he reproached with their Gallicanism and their concessions to the enemies of religion. Here, for the first time, Lamennais openly broke with monarchy, setting his highest hopes upon political liberty and equal rights. "An immense liberty", he said "is indispensable for the development of those truths which are to save the world." This was what he called "catholicizing liberalism". The work met with enormous success. The bishops themselves protested almost unanimously against the Government's action. Not, however, that they approved of Lamennais' violent language; the Archbishop of Paris in a pastoral charge even condemned the work, and this drew from Lamennais two open letters in which the archbishop's Gallican ideas were unreservedly criticized.

When the Revolution broke out the next year (July, 1830), sweeping the Bourbons away and lifting the House of Orleans to the throne, Lamennais beheld without regret the departure of the one, and without enthusiasm the accession of the other dynasty. "Most people", he writes in his letters, "would prefer a republic frankly declared; I am of that number" Thenceforward he thought only of the defense of Catholicism against the triumphant party, who never forgave it the favor it had enjoyed from the fallen monarchy. While laboring to ward off the danger which menaced the Church, he hoped at the same time to ensure its social triumph by setting up its defense on the basis of equal rights, uniting its cause with that of public liberties. With this end in view he founded the journal "L'Avenir" (16 October, 1830) and his "General Agency for the Defense of Religious Liberty". With Lacordaire, Gerbet, Montalembert, and de Coux, he waged a grim battle in defense of Catholics against the hostility of the government, of Roman ideas against the Gallicanism of the clergy, and of his system of the "common sense of mankind" against rationalistic philosophy. The force of his blows, the boldness of his ideas, his outspoken sympathy for every people then in a state of revolt, provoked new accusations against him and gave rise to suspicion of his

orthodoxy. To set himself right in the face of all this hostility, he suspended the publication of "L'Avenir" (15 November, 1831), and went to Rome to submit his cause to Gregory XVI. Though accompanied by Lacordaire and Montalembert, he did not find there the pronounced welcome of 1824. He waited a long time, but received no definite answer: then some days after his departure from Rome, appeared the Encyclical "Mirari vos" (15 August, 1832), in which the pope, without expressly designating him, condemned some of the ideas advanced in "L'Avenir" liberty of the press, liberty of conscience, revolt against princes, the need of regenerating Catholicism, etc. At the same time a letter from Cardinal Pacca informed Lamennais that the pope had been pained to see him discuss publicly questions which belonged to the authorities of the Church.

LAMENNAIS OUT OF THE CHURCH

Having forthwith declared that out of deference to the pope he would not resume the publication of "L'Avenir" Lamennais suppressed the "General Agency", went back to La Chênaie, and there apparently kept silence. In his heart, however, he cherished deep resentment, the echoes of which reached the outer world through his correspondence. Rome was stirred by this behavior, and demanded frank and full adhesion to the Encyclical "Mirari vos". After seeming to yield, Lamennais ended by refusing to submit without reserve or qualification. Little by little, he began by renouncing his ecclesiastical functions (December, 1833) and ended by abandoning all outward profession of Christianity. The amelioration of humanity, devotion to the welfare of the people and of popular liberties, dominated him more and more. In May, 1834, he published the "Paroles d'un croyant", through the apocalyptic diction of which resounds a violent cry of rage against the established social order: in it he denounces what he calls the conspiracy of kings and priests against the people. In this way he loudly declared his rupture with the Church, and set up the symbol of his new faith. Gregory XVI hastened to condemn in the Encyclical "Singulari nos" (15 July, 1834) this book, "small in size, but immense in perversity", and at the same time censured the philosophical system of Lamennais. One after another, all his friends abandoned him, and, as if to break finally with his own past, Lamennais wrote a volume on "Les Affaires de Rome", in which he set forth, very much in his own favor, his relations with Gregory XVI. After this he published only works inspired by his new democratic tendencies, repeating with no great show of originality the ideas of "Les Paroles d'un croyant", the whole foundation of which consisted of a few humanitarian commonplaces, relieved here and there with vague socialism. The Government having in 1835 caused the arrest of 121 revolutionaries in connection with certain disturbances, Lamennais consented to undertake the defense of his new friends before the Peers. Besides some articles in the "Revue des Deux Mondes", the "Revue du Progrès" and "Le Monde", he published a series of

pamphlets, e.g. "Le Livre du peuple" (1839), "L'Esclavage moderne" (1839), "Discussions critiques" (1841), "Du passe et de l'avenir du peuple" (1841), "Amschaspands et Darvands" (1843). In these writings he expounds his views on the future of democracy or vents his rage against society and the public authorities. One of his works, "Le Pays et le Gouvernement" (1840) brought down on him a year's imprisonment, which he served in 1841.

Mention should here be made of his "Esquisse d'une philosophie", published from 1841 to 1846. It comprises a treatise on metaphysics in which God, man, and nature are studied by the light of reason only. Many of the opinions maintained in this book remind one that it was begun when its author was a Catholic, but there are many others which betray his later evolution; he denies in formal terms the fall of man, the Divinity of Christ, eternal punishment, and the supernatural order. The portions of the work devoted to aesthetics are among the finest that Lamennais ever wrote, while the general tone breathes a spirit of serenity and calm. To this epoch, too, belongs the translation of the Gospels, with anti-Christian notes and reflections. It was not the first work of piety that Lamennais had published. From 1809 he had devoted his moments of leisure to the translation of the "Spiritual Guide" of Louis de Blois. In 1824 he published a French version of the "Imitation of Christ" with notes and reflections, more widely read than any of his works. Then came the "Guide du premier âge", the "Journée du Chrétien", and a "Recueil de piété" (1828). To spread this pious literature he had become connected with a publishing house, the failure of which led to his financial ruin..

The Revolution of 1848 brought to Lamennais a renewal of hope and celebrity. He was elected a deputy for Paris in the Constituent and in the Legislative Assemblies. His plan of a constitution, however, met with no success, and thereafter he confined himself to silent participation in the sessions. He was not more fortunate in a newspaper, "Le Peuple constituant", in which he made common cause with the worst revolutionaries; its existence ended after four months, through failure to furnish its *cautionnement*. The *coup d'état* of 1851 put an end to the political career of Lamennais, who relapsed into misery and isolation. Numerous attempts were made to bring him back to religion and to repentance, but in vain. He died rejecting all religious ministrations, and after requesting that his body "be carried to the cemetery, without being presented at any church".

However regrettable his end, it does not efface the memory of Lamennais' great services to the Church of France. When that Church lay bleeding from the blows inflicted on it by the Revolution, and intimidated by the insolent triumph of infidel philosophy, he consecrated to her relief, both absolute devotion and abilities of the highest order. He was the first apologist to compel the attention of unbelievers in the

nineteenth century, and to force them to reckon with the Christian Faith. He was the first who dared to attack Gallicanism publicly in France, and prepared the way for its defeat, the crowning work of the Vatican Council. To him also belongs the honor of having inaugurated the struggle which was to issue in freedom of education (*liberté d'enseignement*). Despite his justly blamable excesses, we must trace to him that reconciliation between Catholicism on the one hand and popular liberty and the masses of the people on the other, upon which Leo XIII set the final seal of approbation. If a temper impatient of all restraint and a pride overconfident in its own conceits deprived him of the blessings which he was instrumental in securing for others, this is surely no reason why the beneficiaries should forget to whom they owe their happier condition.

For the works and historical accounts of Lamennais published during his life, see QUERARD, *Les supercheries littéraires dévoilées* (2nd ed., Paris, 1870), col. 510-634. ANTOINE DEGERT

Jean-Marie-Robert de Lamennais

Jean-Marie-Robert de Lamennais

French priest, brother of Félicité Robert de Lamennais, b. at St-Malo in 1780; d. at Ploërmel, Brittany, in 1860. On the day after the Concordat of 1801 he carried out the purpose he had manifested since before the Revolution of entering Holy orders. He was ordained in 1804 (25 Feb.) after theological studies pursued both in private and under the direction of Abbé Vielle. We have already spoken of the influence he exercised over his brother Felicite. Older than he by two years, he did not possess his brilliant literary qualities, but he had a more robust constitution, and was temperamentally calmer and more equable. He shared, as we have seen, his brother's education, his studies, and his first labors. But an active ministry was more to Jean's taste. Leaving, therefore, to his brother the exclusively intellectual apostleship, he became, after the

suppression of the College of St-Malo, vicar-general to the Bishop of Saint-Brieuc. Later he was also vicar general of the Great Almoner of France, the Cardinal Prince of Troy, and of the Bishop of Rennes. Wherever he went, he did not spare himself—establishing colleges, seminaries, communities of women, and schools. He took an active part in the foundation of the Congregation of St. Peter, of which he had almost always the practical management and for a time the title of superior general. In fact, it was on account of his position in this congregation that he received from Mgr. Dubois the title of Vicar General of New York, when that prelate sought his assistance.

His brother's apostasy, while wounding him most deeply, also created for him a great deal of annoyance among the clergy of Brittany. Refusing thenceforth every honor—even that of the episcopacy, which, it is said, was offered him seventeen times—he devoted himself wholly to what was the great work of his life, the Institute of the Brothers of Christian Instruction. He had established it in 1817 to supply the benefits of Christian teaching in country districts too poor to secure the services of the Brothers of the Christian Schools of St. Jean Baptiste de la Salle, who were not allowed to work singly. When he was still vicar general of Saint-Brieuc, he would seek in the fields and assemble in his own home young peasants, whom he himself instructed in the ways of piety and to whom he imparted elementary knowledge. From these gatherings grew his congregation, with which the members of a similar institution established by M. Gabriel Deshayes, Vicar-General of Vannes, soon associated themselves. In 1820 he had about 50 disciples; in 1829 he had 133; over 260 in 1831; 650 about 1837. When he died, 800 were scattered throughout Brittany, Gascony, in the colonies of the Antilles, Senegal, Cayenne, and Haiti, whither they had been sent by the French government. This great and rapid success was due chiefly to the skillful and energetic administration of Jean de Lamennais. For forty years he was the one who attracted and trained the recruits, guided the young teachers, opened and visited the schools. He also won for them the gratitude of the public authorities, and the approbation and praise of Pius IX testified in a Brief of 1 February, 1851; and he built for them a fine mother-house at Ploërmel. He himself was an example of all the Christian virtues to such a degree that forty years after his death, which occurred on 26 Dec., 1860, the process *de fama sanctitatis* with a view of his beatification was initiated under the patronage of the Bishop of Vannes. His native land has not forgotten him. At Ploërmel a statue has been raised to the memory of this man, who perhaps has done more than any other in the nineteenth century for the Christian education of the people. In the beginning of the twentieth century, before the persecution in France scattered the teaching congregations, his institute was more prosperous than ever and counted among its members about 2700 religious, giving instruction to 75,000 scholars, and distributed among 460 institutions, of which one was in Canada.

Several of the works cited in the preceding bibliography contain information also concerning Jean-Marie. Cf. also ROPARTZ, *La vie et les aeuvers de Jean-Marie de Lamennais* (Paris, s. d.); LAVEILLE, *Jean-Marie de Lamennais* (2 vols., Paris, 1903).

ANTOINE DEGERT

Family of Lamoignon

Family of Lamoignon

Illustrious in the history of the old magistracy, originally from Nivernais. Owing to the nearness of the University of Bourges, the Lamoignons, in the sixteenth century, had the benefit of the excellent juridical instruction given there.

Charles de Lamoignon (1514-73)

The pupil of the renowned juriconsult Alciat.

Chrétien de Lamoignon (1567-1636)

Son of the preceding, was a pupil of Cujas. Both this and the foregoing were members of the Parlement of Paris.

Marie des Landes (1576-1651)

Wife of Chrétien de Lamoignon, was associated in work with St. Vincent de Paul, who called her the mother of the poor; and she founded an association for the deliverance of those imprisoned for debt.

Madeleine de Lamoignon (1609-87)

Daughter of Chrétien, whom St. Francis de Sales prepared for her first communion, also assisted St. Vincent de Paul. Owing to her co-operation the saint was able to found the Hotel-Dieu and establish the institution for foundlings. When she died, a contemporary said, "The poor have lost one hundred thousand crowns."

Guillaume de Lamoignon (1617-77)

Guillaume de Lamoignon, having become in 1644 master of requests in the Parlement, took an active part in the Fronde of the Parlement against Mazarin. He became first president of the Parlement in 1658. The great work which he did towards preparing the codification of French laws has made him famous. A distinguished member of the Society of the Holy Sacrament, he was greatly devoted to the Catholic cause. He induced Colbert to give up his cherished idea of putting back to twenty-seven the age for ordination to priesthood, and the years required for monastic vows to twenty for the women and twenty-seven for the men. He had certain Gallican tendencies, and in 1663 he spoke before the Parlement in favor of the "liberties of the Gallican church" against a thesis suspected of ultramontanism. A nephew of Bishop Potier of Beauvais, a close friend of the Jansenist Hermant, Lamoignon was supposed to sympathize with Port Royal, but he chose Rapin, a Jesuit, as tutor for his sons, whom he also brought into

close acquaintance with Bourdaloue. When in 1664 the Jansenists deferred to the Parlement a confutation of Pascal's "Provinciales" written by the Jesuits, the decree which condemned this book nevertheless spared the Jesuits. On this occasion Lamoignon said to the king that he had been "a witness of the unfair outbursts of the Jansenists in all the differences they had with the Society of Jesus; and this Jansenist party, which was being formed in the kingdom on the dissemination of the new teaching, was but a cabal which would become pernicious to the State". It was Lamoignon who, having as first president to settle the dispute that had arisen at the Sainte-Chapelle between the precentor and the treasurer regarding a desk, furnished Boileau with the account of this incident from which the latter evolved the celebrated poem of the "Lutrin".

Chrétien-François de Lamoignon (1644-1709)

Son of the foregoing, was a member of the French Academy.

Nicolas Lamoignon-Bâville (1648-1724)

Brother of the preceding, intendant of Poitou (1682-85), and of Languedoc (1685-1718), made himself famous by the measures he adopted against the Protestants of these provinces, and by the manner in which he associated himself with the religious policy of Louvois, of which the revocation of the Edict of Nantes was the culminating point. But it is without proofs that Voltaire accused him of having instigated this revocation. "I never counselled the revocation of the Edict of Nantes", he wrote to his brother in 1708. On the contrary he considered that "in religion hearts must be attacked, for it is there that it resides", and immediately after the revocation he sent for Bourdaloue to come and evangelize the Protestants of Montpellier. >From 1702 to 1704 he helped in the repression of the uprising of the Camisards, occasioned in the Cevennes by English and Calvinistic influences.

Malesherbes (1721-94)

Malesherbes, who defended Louis XVI and died on the scaffold, was the grandson of Chrétien-François de Lamoignon.

FLECHIER, *Oraison funebre du president de Lamoignon* (Paris, 1677); LAMOIGNON-BAVILLE, *Memoires pour servir a l'histoire du Languedoc* (Amsterdam, 1734); SAINT-SIMON, *Memoires*, ed. BOISLISLE, 21 vols. (Paris, 1880-1909); VIAN, *Les Lamoignon: une vieille famille de robe* (Paris, 1896).

GEORGES GOYAU

Johann von Lamont

Johann von Lamont

Astronomer and physicist, b. 13 Dec., 1805, at Braemar in Scotland, near Balmoral Castle; d. 6 Aug., 1879, at Bogenhausen near Munich, Bavaria. He was educated in a private school in Scotland. Father Gallus Robertson, a representative of the Scotch monastery of St. Jacob at Ratisbon, accidentally met the boy after the death of his father in 1816 and took him to Germany as a novice. At Ratisbon he became especially interested in mathematical and scientific studies under the prior, Benedict Deasson. He did not take Holy orders but, in 1827, was recommended for appointment as assistant to Soldner, the director of the new observatory at Bogenhausen near Munich. His work there was so excellent that, after Soldner's death in 1835, he was chosen director. He was honored by membership in the Royal Bavarian Academy, the Academies of Brussels, Upsala, and Prague, the Royal Society of Edinburgh, etc. In 1852 he also became professor of astronomy at the University of Munich.

His scientific achievements are classified under three heads: astronomical, geodetic, and physical. His technical dexterity was such as to make the employment of a mechanic unnecessary. A room in his home was fitted up as a workshop. With the excellent one and one-half inch refractor furnished him in 1836 he studied especially nebulae and star-clusters, laying the foundation for such investigations. From observations of the moons of Uranus he calculated its mass (*Memoirs of the Royal Astr. Soc.*, XI, 1838). The ten volumes of the publications of the observatory, "*Observationes Astronomicae in Specula Regia Monacensi*", and the thirty-four volumes of the "*Annalen der königlichen Sternwarte bei München*" contain a great deal of material. In 1840 he began to observe the faint stars from the seventh to the tenth magnitude, and recorded 80,000 of them. In geodetic work he added the Bavarian survey to the Austrian, determined the differences of longitude of Vienna, Munich, Geneva, and Strasburg, and completed the astronomical triangulation of Bavaria. In telluric physics he was especially active. He organized a meteorological society which spread all over Germany. Numerous registering instruments of his own construction were set up, and officials attached to the various courts of law were also provided with meteorological instruments made by Lamont himself. He invented a portable theodolite for magnetic measurements and with it he established the constants of the earth's magnetic force for a number of places through Middle Europe, from Spain to Denmark. Owing to lack of funds only three numbers were published of the "*Annalen für Meteorologie und Erdmagnetismus*", 1842-4, but these contain a mass of valuable information.

For fifty-two years Lamont lived alone in the quiet village near his observatory, greatly respected by the inhabitants. To Munich he went only to deliver his lectures, to attend the meetings of the academic senate, or to spend a social evening in the Catholic Casino. His religious and political views were very decidedly conservative. Not caring for the ordinary pleasures of life, he managed to save a little fortune on his moderate salary, which reached a maximum of 6500 florins yearly at the end. This fortune was devoted to a scholarship for mathematical students, amounting to 72,000 marks in 1883. His larger works are: "Handbuch des Erdmagnetismus" (Berlin, 1849); "Handbuch des Magnetismus" (Leipzig, 1860); "Astronomie und Erdmagnetismus" (Stuttgart, 1851).

GUNTHER in *Allg. Deutsche Biog.*, XVII (Leipzig, 1883), 570; VON SCHAFHAUTL in *JORG, Hist.-polit. Blatter*, LXXXV (Munich, 1880), 54; VON ORFF in *Carl's Repertorium*, XVI (Leipzig and Munich, 1880), 685.

WILLIAM FOX

Louis-Christophe-Leon Juchault de La Moriciere

Louis-Christophe-Leon Juchault de la Moricière

French general and commander-in-chief of the papal army, b. at Nantes, 5 February, 1806; d. at the château of Prouzel, near Amiens, 11 September, 1865. His father was descended from an old Breton family whose device was *Spes mea Deus*. His mother was Desirée de Robineau de Bougon. He made his classical studies at the college of Nantes, where his professor of philosophy was a priest who afterwards became the Trappist Abbot of Bellefontaine. As had been the custom for centuries for the sons in his family, he was early destined for the army, and accordingly entered the Ecole Polytechnique, in Paris, in 1826, and two years later the Ecole d'Application at Metz. He left the latter school with a commission as sub-lieutenant in the engineers and was sent to Montpellier. In 1830 he joined the detachment that took possession of Algiers, and was made a captain of Zouaves as a reward for gallant conduct.

For seventeen years he remained in Africa, where he acquired a lasting reputation, acting not only as a valiant soldier, but as a pioneer of civilization, loved and esteemed by the Arabs as well as by his own soldiers. In 1833 he was directed by the French government to organize the "Bureau Arabe", a sort of tribunal whose mission was to serve as mediator between Frenchmen and Arabs. His authority was so great among the native tribes that he never carried any arms while travelling through the country, but only a stick with which to defend himself, and this caused him to be named Bou-Aroua (father with a stick). After the capture of Bougie, he was promoted major and in 1835 lieutenant-colonel of Zouaves. In that capacity he took part in many a *coup*

de main, inspiring his troops with indomitable courage, and always placing himself at the most perilous spot. His intrepidity at the storming of Constantine gained him the rank of colonel (1837). In 1840, after the engagement of Mouzaïa, he was raised to the rank of brigadier-general and was given the command of the division of Oran. In the following year he played a most prominent part in the expedition against Tagtempt and Mascara. Thanks to his skilful tactics and intrepidity, he subdued the tribe of Filtas (1843), and was created lieutenant-general. He next went to Morocco (1844), drove back the Moorish troops at Lalla-Maghnia, and contributed largely to the success of the battle at Isly (1845). Towards the end of that year, he was entrusted with the temporary governorship of Algeria. He then crowned his military career by surrounding Abd-el-Kader, who was compelled to surrender (23 November, 1847). Algeria being pacified, the distinguished soldier thought of retiring from military life and taking an active part in politics.

In 1846, having been elected deputy by the district of Saint-Calais (Sarthe), he had opposed the Guizot cabinet and created a stir by his speeches on Algeria and promotion in the army. On 21 April, 1847, he married Amélie d'Auberville. In February, 1848, he held for a few days the portfolio of war in the Thiers-Barrot cabinet, which he gave up when the Revolution burst out, causing the downfall of Louis Philippe. Having been elected to the Constituent Assembly (April, 1848) by the Department of Sarthe, he fought against the popular insurrection in June. On 28 June he again accepted the portfolio of war and directed all his efforts towards the organization of Algeria. When Louis Napoleon, to whose ambition he was strongly opposed, entered upon the presidency of the French Republic (20 December, 1848), he left the Cabinet and continued, as a deputy or as vice-president of the Assembly, to antagonize the Government. In the *Coup d'Etat* (2 December, 1852), he was arrested, imprisoned, first at Mazas, then at Ham, and finally expelled from France. His political career had lasted only four years; his exile lasted nine years. This was the most distressing period of his life. He first travelled in England and Germany and then settled in Belgium pining in his enforced idleness, and longing for active occupation. It was then that he came back to the faith of his youth. For many years, without being an infidel, he had neglected his religious duties, and even for a time had gone astray with the Saint-Simonians. Yielding to the entreaties of his friend Charles de Montalembert, the great Catholic orator, he began to study one by one all the articles of the Credo. From that time to the day of his death he lived according to his faith as a devout Catholic.

In 1860 his cousin, Mgr. de Mérode, induced him to take command of the papal army. It was a hazardous task. Ignoring the jeopardy of his established military reputation, he went to Rome. It took only one year to convince him that the undertaking was hopeless. His 8000 men were defeated by the 50,000 men of Cialdini at Castelfid-

ardo (18 September, 1860), and Ancona was obliged to surrender. He bore this severe blow to his reputation with Christian resignation. Deeming his services no longer useful to the papal army, he returned to France, and went to live in his château of Chaillon (Maine-et-Loire). A national subscription was collected to present him with a sword of honour, but he emphatically declined to receive it, on the ground that he was only a defeated general. The only distinction he ever accepted, under personal pressure from Pope Pius IX, was the Cross of the Order of Christ. His last years were devoted to pious works. He built a church at his own expense for the poor parish of Loroux-Beconnais, and contributed large sums to an orphanage and a Catholic school which he had founded. He took pleasure in reading religious books, among which the Holy Bible, the "Summa Theologica" of Saint Thomas, and the "History of the Church" by Darras, were his favourites. When the encyclical letter of 8 December, 1864, was published, he read it with delight, being happy to find in it an answer to many questions which distressed him. His death was sudden. His name is now extinct, as he left only daughters, having lost his only son in 1859, but his fame will last forever as that of a gallant soldier and a true Christian.

LOUIS N. DELAMARRE

Wilhelm Lamormaini

Wilhelm Lamormaini

Confessor of Emperor Ferdinand II, b. 29 December, 1570, at Dochamps, Luxemburg; d. at Vienna, 22 February, 1648. His father, Everard Germain, was a farmer and a native of La Moire Mannie: hence the name Lamormaini. Lamormaini studied first at the gymnasium of Trier, and thence went to Prague, where he received his doctor's degree, and in 1590 entered the Jesuit Order. Ordained priest in 1596, he was called to the University of Graz as professor of philosophy in 1600, became professor of theology in 1606, and in 1614 was appointed rector of the Jesuit College at the same place. Between the years 1621 and 1623 he was in Rome, but became in the latter year rector of the Jesuit college at Vienna, and in 1637 rector of the academic college in that city (the present university). From 1643 to 1645 he was provincial of the Austrian province of his order, but was compelled to relinquish this office on account of the gout, which made his visitations a task of the greatest difficulty. During the last years of his life, he established a seminary for poor students in Vienna, the "Ignatius- und

Franciskus-Seminarium für Stipendisten". After the death of his fellow Jesuit Martin Becanus in 1624, he became the confessor of Ferdinand II, and as such his name appears in the political affairs of the time. He was an esteemed and influential counselor of the emperor, so much so indeed that his enemies affirmed that it was not the emperor, but the Jesuits who ruled the empire. When the Protestants were compelled to give up all ecclesiastical property taken from the Catholics (Edict of Restitution, 1629), Lamormaini was influential in having it used for the propagation of the Catholic Faith. He also took part in the proceedings against Wallenstein (Jan., 1634). He was offered a large sum by the Senate of Hamburg in recognition of his services on the occasion of the election of Ferdinand III as King of Rome. The city of Augsburg, in gratitude for the services he had rendered to it, erected a costly altar in the church of the Viennese Novitiate. On one occasion only was he placed in an unpleasant position, namely when the Spaniards accused him of espousing the cause of their enemies, the French, and tried to have him banished from court. But Lamormaini was able to vindicate himself. By his advice many Jesuit institutions were established in the empire. He took a leading part in the Counter-Reformation in Austria, Styria, Bohemia, and Moravia. Only a part of the biography of Ferdinand II upon which Lamormaini labored appeared, "Ferdinand II, Romanorum Imperatoris, Virtutes" (1638); this has been republished frequently, and in different languages. Lamormaini was scholarly, pious, unpretentious, and upright. He was called by Urban VIII "verus et omnibus numeris absolutus Jesu socius", a true and perfect companion of Jesus. That he was immoral, that he received hush-money, and that he stirred up his brethren to lie and deceive or to use violence against heretics, are unfounded tales that call for no mention in serious history.

KLEMENS LOFFLER

Lampa

Lampa

(LAMPÆ, LAPPÆ).

A titular see in Crete, suffragan of Gortyna, was probably a colony of Tarrha. It was taken by storm and almost entirely destroyed by the Romans. Augustus restored

it and in consideration of the aid rendered him in his struggle with M. Antonius, he bestowed on the citizens their freedom, and with it the right of coinage. It has been identified with the modern small village of Polis. The episcopal see is mentioned in the "Notitiae episcopatum" as late as the twelfth and thirteenth centuries. It was re-established by the Greeks about the end of the nineteenth century; the bishop resides in the monastery of Preveli. Lequien (*Oriens Christianus*, II, 268) mentions Petrus, who attended the Council of Ephesus, 431; Deneltius, at Chalcedon, 451; Prosdocius, in 458; John, who appealed to Rome against his metropolitan Paul, and attended the Council of Constantinople, 667; Epiphanius at Nicaea, 786.

S. PÉTRIDÈS

Lamp and Lampadarii

Lamp and Lampadarii

There is very little evidence that any strictly liturgical use was made of lamps in the early centuries of Christianity. The fact that many of the services took place at night, and that after the lapse of a generation or two the meetings of the Christians for purposes of worship were held, at Rome and elsewhere, in the subterranean chambers of the Catacombs (q. v.), make it clear that lamps must have been used to provide the necessary means of illumination. Of these lamps, mostly of terra cotta and of small size, many specimens survive some of them plain, some decorated with various Christian symbols. These admit of classification according to period and locality, the finer work, as in so many other branches of Christian art, being as a rule the earlier (see e.g. Leclercq, "Manuel d'archeologie chretienne" II, 557 seq.); but the subject is too intricate to be discussed here. Of the great metal chandeliers with their "dolphins"—i.e. little arms wrought in that shape and supporting a lamp—which came into vogue with the freedom of the Church in the days of Constantine, something has already been said under the heading CANDLESTICKS. Such "polycandela" long remained a conspicuous feature of Byzantine worship. For the connection of lamps with the liturgy at an earlier age it may be sufficient to quote a few sentences from a recently published homily of the Syrian Narsai, who died A.D. 512, descriptive of the Liturgy. "The priests," he says, "are still, and the deacons stand in silence, the whole people is quiet and still, subdued and calm. The altar stands crowned with beauty and splendor, and upon it is the Gospel of life and the adorable wood [i.e. the cross]. The mysteries are set in order, the censers are smoking, the lamps are shining and the deacons are hovering and brandishing [fans] in likeness of watchers" (Conolly "Liturgical Homilies

of Narsai", p. 12). It is curious that in nearly all the earliest representations of the Last Supper a lamp is indicated as hanging over the table. When we remember that the pilgrim who, about 550, wrote the so-called "Breviarius", saw at Jerusalem what purported to be the actual lamp which had hung in the chamber of the Last Supper, preserved there as a precious relic, it is easy to understand that the early Christians may have attached a quasi-liturgical significance to the lighting of lamps during the Holy Sacrifice.

At the present day interest principally centres in the lamp which burns perpetually before the Blessed Sacrament, and it has been the custom with many writers (see e.g. Corblet, "Hist. du sacrement de l'Eucharistie", II, 433 sq., and Thalhofer, "Liturgik", I, 670) to represent this as a tradition of very early date. But the testimonies upon which this opinion is based are, many of them, quite illusive (see "The Month", April, 1907, pp. 380 seq.). St. Paulinus of Nola, indeed, seems to speak of a silver lamp continually burning in the church:

Paulo Crucis ante decus de limine eodem
Continuum scyphus est argenteus aptus ad usum.

But there is no indication that this bore any reference to the Blessed Sacrament. It would seem rather to be suggested by the context that it was of the nature of a watch light and a protection against thieves. No really conclusive evidence has yet been produced which warrants us in declaring that the practice of honoring the Blessed Sacrament by burning a light continually before it is older than the latter part of the twelfth century. Still, it was undoubtedly the custom for some hundreds of years before this to burn lights before relics and shrines as a mark of honor the candles burnt by King Alfred the Great before his relics, and used by him to measure the hours, are a famous example—and it may be that this custom generally extended to the place where the Blessed Sacrament was reserved. The constant association of lights with the Holy Grail in the Grail romances is suggestive of this. But the great movement for providing a perpetual lamp before the altar must undoubtedly be traced to the preaching in France and England of a certain Eustace, Abbot of Fleay, about A.D. 1200. "Eustace also laid it down", says Walter of Coventry, speaking of his visit to England, "that in London and in many other places, there should be in every church where it was practicable, a burning lamp or some other perpetual light before the Lord's Body." Shortly after this we begin to find the practice enjoined by synodal decrees (e.g. at Worcester, in 1240 at Saumur, in 1276, etc.), but as a rule these earlier injunctions recognize that, owing to the cost of oil and wax, such requirements could hardly be complied with in the poorer churches. It was not until the sixteenth century that the maintenance of a light, wherever the Blessed Sacrament was reserved, was recognized as a matter of strict

obligation. At present the official "Rituale Romanum" (Tit. IV, cap. 1) prescribes that "both by day and night two or more lamps or at least one [*lampades plures vel saltem una*] must burn continually before the Blessed Sacrament", and the responsibility of seeing that this is carried out rests with the priest in charge of the parish. It is further directed that the oil used should be vegetable oil, by preference that of the olive on account of its symbolism; but exceptionally, in consequence of poverty or some other reason, a mineral oil, like petroleum, may be employed with the bishop's permission. The language of the "Caeremoniale Episcoporum" (I, xii, 17) might easily suggest that at least in the larger churches more lamps than one should be lit, but always an odd number, that is to say, three at least before the high altar, and five before the altar of the Blessed Sacrament. It seems, however, that this direction of the "Caeremoniale" is to be understood as applying only to greater festivals.

During all the Middle Ages the burning of lamps, or sometimes candles, before relics, shrines, statues, and other objects of devotion was a form of piety which greatly appealed to the alms of the faithful. Almost every collection of early English wills bears witness to it, and even in the smaller churches the number of such lights founded by private beneficence was often surprisingly great. It not infrequently happened that every guild and association maintained a special light of its own, and, besides these, we hear constantly of such objects of devotion as the "Jesus light", the "Hok-light" (which seems to have to do with a popular festival kept on the second Monday or Tuesday after Easter Sunday), the "Rood light", the "egg light" (probably maintained by contributions of eggs), the "bachelor's light", the "maiden's light", the "Soul's light", etc. Many of these bequests will be found conveniently illustrated and classified in Duncan and Hussey's "Testamenta Cantiana", Lond. 1906.

Lampadarii were slaves who carried torches before consuls, emperors, and other officials of high dignity both during the later Roman Republic and under the Empire. There seems no special reason to attribute to the *lampadarii* any ecclesiastical character, though their functions were imitated by the acolytes and other clerics who preceded the bishop or celebrant, carrying torches in their hands, in the solemn procession to the altar and in other processions.

THALHOFER, Liturgik, I (Freiburg, 1883), 666-81; SCHROD in Kirchenlex., VII, 1970 72; ROHAULT DE FLEURY, La Messe, VI (Paris, 1888), 1-33; LECLERCQ, Manuel d'archeologie, II (Paris 1907), 557-70; GARRUCCI, Storia dell' Arte Cristiana, VI (Rome 1881), plates 472-76; HOTHAM s.v. in Dict. Christ. Antiq. (1880); DE WAAL, in KRAUS, Realencyclopadie, II (1886), 267 78. See also CHEVALIER, Top-abibl. A full account of all that is known of the *lampadarii* may be found in Daremberg and Saglio Dictionnaire des Antiquites, III (Paris, 1904), 909, where fuller references are given. Most other accounts are not reliable.

HERBERT THURSTON

Lamprecht

Lamprecht

Surnamed Der Pfaffe (The Priest).

German poet of the twelfth century, of whom practically nothing personal is known but his name and the fact that he was a cleric. He is the author of the "Alexanderlied", the first German secular epic composed on a French model. According to the poet's own statement this model was a poem on Alexander the Great by Albéric de Besançon, of which only a portion of the beginning, 105 verses in all, is preserved (discovered and published by Paul Heyse, Berlin, 1856). The poem contained a fabulous account of the life and deeds of the great Macedonian conqueror as it was current in Greek and Latin versions of the early Middle Ages, such as the Greek romance of pseudo-Callisthenes, dating from the third century A.D., the Latin translation of Julius Valerius, the epitome thereof, and especially the free Latin version made by the Neapolitan archpresbyter Leo in the tenth century, known as the "Historia de preliis". A comparison of Lamprecht's opening lines with the fragment preserved of the French original shows that he followed his source with tolerable fidelity, adding, however, occasional moralizing comments or remarks of a learned nature. Altogether there are 7302 verses in short rhymed couplets, the rhyme being very imperfect. Besides Albéric's poem, which, as far as we know it, is based on Valerius, Lamprecht used also the "Historia de preliis" and an "Iter ad paradisum", especially in the narration of the marvels seen by Alexander in the Far East, and in the account of the hero's journey to Paradise. There admittance is refused him, and he is made to realize the emptiness of earthly glory. Thus the close of the poem is distinctly moralizing in tone; the career of the great conqueror is but an illustration of the dictum concerning the vanity of earthly things. The poem seems to have been written in Middle Rhenish territory about 1130, at a time, therefore, when the crusades had brought the East nearer to the Western world, and when stories of its marvels were sure to find an eager audience.

We possess three manuscripts of Lamprecht's poem, one from Vorau which is not quite complete, one from Strasburg dating from 1187, which is about five times as extensive as the preceding, and lastly a version interpolated in the manuscript of a Basle chronicle. The relationship of the manuscripts to one another is in doubt. The Vorau manuscript is generally regarded as the oldest and most authentic; that of Strasburg as an amplified recension. The Basle manuscript is certainly late and inferior in value to the other two. The "Alexanderlied" with German translation was first edited by Weismann (2 vols., Frankfurt, 1850); the best edition is by Kinzel in "Germanistische

Handbibliothek", ed. Zacher, VI (Halle, 1884). The Vora manuscript was edited by Diemer in "Deutsche Gedichte des 11. und 12. Jahrhunderts" (Vienna, 1849), the Strasburg manuscript by Massmann in "Deutsche Gedichte des 11. und 12. Jahrhunderts" (Quedlinburg, 1837), and the Basle manuscript by Werner (Stuttgart, 1882) in "Bibliothek des Literarischen Vereins in Stuttgart", CLIV. Selections were edited by Piper in "Die Spielmannsdichtung", II, 2; in "Kürschners Deutsche National Litteratur", II, pp. 116-82. A modern German translation by Ottmann appeared in "Hendels Bibliothek der Gesamtlitteratur" (Halle, 1898).

Consult the introduction to the editions and translations above mentioned, especially those of KINZEL and PIPER.

ARTHUR F.J. REMY

Early Christian Lamps

Early Christian Lamps

Of the various classes of remains from Christian antiquity there is probably none so numerous as that of small clay lamps adorned with Christian symbols. Lamps of this character have been found in all the ancient centres of Christianity, but the Roman catacombs are especially remarkable for the large numbers of these fragile utensils they contain, many of which, however, bear no intrinsic mark of their Christian origin. These clay lamps belong to two categories; the more ancient manufactured in the early imperial period, and the type of the Constantinian epoch. Even in this not very conspicuous department of arts and crafts there was a notable decline between the first and the fourth or fifth century; the clay lamps of the former period are of far superior workmanship to those of the latter. In form also there is a difference between the two species; lamps of the classic period are round with an ascending perforated handle, whereas the lamps typical of the Christian period somewhat resemble a boat or a shoe with an unperforated handle running to a point. In lamps of Egyptian origin the handles were soldered on after the lamp itself was molded. The favorite symbol, though by no means the only one adorning lamps of Christian origin, was the monogram of Constantine. In some instances they were adorned with the figure of a saint, occasionally accompanied by an inscription.

Bronze lamps of Christian origin have also been found, and, though far rarer than the clay lamps described, they are of much greater interest. One of the most remarkable is a bronze lamp of the fifth century, now in St. Petersburg, which takes the form of an early Christian basilica. Of equal interest is a bronze lamp in the Uffizi gallery at Florence, it has the form of a ship, with inflated sails and two statuettes of bronze, supposed to represent St. Peter and St. Paul, at the prow. Bronze lamps also exist in

the forms of a dove, a duck, a peacock, a crow, etc. The museum of Algiers contains a specimen of a lamp mounted on a pedestal, of excellent workmanship ornamented with the apocalyptic Greek letters A and D, and a dolphin. Many of the gold and silver lamps presented by Constantine the Great to the Lateran Basilica were also in the form of dolphins, as the "Liber Pontificalis" informs us; lamps in the form of the symbolic fish were probably common, though only one of terra cotta is known. The lamps presented by Constantine to the Lateran—a truly imperial gift—comprised altogether 174 chandeliers and candlesticks, which furnished, it is calculated, 8730 separate lights. The most precious of these is the chandelier "of purest gold", weighing fifty pounds and ornamented with fifty dolphins, which hung from the Ciborium; the chains in addition weighed twenty-five pounds. Before the principal altar stood a silver chandelier, weighing fifty pounds, adorned with twenty dolphins. The nave was lighted by forty five silver standards (*fara canthara*), the right aisle by forty and the left by forty-five. Besides these chandeliers for lamps, the nave contained fifty silver standards for candles, while before each of the seven altars of the basilica stood a candelabrum ten feet high, made of copper inlaid with reliefs in silver representing the Prophets. Gifts of precious candelabra, though fewer in number, were also made by Constantine to the basilicas of St. Peter, St. Paul, Santa Croce, St. Agnes, and St. Laurence ("Liber Pontificalis", ed. Duchesne, I, 172 sqq.).

BABINGTON in SMITH AND CHEETHAM, Dictionary of Christian Antiquities (London, 1875-80), s. v. Lamps; LOWRIE, Monuments of the Early Church (NEW YORK, 1901); LECLERCQ, Manuel d'Archeologie Chretienne (Paris, 1907); DE WAAL in KRAUS, Real-Encyklopadie der christlichen Alterthumer (Freiburg, 1882-86), s.v. Lampen.

MAURICE M. HASSETT

Lampsacus

Lampsacus

A titular see of Hellespont, suffragan of Cyzicus. The city is situated in Mysia, at the entrance to the Hellespont, opposite Callipolis, in a region known as Bebrycia, which seems to indicate an establishment of Bebryces from Thrace. It was probably called Pityussa prior to its colonization by the Ionian cities of Phocaea and Miletus. The elder Miltiades, when he had been established in possession of Thracian Chersonesus, declared war against the inhabitants of Lampsacus, who made him prisoner, and released him only in submission to the threats of Croesus. During the Ionian revolt Lampsacus fell into the power of the Persians. The "great king" gave its territory to Themistocles that he might supply himself with its wine, which was very famous; but

the city itself continued to be governed by native tyrants. After the battle of Mycale (479 B.C.), Lampsacus joined the Athenians, but revolted after the unsuccessful expedition to Sicily; being unfortified, however, it was easily recaptured by the fleet of Strombichides. After the death of Alexander, it was forced to defend itself against the attacks of Antiochus of Syria. It voted a golden crown to the Romans and became their ally. Its prosperity continued under the empire; gold and silver staters of Lampsacus are extant, and its coins of the imperial period range from Augustus to Gallienus. The city possessed a fine piece of sculpture by Lysippus, representing a lion couchant, which was carried off by Agrippa to grace the Campus Martius at Rome. It was the home of many famous men, e.g. the historian Charon, Anaximenes the orator, Adimantus, and Metrodorus, a disciple of Epicurus who himself lived at Lampsacus for three years. It must be added that the city was also notorious for the obscene worship that was paid to Priapus. Its name has been conjecturally introduced into the Vulgate (I Mach., xv, 23) in place of the Greek name Sampsace, or Sampsame, in the list of the cities to which the letter of the consul Leucius was sent; and this correction is an excellent one, since no city was known by the name of Sampsace or Sampsame.

St. Trypho, martyred at Nicaea, was, according to the legend, buried at Lampsacus. Its first known bishop was St. Parthenius, under Constantine. In 364 the see was occupied by Marcian, a Semi-Arian or Macedonian; in that year there was held at Lampsacus a council of bishops the majority of whom belonged to that party. Marcian, summoned to the (Ecumenical Council of Constantinople, in 381, refused to retract. Other known bishops of Lampsacus were Daniel, who assisted at the Council of Chalcedon (451); Harmonius (458); Constantine (680), present at the Council of Constantinople; John (787), at Nicaea; St. Euschemon, a correspondent of St. Theodore the Studite, and a confessor of the Faith for the veneration of images, under Theophilus. The See of Lampsacus is mentioned in the "Notitiae episcopatum" until about the twelfth or thirteenth century. Lampsacus is now a village of about two thousand inhabitants, the chief place of a caza in the sanjak of Bigha; it is called in Greek Lampsaki, and in Turkish Lepsek.

SMITH, Dict. of Greek and Roman Geography, s. v., LEQUIEN *Oriens Christianus*, I, 771.

S. PÉTRIDÈS

Lamuel

Lamuel

Name of a king mentioned in Prov., xxxi, 1 and 4, but otherwise unknown. In the opening verse we read: "The words of king Lamuel. The vision wherewith his mother

instructed him." The name occurs again in verse 4: "Give not to kings, O Lamuel, give not wine to kings . . ." The discourse which is an exhortation to chastity and temperance, is supposed to end with verse 9. Some modern scholars (see Revised Version, Prov., xxxi 1, margin) render the first passage thus: "The words of Lemuel, king of Massa, which his mother taught him." Massa is mentioned in Gen., xxv, 14 (cf. I Par., i, 30), among the sons of Ismael, and his kingdom is consequently supposed to have been in Arabia. In etymological form the name Lamuel is kindred with Jamuel (Gen., xlvi, 10) and Namuel (I Par., iv, 24). In signification it is cognate with Lael (Numb., iii, 24) meaning (a man consecrated) "to God".

See LESETRE in VIGOUROUX, *Dict. de la Bible*, s.v.; DAVISON in HASTINGS, *Dict. of the Bible*, s.v. Lemuel.

JAMES F. DRISCOLL

Lamus

Lamus

A titular see of Isauria, suffragan of Seleucia. In antiquity this village is mentioned by Strabo, XIV, 671, and Ptolemy, V, viii, 4 (and 6). It was situated at the mouth of the River Lamus which formed the boundary between Cilicia Aspera and Cilicia Propria. Lametis was the name of the whole district. To-day it is the wretched village of Adana, with existing remains of an aqueduct and a fortress. In 945, John Courcouas, a Byzantine general, concluded there a treaty of peace with the Arabs. The fortress was seized by Emperor Manuel Comnenus and reconquered by the Armenians after the emperor's departure. In 458 Nounechios, Bishop of Charadrus, bore also the title of Bishop of Lamus. In 787 Bishop Eustathius was present at the second Council of Nicaea. The see is still mentioned in the twelfth and thirteenth centuries in the "Notitiae episcopatum".

LEQUIEN, *Oriens Christianus*, II, 1017; ALISHAN, *Sissouan* (Venice, 1899), 13, 413.

S. PÉTRIDÈS

Bernard Lamy

Bernard Lamy

Oratorian, b. at Le Mans, France, in June, 1640; d. at Rouen, 29 Jan., 1715. At the age of twelve he was placed under the tuition of the Oratorians of his native town, and soon evinced more than ordinary talent and versatility of mind. In 1658 he entered

the congregation of the Oratory, and, after studying philosophy at Paris and at Saumur, was appointed professor in the college of Vendome and later at Juilly. He was ordained to the priesthood in 1667, and after teaching a few years at Le Mans he was appointed to a chair of philosophy in the University of Angers. Here his teaching was attacked on the ground that it was too exclusively Cartesian, and Rebous the rector obtained in 1675 from the state authorities a decree forbidding him to continue his lectures. He was then sent by his superiors to Grenoble, where, thanks to the protection of Cardinal Le Camus, he again took up his courses of philosophy. In 1686 he returned to Paris, stopping at the seminary of Saint Magloire, and in 1689 he was sent to Rouen, where he spent the remainder of his days. His writings are numerous and varied. Among them may be mentioned: (1) "Apparatus ad Biblia Sacra", etc. (Grenoble, 1687), translated into French by order of the Bishop of Châlons under the title "Introduction a la lecture de l'Écriture Sainte" (Lyons, 1689). (2) "Harmonia, sive Concordia quatuor Evangelistarum", a harmony or concordance of the Four Gospels (Paris, 1689). In this work he contends that John the Baptist was twice cast into prison, first in Jerusalem by order of the Sanhedrin, and later by Herod in Galilee. He maintains also that the Saviour and His Apostles did not eat the paschal lamb at the Last Supper, and that the Crucifixion occurred on the day on which the Jews celebrated the Passover. He considers Mary Magdalen, Mary the sister of Lazarus, and the sinner mentioned in Luke, vii, 37 sqq. to be one and the same person. These and other opinions involved him in animated controversy with Bulteau, pastor of Rouen, Jean Piénud, Le Nain de Tillemont, and others (see "Traité historique de l'ancienne Pâque des Juifs", Paris, 1693). (3) "Apparatus Biblicus", which is a development of his introduction (Lyons, 1696; Jena, 1709; Amsterdam, 1710). It was translated into French by Abbé de Bellegarde (Paris, 1697) and by Abbé Boyer (Lyons, 1709). In this work he calls in question the historical character of the books of Tobias and Judith, and maintains that even after the Council of Trent a difference of authority should be recognized between the proto-canonical and deuterocanonical books of the Bible. (4) "Défense de l'ancien sentiment de l'Eglise latine touchant l'office de sainte Madeleine" (Rouen, Paris, 1697). (5) A volume of commentaries on his previous harmony of the Four Gospels (Paris, 1699). (6) A Latin treatise on the Ark of the Covenant (Paris, 1720), a posthumous work published by Pere Desmollets, who prefixed to the volume a biography of the author.

REGNIER in VIGOUROUX, *Dict. de la Bible*, s.v.; INGOLD, *Essai de bibliographie Oratorienne* (Paris, 1880-1882), V, 64-70.

JAMES F. DRISCOLL

Francois Lamy

François Lamy

An ascetical and apologetic writer of the Congregation of St-Maur, b. in 1636 at Montireau in the Department of Eure-et-Loir; d. 11 April, 1711, at the Abbey of St-Denis near Paris. While fighting a duel he was saved from a fatal sword-thrust by a book of the Rule of St. Benedict which he carried in his pocket. Seeing the finger of God in this remarkable occurrence, he took the Benedictine habit at the monastery of St-Remi at Reims in 1658. Shortly after his elevation to the priesthood he was appointed subprior of St-Faron at Meaux, but a year later resigned this position out of humility. During 1672-5 he taught philosophy at the monasteries of Mont St-Quentin and St-Médard in Soissons. He was the first of the Maurists to teach the Cartesian system of philosophy. In 1676 he came to St-Germain-des-Prés near Paris where he taught theology until 1679. The general chapter of 1687 appointed him prior of Rebais in the Diocese of Meaux, but he was ordered by the king to resign his office in 1689. The remainder of his life he spent in literary pursuits at St-Denis. He was one of the most famous writers of his times and was an intimate friend of Bossuet. Of his twenty printed works the following are the most important: "Vérité évidente de la Religion chrétienne" (Paris, 1694); "Le Nouvel Athéisme Renversé, ou réfutation du système de Spinoza" (Paris, 1696; 2nd ed., Brussels, 1711); "Sentiments de piété sur la profession religieuse" (Paris, 1697); "De la Connaissance de soi-même" (6 vols., *ibid.*, 1694-8; 2nd ed., 1700), which raised a controversy between the author and Malebranche concerning the disinterested love of God; "L'incrédule amené à la Religion par la Raison" (*ibid.*, 1710); "De la Connaissance et de l'Amour de Dieu" (*ibid.*, 1712); "Lettre d'un théologien à un de ses amis" (*ibid.*, 1699); "Plainte de l'apologiste des Bénédictins à MM. les prélats de France" (*ibid.*, 1699). In the last two treatises the author defends the Maurist edition of the works of St. Augustine against the Jansenists and the Jesuits.

MICHAEL OTT

Thomas Joseph Lamy

Thomas Joseph Lamy

Biblical scholar and orientalist, b. at Ohey, in Belgium, 27 Jan., 1827, d. at Louvain, 30 July, 1907. Ordained priest in 1853 after completing his studies at Floreffe and at the seminary of Namur, he entered the Catholic University of Louvain and received from his professors, Beelen (q.v.), the distinguished exegete and orientalist, and Lefebvre, who was well versed in positive theology, his impulse towards Biblical, Oriental, and patristic studies. He obtained the degree of Doctor of Theology in 1859. His career as professor at Louvain began in 1858 and continued uninterrupted till the year 1900, comprising courses in Hebrew, Syriac, introduction to Sacred Scripture, and exegesis. Lamy succeeded Beelen on the latter's retirement in 1875. His writings, too voluminous for enumeration here, are listed in the bibliography of the university down to 1905, under one hundred and fifty-eight entries. His most valuable contributions to learning took the form of editions of many previously unpublished Syriac writings, notably his collection in six volumes of St. Ephraem's hymns and discourses, under the title "Sancti Ephraemi Syri Hymni et Sermones", and his edition of the "Chronicon Ecclesiasticum" of Bar Hebraeus. It is freely admitted that his editions of text are marred by numerous errors, chiefly typographical. He is most widely known by his "Introductio in Sacram Scripturam", in 2 vols., which ran to six editions, an erudite collection of materials valuable in their day. Of his commentaries the most noted are his Latin commentary on Genesis, in 2 vols. (2nd ed., 1883-84), and his French commentary on the Apocalypse (1893-94). Neither in his introduction nor in his commentaries did Lamy grapple with the difficulties of the day; his ideas, acquired in the sixth decade of the nineteenth century, remained unmodified till the end. His "Introduction" passed almost unchanged through six editions. Lamy's numerous articles show his great devotion to the Church, to his university, and to his country, as well as a marked predilection for Biblical and patristic studies. Before his death, which occurred at the age of eighty, Lamy was engaged in the revision and annotation of a French translation of the Bible. Besides his professorial labors, he served his university for thirty years as president of the College Marie Thérèse. By his simplicity, his goodness, his piety, and kindness of heart, he won numerous friends in all ranks of society and exerted a gentle but effective and wide influence for good. Lamy received many honors from learned societies and from his country; he was made domestic prelate (1885) by Leo XIII, and member of the Biblical Commission (1903) by Pius X.

LAMAUZE in *Annuaire de l'Université Catholique de Louvain* (1908), pp. cxxxix-cxl, biographical notice, with portrait; *ibid.*, pp. v-vi, remarks by the rector, Mgr.

JOHN F. FENLON

Francesco Lana

Francesco Lana

Born 10 Dec., 1631, at Brescia in Italy; died in the same place, 22 Feb., 1687. Mathematician and naturalist, he was also the scientific founder of aeronautics. He belonged to the ancient family of the Counts of Lana-Terzi, which had come to Brescia as early as the fourteenth century from the neighbourhood of Bergamo. Trained by able teachers in his native city, he entered the novitiate of the Society of Jesus in Rome on 11 Nov., 1647, and made his philosophical and theological studies in the Roman College of the Society. He later taught the humanities for a short time at Terni, where the town council through gratitude to him and his family granted him the freedom of the city. After this he was mainly engaged as professor of physical science and mathematics, principally at Ferrara, until delicate health necessitated his return to his native Brescia. He there performed the duties of confessor, and was engaged at the same time on the publication of his great work on physical science, "Magisterium naturæ et artis". Eliminating everything that was uncertain, this work was to treat in nine volumes the entire field of the natural sciences on strictly geometrical principles and on the basis of carefully made experiments. Unfortunately Lana himself could publish but two of these volumes (1684, 1686), but a third appeared at Parma after his death. The work found favourable notice in the learned publications of the time, though Lana's principal achievement lay in another direction.

In 1670 he had published, as an advertisement for his chief work, a small volume entitled "Prodromo overo saggio di alcune inventioni". In this book Lana describes a series of useful discoveries---for example, methods of cipher-writing and of writing for the blind; an apparatus for speaking at a long distance; also telescopes, microscopes, a sowing machine, etc. Two chapters treat of aeronautics---chapter v, "How to construct birds which will fly through the air", and chapter vi, "Demonstration of the feasibility of constructing a ship with rudder and sails, which will sail through the air". Here Lana distinguishes explicitly between the "heavier than air" and the "lighter than air". Although the various ingenious methods of constructing birds given in chapter v are very interesting, chapter vi is much more important. In this he devises a strictly scientific plan for the making of an airship: he begins by discussing the precedent condi-

tions, then develops the plan, and finally solves the objections which might be advanced. According to his plan four large globes are to be made of very thin sheet metal of such diameter that the weight of the air contained therein will be greater than that of the sheet metal of which the globes are made. When the air is exhausted from the globes by means of a simple process explained by Lana, they will float through the air, and moreover carry a car for passengers. In the second volume of his great work (pp. 291-4), Lana again explains his plan, in which he says he has made some improvements. He also mentions that perhaps wood or glass might be substituted for the envelope of the globes. Lana's plan aroused much interest and discussion. Though the Italian Borelli considered it impracticable, German savants, such as Leibniz and Professors Sturm and Lohmeier, spoke well of it. At all events, Lana's influence on his successors was suggestive and encouraging; although his plan was never carried into execution, the principles so clearly set forth by him form the basis of modern aeronautics, and his importance is becoming ever more clearly recognized in our times. In addition to the works already mentioned, Lana also wrote a drama, "La Rappresentazione di San Valentino", and an ascetical treatise, "La beltà svelata".

B. WILHELM

The Holy Lance

The Holy Lance

We read in the Gospel of St. John (xix, 34), that, after our Saviour's death, "one of the soldiers with a spear [*lancea*] opened his side and immediately there came out blood and water". Of the weapon thus sanctified nothing is known until the pilgrim St. Antoninus of Piancenza (A.D. 570), describing the holy places of Jerusalem, tells us that he saw in the basilica of Mount Sion "the crown of thorns with which Our Lord was crowned and the lance with which He was struck in the side". The mention of the lance at the church of the Holy Sepulchre in the so-called "Breviarus", as M. de Mely points out (*Exuviae*, III, 32), is not to be relied on. On the other hand, in a miniature of the famous Syriac manuscript of the Laurentian Library at Florence, illuminated by one Rabulas in the year 586, the incident of the opening of Christ's side is given a prominence which is highly significant. Moreover, the name Longinus -- if, indeed, this is not a later addition -- is written in Greek characters (*LOGINOS*) above the head of the soldier who is thrusting his lance into our Saviour's side. This seems to show that the legend which assigns this name to the soldier (who, according to the same

tradition, was healed of ophthalmia and converted by a drop of the precious blood spurting from the wound) is as old as the sixth century. And further it is tempting, even if rash, to conjecture that the name *Logginos*, or *Logchinos* is in some way connected with the lance (*logche*). Be this as it may, a spear believed to be identical with that which pierced our Saviour's body was venerated at Jerusalem at the close of the sixth century, and the presence there of this important relic is attested half a century earlier by Cassiodorus (In Ps. lxxxvi, P.L., LXX, 621) and after him by Gregory of Tours (P.L., LXXI, 712). In 615 Jerusalem was captured by a lieutenant of the Persian King Chosroes. The sacred relics of the Passion fell into the hands of the pagans, and, according to the "Chronicon Paschale", the point of the lance, which had been broken off, was given in the same year to Nicetas, who took it to Constantinople and deposited it in the church of St. Sophia. This point of the lance, which was now set in an "yeona", or icon, many centuries afterwards (i.e., in 1244) was present by Baldwin to St. Louis, and it was enshrined with the Crown of Thorns (q.v.) in the Sainte Chapelle. During the French Revolution these relics were removed to the Bibliotheque Nationale, and, although the Crown has been happily preserved to us, the other has now disappeared.

As for the second and larger portion of the lance, Arculpus, about 670, saw it at Jerusalem, where it must have been restored by Heraclius, but it was then venerated at the church of the Holy Sepulchre. After this date we practically hear no more of it from pilgrims to the Holy Land. In particular, St. Willibald, who came to Jerusalem in 715, does not mention it. There is consequently some reason to believe that the larger relic as well as the point had been conveyed to Constantinople before the tenth century, possibly at the same time as the Crown of Thorns. At any rate its presence at Constantinople seems to be clearly attested by various pilgrims, particularly Russians, and, though it was deposited in various churches in succession, it seems possible to trace it and distinguish it from the companion relic of the point. Sir John Mandeville, whose credit as a witness has of late years been in part rehabilitated, declared, in 1357, that he had seen the blade of the Holy Lance both at Paris and at Constantinople, and that the latter was a much larger relic than the former. Whatever the Constantinople relic was, it fell into the hands of the Turks, and in 1492, under circumstances minutely described in Pastor's "History of the Popes", the Sultan Bajazet sent it to Innocent VIII to conciliate his favour towards the sultan's brother Zizim, who was then the pope's prisoner. This relic has never since left Rome, where it is preserved under the dome of St. Peter's. Benedict XIV (De Beat. et Canon., IV, ii, 31) states that he obtained from Paris an exact drawing of the point of the lance, and that in comparing it with the larger relic in St. Peter's he was satisfied that the two had originally formed one blade. M. Mély published for the first time in 1904, an accurate design of the Roman relic of the lance head, and the fact that it has lost its point is as conspicuous as in other, often

quite fantastic, delineations of the Vatican lance. At the time of the sending of the lance to Innocent VIII, great doubts as to its authenticity were felt at Rome, as Burchard's "Diary" (I, 473-486, ed. Thusasne) plainly shows, on account of the rival lances known to be preserved at Nuremberg, Paris, etc., and on account of the supposed discovery of the Holy Lance at Antioch by the revelation of St. Andrew, in 1098, during the First Crusade. Raynaldi, the Bollandists, and many other authorities believed that the lance found in 1098 afterwards fell into the hands of the Turks and was that sent by Bajazet to Pope Innocent, but from M. de Mely's investigations it seems probable that it is identical with the relic now jealously preserved at Etschmiadzin in Armenia. This was never in any proper sense a lance, but rather the head of a standard, and it may conceivably (before its discovery under very questionable circumstances by the crusader Peter Bartholomew) have been venerated as the weapon with which certain Jews at Beirut struck a figure of Christ on the Cross; an outrage which was believed to have been followed by a miraculous discharge of blood.

Another lance claiming to be that which produced the wound in Christ's side is now preserved among the imperial insignia at Vienna and is known as the lance of St. Maurice. This weapon was used as early as 1273 in the coronation ceremony of the Emperor of the West, and form an earlier date as an emblem of investiture. It came to Nuremberg in 1424, and it is also probably the lance, known as that of the Emperor Constantine, which enshrined a nail or some portion of a nail of the Crucifixion. The story told by William of Malmesbury of the giving of the Holy Lance to King Athelstan of England by Hugh Capet seems to be due to a misconception. One other remaining lance reputed to be that concerned in the Passion of Christ is preserved at Cracow, but, though it is alleged to have been there for eight centuries, it is impossible to trace its earlier history.

The one work of authority which thoroughly discusses all the available evidence is that of M.F. DE MELY published at Paris in 1904 as the third volume of the *Exuviae Sacrae Constantinopolitanae* of the COMTE DE RIANANT. It contains authentic drawings never before published and a valuable selection of *Pieces justificatives*. Besides this all-important work, the reader may be referred to ROHAULT DE FLEURY, *Memoire sur les Instruments de la Passion* (Paris, 1870), 272- 75; BEURLIER, s.v. Lance in *Dict. de la Bible*; SCHROD in *Kirchenlex.*, VII, 1419- 22; MARTIN, *Reliques de la Passion*.

HERBERT THURSTON

Giovanni Paolo Lancelotti

Giovanni Paolo Lancelotti

Canonist, b. at Perugia in 1522; d. there, 23 September, 1590. He graduated doctor of law in 1546, and taught that science shortly afterwards (1547 or 1548) in the university of his native town. Except for two short sojourns at Rome, he passed the remainder of his life in Perugia, in the study of law and belles-lettres. He owes his world-wide reputation to his "Institutiones Juris Canonici", the text of which is reproduced in most editions of the "Corpus Juris Canonici". Following the example of Emperor Justinian, who had entrusted to three professors the task of drawing up an elementary work on Roman law entitled the "Institutiones", intended for use in the schools, Lancelotti conceived the plan of a like work on canon law. Paul IV charged him officially with the execution of his plan, and for this purpose he went to Rome in 1557. To his great regret, neither Paul IV who died in 1559, nor his successor Pius IV, gave authentic and official approbation to his work, published by Lancelotti at Perugia in 1563 as an entirely private venture. The "Institutiones" are divided into four books, and treat successively of persons, things (especially marriage), judgments, and crimes. This division was inspired by the principle of Roman law: "Omne jus quo utimur vel ad personas attinet, vel ad res, vel ad actiones". (All our law treats of persons, or things, or judicial procedure.) It is a small and very simple didactic work, and may be considered a clear, convenient resume of canon law. Its divisions have been followed on broad lines by all authors of elementary treatises on canon law, and they have also borrowed its title "Institutiones". Lancelotti, however, erred when he applied to canon law the unsuitable divisions of Roman law. Having been published before the promulgation of the Council of Trent, this work had not the advantage of following its decrees; subsequent editors have remedied this defect by notes and commentaries. The best-known editions are those of Doujat (Paris, 1684; Venice, 1739), and Thomasius (Halle, 1715-17). Lancelotti's other writings are: "Institutionum juris canonici commentarium" (Perugia, 1560; Lyons, 1579), in which he gives the history of his aforesaid work; "De comparatione juris pontificii et caesarei et utriusque interpretandi ratione" (Lyons, 1574); "Regularum ex universo pontificio jure libri tres" (Perugia, 1587); "Quaestio an in cautione de non offendendo praestita comprehendantur banniti nostri temporis" (Lyons, 1587).

VERMIGLIOLI, *Biografia degli Scrittori Perugini*, II (Perugia, 1829), 40 sqq.; SCHULTE, *Die Geschichte der Quellen und Literatur des canonischen Rechts* (STUTTGART, 1875-80), III, 451 sqq.; SCHERER in *Kirchenlex*, s.v.

A. VAN HOVE

Archdiocese of Lanciano and Ortona

Archdiocese of Lanciano and Ortona

(LANCIANENSIS ET ORTONENSIS).

Lanciano is a small city in the province of Chieti, in the Abruzzi, Central Italy, between the Pescara and the Trigni, with a majestic view of Mount Maiella. It was the ancient Anxia, a city of the Frentani. Its beautiful cathedral, S. Maria del Ponte, so called because built on bridgework along a precipice, is the work of Michitelli (1619) and has some beautiful paintings by Pozzulaniello (Giacinto Diana). Another beautiful church is S. Maria Maggiore with its Norman portal. Until 1515 Lanciano was subject to the Bishop of Chieti. In 1562 Pius IV, to end a dispute with that bishop, made it an archdiocese without suffragans. The first bishop was Angelo Maccafani, who was succeeded by Cardinal Egidio Canisio (1532); the first archbishop was the Dominican Leonardo Marini (1560). In 1818 the See of Ortona was united to that of Lanciano by Pius VII. Ortona is a very ancient city in the province of Chieti, on the Adriatic Sea, and has a small port from which it carries on commerce with Dalmatia and the Adriatic coast of Italy. Charles I, King of Sicily, assigned the revenues of this port to the Vatican Basilica. It was here that Gregory XII, fleeing from Cividale, landed on Neapolitan territory (1409), and went thence to Gaeta. Ortona was an episcopal see even in the time of Gregory the Great, who mentions the Bishop Calumniosus and his predecessor Blandinus. Another bishop was Joannes, who in 916 was the papal legate at the Council of Alheim. There is no record of a Bishop of Ortona after the tenth century. Pius V in 1570 re-established the see, to which in 1569 that of Campoli was united. When, in 1818, Ortona was joined to Lanciano, Campoli was assigned to Teramo. The archdiocese has 20 parishes, with 61,000 faithful, 2 religious houses of men, and 6 of women.

U. BENIGNI

Land-Tenure in the Christian Era

Land-Tenure in the Christian Era

The way in which land has been held or owned during the nineteen hundred years which have seen in Europe the rise and establishment of the Church is a matter for historical inquiry. Strictly speaking, the way in which such ownership or tenure was not only legally arranged, but ethically regarded, is a matter for historical inquiry also.

But the determination from record of motive and of mental attitude is always a disputable thing, whereas the determination of legal definition and of public acts is a matter of documentary and of ascertainable record. During the last two generations certain theories of the State, based, in their turn, upon a vague and general, but appreciable, philosophy, have made of the ethical history of land-tenure or land owning a capital point of discussion, and, to support what was until lately the chief academic view, recorded and ascertainable history was pressed and even warped into the service of theory.

It is the object of this article to set forth what is rigidly ascertainable in the matter, to distinguish it from what is doubtful, and again from what is merely hypothetical.

The modern theory to which allusion is here made is the conception that property in all its forms has no direct relation with personality, is not an extension of nor support of human dignity and the human will (which, strictly, can only attach to persons), but is a mechanical arrangement or institution deriving its authority from the State, not from the nature of man and not, therefore, from the purpose of his Creator. In this aspect of property many modern apologists apparently divergent, join. Thus, he who will assert that property is necessary in order to give the required impetus to human effort, or that its acquisition is the proper reward of the virtue (as he imagines it to be) of cunning, or that men must endure it as a necessary evil proceeding from the imperfections of their nature is really at one in his general theory of the thing with his apparently irreconcilable opponent who will assert that property is robbery because its existence tends to produce an inequality in material enjoyment. Again the philosopher who analyses what is called economic or Ricardian, rent, and emphasizes its collective quality, however much he may privately support the laws that defend private property, betrays by his whole method of thought his conception that property is adventitious and not native to man. In general, all that wave of non-Christian and (in its acuteness) anti-Christian thought which the nineteenth century has suffered, regards property, among other human establishments, as a thing not having about it that quality which we call sacred. It reposes upon no ultimate moral sanction: it is a function to be expressed in terms of common or private utility. The far-reaching consequences of this philosophy it is not the purpose of these pages to discuss; it has produced, not only the insecurity and the extended poverty, but also the shameless financial spirit of our time; it has put speculation in the place of production, and removed in so far as it has been powerful the permanent economic bases of society.

The opposite philosophy bears no name; and here we have a phenomenon to be paralleled in many another case. Thus we know the modern attitude which regards matrimony as a contract, but we have no name for the view of that vast majority to which such a conception is repulsive. Again, we can hallmark the modern conception

that the State has no authority over the citizen -- the theory called Anarchist -- but we have no name for the public and popular philosophy of the vast majority to which such a doctrine is fundamentally immoral. We must proceed, therefore, without a strict nomenclature, and postulate, what all modern observers will immediately admit, the contrast between those who have with regard to property in all its forms the novel attitude described and those who continue to repose in the older conception of property as a thing connected with the ultimate ethical sense of man.

For the purposes of this article the interest of that great quarrel lies in this: that the academies and universities (from which centres of intellectualism, of course, all such novelties, long-lived or short-lived, proceed), in their determination to disestablish the sense of property as an absolute thing, have pressed into their service historical evidence, and this is especially the case in regard to property in land. Man is a land animal: without land he cannot live. All that he consumes and every condition of his material being is ultimately referable to land. Nay, the prime condition of all, mere space in which to extend his being, involves the occupation of land. Land, therefore, in all ages has been safeguarded in a peculiar manner from the perils which attach to the abuse, or even the natural process, of private property in any material. And whether those safeguards have been or are, an assertion of the ultimate dominion of the State over land, or institutions to make inheritance in land secure, or to safeguard it against the fluctuation of fortune, or to guarantee a proportion of it for what is essential to the common life of men, or to forbid its acquisition in more than certain areas by one family -- no matter what the guarantees are or have been, they ultimately repose upon the prime and self-evident truth that without land man cannot be. To the truth that land is necessary for the life of man, another truth equally self-evident lends added force, to wit that, whereas all other forms of property can be replaced, land cannot be replaced. A man or a group of men can if the laws be sufficiently bad or sufficiently laxly observed, forestall the market in wheat so as to control the whole supply of wheat for a certain period, but they cannot control it for more than a certain period unless they also control the land, for wheat is perishable. Perishable, also, is every other form of things subject to private property, with the exception of land. Vest all the land in the community in one family or one group of families, make their tenure of it fixed, and it is self-evident that the whole of the community will be utterly dependent upon it or them. In other words, a State must, if it is to remain a State, set up in the case of land guarantees and safeguards against the perils attaching to the institution of property which it need not set up in the case of other forms of property.

We shall, therefore, always find in the historical records of every community, however fixed and absolute its conception of the right of private property in land, some land held in common, some land the property of the State or the municipality,

and even that land which is in the hands of individuals or corporations treated legally in a manner different from, stricter than, and contrasting with, the manner in which other forms of property will be treated.

Seizing upon this truth, the school of philosophy alluded to above has attempted to establish a scheme of historical progress wholly hypothetical. It has been pretended that men in their first conception of land thought of it as mere space, heritable by none and open to all: that from this men, organized in strict communities, proceeded to give the community rights over land which it forbade to individuals and to leave the government of the tribe or of the village absolute and continual power -- and power habitually and frequently exercised -- to determine a common tillage and a common pasture. Next (this hypothesis imagined) the mutations of allotment grew rarer, and the watching of common rights less jealous, until at last were found -- what every man can now see round him in European civilization -- a number of private properties, and side by side with them a certain proportion of communal and public territory. The rights which are exercised over this last or ancient customs which attach to it are called (in the terminology of the academic theory) "survivals from an original communism in land."

Now, before any examination of the true history of land-tenure can be attempted, it is of the first consequence to rid the mind of all such vagaries. There is not a shred of proof in support of such an hypothesis: it is but one out of many which might be framed. It corresponds to the temper, if not of our own day, at any rate of yesterday in the intellectual circle of Europe, it would, were it true, powerfully support one part of their general philosophy and of their general attitude towards human development. But, as there is no proof, the historian must content himself with ignoring it.

Lest this statement should seem too abrupt in the ear of those who are accustomed to hear this hypothesis dogmatically affirmed as historical truth, it is but just to notice in passing the type of arguments upon which it reposes.

Records are produced and contemporary evidence is given of an absolute communism. These records, as they are commonly legendary or at the best extremely vague, are more relied upon than contemporary evidence, which is in this department very rare and never quite above suspicion. Even admitting that legendary evidence or contemporary observation of isolated instances establishes the possibility of men's tolerating a communism in land, it in no way establishes a progress from communism toward private property. To attempt to do so is to argue in a circle. To call communism wherever it appears, even in a very imperfect form, "primitive," and to call the private property where it appears "a later development," is merely to beg the whole question. It is a process against which the student must be warned, because it is, or has been, of the greatest possible popularity in every department of modern intellectualism. It is

logically vicious and often demonstrably insincere. There is no single case determinable in history of a regular progression from communism in land to private property. There are cases innumerable of the domain of private property encroaching, as the years pass, upon the domain of public or communal property. And there are numerous, though less numerous, cases of communal property extending after an earlier restriction and growing at the expense of private properties. But to pretend that a regular scheme of development is ascertainable or observable is simply to affirm as an historical truth something for which we find that no historical evidence exists.

With this preface, which, if lengthy, is necessary to any just conception of the business, let us turn to the evidence before us.

The limits of the Christian Era form not only the natural limits for an article in such an encyclopedia as this, but also an excellent historical limit wherein to frame our inquiry. For the birth of Christ was, roughly, contemporaneous with the expansion of the art of writing over the tribal civilizations of Northern and Western Europe, and roughly contemporaneous also with that organization of all the known world, and especially of the ancient Oriental states and cities under the united and simple scheme of Roman rule. In other words, one medium in which ancient records could be preserved upon the one hand and new records established on the other, such a medium, coextensive with the whole of our civilization, is roughly contemporaneous with the beginning of the Christian Era. A generation before that era opened saw Gaul occupied by Roman arms, the last limits reached by the same forces, the last independence of the North African littoral extinguished in Cherchel to the West, in the Valley of the Nile to the East, the generation after the founding of the Catholic Church saw the occupation of Britain at one extreme of the Roman boundaries and the complete absorption of Judea at the other.

We have, therefore, from the first century of the Christian Era, clear records, and upon the basis of such records we can establish our judgment. What we discover is roughly as follows:

The actual tenure of land throughout the whole of this area, to which apply the Roman scheme of law and the Roman appetite for record, regards private property in land as a scheme native and necessary to man. But the absolute quality of this right and the extent of the area over which it is exercised differ very much with the differing sections of the world. The civilization which Rome had superseded in Gaul and was in process of superseding in Britain, the civilization of which she took note, though she did not supersede it, in the Germanies, and which her religion was later to develop in Ireland, was not municipal, but tribal.

It is generally assumed that tribal civilization is necessarily nomadic or at any rate so far nomadic as the chase and continual warfare connote. The assumption has in it

something of truth, but in its absolute form may be very much exaggerated. Thus we can be certain that the Gaulish clan called the Senones, in spite of their distant expeditions and the colonies which they threw out to the utmost limits of their world, had a fixed seat upon the Yonne, a seat which still remains in the shape of a cathedral city. We can be equally certain that the Avernians were a population rooted in and conditioned by the old volcanic region of central France. Negative arguments too long to detain us here suffice to prove that the boundaries of the Basque people on the north of the Pyrenees have been much the same throughout the whole period of recorded knowledge and remain within a few miles today what they were during the Civil Wars of the Romans. And in general the nomadic character of a tribal system is indefinitely elastic. The tribe may be wholly nomad or it may have settled, while yet preserving its tribal organization and morals, into a fixed set of agricultural villages. This much is certain: that wherever men build, and do not depend for shelter upon tents, the nomadic character of their communities is qualified.

Now the importance of such a consideration lies in this: that a community wholly nomad is necessarily quite apart from any fundamental conceptions of property -- communistic in regard to land. Men passing from place to place without a fixed abode can never conceive of land otherwise than as a mere space over which they progress, or a mere area of soil from which they draw the sustenance of themselves and their cattle. But the converse question immediately proposes itself: Where the tribal system was not wholly nomadic, how far did settled habitation accompany the establishment of private property in land? The answer to this question is of capital importance and we shall return to it after dealing with the other half of the Roman scheme.

That other half, the ancient civilization of the Mediterranean, was municipal; that is, the organization of men was in the main an organization of city-states. Agriculture and village settlements existed, the one as a handmaiden to, the other as satellites of, city states which summed up the life of each society. From immemorial time, beyond all record and even beyond the misty horizon of credible legend, men had so lived round the shores of the Mediterranean. Certain picturesque exceptions, numerically insignificant, by their very contrast lent relief to this fundamental character of Mediterranean life. Rare and sparse Semitic tribes wandered in the deserts beyond its southeastern corner; Berber horsemen harried the steppes which lay behind the cities of Northern Africa. But the whole scheme of life was municipal. In that scheme we discover at the opening of the Christian Era a certain attitude towards the tenure of land neither complicated nor difficult to define. Land was everywhere held as private property: it was bought and sold, the most absolute rights conceivable were granted over it by the Roman State. But this does not mean that the system was simple or that it contained no vestiges of institutions less absolute. Though private property was ab-

solutely established (and that with every appearance of being of immemorial usage), and though it was permitted, in a manner in which most modern states would regard as a peril, to accumulate in vast estates, yet, first, there was always a very large reserve maintained of land belonging to the City and to the imperial Government, and, secondly, not hypothesis, but existing records showed how, in the past, society throughout the Mediterranean, though it could not so much as conceive of communism, had made continual efforts to prevent the growth of a class of free men who should be dispossessed of land. The efforts to attain this ideal, now taking the form of popular outbreaks, now of aristocratic legislation were directed, however, for the most part, towards the proper subdivision of the remaining public lands or to the establishment of a freeholding population upon lands which had been acquired by conquest from an enemy.

The institution of slavery must, as the reader need hardly be reminded, be constantly kept in view in connection with such a scheme of society. The State in the Mediterranean, at the time of which we speak, normally, though not everywhere, consisted of a minority of free men, citizens as we should call them, for whom laboured a majority of men not possessed of civic rights and technically no portion of the State at all. Even under such conditions a class was growing up which, though free, was dispossessed of any property in land. It had appeared very early in the history of Rome. and from the early Roman name for it we draw our modern technical term "the proletariat." But there was a constant instinct in favour of increasing the security of the State by the establishment of such landless men as freeholders and proprietors of the diminishing public lands. This, the object of the Gracchi and the achievement of Julius Caesar, though never finally successful, proved the strong tendency of the Roman State to repose upon citizens who should be owners and freeholders. Whether we inherit that conception from the Roman polity alone, or whether it be something native to the European blood as a whole, this much is certain, that from the Roman Civil Wars to our own day, the idea of a large number of absolute owners of land forming the best and most natural basis for a state, has endured unbroken and may be called normal to the political mind of Europe.

A number of exceptions indefinitely large might be proposed to so simple a scheme. Local custom varied infinitely, and the learned can discover many a vestige of ancient tenure, but, regarding our starting point as a whole -- regarding as a whole, that is, the civilization of the Mediterranean in the first century of our era -- it was a civilization of freeholders, owners who could buy and sell, balanced by the retention of great areas in the hands of the community for distribution, not for common tillage.

To this conception of land tenure (which is almost identical with that of the French Republican tradition which has imposed itself today over the greater part of Western

Europe) there was added in the succeeding seven centuries a slow process of modification which is as difficult to estimate in its nature and origins as it is essential to grasp if one is to understand the problem of land in Europe. The absolute ownership of Roman law and of Roman idea remained unchanged in men's minds, in the terminology of their laws, in the phrases of their conversation, and even in the major facts of their society. But there was superimposed upon so simple a conception a novel relationship between the larger and the smaller owners, between the owner and the non-owner who had merely contracted a term of tenure at a rent -- nay, even between the owner and the class that were once his slaves to be bought and sold at will -- which transformed the society of Europe. I say this novel relationship arose most gradually during the first seven centuries; it is widely discoverable in law in the eighth century. The darkness of the ninth century, with its violent Barbarian assault, throws society into a crucible; when the chaotic mass recrystallizes, we find established and henceforward dominating all the Middle Ages, from the later tenth century to modern times, that conception of land tenure to which is roughly, though somewhat inaccurately, given the title *Feudalism*.

It is at this point of moment to return to the thread of tribal organization in order that we may discover how far this change in the habit of the Roman mind between the absolute ownership of the early Empire and the conception of tenure in the Middle Ages proceeded from that exterior and barbarous tribal system, and how far it proceeded from some organic internal change within the structure of Roman society.

We have seen that the tribal system was not necessarily nomadic and therefore not necessarily communistic in the matter of land. Its nomadic character varied in intensity, from the purely nomadic hordes who seem to have occupied the great plains of the East of Europe to the more or less fixed clans of the Gauls, with their established central cities or strongholds, and their local ascriptions of areas and boundaries.

Upon the tribes to the east of the Roman Empire, we have very little evidence indeed. It is customary to give to this vague group of Barbarians the name *Teutonic*; and certainly many of its component tribes (though not all) appear to have certain religious customs, and even the names of certain gods, in common at the opening of the Christian Era. As to the homogeneity of this race, we have evidence quite as contradictory as it is slight. Tacitus, whose main object was the production of a polished literary satire, paints an ideal community, all of one highly distinguishable blood, and exactly possessed of every virtue which he desired, but failed, to find in the Roman State of his time. In his "Germania," however, this writer admits, to strengthen his work, a very considerable number of notes which seem to bear the stamp of actual observation, undertaken, not of course by the writer, but by merchants or soldiers whom he may have interrogated. In the preceding century Julius Caesar, a military writer possessing

a very different aim and concerned with accuracy rather than with effect, gives a picture far less favourable. Neither writer, it must be remembered, had any way of appreciating the Germanies and their mixed and floating population within any great distance from the Roman lines. But it is remarkable that both insisted upon the nomadic character of these Barbarians. In Caesar's account, paucity of agriculture and the importance of pasture is emphasized; the land is described as held in common by a body which moves from year to year. Their habitations are but temporary huts. The account of Tacitus does not form a consistent whole, and the most important sentence in it for our purpose is so corrupt in the text that no scholar can vouch for it; but it is generally understood to mean that land (whether pasture or arable we cannot tell) was re-allotted year by year; and it is certain that, as with most Barbarians, very large areas of waste were maintained round the settlement of each tribe. There is practically no other testimony with regard to the tribal system east of the Roman empire. An enormous mass of guesswork has been erected upon the frail basis of obscure customs and supposed vestiges of the past discoverable centuries later when the Germanies were civilized by the Christian armies, and notably by those of Charlemagne, and when written records could first set down what had hitherto been fluctuating and perhaps recent legend.

The Western tribal system has another and a much greater importance. We know more about it; it formed the civilization of a much larger number of men, and of men far more cultivated and therefore of more influence upon the Roman mind. Of the Gallic system we know virtually nothing. At the British we can do no more than guess, but the survival of what is called "Celtic" habit in Ireland and its recrudescence (which is also a form of survival) in Wales, after the dissolution of Roman rule, instruct us. The characteristic of that civilization seems to have been an intense bond of blood and of common interest between the members of one clan. Perhaps the most startling evidence of this is that, when the Catholic Church, for all its elaborate organization, strictly kept records, and, as it were, necessary machinery, took into its unity the independent Celtic tribes, even such an institution as the episcopate was influenced by the tribal scheme. and the bishop was at first the bishop of the tribe or of its monastic institute not the officer of a municipality, as he was throughout all the rest of the known world.

The proportion of land which could properly be regarded as private property under the tribal system of the West varied indefinitely. Records, of course, only begin to exist with the advent, even after the fall of the Roman Empire, of Roman civilization, letters, religion, and law. Not until modern research was at work could the extent of communal ownership in the tribe be guessed at, for it is an idea alien to the earliest chroniclers who wrote in the Roman tongue and under Roman traditions. Even the Welsh written and oral traditions make it difficult to establish a proportion, and certainly the learned

in the fields of Welsh, Scottish, and Irish tribal custom are compelled, for all their learning, to present much more hypothesis than they do direct knowledge.

It is perhaps a just summary that the half of the tribal system which lay exterior to the Roman Empire in the British Isles was conditioned as to its proportion of private property against communal by the geographical circumstances in which it lived. The districts it occupied in Great Britain were mountainous; the mountain pastures, and the mountain waste, and the mountain forests were communal. The narrow alluvial belts along the valley streams were in part communal as pasture, in part held co-operatively for tillage, and in some part -- necessarily in the neighbourhood of habitations -- particular and owned. In Ireland, where wide stretches of plain (though of moist plain, suitable chiefly for pasturage) contrasted with the mountain districts, private property in the full Roman sense was modified as it was modified, for that matter, in the small private properties of the Welsh and Scottish valleys -- by a political or ethical character common to the whole tribal system, which was its intensely military character -- a character which it should be remembered, the so-called Celtic tribes of the West poured like an invigorating spiritual stream into the life of the early Middle Ages. This character involved intense loyalties to the clan and to the person of a chief. The conception of an individual owning as against the clan, or defending his particular existence and its economic basis as against his chief, was a conception which, though present, was present as a vice and was odious to the spirit of that society. Ownership there was, for there was theft. and a sense of ownership in land, for there are plenty of examples of men raging against unjust spoliation of that form of property as they would rage against unjust spoliation of any other form of property. But the clan was above all military, and the private property, however absolutely felt or universally recognized, was subject to the spirit of sacrifice which is essential to the military temper.

A general appreciation of the tribal spirit of the West, though historically of the first importance since the Middle Ages were principally inspired by it, does not greatly affect the particular history of land-tenure, because it bears, both numerically and institutionally, so slight a relation to the vast, compact, and stable civilization of Rome, whose internal transformation can alone explain the gradual change from the Roman conception of ownership to the feudal system.

A third province of evidence which would be of the utmost importance to our inquiry is unfortunately lacking and can never be recovered: I mean, the evidence of southern and eastern Britain. There certainly took place an infiltration of tribes, and often perhaps, of single families, from the Germanies into southern and eastern Britain during the fourth, fifth, and sixth centuries. There is no manner of doubt that, from a position originally subsidiary and perhaps insignificant under the Roman Empire, the German-speaking population of southern and eastern Britain increased enormously

up to the advent of St. Augustine, just before the dawn of the seventh century. There is again no manner of doubt that the attacks of pirates, who were probably also mainly speakers of Teutonic dialects, from being harassing in the third and menacing in the fourth, had become a scourge in the fifth century; and the weight of legend, though it is only legend, is too strong to be ignored where it describes their progress in the sixth. A certain number of Roman towns in Britain were actually taken by assault, some perhaps by the pirates alone, some by a combination of these with other Barbarians such as the Celtic Northerners beyond the Roman Wall. At any rate, although there is no direct record, and even in the way of myth only very misleading traditions, upon the worst 150 years of the business, and though southern and eastern Britain disappears from history during that period, yet we may confidently say that the society resulting from the pirate invasions the resistance of the Roman cities, and the independent British tribes which joined in the fray, was a society exhibiting, after its conversion, a greater number of tribal features than that of any other province formerly imperial.

If we had any evidence upon the state of society thus in process of formation, we might establish an interesting body of facts, and it might even appear that what is called "Teutonic" custom was of a sort calculated to affect Roman society in the direction of feudalism. Unfortunately, we possess no such evidence. The first clear description of the mixed society produced by the pirate invasions and the spread of German dialects comes too late for our purpose, and there remains for the historian nothing but the very unprofitable business of guesswork as to what the tribal organization may possibly have been in the homes of the pirates before they took the sea, or among the half-independent British tribes surrounding the Roman societies in the decline of the Roman power. By the time clear records are developed under the influence of the Church, nothing in the way of true tribal organization remains. The Roman municipalities have survived the shock, and are all, with the exception of three, upon their feet. The agricultural arrangements of the village have certain local characteristics which appear to differentiate it from its counterpart in Gaul but these differences are slight and unimportant, and with the exception of the increasing change in the popular language (the German elements of which spread further and further), of a considerable admixture of new blood (how much we cannot tell), of a necessary and obvious loosening of the bonds of society, and of an absence of such military organization as Gaul still preserved, the Roman province of Britain is, at the close of the eighth century, once more a portion of the Roman world. We cannot judge from its then social constitution what former tribal influences may have contributed to the moulding of the State.

Yet another source for the transformation in land tenure which Roman society suffered has been suggested. Some have thought that two institutions present in the Roman Empire in the time of its vigour the one military and early discovered especially

in the West, the other civil and developed later in the East under Byzantine law -- were the origins of feudalism.

The first of these was the military tenure granted by the Crown to veterans upon the frontiers on condition of military service to be rendered when called for. This case of tenure was exceptional so far as the number of individuals was concerned, but had a wide extension upon the long frontiers of the Empire. It bears a strong resemblance, indeed, to one characteristic of later feudalism, to wit, the connection between tenure and military service. But it is quite impossible to establish a link between this exceptional, artificial, and occasional system and that whole state of mind which produced (as we shall see later) the feudal system. There is no trace of the one growing out of the other: one does not find an inherited tenure which began under this Roman military experiment and ended as a true feudal estate. The resemblance between the two is mechanical rather than organic, and the analogy is verbal. On examination we find that there is no affiliation between the spirit of the one and the spirit of the other.

The second institution was the tenure called *emphyteusis*, under which land, the domain of the Crown (and other land as well, but especially land under the domain of the Crown), was granted, not on absolute ownership, but in tenancy for certain fixed dues, and once so granted was granted permanently. This system does indeed nearly resemble in form the *beneficium*, which overlapped with it, but grew later and flourished more vigorously in the West. It lacks, however, the prime character of the *beneficium*, to wit, the moral bond between the grantor and the grantee, the conception of a personal favour done by the grantor who expects from the grantee personal loyalty. Now this moral factor was the life of the feudal growth, and though the forms of the grant in the West were undoubtedly influenced by the strict law of the Empire, there is no organic relation discoverable in history between one and the other. A more direct, a more reasonable, and a more demonstrable process produced out of the material of Roman society, and from within its own tradition, the structure of tenure later known as feudalism. For, while various forms of settled tenure which had for their characteristic the holding of land from another, in contradistinction to the fundamental and indestructible idea of ownership, were thus arising in the settled civilization still subject to centralized Roman government and chiefly residing in the eastern portion of Christendom, in the western portion the ideas of the time were expressing themselves in another fashion.

The conception of tenure, or holding of another permanently, as distinguished from ownership (an idea as fundamental and as indestructible in the West as in the East), was developing in Gaul through the merging of two quite distinct currents of custom. To comprehend these two currents the reader must first postulate as the basis of all Roman society at the close of the Roman Empire a number of great estates

varying in size from many hundreds to many thousands of acres, each in the absolute possession of an owner who tilled his land with slave labour. These estates were the units of society, they were the parishes into which ecclesiastical organization was divided, the *villae* into which agricultural industry was divided. One family might possess many; no wealthy or important family possessed less than one. It is their grouping which we shall see building up the feudal system; it is their owners whose descendants become the nobility of Europe in the Middle Ages, their chaplains who become the parish priests, their slaves who become the peasantry. This conception once seized, we can understand the nature of the two currents whose fusion resulted in the full production of feudalism, a process we are now about to examine. The two streams were as follows:

(1) The great landowners whom the Roman Empire, while it was still governed strictly from one centre, had left absolute proprietors of their estates, began to arrange themselves in a hierarchy of greater and lesser men: the lesser related to the greater by an understanding which later became a contract, and which carried with it a conception of dependence.

(2) The great officers of state being identical in so many cases with the owners of large landed estates the two ideas of office and of ownership associated themselves in men's minds, and, while political power became hereditary as the descent of land was hereditary, it became natural, conversely, to think of ownership, however fixed and continuous, as something held from above, since political power, which was at last inseparably associated with ownership must of its nature be held from the supreme authority of the State.

We will examine each of these developments separately. Even before the fall of the Empire and the establishment of local generals of armies (some Barbarian, some Roman. and all, soon, a mixture of the two), the tendency of the smaller man to put himself under the protection of the greater man had appeared. It was the decay in public authority which produced this tendency. Property was the prime institution that survived, it had a sanction in the popular mind which survived the power of punishment vested in the laws and police of the Roman State. A man was powerful in proportion to the number of estates he owned in a district; he could exercise that power in a number of ways; he could see to it that religious endowments should go to the person or persons he wished, he could found monasteries, he could influence by the weight of his presence the course of justice; he could advance money where money stood between an individual and punishment, he could be responsible for taxes. The more estates a man owned in a particular district, the more -- as public authority declined, and sense of the sanctity of property remained -- did such a man tend to become the real head of the district, in contradistinction to the weakening authority of political

machinery. Again, the anarchic character which war was taking on -- the irresponsible raids of small but fierce groups of Barbarians -- created dangers against which a man best secured himself by establishing a close set of mutual duties between himself and some wealthier man of the neighbourhood. The tendency was opposed to Roman tradition, and, since it worked outside the framework of Roman law, was obviously inimical to the imperial conception, but that conception weakened from generation to generation, and as early as the fifth century one finds this sort of "recommendation" an established custom vigorous and vital, which the dead framework of the imperial law cannot break. When the chieftains of the small invading tribes, principally German, and the generals of armies had seized upon the machinery of government, had become the masters of the tax-collecting authorities, resided in the Roman palace of the capital cities, and came to be called local "kings", all attempt to check this natural tendency ceased.

Under the Merovingian Dynasty, which saw, a continued decline of central authority, the institution flourished exceedingly. It became normal and almost universal for the small man with one or two estates to be attached, he and his heirs, in a permanent fashion to the larger local man with many estates. This new link between the greater and the lesser landowners of a district bore various names. Sometimes the lesser man was said to be "in feu" to the greater; the Latin word *fides*, i.e., "the bond of honour", was a technical word employed. Sometimes the old Latin term "patronage" was used to signify the same thing. In the sixth century men were already taking it for granted; in the seventh, though it had not yet appeared in written law, it had appeared in many a written document, and was almost universal. Towards the end of the seventh century and the beginning of the eighth a special political movement was apparent in society which not only accepted and sanctioned such arrangements, but actively and consciously favoured them. The great officers of the Crown, and notably their chief, the mayor of the palace, had become stronger than the Crown itself. Now these great officers were also the great landowners who formed the head of this hierarchy of innumerable individual contracts or understandings or customary relationships. And as these mayors of the palace came nearer and nearer to grasping the supreme power of the State, the chief force behind them was the crowd of men who owed to them and the great officers, their followers, this "fidelity".

The eighth century witnessed a political revolution which finally confirmed and established, brought into the region of positive law, and launched on its career through the Middle Ages, the full institution of "patronage", or, as it was now called, of "seniority". The link of "fidelity" had become the nexus which bound the State together, and feudalism henceforward was the characteristic of society.

This political revolution consisted in the advent to supreme power of the old Roman family of Ferreolus. It was one of the great senatorial families of Roman Gaul established in the district of Narbonne in the fifth century. After many adventures, during which the head of the family at one moment migrated into the German-speaking limits of Gaul, and during which more than one German marriage brought into the old paternal Gallo-Roman stock a mixture of blood on the female side, the descendants of the Ferreoli occupied the highest office of state in the eastern portion of the monarchy. A certain Pepin (the Gallic name is characteristic) was mayor of the palace -- head, that is, of the landed hierarchy and chief officer of state in the eastern half -- when, at the end of a series of confused quarrels between the great nobles, he conquered, at the battle of Testry (687), his rival, the other mayor of the palace, the chief officer of the western half of the monarchy. No racial division is apparent in this confused business, but what is now the wealthiest landed family in all Gaul becomes, under Pepin, the head of all Gaul the master of the whole State. Pepin's son Charles broke the invasion of the Saracens, his grandson, another Pepin, was at last crowned king of the whole French State in 757, and it may be said that from that moment the new system of tenure has definitely replaced the old social organization of Rome. For, though Pepin's son Charlemagne recovered, and in a sense made perpetual, the idea of European unity which is summed up in the word *empire*, yet he never permitted the centralized law, which (so far as was possible in so barbaric a society) he established, to interfere with the natural growth of feudalism. On the contrary, he fostered it. And in the capitularies of Charlemagne the institution takes on the force of law. The monarch orders them to be observed, and himself concludes arrangements upon the basis of *senioritas* or *fidelitas* at the very moment when he is attempting to revive the old, impersonal and anti-feudal idea of the Empire.

Such was the gradual growth of feudal tenure from below. A brief outline must now be given of the second branch of its development, its growth from above.

The Roman Caesar in the later times of the Empire entrusted the government of various districts to officials whose military titles sufficiently indicate their origin. A *dux* (the word we translate by "duke" or leader, was established over one district, a *comes* (the word we translate by "count"), or companion of the sovereign, over another. And in the nature of things these offices of state were revokable and dependent upon the will of Government. But the process of society we have just described associated such offices, even towards the end of the Empire, with large estates in land. When the Empire had broken down, and the chieftains of tribes or the generals of armies had seized upon the powers of local government, this association of political power with landed estate tended to become universal; and the confusion of ideas was further aided by the institution of the *beneficium*. As is still the case in all modern European states

with the exception of England, very large tracts of each province were public land. Nor did these tracts necessarily diminish with alienation, sale etc., for they were recruited by conquest, confiscation, lapse for lack of heirs, and merger. Under the institution of the *beneficium*, a great landowner, desiring to attach to himself the services of some important person or institution, gave over to such person or institution the usufruct of a certain part of his land on condition of receiving in return services and fidelity, or, as it was later called, "vassalage". After the breakdown of the Empire, the declining local monarchies -- and notably the Frankish monarchies of the North -- began to "grant such *beneficia* on a large scale, and by the time of Charlemagne they made inroads into the greater part of the public domain. For generations it was understood that a *beneficium* was a purely personal contract entered into under the strict conceptions of the Roman law, and, if no term were mentioned, terminable at the latest at the death of the grantor.

It is self-evident, however, that, under the pressure of institutions round it, the *beneficium* would tend to become feudal and hereditary like the rest; and so it did. We have, then, under the Merovingian Kings of France, thoroughly established in custom, and, under the Carolingian Dynasty, openly apparent in law, a multitude of royal acts which -- whether they are a grant to a faithful servant or the appointment of a trusted man to an office, especially to a local command, or the nomination of one to such a position who is too strong to be refused -- all become daily less and less the voluntary and revokable act of an absolute government, more and more the recognition of an established landed system.

Out of these two currents -- the growth of feudalism from below by voluntary interdependence of smaller owners and greater, the growth of feudalism from above by the increasing strong analogy which makes of office and of royal grant a permanent tenure in duty and in honour -- the whole feudal system had been welded when the storm of the ninth century broke upon Christendom.

In that storm our civilization nearly disappeared. Its symbol, the imperial name, wholly disappeared; for the establishment of the German Empire in the tenth century and its 300 years' quarrel with Italy, was not universal: it left on one side Gaul, Britain, and the re-conquest of Spain, which was characteristically national, and as characteristically not a European affair. It suffered the fate of all mere names.

The violent Barbaric assault upon Christendom which followed the Carolingian period was calculated to make of the feudal conception a stronger thing than ever. A hierarchy of a military type, based upon local economic power, was absolutely necessary at such a time.

Perhaps the best example of the way in which tenure had come to be a necessity for men's minds is the grant of Normandy. The story is simple enough. The pirate in-

vasions, though they could not have brought numerous armies, yet sufficiently and continually harried the coasts of northern France. Their action dated from shortly after the death of Charlemagne and continued into the tenth century. The way out of the difficulty is a symbol of all that society then imagined: the chief of the pirates must be baptized; that is, he must accept the whole body of civilization if he and his followers desire to settle within it. The pirates have come for gain, they have looted enough, and civilization will only permit them to remain within its boundaries if they regularize their position by calling themselves, and living as, Gallo-Roman lords of villages; presumably only the leaders could have such a position, their followers would be tenants under them or armed servants in their halls. Waste village estates, village estates acquired by the forced marriages of heiresses, grants from the Royal domain, would presumably form the basis of this settlement. The head chief (Rollo), for instance must marry the emperors daughter; and most significant of all is the limit of the territory granted and the title of the grantee. Rollo is to be a *dux*, and he is to be the emperors man, to owe him fidelity, etc. The territorial limits of his jurisdiction are precisely those of an old Roman frontier which has never been allowed to fall into desuetude. Rollo, the *dux* holds of the emperor, as his man, the province of the Second Lyonnese (*Gallia Lugdunensis Secunda*). Custom will later give to this district the new name of Normandy, but it will correspond from that day to this with the exact frontiers of the old Roman province. Such a power for absorption has the Roman world even in its worst moment at the end of the fierce Barbaric onslaught, that the new state is within two generations a model of feudalism. The few hundred chiefs are settled as estate-owners in the Roman scheme, side by side with their more numerous Gallo-Roman equals. Their few thousand followers have become serfs villeins, or armed horsemen upon their manors. The whole is arranged in a strict hierarchy under the hereditary dux, the man of his hereditary feudal lord, the king in Paris, and the Second Lyonnese presents a perfect model of the feudal theory. Indeed, it is this fusion of numerous Gallo-Roman lords of estates with a few Barbaric lords of estates interspersed among them that develops the feudal theory most thoroughly and carries it furthest; for the Norman nobility -- in England, in Sicily, and in Palestine -- were the chief organizers of the Middle Ages.

We have just used the words *villeins* and *serfs*, and at this point in our examination of European land tenure in Christian times, the position of the mass of the people deserves our attention.

The feudal development of which we have been giving a description concerned a small minority. That minority consisted of the numerous descendants of the great landowners of the Roman Empire and a certain smaller number of Barbarian adventurers who in the troubles of the fifth century (to which must be added other invasions,

especially in the ninth) had acquired estates. These estates were the units of the Roman scheme, and feudalism was the organization of their owners upon the system of tenure we have described. What of the great mass of the population which in Roman times had cultivated the land of these landowners as slaves? These also had been transformed in their social constitution during the Christian centuries, and the transformation, though it is most obscure in its process, is quite clear in its origin and at its end. The Church, between the fifth century and the tenth, had transformed the Roman slave into the European peasant. The word was retained, and *serf* is but a form of *servus*, while *villein* is but a form of *villanus*, the agricultural slave at work upon a villa, or Roman country estate. But the political position to which those names attached has utterly changed. Slavery as an institution does indeed still linger in the tenth century there are traces of it even in the eleventh -- but that slavery is domestic and rare. The man who tills the soil is, at the end of the process we have been describing, not a slave at all. On the other hand his position is quite different from the Roman conception of a citizen or the modern European conception of the same political entity.

The Roman estate which has come down, often unchanged even in the details of its boundaries, through all these centuries, we will now call a "manor" (a term probably Norman in origin), for under this name it is alluded to in most textbooks. The medieval, or feudal, manor had at its head a lord who might be an individual, or a corporation such as a monastery or an office such as the Crown or the Archbishopric of Canterbury and these lords were of course the units out of which the feudal hierarchy was built up. To this lord, the representative of the old Roman slaveowners, was still in legal phraseology, due the whole work of the villein. Indeed, it was the definition of a villein that he was one, who, rising in the morning, could not tell of his own will what he should have to do before night.

But even if this legal tradition (which by the tenth century was no more than a form of words) had had actual existence in social fact, the villein would have been a very different person from the Roman slave. He had land of his own, a house of his own hereditary in his family, he could not be bought or sold, and it would appear that so long as his work was done there was no constraint over his person. He was subject to the common justice of the land, and not to the arbitrary will of his master, and so forth. But much more favourable than this was his actual position, for custom and common opinion had long forbidden him to give more than a fixed number of somewhat complicated dues, varying from estate to estate, to his lord. Of the old Roman estate only a portion (differing again from parish to parish) remained absolutely under the lords control and was called his "demesne, that is "lords land", from *dominium*. On this the serf must work so many days of the year under set rules -- sometimes two days a week, sometimes three, always excepting holy days. He must also give a certain

amount of produce, usually quite small at stated times, a few eggs at Easter, etc., etc., according to the industry of the place. And he must perform certain services. For the rest, his time was free, and the land apportioned to him was, in nearly every sense, his own. It was his own because it could not be taken from him even under process of debt, nor for that matter could his capital be taken from him under process of debt. It was his own because, though dues and work went with it, yet they could not be raised as, or if, he improved the value of his land: custom forbade it. What is called in modern jargon "the unearned increment" was his, and that is the test of property in land. So was the earned increment which was due to his own labour. More than this, the villein had, side by side with the lord, certain common rights which were of the utmost importance. The common land of the manor, which had formerly been the Roman proprietors as much as any other part, was now used according to careful rules. The lord might only put so many cattle onto it, the villeins each so many. Similar strict communal rights accrued to him in the woods of the place, in the fisheries, the use of the water-ways and of water-power, etc. The village mill was commonly a monopoly of the lords, and one or two other things common to the village life. That is, he took regular and fixed dues of them, but he could not of course, as could a modern proprietor, use them with a single eye to his benefit, or charge what rates he chose.

The analogy of feudal ideas which had extended upwards from their origins, the unit landowners of the Roman system, extended also downward from them to the estate which they had formerly owned and of which they were now but the seigniorial holders. The villein was not said to own, but to hold; he held of his lord in return for service, and by a bond which, though it was not military and honourable, as was *fides*, was yet based upon the same ethical conception of a moral due, rather than an economic contract.

The system was complicated by other less common forms of tenure. Thus freeholders were discovered side by side with the villeins -- that is, men whose little properties involved some form of service not thought service or degraded; for instance, it was a common, though not a universal, rule that if a man could prove never to have paid anything but a fixed money due for his land, he was to be deemed a freeholder. And all non-servile work for the lord came in the same category. The tenure of the priest was of another kind, and so forth. There were also numerous lesser people who had very small portions of land (the villein might have anything from 15 or 30 acres to as much as 120 or more), but the general frame of society when feudalism was in its vigour was as we have described it.

Caught in the general agricultural system around them were the old Roman municipalities with which this article has not to deal -- Orléans, Chartres, Rouen, Limôges, to take a few Gallic names quite at random, Newcastle, London, Winchester, to take

three British names equally at random. And these municipalities were in practice, of course composed of a number of small absolute owners of the land on which their houses and their gardens stood. But so strong was the feudal idea that it was extended by analogy even to the cities. A city would have a lord, very often the Crown, or some bishop, or other great officer of state. The public taxes paid were paid to this lord under the analog of feudal tenure in the village. When the development of commerce during and after the Crusades made the fiction inconvenient, the lords granted charters, that is, written acknowledgments of the towns immemorial customs, and often added to these special immunities from interference, in return for money.

Other exceptions to the feudal system are to be found in the allodial lands, which simply means the estates, large or small, which had never got caught in the feudal development at all, but remained held in absolute ownership from an unbroken tradition of Roman institutions. These were especially common in the south of France, and it is characteristic of the organizing power of the Normans that they, in their passion for system, refused to admit so unfeudal a conception within their dominions, so that to this day in England there is technically no such absolute ownership of land possible.

Other exceptions again are to be found in the communal arrangements of the mountain valleys -- notably in the Alps and Pyrenees, where the feudal system had never really taken root, and where remote and isolated villages have from time immemorial arranged, and do to this day arrange, their affairs upon an economic system which corresponds to their political republicanism. It should always be remembered that in this most ancient and unchanged of European societies private ownership in land is absolute and most strictly recognized. Communal management attaches only to wood, pasture, and here and there a public field.

The next step in our inquiry must be: How this established feudal system proceeded to its decay. To understand the decline of the feudal system and the transformation of the feudal tenure into the land tenure of modern Christendom, it must first be clearly understood that what I have called the indestructible idea of private property in land survived, paradoxical as it may seem, throughout the whole long reign of so-called tenure. It was present when the absolute owners of the Roman estates began to group themselves in Gaul into patrons and clients, "lords" and "men", seniors and juniors; it was present when Charlemagne, in his capitularies, gave the forms of law to the personal link of tenure -- military service and loyalty as the condition of holding; it was present after the irruption of the Barbarians in the ninth century, when feudalism, in a time necessarily military struck its most vigorous roots. It was present when the Norman lawyers, just before and during the Crusades (that is at the end of the eleventh and during the twelfth centuries), codified the feudal system and erected it into a strict machine of law.

We know that this idea of private property was present in two ways: (1) we know it as a matter of historic fact, because we find land bought and sold and mortgaged; (2) we know it as a matter of historical judgment, because we find land talked of as property, the personal possessive pronoun used in respect to it, the conceptions of theft in regard to it, of indignation at its unrighteous occupation, the increasing wealth of it as accruing to a particular owner, etc. etc., all alluded to.

Had society remained primitive for many centuries after the full statement of feudalism in the ninth and tenth centuries, the logical clash between the feudal theory of holding for service done and the intimate personal sense of property in land, which is common to all Europeans, might never have taken place. It was quite as easy for a family to go on holding an estate from father to son, and to think of it as a private property on the one hand and as a tenure on the other. There was a contract in theory, but no contract in fact. True, treason against the overlord would have involved the loss of the land just as bankruptcy involves it now, but that was a rare contingency and one which the mind regarded as the more exceptional because it was disgraceful. Great lords frequently lost their overlordship, lesser lords less frequently, men with single estates or manors very rarely, monasteries and ecclesiastical bodies hardly ever, villeins, one may say, never at all. And the two conceptions, though contradictory in terms -- the conception of ownership and the conception of tenure -- could have lived peaceably side by side, just as in our society for the moment, the conception of free contract is living peaceably side by side with the contradictory social fact of a proletariat and a capitalist class.

What ruined the feudal system was the tendency as society developed in activity, as values changed as towns grew, as a landless class developed, and as all that accompanies the expansion of a society appeared -- of those who formed the units of feudal societies to define their position with exactitude. Thus, within the village community which was the microcosm of the whole, there came moments when a villein who had long ago commuted his payment in labour for a fixed payment in money was, whether by the change in the value of money or by the rise in the price of labour, more valuable to his lord as a labourer than as payer of dues. The lord would claim service, the villein would dispute in the court his right to service. Again, as between lord and overlord, service in men-at-arms, once natural and normal, might become a fixed and mechanical thing. The overlord might find it profitable to accept a redemption of the military service required. Again, the king, in the primitive feudal conception, was simply the owner of a very large number of estates and of the royal domain (that is the forests and other public land). It was his business to administer the State out of his revenues as a wealthy private gentleman -- far the wealthiest private gentleman of the whole realm. But as civilization increased in complexity he could not do this. The functions

of the State increased, the king must come for aids to his underlords, who were bound to give aids by the personal tie of loyalty. It became an intolerable burden; such mere feudal aids must be supplemented by taxation falling upon all. The Crown was coming back by the mere force of things towards what it had been under Roman rule, before feudalism and tenure were heard of. Meanwhile, the link between the underlord and the overlord was growing as weak as the link between the villein and his lord, or the king and his direct feudal tenants. It was against the interest of the royal courts to allow the overlords to grow strong; that interest would in all countries tend to support a man with one manor who might be fighting an action to prevent that manor escheating, on some technical ground, to a wealthier local man who was his feudal superior. And, side by side with all this, increasing commercial activity, by making land more and more a matter of contract, barter, and sale, broke up the old personal tie upon which the ethical conception of feudalism reposed.

The dislocation of tenure, its reversion towards ownership, was only part of the universal European movement back towards the high civilization of the Empire which was undertaken in the spring of the eleventh century, and which is approaching its climax in our time -- for the story of the life of Europe is like the story of the life of a comet following its orbit; and in that metaphor one may call the ninth century the point of its course most distant from its centre of activity. The breaking-point between the fundamental and indestructible sense of ownership and the feudal conception which had overlain it for a time came, like the breaking-point of so many other strains, with the Renaissance. But the ownership of land did not go through a revolution, as did so many other institutions of that time; did not change abruptly, as did plastic art, nor suffer a catastrophe, as did religion. The forms of tenure were preserved, as they were used to mask what was now no longer tenure but ownership.

Now, from the violent action under feudal forms whereby Henry VIII acquired the land of the Church, and granted it again for ready money to a herd of adventurers, down to our own time there has been no break in the accepted social fact of absolute ownership in land. Tenure, for all practical purposes, disappeared with the sixteenth century. Throughout the seventeenth, the eighteenth, and the nineteenth centuries land has been owned, not held, as a social fact, though in some provinces of Europe (as notably in Britain) legal and technical language has continued to draft conveyances in terms of tenure rather than of ownership. In this revolution, however, a social fact of perhaps more consequence to Christendom than any other of the material kind appeared. It did not concern the relation between the lord of the manor and his overlords; it concerned the condition of the mass of the people.

For the fate of the villein or peasant began from the sixteenth century onward to differ profoundly in two types of communities. In those communities which had

broken off from the unity of civilization, and were soon to be grouped as Protestant, the lord of the manor tended to become the owner of the land, and in those which remained within the unity of the Catholic Church the villein tended to become the owner of the land.

This general formula is the capital historic truth upon which all those interested in the economic development of modern Europe should fix their eyes. Outside the old limits of the Roman Empire fortunes varied. The scanty population of Scandinavia, for instance, drifted away from the Faith, Norway which had never been feudal, became a sort of republic of owning farmers, while Sweden developed a landed aristocracy. Northern and Protestant Germany as a whole, though not entirely, destroyed the ownership of the villein; he was swallowed up by the lord. In Holland, and Denmark, and Switzerland (until the effect of the French Revolution was felt), a process of accretion of power to the lord, a process of diminution of power in the villein -- of economic power, that is -- appeared. But if we contrast the two main contiguous provinces of the old Roman Empire -- Britain, which had taken one lord, Gaul, which, when it suddenly emerged from the Huguenot assault, had taken another -- we shall easily see how true the formula is.

In Britain the Crown was rapidly impoverished, until, by the end of the seventeenth century, all feudal links, even nominal, between it and the lords of villages disappeared, save in the tenure known as "sergeantry" and one or two other quaint archaisms. But the link between the villein and the lord was retained in so far as it advantaged the lord. The owner of an estate grew greater at the expense of his tenants. As time went on the common lands were closed, no boundary of custom defended the freeholder, the poor remnants of villein tenure (now called "copyholders", because they held by right of the copy of the roll of the manor) dwindled as a class, and when the industrial revolution had come in to complete the business, it is just to regard agricultural England generally -- with many exceptions and many qualifications due to the complexity of a large society -- as a congeries of large estates, each of several thousand acres, and possessed by a class of anything between 9000 and 20,000 families. More than this, the great towns in their expansion were compelled to expand over the agricultural estates of these great landlords, who were careful not to sell; no central government existed to restrain their appetites, for the nominal power of the Crown was now but a servant, salaried (and most insufficiently salaried) by a landed oligarchy. The peasant had disappeared.

If an historical origin be sought for this vast change it may best be found in the Civil Wars which were in their effect the conquest of the small landed class over the executive power of the monarch. In Gaul a precisely opposite development took place. The peasant increased his holding and increased his security in it. Communal rights

were in social fact more and more his and less and less the lord's. The executive power of the Crown became greater than ever it had been before, and the nobility, the descendants of the old feudal lords of manors, while preserving intact, and even increasing, their social distinction, were impoverished in every way, losing their political power to the monarch, their land to the peasantry, retaining only the fossils of their old communal jurisdiction. Their impoverishment compelled them to use those fossil rights with harshness; the economic independence of the peasant made their continued usage of such rights more and more difficult, until at last the strain resolved itself in the outburst of the Revolution. In that explosion European society again discovered its original elements. Tenure, even as a fiction, disappeared; the conception of absolute ownership was restored, the control of public lands by public authorities became as absolute as it had been under the Roman Empire, and the orbit of change was completed.

It need not be added that the Revolutionary Wars resulted in an extension of these conceptions to the whole of Western Europe.

The industrial development of the towns and the growth of a proletariat therein has brought on other problems. It has produced, under the guidance of certain philosophers, many of them not European in descent, the conception of Collectivism, which, as an abstract theory, denies that old indestructible conception of ownership in land and would treat all land as the property of the sovereign. But this academic theory has made, and can make, no progress upon the soil, and it may be confidently said that the old Roman idea of absolute and divided ownership is secure.

H. BELLOC

Pope Lando

Pope Lando

(913-14).

A native of the Sabina, and the son of Taino, elected pope seemingly in July or August, 913; d. in February or March, 914, after a reign of a little over six months. Nothing more is known of him except that he was a worthy man, and granted a privilege to a church in his native Sabina.

Liber Pontificalis, II, 239; KERR, *Italia Pontificia*, II (Berlin, 1907), 73; MANN, *Lives of the Popes in the Early Middle Ages*, IV, 147 sqq.

HORACE K. MANN

Jean-Francois-Anne Landriot

Jean-François-Anne Landriot

French bishop, b. at Couches-les-Mines near Autun, 1816, d. at Reims, 1874. Ordained in 1839 from the seminary of Autun, he became, after a few years spent at the cathedral, successively superior of the seminary, 1842; vicar-general 1850; Bishop of La Rochelle, 1856, and Archbishop of Reims, 1867. During his ten years stay at La Rochelle he restored the cathedral, organized the Propagation of the Faith and the Peter's-pence collections, and won a reputation as a pulpit orator. A true bishop, he made it a rule to announce personally the Word of God either in his cathedral or in some city of his diocese. At Reims, besides preaching many Advent and Lenten stations, he raised a large subscription for the pontifical army, established several educational institutions, founded an asylum for the aged, and intrusted St. Walfroy to the Priests of the Mission. As a member of the Vatican Council, he deemed inopportune the definition of papal infallibility, but, once decreed, he adhered to its promulgation and even wrote to his diocesans urging them to accept it unconditionally. Lacroix (*"Mgr. Landriot pendant l'occupation allemande"*, Reims, 1898) shows Landriot's influence in allaying the measure of rigor resorted to by the victorious Germans during their occupation of Reims in 1870. In the question of the ancient classics Landriot refused to subscribe to the extreme views of Gaume and *"L'Univers"*. An eloquent preacher, he was also an ascetic writer of note. Beside his pastoral works collected in the *"(Euvres de Mgr. Landriot"* (7 vols., Paris, 1864-74), we have from his pen, all published in Paris: *"Recherches historiques sur les écoles littéraires du Christianisme"* (1851); *"Examen critique des lettres de l'Abbé Gaume sur le paganisme dans l'éducation"* (1852); *"La femme forte"* (1862); *"La femme pieuse"* (1863); *"La prière chrétienne"* (1863); *"Le Christ et la tradition"* (1865); *"Les béatitudes évangéliques"* (1865); *"Le Symbolisme"* (1866); *"L'Eucharistie"* (1866); *"La Sainte Communion"* (1872); *"L'Autorité et la liberté"* (1872); *"L'esprit chrétien dans l'enseignement"* (1873); *"Instructions sur l'oraison dominicale"* (1873); *"L'Esprit Saint"* (1879), etc.

La France ecclésiastique (Paris, 1875); *L'épiscopat français depuis le concordat jusqu'à la séparation* (Paris, 1907), s.vv., La Rochelle and Reims: biographies by MENU (Reims, 1867), CAUSETTE (Reims, 1874), ARSAC (Reims, 1874), REIDOT (Autun, 1895).

J.F. SOLLIER

Lanfranc

Lanfranc

Archbishop of Canterbury, b. at Pavia c.1005; d. at Canterbury, 24 May, 1089. Some say his father was of senatorial rank, others accord him a somewhat humbler station. He received a liberal education according to the standard of the age, notwithstanding the death of his parents during his tender years. On reaching manhood he applied himself to the study and practice of the law with marked success, but left Pavia for the purpose of devoting himself to the pursuit of learning. He made his way to France, and attached himself to a school at Avranches, in Normandy, where he became noted as a teacher. At a later period, a vocation to the religious life developing itself in him, he quitted Avranches secretly, only taking with him one Paul, a relative. His biographer tells us he was robbed on the road, but eventually made his way to Bec, where Abbot Herluin was then engaged in building a monastery which he had recently founded. He was received into the ranks of the little poverty stricken community after the customary period of probation, and applied himself to Biblical studies. In time, he was appointed prior of the monastery by Herluin, and was then enabled to open a school there, which rapidly became famous, and attracted scholars from many parts of Europe, several of whom rose to high rank in after years, especially the future pope, Alexander II, and Anselm, who succeeded Lanfranc both as prior of Bec and as Archbishop of Canterbury.

In May, 1050, being in Rome on business, he attended the council there and opposed the heresies that had of late years been broached by Berengarius on the subject of the Sacrament of the Altar, denying the mode of the Real Presence. Through the contents of a certain letter, Lanfranc came to be suspected of sharing Berengarius's erroneous views, but he so ably explained his own opinions that he has stood forth ever since as the principal exponent of the doctrine which has from that date been labeled with the name of Transubstantiation. Needless to say, that doctrine did not take its rise then, or through Lanfranc but his masterly exposition of the Faith (always held by the Church implicitly, and merely enucleated by him) was given with a clearness and precision of definition such as has been handed down through succeeding ages to ourselves. During the same year, at the Council of Vercelli, he once more upheld the orthodox belief against Berengarius, and again at Tours, in 1055, and finally secured the triumph of truth over error, of authoritative teaching over private interpretation, in the definition of the Lateran Council, held under Nicholas II in 1059. At a later date, probably about 1080, he wrote "De Corpore et Sanguine Domini" against the errors

which Berengarius had continued to disseminate, notwithstanding various retractions and submissions.

All these activities made Lanfranc a man of such note that William, Duke of Normandy, employed him as one of his counsellors. He, however, forfeited the ducal favor about 1052-53, on account of opposing William's union with Matilda of Flanders, on the ground of their relationship within the prohibited degrees of kindred, and was, in consequence, ordered to leave the duke's dominions. On his journey to the frontier he happened to meet Duke William, who roughly asked him why his orders were not being obeyed. Lanfranc jestingly replied that he was obeying them as fast as a lame horse would allow him to do so. William appears to have been mollified by the answer, a reconciliation followed, and it would seem that Lanfranc undertook to forward negotiations for securing the needful dispensation from the pope. This he finally obtained in 1059, as well as the removal of the interdict which had been laid upon Normandy. In 1066 he was appointed to the Abbacy of St. Stephen's at Caen, one of the two abbeys lately founded by Duke William and his wife Matilda as one of the conditions of the papal dispensation from matrimonial impediments, and the ratification of their previously uncanonical union. This year is further remarkable as chronicling the defeat of Harold, King of the English, at Hastings, and the consequent conquest of England by Duke William. It is generally supposed that Lanfranc had much to do with shaping the duke's policy of invasion, obtaining the pope's sanction of the expedition by a papal Bull and the gift of a blessed banner, thereby conferring on the undertaking the appearance of being a holy war against a usurper and a violater of his oath, to some extent, also, identifying it with the cause of ecclesiastical reform, which was well advanced in Normandy, but still very backward in England. Stigand, the Archbishop of Canterbury at that period, was in very bad odour with all parties; and in 1070, at a great council at Winchester, he was deprived of his office on charges of simony and uncanonical election.

Lanfranc had been elected to the Archbishopric of Rouen in 1067, but had declined it; now, however, the Conqueror fixed on Lanfranc as his choice of a successor to Stigand, and Lanfranc was at last prevailed upon, unwillingly enough, to yield his consent at the solicitations of his friends, headed by his former superior, Herluin. After receiving the temporalities of the see from William, he was consecrated at Canterbury on 29 August, by the Bishop of London. He entered on the duties of his high station with advantages of name and learning and experience of the world such as few men have ever brought to a similar office. The king's ecclesiastical policy, which he now, as chief counsellor, largely moulded, was without doubt beneficial to the kingdom; for the civil and ecclesiastical courts were separated, and regular synods were held, wherein regulations tending to better discipline were enacted and enforced. The Normanizing

of the Church further tended to bring the native ecclesiastics into closer touch with the learning and practice of the Continent; and this was effected by replacing nearly all the Saxon bishops and abbots with Normans, on pretexts grave or slight. Whilst the insularity of the native clergy was thus beneficially broken down, much on the other hand of local practice, laudable in itself, was swept away. Much might well have been retained, but could not stand against the prepossessions of the dominant party, and the effect generally was the destruction of local customs. In particular, the liturgy lost much of its distinctiveness. Hitherto the Saxon Church had kept in close touch with Rome. The old Itala version of the Psalms, for instance—that which is used to this day in the choir of St. Peter's at Rome—was everywhere employed in England; but the Norman superiors supplanted that ancient version by the Gallicana, to which they were accustomed. Proof of this may be seen to this day in corrected codices, such as, for instance, British Museum Additional MS. 37517 (the Bosworth Psalter), which possibly may have undergone revision at the hands of Lanfranc himself.

Once, however, that Lanfranc was identified with the English Church, he espoused its cause warmly, upholding the dignity and primacy of his own see, by refusing to consecrate Thomas of Bayeux to the archiepiscopal See of York till he admitted his dependence on that of Canterbury. This dispute was carried to Rome, but was thence referred for settlement back to England, where the case was finally decided in favor of Canterbury at a national council held at Winchester, at Easter, 1072. Thomas made his submission to Lanfranc in a council held at Windsor at Pentecost of the same year. In connection with this incident a grave charge has of recent years been brought against Archbishop Lanfranc by H. Böhmer (in "Die Fälschungen Erzbischof Lanfranks"), who accuses him of having falsified and forged documents in order to secure the primacy of the See of Canterbury over that of York. M. Saltet (in "Revue des Sciences Ecclésiastiques", 1907), and others, have dealt with the question, exonerating Lanfranc from any personal complicity in these forgeries, if such they were.

Meanwhile Lanfranc had been to Rome in 1071 to receive the pallium from Alexander II, his former pupil at Bec. As Archbishop of Canterbury his influence was so great that he was from time to time consulted by bishops not belonging to his own province or obedience, and he helped in the work of reforming the Church in Scotland. He enforced the observance of celibacy among the clergy in accordance with the decrees renewed in 1076 at a synod held at Winchester; no canons were to be permitted to marry, nor could married men be ordained to the diaconate or the priesthood. But it is clear that at the time a state of degeneracy existed, and that too drastic measures all at once had to be avoided, since clergy already married were allowed to retain their wives. He resisted an attempt to oust the monks at Canterbury and Winchester in favor of secular canons, and secured papal confirmation of the existing practice which had

come down from the days of St. Augustine of Canterbury. Many episcopal sees were at this period transferred from obscure villages to rising towns, as Sherborne to Salisbury, Dorchester (Oxon.) to Lincoln, Thetford to Norwich, and Selsey to Chichester. In 1076 he again visited Rome, and, on the return journey, made a tour of Normandy, during the course of which he had the satisfaction of consecrating the church of his old monastic home at Bec.

The king's attitude towards the Court of Rome more than once placed Lanfranc in a situation of extreme delicacy. William refused to allow the bishops of England to leave the kingdom for the purpose of visiting the pope without his consent. For this Lanfranc appears to have incurred the blame and was reprov'd, being, moreover, summoned to Rome, in 1082 under pain of suspension. He did not go, but it was the infirmities of old age, not contumacy, which prevented him from undertaking the long and arduous journey. It is well, also, to remember that a purely political reason for the king's refusal may be assigned, and Lanfranc probably shrank from precipitating a rupture between the pope and the king upon a question of constitutional law.

William introduced the system of feudal tenure for Church lands, which he was enabled to do when bestowing them upon Norman ecclesiastics, and required homage for them. But only in time did feudal homage and ecclesiastical investiture come to be confounded. It may be safely said that William never dreamt of encroaching upon ecclesiastical privilege, nor of questioning the spiritual supremacy of the Holy See, even when refusing to comply with the request of Gregory VII that he should do homage for his kingdom, and liquidate certain arrears of Peter's pence. The explanation of the pope's attitude and demand would seem to be that the tribute had come to be looked upon as a token of vassalage, whereas, in its origin, it was unmistakably a free gift. William, while refusing to render homage, promised that the arrears of Peter's-pence should be forthcoming. Capital is sometimes made, too, of the fact that William and Lanfranc adopted a hesitating attitude in the case of the antipope Guibert, or Clement III, in 1084. All that can be justly inferred is that they maintained strict neutrality until such time as the merits of the candidates could be adjudged by proper authority. As that authority was not theirs, neither William nor Lanfranc assumed the prerogative of settling the dispute one way or another. (See Liebermann in "Engl. Hist. Rev.", April, 1901, p. 328.) In fact, no act of theirs can be instanced as showing anything but the most complete and filial submission to the Holy See. (See Martin Rule in "Dublin Rev.", 3rd series, vol. VI, 1881, pp. 406 sqq.)

Lanfranc strenuously upheld the rights of his Church of Canterbury, when necessary, by legal action, even against the Conqueror's half-brother Odo of Bayeux. He also showed himself a munificent benefactor to the see, rebuilding the cathedral after its destruction by fire in 1067, improving the archiepiscopal estates by his good man-

agement, founding hospitals for the sick and indigent of both sexes, and giving liberally to widows and to the poor. His munificence was not confined, however, to his own see; he contributed largely, for example, to St. Albans, whose abbot, his relative Paul, had initiated there a vast scheme of rebuilding. His lifelong love of learning prompted him to foster studies; and even when immersed in the multitudinous and anxious affairs attached to his office and to his secular position as chief counsellor to the king, his pen was not idle, as the list of his works, which (considering the calls on his time) is a long one, testifies. His writings were published collectively by d'Achery in 1648; they may also be consulted in Migne, P.L., CL, and in Dr. Giles's edition of his works, published in 1844. Other treatises, now lost, have been attributed to him, amongst which are some that should rightly be ascribed to others.

When William had to leave England to attend to the affairs of his continental dominions, Lanfranc acted as his vicegerent, or regent, in England, and displayed not only activity and sagacity as a temporal ruler, but military qualities of no mean order as well in the repression of a rising against the Conqueror in 1074. It was probably by his advice, too, that, notwithstanding the violence of that young prince's character, William the Conqueror left England to his second son William Rufus, as by right of conquest, Normandy to his eldest son Robert, by right of inheritance, and only a large sum of money to his son Henry. The choice of Rufus was, doubtless, because, as having been Lanfranc's pupil, and as having received his knighthood from him, the archbishop's influence over him might be presumed to be of some weight. Lanfranc crowned him at Westminster less than three weeks after the Conqueror's death.

Lanfranc's name is, with that of his successor, St. Anselm, inseparably coupled with the thorny question of investitures, for the differences between king and primate, which came to a head under St. Anselm, showed their beginnings under Lanfranc. Here it is enough to say that his influence over a great ruler, such as the Conqueror was, prevented any but worthy appointments in the Church. But the root of the future evil lay in regarding sees merely as portions of the temporal fiefs attached to them, instead of keeping their spiritual character wholly separate from their temporal adjuncts. So long as a ruler—such as the Conqueror—was right-minded, no great harm was to be feared, but when a godless savage like William Rufus saw fit to intrude unworthy men into sees, or kept sees vacant in order to enjoy their revenues, then great evils arose, and such men were likely to assume—as Rufus did—that spiritual power and jurisdiction was derived from them by means of investiture with staff and ring, as well as tenure of the temporalities whose outward symbols were at that time, unfortunately, the same instruments. Lanfranc saw clearly the distinction between the civil and ecclesiastical capacities in which the same man might be regarded and might act, and it is related of him that in 1082 he encouraged the Conqueror to arrest his brother, Bishop

Odo. The king scrupled to imprison a clerk, but Lanfranc grimly pointed out that he would not be arresting the Bishop of Bayeux (as it was not for an ecclesiastical offence), but the Earl of Kent—a title he held. Again, in 1088, when William de S. Carilef, Bishop of Durham, was being tried for his share in the rebellion of Odo and the Norman lords, that prelate endeavored to shield himself under his episcopal character. Lanfranc reminded him, first, that he was not at the bar as a bishop, but as a tenant-in-chief of the king; secondly, that the bishops judging him were acting in a like temporal capacity. Had that distinction been recognized and borne in mind by William Rufus, the troubles of his reign about investitures need never have arisen.

Lanfranc endeavored to check the extravagances of the Red King, who, however, proved deaf to his entreaties and remonstrances. Nevertheless, it is certain that, as long as Lanfranc lived, his influence, slight as it might be, caused Rufus to put some sort of restraint upon his evil nature. His faithlessness to his engagements and promises, however, was a source of bitter sorrow to the aged archbishop, and doubtless hastened his death. It had been his accustomed prayer that he might die of some malady which would not affect his reason or his speech, and his petition was granted. An attack of fever in May, 1089, in a few days brought him to the grave. On 24 May, the last day of his life, his physicians having ordered him a certain draught, he asked to defer it until he had confessed and received the Holy Viaticum. When this was done, he took the cup of medicine in his hand, but instead of swallowing it, calmly breathed his last. He was buried in his own cathedral. In the "Nova Legenda" Lanfranc has the title of Saint, and elsewhere he is called Blessed; but it does not appear that the public honors of sanctity were accorded to him.

His character may here fitly be summed up in words written in the "North American Review" (XCII, 257): "An Italian by birth, trained to new thoughts by long residence in France, he brought the subtile mind of his birth-land, refined by the use of French policy, to his new home, and into contact with the clear, hard sense of the English; and ruled in that realm with more than the skill of a native. . . . he was called on . . . so to frame and regulate the institutions of the Church, that they might conform to and sustain the altered constitutions of the State. . . . vigour of intellect and energy of purpose were . . . demanded in one who must displace an old hierarchy, long and deeply established in the affection of the people, and mainly form anew the entire internal economy of their religious sentiments and worship." In every capacity, as scholar, as author, as politician, and as divine, Lanfranc exhibited the sound sense, rare tact, and singular ability that marked the great man amongst his fellows, and that gained for him a memory enduring through eight centuries even to our own day.

HENRY NORBERT BIRT

Giovanni Lanfranco

Giovanni Lanfranco

Also known as CAVALIERE GIOVANNI DI STEFANO.

Decorative painter, b. at Parma, 1581, d. in Rome, 1647. As a boy Lanfranco was a page at Piacenza in the service of Count Scotti, and developing a talent for drawing was placed by the count under Agostino Carracci, with whom he remained for some years, but before he was sixteen he had painted a picture of the Virgin and Saints, which was so much admired that it was considered worthy of being placed in the church of Sant' Agostino at Piacenza. On the death of Carracci, Lanfranco went to Rome and assisted Annibale Carracci in decorative work in the Farnese Gallery, in the Vatican, and in various Roman churches. By clever scheming, he was able to carry off a commission which had been promised to Domenichino, his great rival, who was born on the same day as himself, and exerting himself to the utmost of his ability to out-do his opponent, he executed in the cupola of Sant' Andrea della Valle his greatest work, representing the Virgin seated in the clouds, and distinguished by grandeur, daring, boldness of design, and masterly coloring. He was then attracted to Naples and was occupied for a couple of years in painting the cupola of San Gennaro, and in carrying out similar work in San Martino. Here again he was the rival of Domenichino, who was at work at the cupola of the treasury when he died, and Lanfranco was employed to finish the fresco, but he destroyed almost all the work of his great rival, excepting the decorations in the angles, and these still remain to prove that with the solitary exception of the cupola in Rome, Domenichino's work was far more accomplished than that of his persistent rival. After executing this work, he returned to Rome,

where he spent the remainder of his life, and his productions pleased Urban VIII so much that he conferred upon him the honor of knighthood.

His works can be studied in Madrid, Florence, Paris, Vienna, and Dresden, as well as in the places already mentioned. He left behind him several fine etchings, and a few drawings.

BELLORI, *Vite de' Pittori Scultori e Archetti Moderni* (Rome, 1672), also a similar work on the artist (Rome, 1731), and his description of the Vatican (1751).

GEORGE CHARLES WILLIAMSON

Matthew Lang

Matthew Lang

Cardinal, Bishop of Gurk and Archbishop of Salzburg, b. at Augsburg in 1468; d. at Salzburg, 30 March, 1540.

After receiving a secular education at Ingolstadt, Tübingen, and Vienna, he entered the chancery of Archbishop Berthold von Henneberg of Mainz, became secretary of Emperor Maximilian I in 1494, imperial councillor in 1501, and chancellor in 1508. The emperor esteemed him very highly, and gave him many ecclesiastical benefices. After being raised to the nobility with the title of "von Wellenburg" in 1498, he became provost of the cathedral of Augsburg in 1500, and shortly after also of that of Constance. In 1503 he was appointed coadjutor, and on 5 October, 1505, Prince-Bishop of Gurk. Though bishop, he remained in the imperial chancery as a layman, not even once visiting his diocese as long as he was Bishop of Gurk (from 1505 to 11 March, 1522). As imperial legate he directed the emperor's negotiations with France, Venice, Hungary, and the pope from 1508 to 1515. On 10 March, 1511, Pope Julius II created him cardinal, but kept him *in petto* until 24 November, 1512. Despite imperial influence he was unsuccessful in his aspirations to the Sees of Mainz, Magdeburg, Halberstadt, and Trent, but was finally appointed coadjutor of the See of Salzburg in 1514, against the express wish of Archbishop Leonard Keutschach of Salzburg. After the death of the latter, on 8 June, 1519, Lang became Archbishop of Salzburg. On 24 September, 1519, he was ordained priest and on the next day consecrated bishop. Though originally a promoter of the schismatic Council of Pisa, he later effected a settlement between the pope and the emperor, and joined the Lateran Council on 3 December, 1512. It was due chiefly to his influence that Charles V was elected emperor in 1519. He also induced Charles V in 1521 to take measures against Luther, suppressed the Peasants' War in his domain between 1525 and 1526, insisted on church reform at the synods which he held in Mühlendorf in 1522 and 1537, and joined the league of Catholic princes at Ratisbon on 7 July, 1524. In 1529 he received the title of "Primate of Germany". Car-

dinal Lang was a friend of letters but a proud and ambitious prince of the Church. His suppression of Protestantism and his ecclesiastical reforms were dictated rather by political than religious motives.

HAUTHALER, Kardinal Matthaus Lang und die religio-soziale Bewegung seiner Zeit, 1517-1540 (Salzburg, 1896); SCHMID, Des Kardinals u. Erzbischofs von Salzburg (1519-40) Matthaus Lang Verhalten zur Reformation (Furth, 1901); LEGERS in Mittheilungen der Gesellschaft fur Salzburgerische Landeskunde, XLVI (Salzburg, 1906), 437-517.

MICHAEL OTT

Rudolph von Langen

Rudolph von Langen

Humanist and divine, b. at the village of Everswinkel, near Munster, Westphalia, 1438 or 1439; d. at Munster, 25 Dec., 1519. His family belonged to the nobility; according to Hermann Hamelmann, he received his schooling at Deventer, in the school of Thomas a Kempis, together with Rudolf Agricola, Alexander Hegius, Anton Liber of Soest, Count Maurice von Spielenberg, and Ludwig Dringenberg. But this cannot be possible. Thomas was certainly not a teacher. Count Spielenberg and Dringenberg were much older; possibly Agricola and Liber were his schoolfellows, but where there is no saying. In 1456 he entered the University of Erfurt, and received the degree of B.A. in 1459, and M.A. in 1460. But before this he was made canon of the cathedral of Munster, and provost of the old cathedral in 1462. He went to Rome in 1466 in connection with the election of a bishop. But Hamelmann is wrong in what he has to say about his having been the scholar of the most renowned Italian humanists. He was only there a short time. Neither did Count Spiegelberg go with him, as he went to Rome in 1463, and several of the other scientists mentioned had been dead a long time. But it is true that Langen absorbed many new ideas in Italy. At Munster he was the centre of literary life, as well as of humanistic efforts. He was surrounded by a group of men of similar tastes. He possessed a good classical library, which he liberally placed at the disposal of others. Young Hermann von dem Busche was one of his pupils, to whom he imparted a love of classical literature. Hamelmann says he went to Rome a second time, with Hermann von dem Busche (1486). But this is not very probable.

Langen's own literary work is not important. It is true that he was well read, but he lacked poetical talent. He wrote a poem about the destruction of Jerusalem, which has not been preserved; also a prose work, which was published in Deventer about 1485. In 1486 the first printing office at Munster, belonging to Johann Limberg, printed his poems. In 1493 he published the "Rosarium beatissimae virginis gloriosissimaeque

dei matris Mariae"; about 1494 an epitaph on Albertus Magnus; and the "Horae de sancta cruce" in 1496. All these, as well as numerous other lesser poetical attempts, met with no better success than the collection of 1846, in spite of their ethical gravity, and his inspiration for all that was noble and good. But Langen's influence upon others was far more important. His most meritorious work was the reform which he brought about in the cathedral school, which took place in 1500. It became a humanistic institution, patterned after the one at Deventer. The course of instruction was changed, and other masters were called. But the school was more indebted to the subrector, Johannes Murmellius, than to the rector, Timann Kemener; the former was one of the ablest German humanists, and the flourishing condition of the school and its widespread influence, which reached to Schleswig and Pomerania, drew numerous scholars. It was by this work that Langen raised the literary life of the town of Munster to the greatest activity. He was a pious and noble man, who led a truly religious life. The inscription on his tomb at Munster lauds him as the patron of scholars and the friend of the poor.

II, 1-34; I, pt. III, 15-371 (Munster, 1905-1908); REICHLING, *Die Reform der Domschule zu Munster* (Berlin, 1900); BOHMER, *Das literarische Leben in Munster* (Munster, 1906).

KLEMENS LÖFFLER

Benoit-Marie Langenieux

Benoit-Marie Langénieux

Cardinal, Archbishop of Reims, b. at Villefranche-sur-Saône, Department of Rhône, 1824; d. at Reims, 1 Jan., 1905. He studied humanities in Paris at St-Nicolas du Chardonnet, under Dupanloup; and theology at St-Sulpice, where he was ordained, 1850. After nine years as curate at St-Roch, he became successively diocesan promoter 1859; curé of St-Ambroise, 1863; then of St-Augustin, 1868; Vicar-General of Paris, and archdeacon of Notre-Dame, 1871. Made Bishop of Tarbes, 1873, he was, the following year, translated to the archiepiscopal See of Reims. The thirty-one years of his episcopate were fruitful ones. Beside obtaining from the French legislature an appropriation of two millions of francs for the restoration of Reims cathedral, he secured for the Trappists the ancient Abbey of Igny, and for the Oratorians the priory of Binson, erected at Châtillon the colossal statue of Urban II, whose cultus he had promoted in Rome, built in the suburbs of his metropolis the churches of Ste-Geneviève, St-Jean-

Baptiste de La Salle, St-Benoit, and Ste-Clothilde, this latter being afterwards made the seat of an archconfraternity of prayer for France, and the place of celebration of the fourteenth centenary of Clovis's baptism. When the law of school secularization came into effect, he filled his see with Catholic schools and founded four asylums for orphans. Created cardinal in 1886, he presided as papal legate over the Eucharistic Congresses of Jerusalem, Reims, and Lourdes.

A champion of every noble cause, he took an active part in the beatification of Joan of Arc, the panegyric which he pronounced at Orléans, 1885, being most eloquent. He fought vigorously the anti-religious legislation that was being prepared against Christian education, the religious orders, and the concordat. His "Déclaration des Cardinaux et exposé de la situation faite à l'église de France" (1892), and his "Lettre au Président de la République" (1904), remain as witnesses to his truly episcopal character. However, he cherished above all the title of "Cardinal des ouvriers" given him by the gratitude of the working class, whose interests, spiritual and material, he never ceased to champion. Langénieux enjoyed the friendship of Leo XIII, who consulted him on all matters concerning the Church in France. The universal esteem in which he was held was abundantly proved by the many decorations which European rulers bestowed on him and by the vast concourse of bishops, priests, and people at his two jubilees and at his funeral. His eulogy was pronounced by Bishop Latty, of Châlons, and Bishop Touchet, of Orléans. Beside the pamphlets mentioned above and a number of occasional discourses, we have from Langénieux's pen: eight pastoral letters (Tarbes, 1873); 231 *mandements* (Reims, 1874-1905); and "Abrege de l'Histoire de la Religion" (Paris, 1874).

J.F. SOLLIER

Simon Langham

Simon Langham

Cardinal, Archbishop of Canterbury and Chancellor of England, b. at Langham in Rutland; d. at Avignon, France, 22 July, 1376. Nothing is known of his early life, but in 1346 he was already a Benedictine monk of Westminster Abbey, representing his house in the triennial chapter. In April, 1349, he was made prior, and in May he became abbot. In this office he proved very successful, ruling well and carrying out many works, including the completion of the cloisters. He became treasurer of England

on 21 Nov., 1360, and Bishop of Ely on 10 Jan., 1362. Before consecration he was also elected Bishop of London, but he refused this see, preferring Ely. On 19 Feb., 1363, he received the great seal as chancellor, and he was the first to speak in English when opening Parliament. He was appointed Archbishop of Canterbury on 24 July, 1366, and received the pallium from the pope on 4 Nov., having previously resigned the chancellorship. As archbishop he was vigilant against false doctrine, condemned certain propositions taught at Oxford, removed one Wycliffe—not the well-known heretic of that name—from the headship of Canterbury Hall, and censured the demagogue-priest, John Ball. Blessed Urban V created him Cardinal of St. Sixtus, 27 Sept., 1368. His acceptance of this dignity without the king's leave offended Edward III, who seized the Canterbury revenues on the plea that Langham had by his act forfeited the see. Langham resigned the archbishopric on 27 Nov., and early in 1369 joined the Pope at Avignon, being succeeded at Canterbury by Whittlesey. Subsequently he regained the king's favor, but did not return to his native country, though he held several English preferments in succession, such as the archdeaconries of Wells and Taunton. Gregory XI made him Cardinal-Bishop of Palestrina in July, 1373, and in the following year the monks at Canterbury again elected him as archbishop. The pope refused to confirm this, alleging that he could not spare the cardinal from Avignon. When the Curia was about to return to Rome in 1376, Langham obtained permission to go back to England, but he died before he could carry out this intention. Three years after his death, his remains were translated from Avignon to Westminster Abbey to which he had bequeathed his residuary estate. He was an upright man, and an able, if stern, ruler.

EDWIN BURTON

Langheim

Langheim

A celebrated Cistercian abbey situated in Upper Franconia (Bavaria), not far from Mein, in the Diocese of Bamberg. Three brothers of the city of Bamberg made a gift of the estate of Langheim to Bishop St. Otto VIII, who, in 1132, offered it to the Cistercians of the Abbey of Ebrac (which was itself founded by Morimond), under the condition that they should establish there a monastery of their order. Encouraged by St. Bernard, Adam, Abbot of Ebrac, accepted the offer. On 1 August, 1132, he laid the corner stone of the new monastery, and in 1142 the buildings were completed. The

first to rule this community was Abbot Adam (1141-80), who, by his wisdom and holiness, won the sympathy of the bishops of Bamberg and of the nobles of the surrounding country for the new foundation. Very soon the abbey found itself in possession of considerable revenues, and had a large number of parishes depending upon it. Pope Eugene III and the emperors granted it many privileges. All the ancient historians of the order agree in saying that it surpassed every other monastery in splendor and wealth, while one of its distinctive characteristics was the generous hospitality which it extended to all visitors. But this era of prosperity endured scarcely more than two centuries, for in 1385 the Bishop of Bamberg seized part of the property of the abbey, and in 1429 the Hussites destroyed the buildings by fire. After these misfortunes it arose again from its ruins, and enjoyed a return of prosperity, until, in 1535, the revolted peasants applied the torch and reduced all once more to ashes. After the abbey had been rebuilt, a period of peace ensued, but in 1632 the Swedish hordes delivered it up to pillage, subjected the monks to every outrage, and left nothing but misery and desolation in their train. It was not until the following century that Abbot Stephen Mössinger (1734-51) had the monastery reconstructed in such proportions and with a splendor that recalled the first abbey. During this interval the bishops had again become favorable to the religious, but failed to restore either the property they had usurped or the old-time privileges. The final catastrophe occurred on 7 May, 1802, when fire destroyed the splendid buildings erected by Stephen Mosinger and put an end to Langheim. On 23 June, 1803, the community, at that time numbering forty-nine members, was secularized by a decree of the Prince Elector of Bavaria. The religious were dispersed to various places, and the last abbot, Candide Hemmerlein, received a pension of 8000 florins, with which he retired to the Castle of Thieb, where he died in 1814.

This abbey gave to the Church in Germany many bishops, who distinguished themselves by their zeal in combating error, and in laboring for the conversion of heretics; it also sheltered many writers who were not without merit. We may here mention the monk Engelrich, who wrote the "Leben der hl. Mathilde, Abtissin von Edelstetten"; Simon Schreiner of the seventeenth century, who composed a treatise on the "Vierzehnheiligen", and an "Apologia contra Lutheranos". The Abbot Moritz Knauer, a distinguished mathematician and astronomer, published different works on the natural sciences, also an ascetical work entitled "Tuba Coeli" (1649-64); but the most prolific author was Joachim H. Jaeck, who, after his secularization, published the results of his researches on the history of Bamberg and the surrounding country. In 1210 Langheim founded the Abbey of Plass in the Diocese of Prague, Bohemia. In 1445 Abbot Frederick Hengelein built at Frankenthal, as a dependence of the abbey, a church in honor of the "Fourteen Holy Helpers", which soon became a celebrated

and much frequented place of pilgrimage. The care of this church is now confided to the Franciscans.

E. OBRECHT

Richard Langhorne

Ven. Richard Langhorne

English martyr, b. about 1635, d. at Tyburn, 14 July, 1679. He was the third son of William Langhorne of the Inner Temple, by Lettice, daughter of Eustace Needham of Little Wymondley, Herts. He was admitted to the Inner Temple in November, 1646, and called to the bar in 1654. He married a Protestant lady, Dorothy, daughter of Thomas Legatt of Havering, Essex, and lived at Shire Lane, to the right of Temple Bar. His chambers were in Middle Temple Lane. He was arrested on 15 June, 1667, in connection with the great fire. Arrested a second time on 7 October, 1678, and committed to Newgate without any previous examination, he was kept in solitary confinement for eight months. On 14 June, 1679, he was brought to the bar at the Old Bailey; Oates, Dugdale, Bedloe, and Prance gave evidence against him, and he was found guilty. He was offered a pardon, if he would confess his guilt and also make a disclosure of the property of the Jesuits with which he had become acquainted in his professional capacity. This last he did -- probably with the consent of his fellow-prisoner, the provincial, Fr. Whitbread -- but, as he persisted in declaring his ignorance of any conspiracy, he was executed. His last words were to the hangman: "I am desirous to be with my Jesus. I am ready and you need stay no longer for me."

JOHN B. WAINWRIGHT

Richard Langley

Richard Langley

Layman and martyr, b. probably at Grimthorpe, Yorks, England, date unknown; d. at York, 1 Dec., 1586. From his father, Richard Langley, of Rathorpe Hall, Walton, he probably inherited Rathorpe, but for the greater part of his life continued to reside on his estate at Ousethorpe, in the East Riding. His mother was Joan Beaumont of Mirfield. He married Agnes, daughter of Richard Hansby, New Malton, by whom he had one son, Christopher (b. 1565), and four daughters. (See "Visitation of Yorkshire", ed. Foster, London, 1875.) During the troublous times of the Elizabethan period Langley gave over his energies and a very considerable part of his fortune to assisting the oppressed clergy; his house was freely offered as an asylum to priests. He even constructed a subterranean retreat, perhaps beneath the Grimthorpe dwelling, which afforded them sanctuary. This refuge was betrayed to the President of the North, and on 28 Oct., 1586, a strong band of military was despatched, several justices and ministers of the new religion joining in the quest, to make a domiciliary visitation of the Grimthorpe and Ousethorpe houses. Two priests were found in hiding at the former; at the latter Langley himself was seized. All three were carried to York, committed to prison, and subsequently arraigned before the President of the North, the priests because of their office and Langley for harboring them.

During the investigation Langley was steadfast in his adherence to the Faith. He would not take the oath of the queen's ecclesiastical supremacy, nor compromise his religious heritage by seeking to ingratiate himself with the lord president or Privy Council. It was feared that the jury which had first been empaneled to decide upon the case might return a verdict in accordance with the dictates of justice, it was therefore discharged and replaced by another of tried fidelity to the prosecutors. Langley was condemned to death, without any evidence being adduced to establish the fact that he had knowingly sheltered seminary priests, and was hanged, drawn, and quartered at York. His remains were refused honorable burial, despite the importunity of his friends.

P.J. MACAULEY

Diocese of Langres

Langres

(LINGONÆ).

Diocese comprising the Department of the Haute-Marne. Suppressed by the Concordat of 1801, Langres was later united to the Diocese of Dijon. The bishop bore the title of Dijon and Langres, but the union was never quite complete; there was a pro-vicar-general for the Haute-Marne and two seminaries at Langres, the *petit séminaire* from 1809 and the *grand séminaire* from 1817. The See of Langres was re-established in 1817 by Pius VII and Louis XVIII; and Mgr de la Luzerne, its pre-Revolution bishop, was to have been re-appointed; but the parliament did not ratify this agreement, and the bishops of Dijon remained administrators of the Diocese of Langres till 6 October, 1822, when the Bull "Paternae charitatis" definitely re-established the see. The new Bishop of Langres governed 360 parishes of the old Diocese of Langres, 70 of the old Diocese of Châlons, 13 of the old Diocese of Besançon, 13 of the old Diocese of Troyes, and 94 of the old Diocese of Toul. For the legends concerning the Apostolic origin of the See of Langres and the mission of St. Benignus see DIJON.

Mgr Duchesne considers Senator, Justus, and St. Desiderius (Didier), who was martyred during the invasion of the Vandals (about 407), as the first three bishops of Langres; the see, therefore, must have been founded about the middle of the fourth century. Among the bishops who, till 1016, resided at Dijon, and exercised till 1731 spiritual jurisdiction over the territory of the present Diocese of Dijon we must mention: St. Martin (411-20); St. Urban (425-40); St. Paulinus (440-50); St. Aprunculus, the friend of Sidonius Apollinaris and his successor in the See of Clermont (470-84); St. Gregory (509-39), great-grandfather of St. Gregory of Tours, who transferred the relics of St. Benignus; St. Tetricus, son of St. Gregory (539-72), whose coadjutor was St. Monderic, brother of St. Arnoul, Bishop of Metz; Blessed Migetius (589-618); St. Herulphus (759-74), founder of the Abbey of Ellwangen; Blessed Arnoul (774-8); Betto (790-820), who helped to draw up the capitularies of Charlemagne; Venerable Isaac (859-80), author of a collection of canons; Venerable Argrin (889-909); Blessed Bruno of Roucy (980-1015), who brought in the monks of Cluny to reform the abbeys of the diocese; Venerable Lambert (1015-30), who ceded to King Robert of France the lordship and county of Dijon, in 1016; Venerable Gauthier of Burgundy (1163-79); Robert de Torote (1232-40), who became Bishop of Liège in 1240, and established the feast of the Blessed Sacrament; Bertrand de Got (1306-07), uncle of Clement V; Venerable Sebastian Zamet (1615-54), whose vicar-general, Charles de Condren, became later Superior General of the Oratory, and who gave the college of Langres to the Society

of Jesus in 1630; César Guillaume de la Luzerne, bishop in 1770, celebrated as an apologist, deputy to the States General in 1789, and an *émigré* in 1791. He resigned in 1801, was created cardinal and again nominated Bishop of Langres in 1817, dying in 1821; Pierre Louis Parisis (1835-51), celebrated for the part he took in the Assembly of 1848 in the discussions on the liberty of teaching (*liberté d'enseignement*) and for founding the ecclesiastical college of St. Dizier even before the *Loi Falloux* (see FALLOUX DU COUDRAY) was definitely passed. Hugh III, Duke of Burgundy, in 1179 gave the city of Langres to his uncle, Gautier of Burgundy, then bishop; later it was made a duchy, which gave the Duke-Bishop of Langres, as the third ecclesiastical peer, the right of precedence over his metropolitan, the Archbishop of Lyons, at the consecration of the kings of France.

The chief patron of the diocese is the martyr, Saint Mammes of Caesarea (third century), to whom the cathedral, a beautiful monument of the late twelfth century, is dedicated. The Diocese of Langres honors as saints a number of martyrs who, according to the St. Benignus legend, died in the persecution of Marcus Aurelius, the triplets, Saints Speusippus, Eleusippus, and Melapsippus; St. Neo, the author of their Acts, himself a martyr, St. Leonilla, their grandmother, and St. Junilla, their mother. Among other saints we may cite St. Valerius (Valier), a disciple of St. Desiderius, martyred by the Vandals in the fifth century; the hermit St. Godo (Gou), nephew of St. Vandrillus, in the seventh century; St. Gengulphus, martyr, in the eighth century; Venerable Gerard Voinchet (1640-95), canon regular of the Congregation of St. Geneviève in Paris, called the saint of that congregation; Venerable Jeanne Mance (1606-73); Venerable Mariet, a priest who died in 1704; Venerable Joseph Urban Hanipaux, a Jesuit, the latter three natives of the diocese and celebrated for their apostolic labors in Canada.

The diocese was also the birthplace of the theologian, Nicolas de Clémenges (fourteenth-fifteenth century), who was canon and treasurer of the Church of Langres; and of the Gallican canonist Edmond Richer (1560-1631); of the Jesuit, Pierre Lemoine, author of an epic poem of St. Louis and of the work "La dévotion aisée" (1602-71); of the philosopher Diderot (1713-84). The historian, Raoul Glaber, monk of Cluny, who died in 1050, was at the priory of St. Léger in this diocese, when he was touched by Divine grace on the occasion of an apparition. The Benedictine Abbey of Poulangy was founded in the eleventh century. The Abbey of Morimond, the fourth foundation of Citeaux, was established in 1125 by Odolric, lord of Aigremont, and Simon, Count of Bassigny. Blessed Otho, son of Leopold of Austria, Abbot of Morimund, became Bishop of Freising in Bavaria, and returned in 1154 to die a simple monk in Morimond. The Augustinian priory of the Val des Ecoliers was founded in 1212, at Luzy, near Chaumont by four doctors of the Paris University, who were led into this awful solitude by a love of retreat.

A religious festival, the "Scourging of the Alleluia" at Langres, now no longer observed, was quite celebrated in this diocese in the Middle Ages. On the day when, according to the ritual, the Alleluia was omitted from the liturgy, a top on which the word Alleluia was written was whipped out of church, to the singing of psalms, by the choirboys, who wished it *bon voyage* till Easter. The "Pardon of Chaumont" is very celebrated. Jean de Montmirail, a native of Chaumont, and a particular friend of Sixtus IV, obtained from him, in 1475, that each time the feast of St. John the Baptist fell on a Sunday, the faithful, who, having confessed their sins, visited the church of Chaumont, should enjoy the jubilee indulgence. Such was the origin of the great "Pardon" of Chaumont, celebrated sixty-one times, between 1476 and 1905. At the end of the Middle Ages, this "Pardon" gave rise to certain curious festivities; on stages erected throughout the town were represented fifteen mysteries of the life of St. John the Baptist, while frolics of the devils who figured in the punishment of Herod, through the town and the country, on the Sunday preceding the "Pardon", drew multitudes to the festivities, which were finally called the "deviltries" of Chaumont. In the course of the eighteenth century the "Pardon" became a purely religious ceremony.

In the Diocese of Langres is Vassy, where in 1562 took place the riots between Catholics and Protestants that gave rise to the wars of religion (see HUGUENOTS). Numerous diocesan synods were held at Langres. The most important were those of 1404, 1421, 1621, 1628, 1679, 1725, 1733, 1741, 1783, and six successive annual synods held by Mgr Parisi, from 1841 to 1846, with a view to the re-establishment of the synodal organization and also to impose on the clergy the use of the Roman Breviary (see GUÉRANGER). The principal pilgrimages are: Our Lady of Montrol near Arc-en-Barrois (dating from the seventeenth century); Our Lady of the Hermits at Cuves; Our Lady of Victories at Bourmont, St. Joseph, Protector of the Souls in Purgatory, at Maranville. In 1908 there were still thirteen congregations of nuns in the diocese. The Sisters of Providence, founded in 1802, with their mother-house at Langres, were, at the time of the enforcement of the Associations Law, remarkable for the work they were doing in the schools and hospitals. In 1901 the religious congregations had in the diocese 33 *écoles maternelles*, 1 agricultural orphanage for boys, 6 orphanages for girls, 7 workshops, 1 school of house-keeping, 2 dispensaries, 16 hospitals, hospices, and homes for the aged, 2 houses of retreat, 113 houses for nursing of the sick at home. In 1908, three years after the separation of Church and State, the Diocese of Langres had 226,545 inhabitants, 28 canonical parishes, 416 ancillary parishes, and 49 vicariates.

GEORGES GOYAU

Lanspergius

Lanspergius

(JOHN JUSTUS OF LANDSBERG).

Carthusian monk and ascetical writer, b. at Landsberg in Bavaria 1489, d. at Cologne, 11 Aug., 1539. His family name was Gerecht, of which Justus is merely a Latin translation. The appellation, however, by which he is generally known is that of Lanspergius (of Landsberg), from his birthplace. After studying philosophy at the University of Cologne, he joined the Carthusian Order at the age of twenty (1509), entering the Charterhouse of St. Barbara at Cologne. He was named novice-master there in 1520, and in 1530 became prior of the Charterhouse of Cantave near Juliers, where, according to Hartzheim, he was also preacher (*concionator*) to the Court of William, Duke of Juliers, and confessor to the duke's mother. The unhealthy climate of that country, together with the fatigue resulting from his continuous literary labors and his excessive austerities, so ruined his health, already impaired by various internal complaints, that in 1534, he had to return to Cologne, where, a few years later, he was named sub-prior and remained in that office until his death. He was a monk of saintly life, employing all the time he could spare from his duties towards others in prayer, contemplation, and writing on ascetical and mystical subjects. His literary works comprise paraphrases and homilies on the Epistles and Gospels of the liturgical year, sermons for Sundays and festivals, meditations and discourses on the Life and Passion of Christ, and a variety of treatises, sermons, letters, meditations, etc. on subjects pertaining to the spiritual life. He was not a polemic. Among his productions the only ones of a controversial kind are two dissertations against Lutheran errors and in defense of the monastic life. These two treatises are also all that he wrote in German, his other writings being in Latin.

The chief feature of his writings is a deep, ardent, and tender piety. The love of God for man, calling for a corresponding love of man for God, such is his usual theme treated in various ways. One thing particularly worthy of mark is the frequency with

which he speaks of the Heart of Christ, and pressingly exhorts every Christian to take the Sacred Heart as an object of special love, veneration, and imitation. Indeed it may perhaps be said that no one before him had laid down and explained so clearly the principles upon which that devotion is grounded, nor had so developed their practical application. He was one of the last, and was perhaps the most precise in language, of those whose written teachings paved the way for Blessed Margaret Mary and her mission, and helped to prepare the Catholic mind for the great devotion of modern times. To him also Catholics owed the first Latin edition (Cologne, 1536) of the "Revelations of S. Gertrude". The best known of his treatises is the "Alloquia Jesu Christi ad animam fidelem", which has been translated into Spanish, Italian, French, and English. The English translation, done by Philip Howard, Earl of Arundel, who died in the Tower under Elizabeth, has reached its fourth edition (London, 1867). A new and revised edition of all the works of Lanspergius in Latin has been issued by the Carthusian press of Notre-Dame-des-Prés (Tournai, 1890), in five quarto volumes. The same press has published separately the treatise "Pharetra Divini Amoris" (18mo., 1892) and a French version of the "Alloquia", bearing the title: "Entretiens de Jésus Christ avec l'âme fidèle" (18mo, 1896).

HARTZHEIM, Biblioth. Colonien, (Cologne, 1747).

EDMUND GURDON

Lantern

Lantern

In Italian or modern architecture, a small structure on the top of a dome, for the purpose of admitting light, for promoting ventilation, and for ornament. The name is also given to any such projection, even if it has no such openings and serves merely for decoration. Examples include:

- the Karlskirche (church of St. Charles Borromeo), Vienna;
- chapel of Montepulciano, Italy;
- St. Peter's, Rome;
- St. Paul's, London;
- St. Isaac's cathedral, St. Petersburg;
- Sta Maria della Salute, Venice;

- Sta Maria del Fiore, Florence;
- the Frauenkirche, Dresden;
- church of the Val de Grace, Paris;
- St. Stephen's Walbrook, London;
- Sta Maria di Monte Santo, Rome;
- Madonna of the Little Well, Guadalupe, Mexico;
- church of the Oratory, London;
- church at Loyola, Biscay, Spain;
- La Superga, Turin;
- Sta Maria di Carignano, Genoa;
- Palermo cathedral.

THOMAS H. POOLE

Luigi Lanzi

Luigi Lanzi

An Italian archeologist, b. at Mont Olmo, near Macerata, in 1732; d. at Florence in 1810. In 1749 he joined the Society of Jesus, on the suppression of which, in 1773, the Grand-Duke of Tuscany made him assistant director of the Florentine Museum and curator (*antiquario*) in 1776. His tomb is in the church of S. Croce, near that of Michael Angelo. He applied himself early to the study of ancient and modern literature (Cicero, Dante, *Firenzuola*), filled several times chairs of rhetoric, and was elected a member of the literary society of the "Arcadians" (where he was called *Argilio Celerio*). He wrote in Florence his excellent "Guide to the Museum" (1780), published in the "*Giornale di Pisa*" (1782). As an archeologist, particularly with regard to Etruscan subjects, Marini styles him the *Varro* of the eighteenth century. His "*Saggio di lingua etrusca e di altre antiche d'Italia*" appeared at Rome in 1789 (3 vols.). It was followed by different treatises of the same tenor on ancient paleography, on some ancient vases, and other antiquities. He won still more widespread reputation by his history of modern Italian painting (*Storia pittorica dell' Italia dal risorgimento delle belle arti fin presso al fine del XVIII secolo*, 3 vols., Bassano, 1795-96). This work, often reprinted

(lastly at Venice, 1837-39), was translated into German, French, and English (twice in the latter tongue, by Roscoe, London, 1828, and by Evans, abridged, London, 1831). Lanzi describes the Schools of Art and their development, and opens his narration with the Florentine artists of the thirteenth century, whom he looks upon as the preservers and revivers of art in Italy. He is remarkable for his widespread learning, his masterful grasp of his subject, his sound judgment, and the classic simplicity of his beautiful diction. He never lost his interest in Greco-Roman antiquity, and published at Florence, as late as 1808, a critical edition of Hesiod's "Works and Days", with a Latin and an Italian translation (the latter in three-line stanzas). His qualities as a writer matched his proficiency as a humanist, and he published at Florence (1807) three volumes of "Inscriptiones et Carmina"; he left numerous translations from Catullus, Theocritus, and others, either printed or in manuscript form. Lanzi was always a devout and ascetic priest. A collection of his edifying works on the Sacrament of the Altar, on the Sacred Hearts of Jesus and Mary, and on St. Joseph, was published at Rome in 1809.

G. GIETMANN

Laodicea

Laodicea

A titular see, of Asia Minor, metropolis of Phrygia Pacatiana, said to have been originally called Diospolis and Rhoas; Antiochus II colonized it between 261 and 246 B.C., and gave it the name of his wife, Laodice. The city stood on a spur of Mount Salbacus, one mile from the left bank of the Lycus, between the Asopus and Mount Cadmus; its territory lay between the Lycus and the Caprus. In 220 B.C. Achaeus was its king; then it formed part of the Kingdom of Pergamus, and suffered severely during the war with Mithridates, but recovered its prosperity under Roman rule. About the end of the first century B.C. it was one of the principal cities of Asia Minor, both as to industries and commerce, being famous for its woollen fabrics and its sandals. It had received from Rome the title of free city, and it became the centre of a *conventus juridicus*, which comprised twenty-four cities besides itself. Its wealthy citizens embellished it with beautiful monuments. One of the chief of them, Polemon, became King of Armenian Pontus—called after him "Polemoniacus"—and of the coast round Trebizond. The city had a school of medicine and gave birth to the two sceptic philosophers, Antiochus and Theiodas. Its coins and inscriptions show evidence of the worship of Zeus,

Æsculapius, Apollo, and the emperors. It is frequently mentioned by the Byzantine historians, particularly in the epoch of the Comneni, and was fortified by the Emperor Manuel. The Mongol and Turkish invasions brought on its decay, and then its complete ruin. Its magnificent remains are to be seen near the village of Denizli, formerly and more exactly called Denizli Ladik (Ladik = Laodicea), in the vilayet of Broussa; they consist principally of a stadium, three theatres, an aqueduct, sarcophagi, etc.

At the beginning of the Christian era, Laodicea was inhabited, besides its indigenous population of Hellenized Syrians, by Greeks, Romans, and an important Jewish colony. There is extant a letter from the authorities of the city to a Roman magistrate in which the former undertake to refrain from molesting the Jews in their religious observances and customs. These Jews sent regularly to Jerusalem a tribute of twenty pounds of gold. Christianity penetrated into the city from the earliest times: St. Paul mentions the Church of Laodicea as closely united with that of Colossus. It had probably been founded by the Colossian Epaphras, who shared the care of it with Nymphas, in whose house the faithful used to assemble. Paul asks the Colossians to communicate to the Church of Laodicea the letter which he sends to them, and to read publicly that which should come to them from Laodicea, that is, no doubt, a letter which he had written, or was to write, to the Laodiceans (Col., ii, 1 sq.). An apocryphal epistle purporting to be from Paul to the Laodiceans is extant in Latin and Arabic (see APOCRYPHA, I, 614). Some of the Greek MSS. end the First Epistle to Timothy with these words: "Written at Laodicea, metropolis of Phrygia Pacatiana". The Church of Laodicea is one of the seven (see Ramsay, *The Seven Churches of Asia Minor*, London, 1908) to the bishops of which are addressed the letters at the beginning of the Apocalypse (Apoc., iii, 14-21). The first bishops attributed to the See of Laodicea are very uncertain: St. Archippus (Col., iv, 17); St. Nymphas (Col., iv, 15; already indicated as bishop of Laodicea by the Apostolic Constitutions, vii, 46); Diotrephes (III John, 9). Next comes St. Sagaris, martyr (c. 166). Sisinnius is mentioned in the Acts of the martyr St. Artemon, a priest of his Church. Nunechius assisted at the Council of Nicaea (325). Eugenius, known by an inscription, was probably his successor. The Arian Cecropius was transferred by Constantius to the See of Nicomedia. When Phrygia was divided into two parts, Laodicea became the metropolis of Phrygia Pacatiana: it figures under this title in all the "Notitiae episcopatum". Some twenty incumbents are known besides those already enumerated; the last occupied the see in 1450.

There are extant, in Greek, sixty canons of a Council of Laodicea. That this assembly was actually held, we have the testimony of Theodoret ("In Coloss.", ii, 18, P.L., LXXXII, 619). There has been much discussion as to the date: some have even thought that the council must have preceded that of Nicaea (325), or at least that of Constantinople (381) It seems safer to consider it as subsequent to the latter. The canons are, un-

doubtedly, only a resume of an older text, and indeed appear to be derived from two distinct collections. They are of great importance in the history of discipline and liturgy; Protestants have often, but quite without reason, invoke one of them in opposition to the veneration of angels.

S. PÉTRIDÈS

Laos

Laos

(Vicariate Apostolic)

Separated from the Vicariate Apostolic of Siam by a decree of 4 May, 1899. The vast extent of territory of Further India embraced within the ecclesiastical unit is politically divided. The country to the west of the Mekong River, excepting the province of Bassak is included in the Kingdom of Siam; that east of the river is under French rule. The vicariate embraces the whole of the Mekong valley from the frontiers of Cambodia as far as those of China; on the west is the Menam with tributary streams; the mountains of Annam and Tongking form the eastern boundary, excluding the district of Attapeu which is attached to the Vicariate of Eastern Cochin-China. The ranks of the missionaries have been frequently thinned owing to the unhealthy nature of the climate; epidemics of cholera morbus and bubonic plague are of constant recurrence.

The vicariate is entrusted to the Paris Society of Missions Etrangères, with residence at Nong-Seng in the province of Nakong-Phanom. The present Apostolic vicar is Mgr Marie-Joseph Cuaz, titular Bishop of Hermopolis Minor. He was born at Lyon France, 8 Dec., 1862; elected 30 April, 1899; preconized 22 June 1899; and consecrated on 3 Sept. of the same year. The history of the territory previous to its formation into a separate vicariate is given in Piolet, "Les Missions" II (Paris, s. d.), xiii; cf. Neher in *Kirkenlex* VI, 683. The most recent available religious statistics may be found in Indo-China (French), subtitle *Present Conditions of the Catholic Church in French Indo-China*.

P.J. MACAULEY

La Paz

La Paz

DIOCESE OF LA PAZ (PACENSIS).

Diocese of La Paz, in Bolivia. The city is the capital of the department of the same name, is the most populous city of the Republic of Bolivia, and since 1899 its capital. It is about thirty miles south-east of Lake Titicaca, is connected by railway with the Peruvian harbour town of Puno, situated on the lake, and is 12,200 feet above sea-level. The city is regularly laid out, but built on very steep ground, and according to the last census (1900) has a population of 54,713, chiefly mestizos (called cholos) and Aymará Indians. The most prominent buildings are a new cathedral built in the eighties of white marble with Corinthian columns, situated on the steep plaza, and the monastic churches of Santo Domingo, San Francisco, and San Juan de Dios. The monasteries attached to these churches, although secularized immediately after the establishment of the republic, were later restored to their respective orders. The most important monasteries of men are San Francisco, La Merced, and La Recoleta; there are also the convents of the Sisters of the Immaculate Conception, and the Carmelite nuns (El Carmen), both new buildings which the city government of La Paz made an unsuccessful attempt, in 1909, to confiscate for school purposes, ostensibly because, unlike the other orders of women in the city engaged in teaching or nursing, these two devoted themselves to the contemplative life (see the protest of Bishop Armentia in the "Boletín Eclesiástico", No. 8, 1909). French Sisters of Charity conduct both the city hospitals and a medical school is attached to the Loaiza Hospital for women. The Academia Aymará was founded in 1900 to foster the study of history, and publishes the "Academia Aymará," (La Paz, 1901--). The Sociedad Geográfica de la Paz, founded in 1889 and reorganized in 1896, with four sections, for astronomy, physics, political science, and commerce respectively, publishes the "Boletín", as well as separate works. Finally, the Institution Lejion, formed in 1908 from the Federación Enciclopédica, Sociedad Enciclopédica Filantrópica, and the Union Filarmónica, for the promotion of the study of natural science, and also of philosophical and sociological studies, issues the "Revista".

La Paz is one of the oldest Spanish colonies on the table-land of Old Peru. In 1549 the city was founded by Captain Alonzo de Mendoza (according to others, about 1548,

by Diaz de Medina) on the site of an earlier Indian settlement called Chuquiabo ("gold field", because gold was washed here). To commemorate the restoration of peace after the civil war following the insurrection of Gonzalo Pizarro, the city was called Nuestra Señora de la Paz. After the victory of the patriot army under General Sucre at Ayacucho (1824) it was named La Paz de Ayacucho, but the latter designation was used as seldom as the former, and the city, afterwards as before, was called simply "La Paz". One of the most remarkable events in its history was the siege endured during the Indian revolt under Tupac Amaru in 1780, heroically repulsed by the commandant of the town, Sebastiano Seguro. Later, during the South American struggles for independence, La Paz was one of the first cities to join the movement. On 16 July, 1809, citizens and soldiers rose, at first, it is true, only against the French party and in favour of Ferdinand VII, but with the ultimate object of freeing themselves from the mother country. This first uprising was suppressed by General Goyeneche, who was sent from Lima against the insurgents, and had all the chiefs executed. After the battle of Ayacucho La Paz was the head-quarters of General Sucre and since then, at intervals, has been the capital of the country.

The Diocese of La Paz was separated from that of Charcas by Paul V, 4 July, 1605 (see LA PAZ, DIOCESE OF). In the records of the Audiencia de Charcas, preserved in the "Archivo General de Indias" at Simancas, Diego de Zambrana y Guzmán appears to have been the first bishop, though he apparently did not take possession of his see. The first bishop vouched for by history was Domingo Balderrama, O.P., who assumed office in 1610 (d. 1615). He was succeeded in 1616 by Pedro de Valencia, who died in 1631, blind and an octogenarian. The next bishop, highly trained in law and literature, was Feliciano de la Vega, from 1628 Bishop of Popayán, who remained for only a year (1639) at the head of the diocese. He published the first synodal constitutions and died in 1640, Archbishop of Mexico. Among the subsequent bishops the following are prominent: Antonio de Castro y Castillo, O.F.M. (1648-53), whose detailed report on his diocese is preserved in the Archivo General de Indias at Simancas (printed in the "Boletín Eclesiástico", 1908-9, No. 5 sqq.); Juan de Queipo; Llano y Valdés (1681-95), who finished the first cathedral (1685) and was subsequently transferred to Charcas. The eleventh bishop, Agustín Rodríguez Delgado, was made Bishop of Panama in 1725 and became bishop of La Paz in 1731, in which capacity, in 1738, he edited the constitutions of the Third Diocesan Synod of La Paz. In 1748 he was appointed Archbishop of Charcas and in 1746 Archbishop of Lima, and died in the same year on his way to Lima. Gregorio Francisco de Campos (1764-87) completed the Franciscan monastery and dedicated it on 23 April, 1784. The twenty-sixth bishop, Juan de Dios Bosque (1874-90), published 29 November, 1883, the synodal constitutions still in force. The actual bishop (the twenty-eighth) Mgr. Nicolás Armentia, O.F.M., has

rendered distinguished services in the geographical exploration of Bolivia. He was born 5 December, 1845, at Bernedo in the Spanish province of Alava, received his early education in Biscaglia and in 1860 entered the French Franciscan province of St-Louis. In 1865 he was sent to the Franciscan college at La Paz, where he was ordained in 1869, after which he laboured from 1871 till 1880 as a missionary among the Indians in Tumupasa and Covendo. In June, 1881, he went to the Araunas and Pacaguaras on business for the Government. With a knapsack on his back containing clothes, provisions, and a sextant, a breviary in one hand and a compass in the other, he traversed the broad territory between the Beni and Madre de Dios Rivers. He followed the Beni for its entire length and examined the surrounding forests, remaining until 1883. After his return to La Paz he published, in 1884, the result of his explorations under the title "Diario de sus viajes á las tribus comprendidas entre el Beni y Madre de Dios y en el arroyo de Ivón en los dos años de 1882 y 1883". In May, 1884, Armentia navigated the Madre de Dios, pushing as far as 10° S. lat., exploring the Ortón River (Tahuamanu), among others, and returning to La Paz in August, 1886. Here, in 1887, he published his second work: "Navegación del Madre de Dios" (in "Biblioteca Boliviana de geografía é historia", I), translated into Italian by Marcellino da Civezza in his "Storia universale delle missioni Francescane" (VII, Florence, 1894, part IV, 503-663). In this Armentia describes, besides the fauna and flora of the countries he traversed, the customs and tongues of the tribes he visited, especially the Araunas, and laid before the Government a plan showing how the work of civilization begun by him among these savages could be most effectively carried on. On 22 October, 1901, Armentia was appointed Bishop of La Paz, and 24 February, 1902, was consecrated at Sucre. He published the "Regla Consueta" of his order in 184 articles (8 Dec., 1903), and wrote a valuable history of the old Franciscan missions in Bolivia under the title "Relación histórica de las misiones Franciscanas de Apolobamba, por otro nombre Frontera de Caupolicán" (La Paz, 1903).

The diocese includes the entire Department of La Paz and the Province of Magdalena in the Department of Beni. It numbers 700,000 inhabitants in 72 parishes, served by about one hundred secular priests. The religious congregations represented in the diocese are the Franciscans, with the missionary college of San José, opened at La Paz in 1837; the Franciscan Recollects with various mission schools; the Jesuits with a flourishing college (150 day scholars and 50 interns); the Mercedarians with free schools; the Lazarists with a college; Dom Bosco's Salesians with an institute opened in 1887 (a business and trade school). The Sisters of Charity of St. Vincent de Paul, the Sisters of the Most Sacred Heart (Picpus Sisters), the Sisters of the Good Shepherd, and the Daughters of St. Anne devote themselves to teaching and works of charity,

while the Sisters of the Immaculate Conception and the Carmelite nuns follow the contemplative life. The cathedral chapter has ten canons.

GREGOR REINHOLD

Pierre-Simon Laplace

Pierre-Simon Laplace

Mathematical and physical astronomer, b. in Beaumont-en-Auge, near Caen, department of Calvados, France, in March (dates given 28, 25, 23, 22), 1749; d. in Paris, 5 March, 1827. The son of a small farmer, he became connected with the military school of his town, first as pupil, then as teacher. At the age of eighteen he went to Paris, and, after convincing d'Alembert of his talents by a letter on the principles of mechanics, obtained a professorship at the military school of the capital. Later he became examiner of the royal artillery (1784) and professor at the Ecole Normale. During the political changes in France he sought favour with Revolution, consul, emperor, and king. In 1799 he accepted from the consul the post of minister of the interior, but, after six weeks, was removed for administrative incapacity. He was a member and even chancellor (1803) of the Senate, and great officer of the Legion of Honour and of the new Order of Reunion. After the downfall of Napoleon (1814) he was nominated Peer of France, with the right of a seat in the Chamber, and in 1817 was raised to the dignity of marquis. His last years were spent in his villa of Arcueil, which became a centre of learned visitors and studious young men (Biot, Poisson, etc.). The Société d'Arcueil was founded with his co-operation. Whereas he remained in undisturbed friendship with his great scientific rival Legendre, other scientists, like Young and Legendre,

complained of him for not acknowledging their work. Laplace married at the age of thirty-nine, and a son was born to him in 1789. His scientific discoveries were made between the twentieth and fortieth years of his life. The succeeding thirty-eight years were spent in composing the immortal works: "The System of the World" (1796) and the "Mechanics of the Heavens" (1799-1825).

Analysis owes to Laplace mainly the full development of the co-efficients, of the potential and of the theory of probabilities. In the line of celestial mechanics his glory was made by the discovery (announced in 1773) of the invariability of the planetary mean motions and the consequent stability of the solar system. The "Exposition du Système du Monde", in which the results are presented without mathematical deductions, showed such linguistic excellence that it secured him a seat among the Forty of the French Academy (1816) and for a time the presidency of that body (1817). The five volumes of the "Mécanique Céleste" made him the Newton of France. He was admitted to the French Academy of Sciences, first as associate (1773) and then as member (1785), and took a prominent place in the Institute, into which the Academy developed (1796). He was one of the founders of the Bureau of Longitudes and for a while its president. The Royal Society of London and the principal academies of Europe honoured him with membership. Great scientists, like Berthollet, Cuvier, Humboldt, dedicated their works to him. The collected works of Laplace were printed twice: by the Government in seven volumes (1843-47), the Chamber granting forty thousand francs; and again, at the expense of General Laplace (who left seventy thousand francs for the purpose) and his niece the Marquise of Colbert, in thirteen volumes (1878-1904), under the auspices of the Academy of Sciences. An English translation of the "Mécanique Céleste" by Dr. Bowditch appeared in Boston (1829-39) in four volumes.

Laplace was born and died a Catholic. It has been asserted that to Laplace the Creator was an hypothesis. The origin of this assertion lies in the misinterpretation of a passage of the "Système du Monde" (Oeuvres, VI, 1835, p. 480), where it is evident that by "vain hypotheses" Laplace meant the *Deus ex machina* of Newton and the "perpetual miracle" of Leibniz's Harmony. It is true that Laplace indulges in a frivolous remark against Callistus III both in the "Theory of Probabilities" (Introduction, also separately as "Essai Philosophique") and in the "System of the World" (IV, iv). He partly atoned for it by omitting the remark in his fourth edition of the "Essai". Death prevented him from doing the same in the sixth edition of the "Système du Monde", the correcting of which he had commenced during his last illness. He died at his home in Paris, Rue du Bac, attended by the curé of the Foreign Missions, in whose parish he was to be buried, and the curé of Arcueil, whom he had called to administer the last comforts of religion (de Joannis, p. 27).

JOHN G. HAGEN

Lapland and Lapps

Lapland and Lapps

About 150,000 square miles of the most northerly regions of Europe, from the Atlantic Ocean to the White Sea, from the Pole and the Arctic Ocean to the 62° N. lat., are occupied by a partly stationary, partly nomadic people of Mongolian race, usually designated as "Lapps", while their neighbours call the territory over which they migrate "Samelads" and the people themselves "Same", though many prefer the term Fjelman (mountaineers). The country is rich and varied. Radiant days and midnight sun alternate with months of night and twilight, contrasts that can scarcely be found elsewhere on earth. Deep obscure forests surround bright sheets of water; majestic rivers hurry over mighty cataracts to the sea; here ice-capped mountain peaks tower skyward; there innumerable herds of reindeer pasture in the grassy river valleys. The earth conceals all kinds of treasure, thus the inexhaustible iron mines at Gellivare are well known (in 1901 output 1,200,000 tons) as among the richest in the world. The total number of Lapps (the nation as such has exerted no influence on the development of mankind and therefore has no individual history) is about 30,000, of whom 2000 live on Russo-Finnish, 8000 on Swedish, and 20,000 on Norwegian territory.

This singular race is divided into three different groups: mountain, forest, and fisher Lapps. The first two are nomadic and almost entirely dependent upon reindeer. Nearly all the needs of the Lapps are supplied by this useful creature, which closely resembles a stag. The flesh provides his food; from its milk he obtains cheese; from the hide, clothes, leather, foot and tent covering, while the antlers yield material for knife blades, vessels, etc. During the winter the mountain Lapps move down from their storm driven heights to the sheltering valleys. Here they linger until spring and while here slaughter superfluous animals. They conceal their provisions in storehouses (njallas) to save them from depredation. Into the part of the cuoptes (that is sheds resting on piles) not used to dry meat, they bring tools and sledges for the summer. On the approach of spring they return to the green mountain meadows where the reindeer calve and then, having abundant food, supply milk for nourishment and for making cheese. The dwellings of these Lapps consist of an easily movable kata, or

conical hut, with skins fastened over the poles and ceilings and in winter roofed over with turf. These huts are fifteen to sixteen feet in diameter at the base and from six to fifteen feet in height. They have two entrances but no windows. The smoke from the fireplace in the middle escapes through an opening above. Around the hearth men and dogs, parents, with children and servants, lie on fir or birch twigs covered with skins. Less laborious than the lives of the mountain Lapps are those of the forest Lapps who have fixed places of abode and dwell in log-houses. Twice a year, in spring and autumn, they leave their hearths and devote themselves to hunting and fishing. The rest of the time they are employed, like the mountain Lapps, in breeding reindeer. The forest Lapp is in every respect more favoured than the rest of his race, and enjoys such luxuries of civilization as salt, meal, coffee, and tobacco. The fisher Lapps have few resources, and at the best have only a few reindeer to dispose of. They are industrious and depend solely on the often insufficient results of their toil. Absolute pauperism is frequent among them. As to physical traits, the Lapps are usually small and slight in figure like the Scandinavians and Russians; their heads are broad, the profile sharp and the expression somewhat sad. Their complexion is yellowish and the long jaw and pointed chin develop only a scanty beard. They love gay coloured clothes adorned with rude ornaments of silver or tin and make them with much skill. They are not lacking in mental capacity and few Lapps are totally illiterate. Education is provided by means of a few established schools and the aid of travelling teachers. Kindness and gentleness form the bright side of the Lapps' character. Thieving is rare. It is natural that an isolated people, but too frequently the victim of natural forces, should be given over to superstition.

Formerly the Lapps were polytheists. Ibmel appears to have been invested with a sort of leading rôle among the gods, and his name is still used figuratively. To-day most of the people profess, at least outwardly, the Confession of Augsburg. There are several parishes, e.g. Kautokeins and Karajok in Norway, Karesuanda and Jukkejarin in Sweden where religious service is held in both the Scandinavian and Lapp languages, or only in the latter. It is abridged and the attendance is slack. About four times a year, however (at the so-called Helgdagar), the contrary is true. The multitudes who assemble at that time combine business and pleasure, markets and popular sports with religious celebrations. A few thousand Lapps were Christianized in the sixteenth century by monks from the Russian island-monastery of Solowetzkoi and were enrolled as members of the Orthodox Church. Their new "religion" was no more seriously taken than the Protestant Christianity of the Southern Lapp. Attempts at conversion were certainly made during the Middle Ages from Upsala, the archbishop of which was the protector of the nomads of the northern provinces, tributary to Sweden; the missions, however, made no real progress, though at the time of the Calmar Union (1397) the

rich Lapp, Margarethe, took a lively interest in them and a priest named Tolsti was sent to preach the Gospel and erect churches for them. After the schism, Gustavus I Vasa took the matter up again and is said to have sent Brigittine monks from Vadstena to these northern missions. Charles IX had some chapels built, caused the Lapp language to be used by preachers, and laid the foundations for much of the work done later. In Norway, instruction in their native language were first given the Lapps in 1714 at the instigation of Thomas of Westen. This brought about conversions, but in 1774 when the instructions were once more confined to Danish, the neophytes fell away. In the middle of the eighteenth century an unsuccessful mission was undertaken by the Moravian Brotherhood. Since then much has been done to Christianize and civilize these people. Numerous grammars, dictionaries, and readers have been written, religious tracts disseminated, and even portions of the Holy Scriptures translated into their language. Since the repeal of adverse legislation, the Catholic Church has likewise endeavoured to gain an influence over these poor nomads. Unlike the Protestant missionaries, fathers of families, the unmarried Catholic priests have chosen the severe winter season for their work. The results, indeed, are yet moderate, though the future offers relatively favourable prospects.

SCHEFFER, *Histoire de La Laponie*, tr. from the Latin (1678); HARTUNG AND DULK, *Fahrten durch Norwegen und die Lappmark* (1877); ESCARD, *Le prince Roland Bonaparte en Lapponie* (1886); ROLAND BONAPARTE, *Note on the Lapps of Finmark* (1886); BAUMGARTEN, *Nordische Fahrten*, (Freiburg, 1889); IDEM, *Durch Skandinavien nach St. Petersburg* (Freiburg, 1890); *Katholische Missionen* (1897-8 and 1900-1); SCHULZE, *Abriss einer Geschichte der Brüdergemeinden* (1901); VAHL, *Lapperne og den lapske Mission* (1866); FRIIS, *Lappisk Mythologi, Eventyr og Folkesagn* (Christiania, 1871); IDEM, *Lexikon Lapponicum* (1885--); STORM, *Hist. top. skrifter foerfattede i Norge i det 16de aarhundrede* (1895); HOLFBURG, *Genom Sveriger byjder* (1883); *Svenska Turistforeningens Reschandboecker*, VI: *Schweden* (1900); *Svenska Turistforeningens aroskrifter* (1882--) gives full instruction on Lapland, its nature and inhabitants, as far as they concern Sweden. Each volume is furnished with an index. A systematic summary of works on Lapland previous to 1899 appears in the *Annals for 1899* (pp. 416, 418); see HAZELIUS, *Meddelanden fran Nordiska, Meeseet* (1898); LALIN, *Nord. Museets Fataburen* (1906) with the criticism of FELLMAN, *Anteckningar under min vistelse i Lappmarken* (Helsingfors, 1906), of especial value for Russian Finland.

PIUS WITTMANN

La Plata (Argentina)

La Plata

DIOCESE OF LA PLATA (DE PLATA).

The city of La Plata, capital of the Argentine Province of Buenos Aires, is situated on the right bank of the Rio de la Plata, about 35 miles south-east of the city of Buenos Aires. In 1895 the inhabitants numbered 45,410, and 80,000 in 1907, most of them foreigners, with Italians predominating. When, in 1880, the city of Buenos Aires was ceded to the Federal Government, the national Congress resolved to build a new capital for the Province of Buenos Aires. The foundation stone of this new capital was laid, 19 November, 1882; it was named La Plata, and grew rapidly in the '80s, but came to a standstill in 1890, and has not recovered yet. The far-famed artificial harbour assures the town an important future, though its nearness to Buenos Aires has temporarily checked its development. Among the important buildings belonging to the town are those of the National University of La Plata, which was developed, in 1905, out of the provincial university, and now (1909) has four faculties and a yearly budget of 1,080,000 pesos (about \$440,000). Attached to the university are the library and university extension, containing 41,000 volumes, the Museo de la Plata, founded in 1877, with valuable anthropological, palaeontological, zoological, and mineral collections, and an astronomical observatory erected in 1882. The parish church of San Ponciano, built in 1883, served as pro-cathedral until 1901, when the present large Gothic cathedral took its place.

The See of La Plata, by wish of the Argentine Government, was founded at the same time as the Sees of Santa Fe and Tucumam, by Bull of Leo XIII, "In Petri Cathedra," 15 February, 1897, and canonically established 30 May, 1897, by an edict of Archbishop Udalislao Castellano of Buenos Aires. It is a suffragan of Buenos Aires, with jurisdiction over the Province of Buenos Aires and the Territory of Pampa Central, both of these formerly belonging to the Archdiocese of Buenos Aires. The diocese and the cathedral are under the Patronage of the Immaculate Conception, while the Province of Buenos Aires is under the patronage of St. Martin of Tours. The Archbishop of Buenos Aires took charge of the new diocese until the appointment, in 1898, of the first bishop, Msgr. Mariano Antonio Espinosa. The present bishop (1909), Msgr. Nepomuceno Terrero y Escalada, was appointed in 1900. There is also an auxiliary bishop, Msgr. Francisco Alberti, titular Bishop of Siunia.

On 29 December, 1909, the diocese numbered 1,700,000 inhabitants, mostly Catholics; 130 parishes; 260 secular priests and 60 religious. The communities of men are represented in the diocese by: Franciscans, Dominicans, Fathers of the Sacred

Heart from the Diocese of Bayonne, Pallottines, Community of the Divine Word, Passionists, Salesians — to whom, since 1896, the Mission of Pampa Central has been entrusted (see PATAGONIA) — as also Brothers of the Christian Doctrine and Marists. The female communities are: Daughters of Our Lady of Mercy, Sisters of Mary Help of Christians, Poor Sisters of St. Joseph of Buenos Aires, Sisters of the Divine Saviour, of the Blessed Sacrament, of St. Anthony, of the Divine Master, Vincentians, Sisters of the Garden, of Our Lady of Lujar, of the Rosary (native and French), of the Child Jesus, of Mercy, of the Good Shepherd, Franciscan Tertiaries, Sisters of the Cross, of St. Camillus, of the Immaculate Conception, Capuchins, Sisters of the Holy Ghost, Little Sisters of the Poor, French Sisters of St. Joseph, Servants of Mary, of the Holy Union, Dominicanesses of the Annunciation, Franciscans of Charity, of Saint Martha, and Sisters of the Poor of St. Catherine of Siena.

Boletin Eclesiastico de la diocesis de la Plata (1898-); La Lectura del Domingo, Publicacion semanal de instruccion religiosa, etc. (La Plata, 1883-); SCHUPP, Ein Besuch am La Plata (Freiburg, 1891), 211-32, reprinted by SPILLMANN, In der Neuer Welt, I (2nd ed., Freiburg, 1904), 227-31; Salesianische Nachrichten, XV (Trent and Turin, 1909), 249-54 (Reports of the Salesian Missionaries of Don Bosco in Pampa Central).

GREGOR REINHOLD

La Plata (Bolivia)

La Plata

ARCHDIOCESE OF LA PLATA/DE PLATA (OR CHARCAS)

La Plata, besides being the metropolitan see of Bolivia, is one of the three principal cities of that republic. The other two are La Paz and Cochabamba. The city owes its origin to the famous silver mines of Potosi, which are nearby. Owing to the chill climate of Potosi, which is about 13,000 feet above the level of the sea, the wealthy mine-owners conceived the idea of seeking a more pleasant habitation for their families, in a milder temperature, about sixty miles to the north-east. The city is said to have been founded as early as 1536, under the name of Villa de la Plata (Silver City); it was also long called, from the district in which it is situated, Charcas, or popularly, Chuquisaca (Golden Gate). After the victory of General Sucre near Ayacucho (1824), it was named in his honour, Sucre. La Plata is built on a plateau, 8837 feet above the level of the sea, on the Cochimayo, a tributary of the Pilcomayo, flowing into it from the left, and is the metropolis of the department of Chuquisaca, numbering 20,907 inhabitants (1900), chiefly Indians and Mestizos. The city is the residence of the archbishop, has a medical institute founded in 1905, with a meteorological observatory, a museum of anatomy

and natural history, a Franciscan missionary college, built in 1837 by Father Herrero, O.F.M., a flourishing college of arts and industries of the Salesians of Don Bosco (connected with the Oratory), an Oratory of St. Philip Neri, also a geographical society, whose principal work has been the "Diccionario geografico del departamento de Chuquisaca" (Sucre, 1903). The many churches of the city are for the most part unattractive, the exteriors covered with unsightly stucco work, the interiors with wretched paintings. The only one worthy of note is the Cathedral of Nuestra Senyora de Guadalupe, a building with three naves and an imposing tower. This cathedral is remarkable for its wealth of treasures in silver, which, however, have recently diminished in importance, a part having been melted down by President Melgarejo. The miraculous image of Our Lady of Guadalupe, about seven feet in height, and encrusted with diamonds, rubies, emeralds, and pearls, is still in the church, and is valued at about two million dollars. Of the twenty-four massive silver candelabra, there are two at present weighing each about 110 pounds. Also in the cathedral are a large number of valuable paintings, among others a "Madonna de la Paz" by Murillo, a "Martyrdom of St. Bartholomew" by Ribera, a "Crucifixion of St. Andrew" by Montufar. In the adjoining chapel of San Juan de Mata are two artistic statues of St. Clement and St. Aquila, both containing relics of the saints. The spacious sala capitular, or chapter hall, contains the portraits of all the archbishops.

The Diocese of La Plata, or Charcas, was erected by Bull of Julius III, 27 June, 1552, as a suffragan of Lima. On 4 July, 1605, Paul V founded two new dioceses out of La Plata territory, La Paz and Santa Cruz de la Sierra, and on 20 July, 1609, raised La Plata to metropolitan rank. The province formerly embraced, in addition to the two above-mentioned dioceses, practically all the territory now comprised in Chile, Argentina, Panama, Paraguay, etc. To-day the boundaries of the ecclesiastical Province of La Plata coincide with those of the Republic of Bolivia, embracing only the suffragan Dioceses of La Paz, Santa Cruz de la Sierra, and Cochabamba, erected in 1847. The list of bishops of La Plata comprises six names; that of the archbishops, thirty-six, including the present incumbent of the see. Prominent among them are: Alonso de Peralta (1609-16), who died in the odour of sanctity; Fernando de Arias y Ugarte (1627-30), previously Bishop of Quito and Archbishop of Santa Fe de Bogota, held the first provincial synod in 1629, was a true father to the Indians, and died, in 1638, Archbishop of Lima; Gaspar de Villaroel, O.S.A. (1659-67), formerly Bishop of Santiago de Chile and Arequipa, also known as a writer on canon law and exegetics (Hurter, "Nomenclator literarius," 2nd ed., Innsbruck, II, 1893, 138); Cristoval de Castilla y Zamora (1655-82), natural son of Philip II of Spain, who built the archiepiscopal seminary and the former archiepiscopal palace (now the president's mansion); Bartolome Gonzalez y Poveda (1683-92), who expended a hundred thousand pesos on the erection of the side aisles

and the tower of the cathedral; Pedro Miguel de Argandonya (1761-76), formerly Bishop of Cordova de Tucuman, who built the charter hall and held the second provincial synod in 1776, during the course of which his death occurred; the Discalced Carmelite Jose Antonio de San Alberto (1785-1804), a veritable father of the poor, who founded the local Oratory of St. Philip Neri and was also a writer of some merit on ascetical subjects; the Benedictine Benito Maria de Moxo y Francoli (1807-16), a well-trained scholar, the author of homilies and also of some polished poems in Latin and Italian, who died at Salta, in Argentina, having been banished thither by General Rondeau; Pedro Puch y Solona (1862-85); who assisted at the Vatican Council. The present (thirty-sixth) archbishop is a Franciscan, Sebastiano Francisco Pifferi, born, 4 November, 1848, at Castelmadama in the Diocese of Tivoli, Italy. He entered the Franciscan Order, 9 November, 1863, made his profession, 20 January, 1868, and was ordained to the priesthood, 14 May, 1871. He first worked in Bolivia as commissary general of his order, and in 1905 was appointed titular Bishop of Jericho and coadjutor of the aged Archbishop Miguel de los Santos Taborga (1898-1906), on whose death (30 April, 1906) he succeeded to the archiepiscopal See of La Plata.

STATISTICS

According to a communication from Archbishop Pifferi, of January, 1910, the Archdiocese of La Plata embraces the departments of Chuquisaca, Potosi, Oruro, and Tarija, with an approximate area of 165,200 sq. miles, and a population of 805,299. The archdiocese is divided into 13 deaneries (vicariates forane), and comprises 135 parishes, over 200 vice-parishes, with 172 secular priests and 99 regular priests, besides 10 regular clerics not priests, and 26 lay brothers, in 6 monasteries of men, and 159 sisters in 21 houses. There are 70 students in the seminary. The 10 mission stations among the pagan Indians, and 7 mixed stations are all attended from the missionary colleges of the Franciscans. The religious congregations represented in the archdiocese are as follows: Franciscans, with monasteries at Sucre, Potosi, Oruro, and Tarija, all in the province of San Antonio de las Charcas. Of these four monasteries, Potosi (founded 1547), Sucre (mentioned above), and Tarija (1607), have flourishing missionary colleges in charge of missions among the pagan Indians. Moreover, the Oratorians of St. Philip Neri have an oratory at Sucre; Don Bosco's Salesians a college of arts and industries (with oratory) at Sucre; the Lazarists, a house at Sucre; the Discalced Carmelite nuns, monasteries at Sucre and Potosi; the Poor Clares and the Servants of Mary, each a house at Sucre; the Augustinian nuns, a monastery at Potosi; lastly, the Daughters of St. Anne have foundations at Sucre, Potosi, Orura, Tarija, and Tupiza. In addition to 14 religious schools, there are 2 educational institutions for boys (with 360 pupils) and one for girls (with an attendance of 1200), and 6 hospitals and hospices.

Besides the Spanish language, there are Indian dialects still in use — Quichua, Aymara, and Guarani. St. Barbara, virgin and martyr, is patroness of the diocese.

GREGOR REINHOLD

Albert Auguste de Lapparent

Albert Auguste de Lapparent

French geologist, b. at Bourges, 30 Dec., 1839; d. at Paris, 12 May, 1908. He made a brilliant course of studies at the Ecole Polytechnique in Paris, graduating there the first of his promotion, and at the School of Mines. Having been appointed mining engineer in 1864, he was chosen by Elie de Beaumont as a member of the staff entrusted with the task of drawing the geological map of France. From 1866 to 1880 he contributed, with Delesse, articles on geology to the "Annales des Mines". In 1874 he was made secretary of the committee on the submarine tunnel between England and France, and conducted the soundings with such skill that his report was pronounced most valuable and served as a basis for subsequent inquiries on the question. The French Government gave him the Cross of the Legion of Honour. Towards the end of 1875 a chair of geology and mineralogy was founded for him at the Catholic University of Paris. For a few years he occupied that position without severing his connexion with the mining department, and when the leave of absence he had obtained was cancelled (1880), he preferred to give up his official position and continue to teach a science so dear to him in an atmosphere more congenial to his religious convictions. In 1880 he was elected president of the Geological Society of France. Two years later he began to

write his "Traité de Géologie", published at Paris in 1884, the style of which work was as remarkable as its contents. He treated the subject in a new way, abandoning the old methods and laying the foundation of the scientific history of the earth. Instead of confining himself to a dry description and to a mere enumeration of fossils, he ventured to make hypotheses on terrestrial dynamics, as well as on the past and present evolutions of the earth. In 1885 appeared his "Cours de Minéralogie", which gained him the presidency of the French Society of Mineralogy, and a prize from the Academy of Sciences. Not long afterwards he began at the Catholic University his lectures on physical geography, a work of such merit that he was offered the chairmanship of the central committee of the Society of Geography in 1895, and was sent to represent the society at the international congress held in London. In 1896 he published his "Leçons de Géographie Physique", a work of decided originality. Lapparent was the first to treat this subject in France, and the success of his lectures at the Catholic University, the first ever given in this department, prompted the French Government to establish a similar chair at the Sorbonne. His chief qualities as teacher consisted in the clearness and method of his treatment. He saw at once the essential points of a question and showed them in a new light. Hence the enduring success of his publications, which were many times reprinted. However deep and complicated the subject, his treatment made for simplicity. In recognition of his services to science, he was elected to the Academy of Sciences in June, 1897, and in May, 1907, when Berthelot died, de Lapparent succeeded him as secretary of that academy.

De Lapparent was not only a prolific author of original scientific works, but also, in the highest sense of the term, a remarkable "popularizer". Considering that the proper rôle of the scientist, holding by his work the closest communion with truth in this world, is to spread this truth abroad, he set forth in words perfectly simple and clear, but withal perfectly exact, the great problems of contemporary science. The style in which he did this derived an added dignity from the very simplicity in which he clothed these abstract themes. He never had recourse to that pretentious pomp of style with which ignorance is wont to mystify the lay mind. De Lapparent's writings embodied the most abstract thoughts, straightway illuminated, however, by his marvellous gift of simplification. His articles in "Le Correspondant" are masterpieces. They were always cordially welcomed, not only by the laity, but also by his colleagues in the world of science. In these articles he gave to the world in popular form his tetrahedral theory of the form of the earth, a theory as simple in principle as it was pregnant in possible applications. He also made known Brückner's curious theory of meteorological periodicity, and discussed the question of the flattening of the earth, a subject to which he succeeded in imparting much new life and significance. In this same happy style de Lapparent wrote that remarkable little work, "Some Thoughts about the Nature of the

Earth's Crust", which, although based upon a series of lectures delivered by him to a lay audience, shows wonderful philosophic grasp and scientific comprehension.
